MODERN HISTORY:

BEING A

CONTINUATION

OF THE

UNIVERSAL HISTORY.

BOOK XVII.

CHAP. II.

The Empire of Japan.

^a **T**HIS large and potent empire is indifferently called by the *Europeans* *Japan* and *Japan*, its names. *Japon*, but by the natives *Nippon* and *Hippon*, or *Nippon* and *Hippon*, from the largest Island belonging to it. The maritime *Chinese* pronounce it *Zippon* or *Sippon*, but the rest call it *Je-pwen* or *Ge-puen*; all which come to the same signification, and were probably given to it on account of its eastern situation; the word *Ni* or *Hi* signifying *fire*, and, in a more emphatical sense, the *sun*, and *pon* or *phon* a *basis* or *foundation*; conformably to which, *Martini* says, that the words *Je puen*, in the *Chinese*, signify *the place of the sun's rising*^a; but, besides that of *Nippon* or *Hippon*, the natives give it several other pompous ones, such as we have observed the *Chinese* bestow upon their own^b; and which being less known to other nations, and serving only to shew the high value they set upon their own, we shall content ourselves with giving a specimen of them in the margin (A).

^b JAPAN is situate on the most eastern verge of *Asia*, and consists of three large, and a number of smaller islands; and lies about 160 leagues eastward of the coasts of *China* and *Korea*, and about 130 degrees to the eastward of *London*; so that they have their sun-rising, noon, &c. about eight hours before us. Its extent is from 30° to 41° of latitude, and from 130° to 147° east longitude; and the author of the church-history of *Japan*, published in *English*, anno 1700, computes all those islands together to contain about 600 leagues in compass, or 200 leagues in length, and so proportionably in breadth, exclusive of their various windings, and of sundry remote islands which are subject to that empire. Were *South* and *North Britain* divided by an arm of the sea, *Japan* might be most aptly compared to *England*, *Scot-*

^b See before, vol. iii. p. 493.

^a (A) They often give it, especially in their writings, the name of *Ten ka*, or *under heaven*; and the emperor that of *Ten-ka fuma*, or *the monarch under heaven*, as if his country was the only one under it. They have, however, condescended to give that title not only to the *Chinese* empire, which they style *To-sin Ten-ka*, but even

to the *Dutch*, whose country they call *Hollanda Tenka*. They likewise style *Japan* *Sin-kok* and *Camimokuni*, that is, *the abode or country of the gods*, *Sin* and *Kami* being the names of their two chief antient deities; *Tout-sie*, or *the true morning*, or *sun-rising*, and others not worth farther mention (1).

(1) De his, vid. Kæmpfer Hist. Japon. cap. iv.

land, and Ireland, with all its attendants of other smaller islands, peninsula's, bays, chanel's, a &c. and all under the same monarch.

Whether known to the ancients.

When discovered.

How, and by whom.

WHETHER the *Japan* islands were known to the antients, or the same with the *Satyr Ispes* of *Ptolemy*, as Mr. *De Lisle* conjectures, is justly doubted^c; but it is not to be questioned that they are the same which the famed *Venetian* traveller *Marco Paulo* hath described under the name of *Zipangri*, from the account which the *Chinese* gave him of them (B). However, we had but a very imperfect knowlege of them till they were discovered by the *Portuguese*, at what year is not agreed, some placing that epocha as early as *anno* 1535, others *anno* 1542 and *anno* 1548, and others still later. Be that as it will, we are told^d, that, whilst *Alphonso de Sousa* was viceroy of the *East Indies*, three *Portuguese*, viz. *Antonio da Motta*, *Francisco Zeimoto*, and *Antonio Peixola*, were, by stress of weather, driven upon some of the *Japanese* coasts, being then in a small vessel loaden with leather, and bound from *Siam* to *China*, and were the first *Europeans* that discovered those islands. Upon the report they gave of it, others of their nation, particularly some of their missionaries were sent thither; and, by their skill in the liberal sciences, so recommended themselves to the *Japanese*, that they easily got not only free admittance into, and commerce with, that empire, but likewise the free exercise of their religion, and, in process of time, the liberty from the emperor of propagating it through his dominions, as will be seen in the sequel.

Rocky coasts, and dangerous seas.

Whirlpools.

ALL the coasts of this empire are surrounded with such craggy, high, and inaccessible mountains, and such shallow and boisterous seas, as make sailing about them, as well as to and from them, extremely hazardous; and their creeks and bays are for the most part choaked up with such rocks, shelves, sands, &c. that it seems as if Providence had designed it to be a little world within itself. Those seas have likewise many dangerous whirlpools, which are very difficult to pass at low water, and will suck in and swallow up the largest vessels, and all that comes within the reach of their vortex, with a most dreadful quickness, and dash them in small pieces against the rocks which lie at the bottom, some of which are never seen again, and others are thrown up on the surface at some miles distance. The noise which some of them make is no less terrible to hear; tho' these are reckoned less dangerous, because they may the more easily be avoided by it^e.

Violent rains and frosts.

THE country is no less pleasant and inviting within, than its avenues are discouraging and frightful. Its situation is such, that it possesses the fifth and sixth climates; and would consequently be by many degrees hotter than *England*, were not those heats refreshed by the winds which continually blow from the sea around it, and to which they are much exposed by the height of their situation. However, it must be owned, that this makes their winters excessive cold, and the snows to fall in greater quantities, which are commonly followed by hard frosts. It renders their seasons likewise more inconstant, and frequently liable to various changes, which are hardly felt in other parts of the *Indies*, especially on the continent, particularly violent and lasting rains, which sometimes hardly cease during the whole year. The months of *June* and *July*, especially, have them still more vehement, and are on that account called *Sat-suki*, or *water-months*; and it is well for them that they are so, else the heat would be hardly tolerable. The country is also much subject to dreadful thunders and lightnings, and to storms and hurricanes, which frequently do a great deal of damage.

Soil and produce.

THE soil is naturally rocky and mountainous, and the antient relations describe it as very barren; nevertheless, the industry of the inhabitants hath made it fertile enough of every necessary of life, so as to be able not only to supply their own wants, but to furnish other countries with them, especially with the finest and whitest of rice, and with bread-corn, of both which vast quantities are exported by the natives and the *Dutch*; and the *Philippine Islands* were known heretofore to be mostly supplied with them from thence.

Various sorts of grain.

THEY have five different grains, which they comprehend under the name of *Gokokf*; viz. the *Komi*, or rice above-mentioned, of which they have several sorts, of the finest of which they make bread, and of the coarser a sort of beer they call *Sacki*; the next is called *Omuggi*, or large grain, which is their barley, of the flour of which they make a sort of cakes; but the greatest use they make of it is, to feed their horses and cattle with it; the third is called *Koomuggi*, or small grain, and is their wheat, of which they chiefly make cakes for their table;

^e KÆMPFER.

(B) That author mentions likewise the expedition which the *Tartarian* prince *Koblay*, who had conquered all *China*, made against the island of *Zipangri*; and the *Chinese* annals tell us, that this was the emperor *Shi-tsu*, founder of the *Yuan* family, or, as the *Tartars* call him, *Hu-pi lay*, the son of the famed *Jenghiz Khan*, at whose court he had resided several years, as we have lately seen in the history of *Korea* (2): for that prince, whom *Complet* calls *Xi-ca* (3), is by him affirmed to have

completed the conquest of *China* A. C. 1281, and to have attempted that also of *Japan*; so that there is not the least room to doubt that *Zipangri* is the same with *Japan*. To which we may add what another author tells us (4), that *Zipangri* is the same as the *Chinese* *Ge-puen-gin*, with the addition of an *i*, after the *Tartarian* manner; *Ge* signifying the *sun*, *Puen* the *origin* or *beginning*, and *Gin* a *man*.

(4) *Martini Hist. Sinic.*

a fourthly, their *Daid-su*, or *daid* beans, is a smaller sort of bean, of the bigness of our lupines, which they grind into a meal, and boil for eating; the last is their *Adzuki* or *Socsu*, another sort of bean, which they boil in the same manner as the *Daid su*, or make into sweet cakes, by mixing some sugar with them. Besides the five grains above-mentioned, they have the *Indian* wheat, the millet, and several other sorts, in great abundance.

THE very rocks, and most barren places, produce such variety of fruits, plants, and roots, as the indigence of their forefathers obliged them to use for food, and to find ways of dressing them so as to make them palatable and wholesome. Even their large woods and forests, and the vast long ridges of mountains with which the country is intersected, are made to produce good pasturage, and are stocked with vast quantities of deer, oxen, buffaloes, sheep, hogs, and other useful creatures; and many of their mountains are covered with high grass, bespangled with variety of flowers and sweet herbs, and with plenty of delicious fruit-trees^f. Their seas round about, as well as their lakes and rivers within, likewise furnish them with plenty and variety of fish; to all which if we add, that the *Japanese* are naturally as temperate and frugal as they are laborious and industrious, it will be no wonder that their country should more than furnish them with every necessary for life and delight, without the assistance of any of their neighbours (C). Thus, whilst the laborious males will not disdain to draw the plough over rocky mountains, inaccessible to horses and oxen, in order to make them productive of some wholesome esculent, and their no less industrious females will not scruple to plunge some scores of fathoms into the sea, to fetch from thence plenty and variety of shell-fish, sea-weeds, and other eatables; and have gained the art not only of making them palatable, but even to strip them from any noxious qualities; when they can gather and knead the very moss which grows on shells and barks of trees, into a pleasant kind of cakes, and give an agreeable relish to the most insipid or even distasteful roots, vegetables, &c.; what kind of want will not this industry supply even the most barren parts of that vast empire!

THE country abounds with rivers, lakes, and springs, of various kinds, so that they have plenty of sweet as well as medicinal waters; and some of their rivers flow from the high mountains with such rapidity, increased by the great rains and snows, that they cannot be crossed without danger; and some of them retain such a fierce current, that there is no building of any bridges over them. There are others, that, in their fall from the mountains, make such a prodigious noise against the rocks, as to be heard at four or five leagues distance; some of them form delightful cascades in their fall, and others dreadful and loud cataracts. The three most celebrated rivers of this empire are the *Ujingava*, *Oomi*, and *Askagava*. The first of these is so called from *Ujin*, where it hath its spring; and so rapid in its course, that no bridge can be built over it; and, tho' near a mile in breadth, where it runs lowest, and reaches hardly up to the knee, it requires five lusty men, who are well acquainted with its bed, to make a horse-ford across it; and the laws oblige those guides to be answerable for man or beast that perish under their charge, either over this or any other river of the like dangerous nature, of which there are not a few. The *Oomi*, so called from the province where it has its source, is said to have sprung in one night, some centuries before the Christian æra. The *Askagava* is remarkable for its depth, and the continual change which that is liable to, which makes it both dangerous in crossing, and affords their poets and orators elegant allusions^g.

AMONG other lakes, that called *Oitz*, *Oomi*, or *Omi*, from the province where it lies, is the most remarkable. It extends itself near 100 miles in length, and 20 in breadth, and is formed by the concurrence of a good number of rivers; and hath an outlet on the south-west side into the sea by the river *Oomi* above-mentioned; which, running by the city of *Meaco*, after a winding course of about twenty or thirty miles, falls into the sea, near the town of *Osaca*, where it forms a considerable bay. Some of their lakes, we are told^h, have been caused by earthquakes, to which this country is subject. Such was that in the kingdom of *Mino*, where was a very high mountain, and on that a strong fortress, both which, after having felt a great number of shocks, were swallowed up, and a lake appeared where the mountain stood. The same happened in other provinces, where some of those lakes retained such an intolerable sulphureous stench, that travellers were obliged to go a good way about to avoid it. We shall find a more proper place to speak of those earthquakes, and other natural wonders; and only observe with regard to their rivers and lakes, that they abound with great variety of fish;

(C) This account we not only have from *Kempfer* above quoted, but from two authors who lived a great many years among them, one of them especially, who had as it were been brought up from a boy there (5); the other, who hath wrote notes upon him (6), and sums up this article to this effect. That no country in

all *India* enjoys a more healthy and temperate air, or greater fertility, nor exceeds it in the production of its fine silver; he might have added gold, copper, steel, and other commodities, of which we shall have further occasion to speak.

(5) *Caron Descript. Japon.*

(6) *Hagener not. in eundem.*

water and fructify a vast quantity of low grounds, as their higher springs do their hills and valleys, which are all covered with verdant trees of all sorts, too many to be mentioned, especially as they are the same we have seen in *China*, and for the most part in as great perfection. Only the cedars here exceed all of that kind through *India*, for straightness, height, and beauty, and are in great plenty in most of the islands, especially in the three largest.

Cattle, and
some fleet
horses.

Elephants,
and other
exotic beasts.

Pearls, corals,
and shells.

WE have already hinted something of their great quantities of cattle, and domestic animals, among which we may reckon their horses in the first rank, of which they breed the greatest number; and which, though not near so large as ours, are yet for the most part very beautiful, exceedingly fleet, and highly valued. Their vast forests swarm with all sorts of wild beasts, of the furs of which they make a considerable traffick, as well as of elephants teeth; which noble creature is not only to be found in great plenty in their woods, but is likewise bred up tame in their towns and cities. Their seas, besides fish, furnish them with great quantities of ambergris, which they call whales dung, red and white coral, and some pearls of a beautiful orient and great value, besides great variety of sea-plants and shells, which last are not inferior to those that are brought from *Amboyna*, the *Molucca*, and other eastern islands; but the *Japanese* set so little value upon them, that they hardly think those worth bringing away which they acquire by chance, unless it be to carry them to the next temple of *Iebis*, which is the *Neptune* of the *Japanese*.

Metals and
minerals.

Sulphur.

Mines of gold
claimed by the
emperors.

Great plenty
of gold.

BUT the greatest riches of this empire, and in which it exceeds most others in the east, consist in the great quantity, variety, and fineness, of their metals and minerals. Their many volcanoes, and numberless hot springs, sufficiently shew what prodigious quantities of sulphur lie hidden in the bowels of the earth, which is as it were the parent and nurse of those metals and minerals; to say nothing of the immense loads of it which are almost every-where dug up for use and exportation (D). The mines of gold, as well as golden sand, are to be found in many of their provinces, particularly in the great island of *Nippon*; but the emperor lays an absolute claim on them, and the same he doth indeed on those of other metals, none of which can be opened without his permission. Of those of gold and silver that are opened, he reserves two thirds for himself, and the rest he allows to the lord or prince in whose territory they are; but, as these are commonly upon the spot, they seldom content themselves with so short an allowance, and make the most of them they can with safety. The richest mine of gold heretofore was that of *Sado*, a small island on the northern coast of the great one of *Nippon*, whose ore produced the greatest quantity of the finest gold; but the veins of it have been since much exhausted, and our author was assured, that this, among others, was one of the reasons which caused the emperor to forbid the export of it by the *Dutch* and *Chinese* under such severe penalties¹. This island yielded likewise a good deal of golden sand, which the lord of it concealed from that monarch. The provinces of *Suruga* on the southern coast of *Nippon*, and *Saxuma* on the south coast of the isle of *Ximo*, are the next in rank for the fineness and quantity they yield of that precious metal, but especially the latter, which the emperor hath since forbidden to be wrought, lest so valuable a treasure should be exhausted. We read of several others equally rich, which, lying under water, have been likewise set aside; for it seems they have neither the art nor the courage of draining it, or letting it out by adits, as we do here in our mines (E). However, they have that metal in such plenty, that *M. Paulo* the *Venetian* was told

by

¹ KÆMPFER, ubi sup. cap. viii.

(D) Though most of their mountains abound with that useful commodity, yet the greatest quantity is dug out of a small island on the coasts of the province of *Salzuma*, called from thence *Iavogazima*, or isle of sulphur. This island was, till about a century and half ago, looked upon as inaccessible, on account of the vast quantity of thick smoke that continually issued out of it, in which the superstitious people imagined they saw legions of devils flying to and fro.

At length a man of more sense and courage than the rest ventured to land in it with about forty lusty bold fellows, who, instead of a country inhabited by demons, found a spacious plain, so covered with sulphur, that, where-ever they trod, they saw a sulphureous smoke come out from under their feet. Since that time, such prodigious quantities are brought away from thence, that the prince of *Salzuma* receives a considerable income from it, as well as from the fine trees that grow round the coasts of that island (7).

(E) We are told, that they undertook to pierce an adit at one or two of these, but that there arose such a vio-

lent tempest, attended with thunder and lightning, that the workmen were frighted from pursuing it; which plainly shews they are unacquainted with the right method of doing it; and their native superstition makes them attribute those accidents to the displeasure of the tutelary demon of those mines.

We read likewise of another rich mine, which had lain under a very high rock in the gulph of *Oki*, on the north coast of *Nippon*, which seemed to lean on one side; and, being fallen into the sea, great quantities of that fine metal were gathered by the people, with the assistance of divers, who fetched it up; but, a few years after, a violent storm brought such a high sea upon the place, as covered that spot with dirt and mud some fathoms high; since which the poor people still take the pains of lifting the sand and dirt about the mountain, and just get enough of it to live by it (8). The *Japanese* mention many other such rich mines in other parts of that empire, which would yield great quantities of that metal, if they were permitted to be wrought; as well as of others, the working of which hath been pre-

(7) Kæmpfer, ubi sup. Caron, & al. sup. citat. Vide & Varren. Hist. Japon. c. 2. p. 103, & seq.

(8) Kæmpfer, ubi supra,

- a by the *Chinese*, that the emperor's palaces were covered with it; which is not only confirmed by *Caron* and others, but they add, that some of their temples and noblemens palaces are so too.

SILVER mines are not in such great number; but some of them, especially those of *Katami*, *Silver mines*. in the north part of *Nippon*, are very rich, as well as one in the province of *Bingo*, in the island of *Ximo*. But the most plentiful of all metals is their copper, of which they have *Copper*. great variety, some of it exquisitely fine and malleable, and fit for any sort of work, and other very coarse and cheap. Some sort of it is so rich, that the refiners extract a considerable quantity of gold out of it. All that is designed for exportation is sent to be refined at *Saccai*, *How wrought, and exported*. one of the five imperial cities, where it is cast into small cylinders about eleven or twelve inches

- b long, and one inch thick; and these they put into boxes which hold 125 lb. weight, and are sold to the *Dutch*, who make a considerable traffick of it. Brass is there very scarce in pro- *Brass, why* portion, because they have no calamy but what is brought from *Tong-king* in flat cakes, and *scarce*. sold at a dear rate. Some tin they have, in the isle of *Ximo*, so very fine and white, that it looks almost like silver, and sells very dear, though the *Japanners* seldom make any use of it themselves. Iron mines are hardly to be met with any-where but in the three provinces of *Iron mines*. *Mimasaka*, *Bisfen*, and *Bitfu*, which lie contiguous to one another, and one in that of *Vacusa*, all which yield great quantities of that metal, which is refined, and cast, upon the spot, into round bars about two spans long. These are bought up by the *Chinese* merchants, and at almost *Iron bought up by the Chinese*. as dear a price as copper; and those iron tools or instruments that are fabricated there, even *Iron bought up by the Chinese*. dearer than those of copper (F). But their greatest art in the metallic way is in the tempering *Fine temper'd steel*. of their steel, of which they make the finest and keenest scymetars, cutlasses, and other sharp *scymetars, &c.* tools, which carry an edge beyond those of any other nation in the world; but most of these, especially weapons, are forbidden to be exported, under the severest penalties: yet some of their merchants have ventured to do it; and we are told, that some of their scymetars will cut through an iron bar at one blow, without breaking or blunting^k.

- THERE are several useful minerals which have not yet been discovered to grow in any of their islands, and which they are obliged to have from *China* and other parts; such as anti- *Several minerals wanted*. mony, quicksilver, sal armoniac, borax, calamy, cinnabar, and others. Mercury sublimate they likewise buy from abroad, at an excessive price, which is chiefly used by them as one of the main ingredients of a mercurial liquor, much in vogue for curing ulcers, cankers, and all cuticular diseases. The sea furnishes them with plenty of salt, in the making of which they use no other art than inclosing sundry pieces of ground, which they fill with clean fine sand, on *Salt, how made*. which they throw the sea-water, and let it dry. They repeat the throwing of the water several times, till the sand be well impregnated with it. They then remove it into a large vat with holes at the bottom for the salt water, which filters through the sand, to empty itself; after which they boil it into a consistence, as they do in other countries.

- WE hinted before, that the vast quantity of sulphur, with which most of the *Japan* islands *Japan subject to earthquakes*. abound, makes them subject to frequent and dreadful earthquakes. The inhabitants are so hardened to them, that they are scarcely alarmed at any, unless they chance to be very terrible indeed, and overturn whole towns under their own ruins, which very often proves the case. The reader may judge of them by an instance or two which we shall subjoin in the margin (G),

as

^k Vide VAREN. & auct. ab eo citat. cap. 19.

vented by extraordinary accidents, supposed by them to have happened from demons who are set to guard them.

(F) It is observable, that most of those instruments which are made of iron, either for land or sea, in other countries, are made of copper in *Japan*, excepting those which they use for the dressing of their victuals, which are made of very thin, but durable iron, of a fabrication peculiar to them.

(G) Father *Lewis Froes*, who was in *Japan* Anno 1586, mentions one of those earthquakes, which he says began with terrible shocks, which continued forty days, and spread themselves from the small city of *Saccai*, where it began, and overturned about threescore houses, to the great metropolis of *Meaco*, where it made a much greater havock, and, among other edifices, destroyed one of their famous pagods, or idol temples. The little city of *Naga-suma*, in the province of *Oomi*, which lies between the two cities above-mentioned, and consisted of about 1000 houses, was partly swallowed up, and the rest reduced to ashes by the subterranean fires which came out of the earth. The city of *Naga-suma*,

Mod. Hist. VOL. IV.

a place much frequented by merchants, felt likewise some terrible shocks for several days; after which a vehement storm arose, which swelled the sea to such a height, that the billows of it came pouring upon the city, overthrew all the houses, and washed them away, with all their inhabitants, into the sea; and hardly left any other footsteps of so fair and rich a city having stood there, except the spot on which the cattle stood, and which was laid under water. In many other places it swallowed up mountains and towns, and, in their stead, left some horrid chasms, or pools full of sulphureous matter and stench, and some of them above a gunshot wide; all which dreadful disasters were caused by that one earthquake, according to our author's report, whose letter, dated from *Simenosek*, October 15, 1586, was afterwards published in the collection of *P. Hay, de Rebus Japonicis*.

No less dreadful was that which happened at *Yedo*, the other metropolis of the empire, no longer since than 1703; which was attended with such a vehement conflagration, that it almost consumed that large and noble city, together with the imperial palace, and destroyed

as we find them related by witnesses who were then upon the spot. Some of these earthquakes ^a are followed with such violent eruptions of fire, and of combustible materials all in flames, as burn and destroy whole towns, and every thing that comes in their way. Storms of thunder and lightning, and dreadful hurricanes, are also very frequent and destructive, so that not only houses, palaces, temples, and other edifices, but whole towns, have been burnt to ashes by the one, or overturned and ruined by the other. In all such dreadful disasters, as well as in times of pestilence, famine, drought, &c. the superstitious *Japanese* have recourse to their bonzas or priests, who, instead of endeavouring to account for them in a natural way, commonly ascribe them to the displeasure of some of their peculiar deities, or to some malevolent demons sent on purpose to punish them; but the most received opinion is, that the devil, or, as they style him, the evil deity, is the author of those calamities. In either case, recourse must be had to ^b extraordinary sacrifices, and acts of worship, according to the different notions of each sect, until they have either appeased the former, or glutted the jaws of the latter; and, in some of those very dreadful ones we have mentioned above, they even proceed to offer human victims, when the others will not answer the end; but, in this case, they only take some of the vilest and most abandoned fellows they can meet with, because they are only sacrificed to the malevolent deities. Their superstition goes so far, even after those calamities are ceased, as to make those who have suffered by them to discard their tutelary gods, and adopt those of the countries that have escaped them, as being either more powerful or more benevolent than their old ^c ones. They have a notion likewise, that there are sundry happy spots, which, either through some intrinsic sanctity, or other virtue, are free from earthquakes, and other such disasters; such as are, for instance, the little islands of *Gotbo* and *Sicubusima*, the latter of which hath a very magnificent temple, and a large rich monastery of bonzas, and both edifices are looked upon as some of the first that ever were reared in that country. There is also another stately temple and convent on a high hill near the city of *Meaco*; and some others are here and there dispersed, which are supposed to enjoy the same exemption, and are of course well stocked with the monkish tribe, as well as much resorted to by the superstitious laity ^d.

THE religion of the *Japanese* is allowed by all writers to have been downright heathenism and idolatry, from time immemorial. They do not seem to have so much as a tolerable, if any, notion of a Supreme Being; but believe the world to have existed from eternity, and that the gods they worship were men, or beings that lived on earth several thousands of years, ^e and were afterwards, for their piety, mortifications, and even by their voluntary deaths, raised to that height of power and dignity they have ever since enjoyed. It is true, that, if we compare the accounts of their religion given us by the Christian missionaries, with those of the *Dutch* authors, one would be apt to imagine that the former have set it in the most disadvantageous light, and blended it with many horrid superstitions, which the others mention nothing of ^f, merely perhaps to raise the merit of their great conversions. But if we consider, that those fathers chose to make their chief abode in the inland cities, and had free access to the greatest men for learning and wisdom, and conversed mostly with them about religion; whereas the *Dutch* authors chiefly confined themselves to the maritime towns, and minded little else but the promoting of their commerce; it will not be thought a wonder that the former have ^e been able to give us a more exact and full account of the *Japanese* superstitions than the latter. However, to avoid expatiating beyond our limits, we shall confine ourselves to such heads only in which they both agree.

THEY are divided into various sects, probably according to the various nations that first settled in those islands; for we shall give, in a proper place, some pregnant arguments against their having been colonized by the *Chinese* alone. The three principal ones are; that of *Xinto*, or the most ancient of all, and consists in the worship only of their own ancient deities and idols; 2. That of *Siutto*, which is that of their philosophers and moralists, and is rather a kind of deism, or rather atheism, like that of some of the *Chinese* literati [†], whose professors despise in their hearts all notions of public worship, and popular superstition; 3. That called ^f *Budzo*, which hath introduced a number of deities and idols brought thither from *China*, *Siam*, and other parts of *India*, particularly the worship of *Fo*. These are again subdivided into many others, who have their particular deities, among whom they join the sun, moon, pla-

above two hundred thousand persons, who either perished by the flames, or were buried under the ruins. The relations of that country are full of these kinds of disasters (9); and yet, till they come to such a height

as to overturn and swallow up, the inhabitants hardly shew the least fear or concern; but, in a jocular manner, cry out, that a large whale, which crawls and moves itself under ground, occasions those dreadful shocks.

(9) Caron, Kæmpfer, ubi sup. p. 108. Varen. & al. sup. cit.

a nets or stars, with whom the bonzas pretend to have a familiar converse, and to be instructed by them about every material thing relating to futurity ; for the *Japanese*, knowing little or nothing of astronomy, ascribe most of the things that happen in the world, not so much to their influence, as the *Chinese* do, as to their supernatural power and direction ; and some of them pay likewise a worship to the devil, or evil deity : notwithstanding which variety, every person is free to chuse which pleases him best, no compulsion being used either by the government or by the parents, but often the same family shall have the husband of one sect, the wives of another, and the children of a third or fourth ; which often occasions such disputes and quarrels, as might endanger the œconomy of the family, if the husbands did not exert their despotic power, to preserve peace among them^a.

b THE two chief antient deities belonging to the first, or *Xinto* sect, are called *Amida* and *Xaca*, *Chief deities*. or, as the *Indians* call him, *Shaka* ; and these are held in such high veneration, that most sects pay a veneration to them among their other deities, they looking upon them as the chief dispensers not only of long life, and all other earthly happiness, but likewise of all the rewards and punishments in the next life : for most sects believe a future state of bliss or misery ; and, tho' they are not agreed about the nature and duration of it, yet they believe that both will be exquisite in their kinds, and last a great number of ages ; but the generality of them think that it will consist in a transmigration of the soul from one body to another, more or less excellent and happy, according to their behaviour in their last state, and that this revolution will continue, as well as the world, to eternal ages. Their bonzas, however, represent the punishments of the wicked in the most dreadful colours, both in their sermons, and paintings on the front of their temples, and against the walls on the inside, in order to inspire the people with a dread of them, as we shall have further occasion to shew in the sequel.

c WHAT fabulous account they give of those two deities, may be seen in the margin (H) ; but there is another no less celebrated one among them, which, if what they relate of him were true, would rather shew him to be such another devil incarnate as the *Indian Fo*, brought into *Cbina* *, if it be not really the same, and only naturalized here under the *Japanese* name of *Cambadoxi* or *Combedaxi* ; for they give him but a modern date, in comparison of the other

^a VAREN. ubi supra, & auct. ab eo citat. vid. sup. vol. iii. p. 561, & seq.

† De hoc, vide supra, vol. iii. p. 496, & seq.

* De hoc,

(H) *Amida* is said by them to have flourished many thousands of years ago, and to have lived one or two thousand years ; and, after a vast variety of mortifications and austerities, which he voluntarily inflicted upon himself, an infinite number of sermons he preached to the people, and miracles which he wrought, being at length tired with this life, he passed by a voluntary death into the next, where he was raised to the dignity of a god ; but by whom, they do not pretend to say. Much the same they relate of *Xaca*, who flourished, according to them, about 8000 years ago, and, after a life of 2 or 3000 years, during which he likewise underwent the severest penances, and wrote a prodigious number of books, which are still preserved in one of his great temples, buried himself in a deep cave, the mouth of which he caused to be shut up.

The miracles which they are affirmed to have wrought, both during their lives and since, are too numerous and extravagant to deserve any farther mention, but, from their example, the *Japanese* have the notion of its being such a very meritorious thing to dispatch themselves out of this world, that great numbers of them, either thro' discontent, ambition, or other motives, embrace, in the most public manner, a voluntary death ; and if they have but made some signal preparative beforehand, by the like severe penances, by preaching to the people, giving of alms, and the like, they are not only supposed to enter into immediate bliss, but are listed in the number of their saints, and are prayed to as such ; and the very instruments of their death are preserved as relics. Those who give the preference to *Xaca*, commonly drown themselves either in the sea, or some river or lake, with great ceremony ; their friends and acquaintance accompanying them to the place, where they take care to tie a large stone about their necks, fill their sleeves and other parts of their cloathing with pebbles, or other heavy luggage ; and, after a solemn and sorrowful farewell, fling them-

selves into the water. Those who are the worshippers of *Amida*, instead of drowning, starve themselves in some close confined place, where they have just room to sit ; and, being immured on every side, have only a little hole left to breathe thro', by means of a small cane, and never cease calling on that deity till they expire (10). But this doth not hinder others from taking different ways of dying, some by hanging, others by flinging themselves down from a precipice, by poison, daggers, or any other quick riddance ; but these are neither looked upon as regular, nor so meritorious, but rather as the effects of despair.

They use the names of *Amida* and *Xaca* by way of asseveration, and in their commerce : the very poor beg for charity for their sakes, and both priests and laity carry about them a sort of beads, like those of a neighbouring church, over which they repeat some short prayer to them, and drop one of the beads every time, till they have gone thro' the whole chaplet. The same thing is done by those of other sects, only exchanging their names for those of their own deities ; but still *Amida* and *Xaca*, especially the former, are looked upon as the most bounteous and liberal to their votaries, not only in this life, but much more in the next, where those who are found most in their favour shall fare more sumptuously and elegantly in that state of bliss (12) : and, for that reason, the bonzaic tribe of preachers, which are very numerous and loud, not only in their temples, but in the streets and places of resort, are ever reminding the people of the extraordinary happiness which their worshippers shall be intitled to both here and hereafter (13).

Cano, the son of *Amida*, is likewise held in great veneration ; and hath a stately temple erected to him near the city of *Meaco*, in which are 1000 images or statues of him regularly disposed, 500 on each side, and beautifully carved (14).

(14) Froes, Xaver. & al.

two. They make him to have been a bonza of the city of *Saccai*, and to have flourished ^a above 900 years ago : they relate a great many atrocious crimes to have been committed by him ; tell us, that he had the power of bringing down the stars from heaven, of foretelling future events, and other things of that nature. They attribute to him the invention of the writing or characters now used in *Japan*, and many other extraordinary feats, for which he ^b had a vast number of temples erected to him by his own commands ; but, being grown very old, and weary of life, he caused a tomb to be dug out for him, into which he shut himself up alive, pretending that he designed to continue there several myriads of years, that is, till there arose an extraordinary *Japanese* doctor in that country, at which time he would come out of his cave, and appear again to them. They believe him to be still alive ; and many, especially of the monkish tribe, pretend that he appears to them. They invoke his aid in all emergencies ; and pay him an extraordinary worship, especially on the anniversary day in which he shut himself up ; at which time there is a great concourse of people from other nations, that flock thither to see the solemnity. There is a vast number of monasteries of both sexes dedicated to him every-where ; and the temple which is erected over his vault, or tomb, is illuminated with a prodigious number of lamps, which are continually burning, and were sent thither from various provinces of the empire, it being thought one of the most meritorious things they can do to adorn that place with every thing that is rich and costly *. They have a great many more of such heroes, who have all their temples, monasteries, priests, and priestesses, and votaries, of which it were endless to speak. We shall only add two or three more of still recenter date who were of the monkish order, and, for their great learning and sanctity, have been since held in the same high veneration ; viz. *Icko*, the author of a sect of his name, who seem to place all their confidence, as to present or future bliss, on the sole favour of the god *Amida*, without troubling themselves about any of the rest ; *Nequiron*, another monk of great virtue and sanctity ; and *Daimaog*, who, they say, had been formerly a page to one of the *Japanese* emperors. These have likewise their temples, idols, and votaries. Those who would know more of the *Japanese* superstition, may have recourse to the authors above quoted ; to which we shall only add, that all those sects, though so much divided in other respects, and having each a great number of laws and rules peculiar to each, yet agree in the five following negative ones, as absolutely binding ; viz. 1. Not to kill, and not to eat any thing that is killed (I) ; 2. Not to steal ; 3. Not to defile another man's bed ; 4. Not to lye ; 5. Not to drink wine. To conclude this article of their religion, there seems to run a general notion among them, that there are very dreadful punishments reserved in the next life for the wicked ; and that the great austerities said to have been exercised by *Amida*, and other gods they pray to, were by them undergone, in order to deliver their votaries from them, by virtue of those voluntary sufferings. Hence the whole monkish tribe pretend, by imitating their example, and macerating of their bodies, not only to a much greater share in their favour and intercession, but likewise to some intrinsic merit of their own, by virtue of their supererogatory prayers and mortifications, both which they can retail to the laity, who, placing their chief confidence in them for a deliverance from those future torments, gratify them with their charity, in proportion to their apprehension of them from the dreadful description which they frequently give of them in their sermons, and the frightful representations in which they paint them, both within and without their temples, where they are painted in the most terrible colours and attitudes, and accompanied with multitudes of devils in the most horrid shapes, and all employed in inflicting the most excruciating torments on the unhappy souls that are consigned over to them (K). It is almost incredible what effect these representations make on the

* VAREN. & auct. ab eo citat.

(I) This is to be understood only of the priests and priestesses of those sects, or, to speak more properly, to the monks and nuns of each of those orders, but doth not bind the laity. Caron reckons twelve of these sects or orders, eleven of which abstain not only from killing, or from eating any thing that hath had life, but likewise from all commerce with the other sex ; but the twelfth, which is said to have *Icko* for its founder, and is in great authority there, allows the priests to marry, and to eat of the flesh of all living creatures, whether of land or sea (15).

Upon the whole, these orders of both sexes, like those of the church of *Rome*, are some more strict and austere than others ; and the more so they are, the more they are respected by the laity, who place a great confidence in their prayers and mortifications. We are even

told, that the emperor will rise up to salute them, and suffers them to sit in his presence ; but, if we may believe the character which the missionaries give of them, the most austere, and those who preach and affect the greatest contempt of the world, are but cheats and hypocrites, and live in a manner quite opposite to their specious pretences ; which is far enough from being improbable, and we need not send our readers so far as *Japan* for instances of such a contrariety.

(K) Hence a question hath been started, whether these frightful representations, which were only designed to deter people from vice, and to make them have recourse to the priests for a deliverance from those punishments, have not given rise to the notion of the *Japanese* worshipping of those infernal spirits, not only under those horrid shapes, but under that of several sorts of

a the people of all ranks, how much their morals are secured, and their vices restrained, by them, as we shall have further occasion to shew, when we come to speak of the character of that nation; but more especially how much they contribute to inspire both high and low with generosity, or even profuseness, in building, endowing, and adorning, of temples and monasteries to their several deities, as the most effectual means of securing their favour, and a happy lot in the next life.

ACCORDINGLY we are told, that there is not a country in all the east that abounds more with those stately edifices than this. Not only cities and towns, but plains and mountains, and even deserts, swarm with them; and some of those that are most remote and solitary, are the most splendid, rich, and resorted to by the people, as well as stored with monks of different orders, according to the deities they dedicate themselves to. These, like those of the Roman church, are either regular or secular. The former live in communities under their respective superiors, and lead more or less reclusive and austere lives, according to their sects; and some of those monasteries contain 1000, or even more of them; who, besides a perpetual celibacy, and other mortifications, are all bound to observe the five laws lately mentioned. The secular ones live in private houses of their own, allow themselves one or two wives, and live on the income and offerings made to their respective temples and deities, are at their own liberty as to practice of abstinence, and other severities; and the generality of them, at the best, lead their lives in plenty, or even luxury, as well as idleness; and some of them are even accused of indulging themselves in filthy and unnatural vices; for which reason, the regular sort are most respected by the laity of all ranks. Both secular and regular are under the government of the dairo, or high-priest, who, as we shall shew in its proper place, is the head of all the religions and sects in the empire, though more particularly of those of *Amida* and *Xaca*, these he protects and governs, and appoints heads and superintendants over all the secular priests which attend on the service of those two deities. The regular he suffers to chuse their own governors or superiors; and the rest of the sects he only tolerates, but on condition that they shall speak and behave with due veneration to the two grand deities, and avoid all quarrels and disputes with their votaries, as well as with those of different sects. And hence it is, that, though they all profess the greatest zeal and warmth for their favourite deities and opinions, yet they not only live peaceably, but converse freely and amicably, with each other^p.

d AFTER what we have hinted above of the prodigious multitude and variety of their temples and monasteries, our readers will easily excuse us from entering into a detail or description of them, in a work of this nature, much less have we room to speak of the infinite number of idols that adorn them. The kingdom of *Meaco* is said to have sixty stately ones of the former, and above 4000 of the latter, most of them finely gilt. We lately mentioned that of *Amida*'s son, which had no less than 1000 of them, all representing him in some different way. There is still a much more extraordinary one near the same capital, and which may be looked upon as the *Japanese* Pantheon, it having no fewer than 33,333 of those idols within its walls†. However, it will not be amiss to gratify them with a specimen or two of the most remarkable of each kind; by which they may guess at the surprising munificence of that nation, in this respect.

e THE most stately structure of the first kind we read of, is in the city of *Meaco*, and is affirmed to be as long as the body of *St. Paul*'s before it was burnt, and all built of free-stone. Its roof is arched, and lofty in proportion, and supported by noble pillars, answerable to its length and height. It is situated on a high hill; and on each side of the ascent are fifty pillars of free-stone, at the distance of ten paces from each other, and on each of them a large lantern, which give a noble air to the avenue, especially in the night, when the lamps are lighted.

^p KÆMPFER, CARON, HAGENER, VAREN. & al. ubi supra.

† Ibidem, ubi supra.

animals. Some authors pretend, indeed, that the devil appears to them in those shapes, and forces them, by obessions, and other plagues, to promise him to rear up idols and temples to him, which if omitted, he returns, and plagues them ten times worse, till they do (16). But, had that been the case, *Xacarias*, and others of his fraternity, would not have failed saying something of it, as well as some of our *Dutch* authors. Besides, we do not read that their bonzas enforce any such worship in their sermons, but only to trust to their gods above-mentioned for all sorts of help. However, tho' these may perhaps have no concern in that sort of worship, yet, as we find that several of their sects acknowledge an

evil deity, and all of them look upon those devils to be the instruments of his anger, it is more than probable, that in all public calamities, they, if not all, yet some of them, may try to appease it by such sacrifices as we have elsewhere spoken of, which is no more than is commonly done in most parts of *India*; but that any such regular worship is paid to him out of fear, and under those frightful representations, or even monstrous idols, mentioned by *Froes*, as they do under more benign agreeable ones to their other deities, for their favour and blessing, is what we do not dare to affirm, nor indeed can believe (17).

(16) *De his, see Villula, p. 47. Froes, p. 203.*

(17) See *Varen ubi supra, Kæmpfer's Lett. on Curon*

Of Nara.

THAT of the city of *Nara*, a day's journey from *Meaco*, together with the monastery adjoining to it, is still more magnificent, not only for its largeness, elegance of its structure, and richness of its materials, but also for its noble avenues. We shall content ourselves with giving a sketch of it in the margin (L), for want of room, and, for the same reason, omit several others, equally grand, that we may say something of their extraordinary idols; amongst which, that of the temple of *Meaco*, above-mentioned, is justly reckoned the most considerable and stupendous, it reaching up quite to the roof of the building, and is all of copper gilt; and, according to Sir *Thomas Herbert*, the chair on which the god sits is seventy feet high, and eighty in breadth; the head big enough to contain fifteen men, and the thumb forty inches round, and the rest proportionable to it. This colossus may be reckoned the chief deity and idol of that country, to which few others bear any proportion. Besides those which they have in their temples, there are a vast number of others set up in their other public buildings, in their piazzas and markets, streets, and even public roads. There is one in particular on that between *Surungo* and the imperial city of *Jeddo*, of the god *Dabis*, which is likewise of copper, and cast in a sitting posture, with its hands extended, and is twenty-two feet high, besides its basis. Their temples are not only famed for their magnificence, but some likewise for several miraculous powers attributed to their chief idol, or god; of which the bonzas having the sole management, the whole is carried on with so much dexterity, that the cheat is never discovered, but the people are confirmed in their superstition by those jugglers. That in particular of *Tencheda* is celebrated for a miraculous appearance of its deity, in a human shape, to a young virgin, whom they bring into it every new moon, and place before the idol. The place, at such times, is illuminated with golden lamps, burning with the sweetest perfumes; but, all on the sudden, those lamps are miraculously, it is pretended, put out; upon which the virgin finds herself closely embraced by something in human form, which holds her for some time, and commonly leaves her in a kind of extasy. It sometimes happens, that she is impregnated, but whether by the pretended deity, or by some of the priests, we leave our readers to guess. How the miraculous offspring is disposed of in that case, we are not told; but as to the damsel, she is generally accompanied out of the temple with songs and music, and is, from that time, highly honoured, and supposed to be inspired with such a prophetic spirit, as to be able to answer the hardest questions that are proposed to her^a.

Colossian idol described.

Idols set up every-where.

A strange apparition of one of their gods.

Festivals.

THEY have as great a variety of festivals as they have of sects and deities, which it would therefore be endless to describe. They consist, in general, in the anniversary of their gods, and of their dead relations. The latter we shall give an account of, when we come to speak of their funerals. The former is performed with the greatest pomp and grandeur; all that belong to each respective sect, nobles, gentry, tradesmen, with the bonzas at the head of them, appear in the finest and richest dresses, at their places of rendezvous, from which they

^a SARIS, HERBERT, VAREN. & al. sup. citat.

(L) This fabric is called the temple of *Cobucu*, hath three stately courts before it, adorned with cloisters and columnades all around, and rising one above the other by three magnificent flights of steps. At the entrance from the first to the second court, are seen two figures of a gigantic size, curiously wrought, and with clubs in their hands, as if to guard the avenue. Before the last court appears the front of the noble temple; the ascent to which is by another stately flight of steps of stone, neatly wrought, the gates of which are guarded by two lions of a monstrous size, and finely carved. In the centre of the temple are the three idols of *Xaca*, and his three sons, one on each side, and all in a sitting posture, and seven cubits high above the pedestal. The pavement is of fine square stone; and the columns which support the roof, being seventy in number, are of cedar, of a prodigious height and diameter, and affirmed, in the records of the monastery, to have cost about 5000 ducats each. They are beautifully carved, and painted with vermillion, as well as the walls, and all the inside of the structure. The roof is no less bold and lofty, and the painting and workmanship answerable to it; and the covering projects about eight or nine feet beyond the outside wall.

The monastery, which adjoins to it, is no less costly and beautiful. The hall, or refectory, is of a considerable length and breadth, and lofty in proportion. Their cells amount to 780, besides a number of other

lodgings and buildings belonging to the bonzas; amongst which is a noble library, standing at a good distance from the ground, and supported by twenty-four large columns, of about three feet and a half in circumference. The library is so well stored with books, that our author, who took a full view of all the whole fabric, tells us, that they darkened the light that came in at the windows. The baths belonging to the monks, and other offices, were neatly built; and the kitchen belonging to them kept extremely sweet and clean, by means of a river which runs just by it. The caldron in which they heat their water (for they never drink any cold, summer or winter) was of a considerable depth and compass, made of the finest copper, and kept very neat and bright. Every gallery and apartment in the convent had lanthorns commodiously placed, and all other conveniences, in the nicest order. We omit their gardens, walks, and other curiosities, belonging to this delightful place, and shall close the whole with a beautiful square pond standing before it, stored with variety of the best fish, though no one be suffered to meddle with or catch them, under very severe penalties. This noble structure, temple, and all, had stood 600 years, when our author went to view it (18). He hath given an account of many others, which we have not room to mention; but refer our readers to him, and the other authors often quoted, for a fuller account.

(18) *Almeida Epist. Indic.* p. 178. *Varen. ubi supra.*

- a march, or cavalcade it, to the temples, with vocal and instrumental music. The statues and insignia of their gods are carried with great pomp. Some have stately pageants carried upon twenty or thirty stout mens shoulders, on which are exhibited various representations of their gods, and their exploits, either by some machinery, or by actors in suitable dresses. The ceremonies performed in their temples are likewise various, but consist chiefly in songs and music in praise of their deities, in burning odoriferous gums and woods before their idols, and conclude with a panegyric or sermon, preached by some bonza, in honour of them. The rest of the day is spent in feasting, dancing, racing, tournaments, illuminations, and other rejoicings; and, on such days, there is no such thing allowed as buying or selling; but, in cases of necessity, they will freely give the thing wanted, but refuse to take any price for it. The anniversary of *Combadoxi's* burying himself alive in his cave, is kept by the *Icoxian* sect with lugubral pomp; and as soon as the gates of his temple are opened, the procession crowds in with a kind of desperate frenzy, and numbers of men are crowded and trampled to death, and many of them wilfully throw themselves down with that intent, esteeming it a meritorious death. The sermon in his praise, which is preached in the night, is always accompanied with the most doleful outcries; insomuch that one would imagine that all his votaries there were going to be massacred^r. And thus much shall suffice for the *Japanese* feasts and religion.
- b But, before we dismiss this article, it may not be unacceptable to our readers to add a few words more concerning the first introduction, success, and final extirpation, of Christianity among them.
- c It was not long after the first discovery of this country by the *Portuguese*, that is, about the year 1552, that some Jesuits, sent thither from *Ma-kau* by *Francis Xavier*, found means to be introduced into that empire, and to recommend themselves to the quality and learned men of it, by their skill in the mathematics and other sciences, as well as by the many curious instruments of astronomy, navigation, &c. and other *European* rarities, much after the same manner as others did in *China*^s, and other parts of *India*. Their success was such, that, in a little time, not only vast multitudes of the people of all ranks were converted to Christianity, but several of their petty kings not only encouraged the propagation of it, but some of them made open profession of it (M); the emperor himself, if we may believe the accounts of those missionaries, not only permitting it, but being a great patron, if not a secret profelyte, to it; insomuch that the very bonzas, after having used their utmost efforts to suppress the spreading

Ceremonies.

A lugubral one.

Christianity introduced in Japan.

Its vast success.

^r De his, vide *FROES* Epist. p. 245 & 290. *ALMEIDA*. p. 77 & 188. & al. pass. *VILLELA*, p. 93, & seq. *VAREN.* lib. iii. cap. 4.

^s See before, vol. iii. p. 568.

(M) These, we are told by their own epistles, were the maritime princes, who were so taken with the new commerce with the *Portuguese*, that they strove who should oblige them most, in order to draw them to their own sea-ports; so that, with respect to them, there appears to have been more interest than zeal in the encouragement they gave to these missionaries.

With regard to the rest, they likewise own, that multitudes of the poorer sort were allured to Christianity, not so much by their preaching, as by their seasonable charities, and the singular care they took of their sick, lame, and indigent, who used to be despised and neglected by their own countrymen, of all sects, their bonzas representing them not as objects of pity, but as wretches under the displeasure of the gods, who neither deserve compassion in this life, nor could have any prospect of faring better in the next. With such, therefore, the Christian gospel could not chuse but meet with a sincere welcome, which assures us, that poverty and afflictions are surer tokens of God's favour, than grandeur and prosperity; and that the short-lived miseries they patiently endured in this world, would be crowned with such ample rewards in the next. They could not but prefer a religion, which inspires people with such charitable sentiments towards the miserable part of mankind, induced them to build hospitals and almshouses for their relief, and to provide them with food and physic, for their souls and bodies, to those of the bonzaic crew, which inspired the rich with a contempt and abhorrence of them, and obliged those poor miserable people to seclude themselves from mankind, and live and die wretched in woods and desarts. This made some of these missionaries complain, in their letters, that few but such became profelytes to Christianity (19).

Not but there were some of the richer sort who embraced it, in order to ingratiate themselves with the *Portuguese*, and other *Europeans*; some with a view of traffic, others with intent to learn some of their arts and sciences, or even some of their mechanical trades.

We may add, from what we have observed of the *Japanese* religion in general, that there was such a conformity between it and that which the Jesuits preached among them, as might easily be improved to advantage by the latter, towards the conversion of the former. The *Japanese* expected all their present and future happiness to come to them through the favour and merits of their *Xaca*, *Amida*, and other of their gods, and by virtue of those long and severe mortifications they had freely undergone, before they put an end to their lives, in order to be deified. The Jesuits preached to them a Divine Person, who came down from heaven, and who willingly submitted himself to an ignominious and painful death, to save those that believed in him. The former sainted those melancholy and discontented people who made away with themselves, celebrated their memories, and desired their suffrages. The latter, with much greater reason, extolled to them the hecatombs of martyrs and primitive Christians, whose heroic constancy and deaths, for the testimony of their Redeemer, intitles them to a much greater degree of honour and devotion, and to the benefiting of their votaries by their intercession. To say nothing of the statues and imagery, candles and perfumes, used in their worship, the variety of their monasteries of friers and nuns, their celibacy and recluse lives, their beads, processions, praying to and for the dead, auricular confession, and many other particulars. Against which, the *Japanese* could have no objection, because they were what they themselves practised in their own.

(19) See *Varen. ubi supra*, c. 6 & 10. & *ant. ab eo citat.*

of this new religion, so contrary to their own, as well as to their interest, were obliged to yield ^a to the current, for want of sufficient support from those in high power to oppose them; and we are even told, that several of them were become zealous professors and preachers of it. They went on with this wonderful success above sixty years, that is, till about the year 1616, during which time, all their letters from thence were still fraught with accounts of the fresh conversions they made, and the great confidence they had of seeing idolatry shortly banished out of the whole empire, their idols all demolished, their temples turned into churches, and the whole realm submitted to the pope's authority; when, on the sudden, all this promising sunshine was turned into a dismal gloom; the missionaries were suspected, and accused of the most treasonable designs, and, under pretence of converting the empire, to be plotting to dethrone the emperor, and bringing his dominions under the government of the *Spanish* monarchs. What ^b grounds there were for such a dreadful charge, do not hitherto clearly appear; neither is this a proper place to inquire into the causes of it, which will be better seen in the history we shall give of the nation in the sequel. It will be sufficient to say here, that the charge was taken for granted by the jealous emperor, and all the grandees of *Japan*, and turned their kindness into such a detestation against those missionaries, and their religion, as produced a most dreadful ^c persecution, not only against them, but against as many of their proselytes as refused to renounce it, who were all put to the most excruciating deaths. This happened in the year 1622, and following; ever since which dire epoch, Christianity hath been intirely extirpated out of the whole empire, and held in greatest abhorrence; nor is any person or people suffered to live there that is suspected to profess it, nor any stranger to come amongst them; that doth not publicly renounce it, under the severest penalties.

persecuted and
eradicated

Government.

Petty kings
subject to the
emperor.

THE government of *Japan* is, and hath been for many centuries, altogether monarchical and despotic. It was antiently divided into a great many small kingdoms, which still retain their antient names, as many of them do in *Spain*, *China*, and other parts, but they were at length swallowed up into one, unto which all the rest are become either subject or tributary; and the number of the former hath still gradually increased above that of the latter. Of these last, they reckon between fifty and sixty, who are vested with the regal title and dignity, and are, in some measure, absolute in their respective territories, but are so intirely subject to the emperor, that he can depose, or even condemn them to death, if he thinks fit. It hath been likewise a constant policy in those monarchs, to split those petty kingdoms into still smaller divisions, and to give those princes leave to war against, and encroach upon, each other's dominions, as the most effectual means to weaken their power, and secure their obedience. They likewise frequently dethrone and imprison them, and give their territories to others, and either curtail or enlarge, according to their interest or pleasure; so that those little states are designedly kept in a constant fluctuation, to prevent their revolting, and making themselves independent. As to the people, they are doubly slaves, first to their own princes, and next to the emperors, who have power of life and death over them all.

Antient dairo's
religion of
a religion;

their grand-
dears;

High titles
and honours;

prime mini-
ster;

stripped of
their civil
powers;

ANTIENTLY the emperors were likewise sovereign pontiffs, under the title of *dairo's*; at which time, their persons and dignity were held so sacred, that not only every rebellion against them, but even every contravention to their decrees, whether in civil or religious matters, were detested as crimes against the Deity itself. They were, in some measure, worshipped by all their subjects, and took upon them such state, as if they had been some kind of deities. They never set their feet upon the ground, nor suffered the sun to shine, nor any wind to blow, upon them. They never wore their cloaths above one day, and never eat twice out of the same dishes. In a word, all the furniture, vessels, &c. of their table, beds, and whatever they used, must be renewed every day. They never cut their hair or beard, nor pared their nails. They kept themselves as much as possible from being publicly seen, and were chiefly waited upon by twelve wives, whom they married with great solemnity. The titles they assumed, and by which they were addressed, came little short of blasphemy, and the manner of approaching them of idolatry; they being all alike obliged to prostrate themselves flat upon the ground, and, in that humble guise, present their petitions, answer his questions, and receive his commands. And as they lived thus in the grandest splendor, luxury, and effeminacy, they committed the chief care of the civil, and all the military, affairs to their prime minister, who was styled *cubo*, because he was always generalissimo of all the forces; which dignity was commonly bestowed on one of his younger sons, for the eldest always inherited his father's throne; and it was by one of these *cubo's* that the *dairo's* were stripped of their whole civil authority, as we shall further shew in their history, and from that time have been only at the head of all religious matters, whilst the *cubo*, or emperor, bears an absolute sway over all civil and mili-

^b KEMPFER, ^c Ibid. Vide & Epist. MATTEI, XAVER. & alior. VAREN.

- a tary affairs (N) throughout the empire. The former is still permitted to live in the same state and grandeur as his ancestors did, and the latter is still obliged to pay him a kind of homage, as if he acted only as his deputy, or viceroy : but all that is mere ceremony, and only kept up to prevent the people's rising up in arms in favour of him ; so that, in reality, the cubo is now the real *Cæsar*, or monarch, of *Japan*, and the daïro only the pope, or high-priest, of it. This homage consists in going in great solemnity, once in three, four, or, at most, in five years, to the city of *Meaco*, where the daïro resides, and there waiting on him in person, with suitable presents, and acknowledging, that he holds the imperial crown from his family (O). He is moreover obliged to marry one of his daughters, if he hath any that is marriageable ; and she is first crowned empress, and then given to him as a seal and confirmation of his imperial authority. All that needs be farther added, with respect to those two dignities, is, that the daïro's have still kept to their antient residence, at the old metropolis of *Meaco*, on the south, and the cubo's have settled theirs at the city of *Jeddo*, on the north side of the island of *Hippon*, of both which capitals we shall give a further account in its proper place. As for the name of daïro, or dayro, it is supposed, like that of *Cæsar*, to have been that of the head of the imperial family ; whereas that of *cubo*, or *cuboy*, was originally no more than the title of the prime minister, generalissimo, or grand vizir. This post hath been suppressed ever since, though the title is still retained by those secular monarchs, as we may style them, though, in fact, now it means no less than a despotic prince, or emperor, in the same manner as the title of *imperator*, which, among the *Romans*, originally meant no more than a commander, or general, came, after *Julius Cæsar*'s time, to signify the supreme head of the empire.

- SINCE the suppression of the office of prime minister, the administration of the government hath been committed to four of the principal of the nobility, of the emperor's choosing ; besides which, he hath a council of twenty-eight nobles, four of whom are tributary princes, and assist in a kind of rotation, of which he is the director ; and this is another method by which he keeps them steady in their obedience. But, besides this, the imperial courts observe some other maxims, equally effectual to prevent their raising any revolt, either in favour of the daïro, or of themselves ; the principal ones of which are ; 1. That all those princes, whether tributary or subject, are obliged to attend at the imperial city of *Jeddo* six months in the year ; for which end, they have palaces assigned to them in and near that of the emperor. 2. All the grandees, nobles, governors, &c. are likewise obliged to pay their attendance at the court for a certain space. 3. The eldest sons of every king, prince, and grandee, are brought up there, under the emperor's eye, and must reside there, till he dismisses or raises them to some post. 4. Their wives and children are obliged to live in that metropolis all the year round, to be a kind of hostages, except the emperor gives them leave to go with their husbands into their own dominions, or estates, during the six months in which they are not in waiting. 5. They are obliged to take oaths of fidelity every year. 6. During their recess in their respective countries, there are spies set to watch all their motions, and to transmit an account of them to court. 7. To prevent the common people siding with them, or hatching any rebellion, he employs 100,000 of them at a time, and by turns, in public works, such as building of fortresses, making and mending of public roads, dikes, bridges, &c. 8. He keeps strong garisons in all his military cities, castles, forts, &c. which are very numerous, and often shifts them from one end of the empire to the other. 9. All the cities and walled towns are divided into small wards, which are shut up every night, to prevent all nightly intercourse between the inhabitants ; so that if any riot or tumult should happen in any of them, they are

(N) The *Japanese*, it seems, had such an irradicable veneration for their antient monarchs, that they would never have suffered them to have been thus stripped of the greatest branch of their power, if the cubo had not blinded them with the specious pretence, that it was done with their consent, and out of regard to their dignity, as well as to ease them of the burden of the civil government, the care of which, it was further urged, was not only beneath, and inconsistent with, but even dishonourable, in some measure, to their high dignity, as supreme heads over all religious and ecclesiastical affairs.

On the other hand, the old daïro's indolence and luxurious life having given the cubo a fair opportunity of engaging not only the whole army, but the far greater part of the petty kings and princes in his interest, his son, when he came to the crown, seeing himself in no condition to oppose him, gladly yielded one branch of his authority to save the other, which was, perhaps, the most agreeable to his lupine and effeminate temper ;

whilst the active and martial cubo was easily suffered to enter into a province, for which he was much fitter than he ; especially as the matter was so compromised, that he should still be left to enjoy his antient revenues, titles, state, and grandeur, and be still looked upon as sovereign monarch of the empire (20).

(O) This acknowledgement is performed by his drinking wine in a dish of porcelain, and then letting it fall and break upon the ground. This ceremony was to be performed once in three years ; but the emperor reduced it, on some pretence, to once in four, and afterwards to once in five years. And it is much to be doubted, whether it hath not been quite set aside before now, seeing matters were set on such a foot between them, that the authority of the one must of course dwindle away as fast as the other's increased. The description we shall give of this grand ceremony, at the end of this chapter, will further evince the probability of this our supposition.

(20) *Varia. lib. i. c. 4, & seq. Xaver. Froes. & al. sup. citat.*

easily suppressed by the officers of the guard, which are kept in every one of them. 10. Every a city, town, and ward, have a magistrate, appointed by the emperor, who is answerable for every disorder that happens in his precinct; which makes them keep the people under the greatest strictness, and sometimes punish a whole street, or ward, for the disorder that happens at one house or family *.

Numerous
court.

THE reader may guess, by what we have said above, what a numerous court and retinue these emperors must constantly have in their capital, besides their own guards and officers, which amount to 5 or 6000 more; all of whom are likewise obliged to attend him, wherever he goes.

Standing
forces.

Weapons.

His army is no less numerous, it consisting of 100,000 foot and 20,000 horse, including his garrisons. They are all well disciplined, and commonly stout soldiers. Their arms are muskets, bows, and arrows, the scymetar, and dagger, and all of the best metal, the Japanese being the most expert artists at making of them in all the east, and in some of them excelling all the Europeans, especially in the keenness of their broad swords, and lightness and neatness of their armour. This last is only used by the cavalry, though they are seldom known to fight on horseback. As for the foot, they wear no other defence than the helmet. These forces are reckoned sufficient in time of peace; but in time of war, every one of the tributary princes is obliged to furnish a certain quota, which increases the former to 368,000, and the latter to 38,000 (P). To maintain such numerous forces, and such a vast number of officers, as well as the grandeur of his court, must needs require an immense revenue; and, if we may rely on the calculations that have been made of it, it will be found really such, and to exceed that of any prince in the world, if there is not some mistake in the figures, or if they have not been magnified by those authors; for it is a common observation, the forces and revenues of distant kingdoms frequently exceed all probability. The reader may see a sketch of one of those calculations in the margin (Q). But there is still another way of making a tolerable estimate of his revenue, from the annual pensions and salaries paid to his governors, and other officers, and his own particular expences; all which the reader may see, calculated and reduced to florins by Caron, according to whom, the whole amounts to 283,000,000, or about 28,000,000 sterling †. These pensions are differently paid, some in gold and silver, some copper, lead, tin, iron, and some in rice, and other produce of each respective province. He is likewise possessed of immense treasures in diamonds, pearls, and other precious jewels; to say nothing of the vast quantities of gold, silver, rich furniture, merchandizes, and other valuable commodities, which are stored up in his treasury and magazines. All which, together with his sumptuous palaces, descend, after his death, with the empire, to his eldest son, except such legacies which he commonly leaves, not only to his other children, but to his favourite vassals and officers. As to his younger sons, he either bestows some kingdoms, or government of provinces, or, if too young for either, leaves them a sufficient income, to be brought up within the second cincture or court of the imperial palace, till they are better provided for.

Vast revenue.

Salaries paid
to his govern-
ors, &c.

Vast riches.

Stately pa-
laces,

He hath a great number of such palaces, besides that of his usual residence at Jeddo, no less spacious and magnificent, than strongly fortified. They reckon no less than twenty be-

& al.

† Vide VAREN. lib. i. c. ii. CARON, KÆMPFER,
& al.

(P) It is not easy to guess what nations he employs these numerous forces against, or is at war with, our authors not mentioning any they are engaged in. Some few we read of he hath had formerly with China, and one more lately against the Koreans, which we have taken notice of in the last chapter (21). Neither the ancient dairo's nor modern emperors, except this taycho, were ever known to aim at making any conquests abroad; and as to any invasions from thence, nature hath so well fortified them against all attempts of that kind, that no princes need be less apprehensive of them than they, as we hinted at the beginning of this chapter.

But their fears, it seems, are not so much from any of their neighbours, as from the Europeans, and especially from the Spaniards; and we are told, that, since the great umbrage which the missionaries gave to that nation, which occasioned the extirpation of Christianity, the emperors have conceived such jealousy of them, that they dream of nothing but being invaded and conquered by them, and pretend to have some such threatening predictions, which keep them always in fear, and

upon their guard (22). But may not this be a politic pretence, to conceal their apprehensions from a more likely and dangerous quarter, viz. from the Eastern Tartars? So that, upon the whole, it is no wonder if they secure such a vast number of forces to be raised, in a short time, against all adventures, and which may prove as necessary, in case of any revolt or rebellion, as against an invasion.

(Q) They compute it according to the two chief Japanese rice measures, named the *man* and *kof*, the former of which contains 10,000 of the latter, and this contains 3000 sacks or bales, each containing rice enough to suffice 100 men for one day. Our authors differ somewhat, not only as to the stating of the proportions of these measures to each other, as well as in the calling up the whole, Kæmpfer making the amount to be 2338 men, and the Japanese author, from whose memoirs he took his account, only to 2257 *. However, the least of them, when reduced to the number of sacks, amounts to such a prodigious number, as almost exceeds belief.

* Hist. Japan, lib. i. cap. 5. ad fin.

a tween that city and *Meaco*, though scarce 250 miles distant from each other; the most celebrated of which are those of *Jeddo* and *Osacka*, and next to them those of *Quana*, *Iwatzuki*, and *Matzjama*. Most of them are rather stately castles or fortresses, especially without, being surrounded with strong walls, wide and deep ditches, and some of them with three circles, one within another, and flanked with strong and lofty towers, and salient angles, like their usual fortifications, and built mostly of square stone. The apartments within are equally magnificent, their halls of audience high and stately, and adorned with costly cedar columns, curiously wrought, painted, and gilt; the ceilings finely carved, and many of them plated with gold, curiously wrought, and embellished with precious stones. The furniture of the lodgings, the gardens, baths, walks, ponds, fountains, summer-houses, terraces, &c. all answerable to the pride and grandeur of those opulent monarchs. We shall give our readers a short specimen of that of *Jeddo*, in the sequel, by which they may guess at the structure and richness of the rest, and only add here, that they are still building some new ones here and there, for hunting and pleasure-houses, or for burying-places; and these last have commonly a stately temple added to their other embellishments: such is that in the province of *Niko*, about four days journey from *Jeddo*, and built in the year 1636, in the dome of which is seen a vast copper crown, to which hang a great number of branches for tapers to burn in, and which was presented to the emperor by the *Dutch* company².

b Most of their palaces and fortified places have batteries of cannon upon their ramparts, though the *Japanese* are nothing so well skilled in the use of them as their neighbours the *Chinese*, who were instructed by some of the best *Portuguese* engineers from *Ma-kau*; and it is but rare for them to have any artillery with them in the field. In other cases, they are very dexterous at all manner of weapons, and are very strict, not only in exercising their soldiery in all martial discipline, but likewise in training up their youth to it, from their tender years, both at home, and in diversions abroad, and, in this last respect, even to a fault (S).

c THEIR laws and punishments are severe, beyond all justice, and may be justly said, like those of the *Spartan Draco*, to be written in blood. They have few, if any, written laws, the emperor's will being the supreme one, and next to it that of the kings and princes in their respective dominions. The very lords of every district, and even the heads of every family, have power of life and death over all that are under them, and try and condemn them according to their own will. There is scarcely any crime so small, that is not punished with death, except the offender be a petty king or prince, and even these are not always exempted; and the only privilege they have, is to dispatch themselves with their own hands, which is commonly done by ripping up their own bellies, instead of being put to death by an executioner. In these cases, there is no other ceremony used, than a letter sent from the emperor, by a proper officer, who, if the offender refuses to comply immediately, hath orders to put him to some more torturing death. As for those whose lives are spared, they are commonly banished into some desert island; the kings and princes into that of *Faytsiensima*, or *Fatissio*, an island on the south of the gulf of *Jeddo*, which is small, rocky, and almost inaccessible, where they are condemned to more or less servile labours, according to the nature of their crime, or the mercy they can obtain from the court; but most commonly they are obliged to drag a life which is much severer than death. As for persons of inferior rank, they are not so much as imprisoned, but, upon full proof made before a magistrate, are immediately hurried to execution.

d CRIMES of a higher nature, such as treason, violating the emperor's edicts, defrauding him of his revenue, counterfeiting his coin, male-administration, or any flagrant injustice committed by any of his officers, magistrates, &c. or any enormous breach of the peace, such as setting houses on fire, murders, burglaries, deflowering of a married woman, or an unmarried one, against her consent, notorious robbery or theft, these, and the like atrocious crimes, are punished with such severity, that not only the criminal, but his parents, brethren, children, and even male relations, are all put to death at one and the same time, let them be at ever so

² Vide VAREN. lib. i. c. 11. CARON, KÆMPFER, & al.

(S) They have a custom once a year, in the month of *March*, to indulge them in some martial sports, or public games. Every youth comes to them armed, with what weapons he pleases, or can get. They commonly begin some time after noontide, and divide themselves into two bodies, or little armies, each with the banners and standards, and the statues or pictures of their gods, carried before, to animate them. Their first onset is by throwing stones at each other at some distance; then they draw nearer, and ply their bows and arrows, and then their short guns; and last of all close in with their

swords. These games, as they are styled, seldom fail of doing mischief, and leaving some dead in the field of battle; and sending away others wounded and maimed; all which goes off unpunished and unreprieved (23).

This plainly demonstrates the nation to be naturally warlike, and to take delight in such feats; or else why should such pains be taken to keep up that martial spirit among them, when they live at peace with all their neighbours? unless we suppose them to live in fear of some invasion, either from *Europe* or *Tartary*.

(23) Vide Varen. ubi supra, cap. 19.

great a distance from each other (T). High treason and revolts extend the punishment still farther, on the whole ward, or neighbourhood, where the criminal lives: for, in all such cases, the law supposes them all guilty for suffering such an enemy to the government to harbour among them; and this is an effectual means not only to prevent a concealment, but to cause an immediate discovery of the crime and criminal, because the informer saves himself and family by it. In all cases, except treason, the female relations are only sold for slaves, for a longer or shorter term of years, according to the nature of the crime, their age, or nearness to the offender; but in that of treason, the wives and daughters are put to death, though not so severe a one as the criminal.

*Sundry kinds
of punishment.
Crucifixion.*

*Burning, and
boiling in oil.*

*Gentlemen and
soldiers dis-
patch them-
selves.*

THEIR punishments are various, and more or less severe. That of crucifixion, which is commonly with the head downwards, is the principal, and executed on traitors, murderers, incendiaries, and other such atrocious crimes; and the criminals are suffered to hang two, three, or more days on the cross, or till they expire, according to the nature of the crime; and, where that admits of mitigation, they are either stabbed with a dagger, or shot with darts, in a shorter time. Burning, and boiling in oil, are inflicted on persons guilty of parricide, incest, rape, adultery, and other such heinous crimes. Where an offender refuses to surrender himself, after public proscription, he is torn in pieces by horses, or cut in pieces by the hangman, where-ever he is found; and, whether found or not, is always executed in effigie, according to the nature of his crime. Every petty larceny, insult, detraction, cheating of any kind, even at play, a lye or prevarication before a magistrate, are all likewise capital, though punished with a milder death, as beheading, hanging, and ripping out their bowels; which last punishment is commonly that inflicted on gentlemen and soldiers so convicted, only with this difference, that they are allowed to dispatch themselves by it; for it is reckoned ignominious if any such let the hangman take the work out of his hands by his cowardice or delay, and they are sometimes put to a severer death for it. There are few crimes so small, or injury so trivial, as to be alleviated by a pecuniary punishment; and as for corporal ones, as the whip, bastinado, &c. they are chiefly inflicted on slaves and inferior servants, and that only by their own lords or masters^a.

S E C T. II.

The genius, arts, sciences, trade, navigation, and manufactures, of the Japanese.

*The genius of
the Japanese.*

Virtues.

Vices.

THE Japanese are generally very acute, and of a quick apprehension, good understanding, modest, patient, and courteous, and excelling all the orientals in docility. They are so just in their dealings, that one may absolutely depend on their word; and, contrary to the Chinese, disdain to take the least advantage of those they deal with. They are all very industrious and laborious, and much given to study and reading. They will indulge themselves at proper times in any innocent pleasures, and necessary recreations; but will readily forego them for the sake of better employment, or even live content without them, when their circumstances cannot admit of them: neither are they greedy after wealth, but are satisfied with a moderate competency, as the most effectual preservative against lying and cheating, against envy and detraction, intemperance and luxury. In conversation they observe a great decorum; but avoid not only all loose, vain, and idle prattle, but all the stiff formalities of the Chinese nation^b. Their style is grave and laconic, yet familiar and obliging. They affect a surprising neatness and decency in their eating, drinking, furniture, dress, and conversation; but have an abhorrence to intemperance, luxury, and defamation. Drunkenness and gluttony are as much detested by the rich and poor as cheating and dishonesty.

THIS is the character which most authors give of their virtues, but we must not from thence suppose them to be free from vices; on the contrary, the very same authors charge them with many heinous ones, some of which seem quite opposite to the other side of their character; and indeed those who are most conversant in books of travels, especially into such a remote

^a CARON, KÆMPFER, VAREN. l. i. c. 18. & al. sup. cit.

^b See before, vol iii p. 631, & seq.

(T) This is done, we are told, by suspending the execution of the chief criminal, and of those that are at hand, till the sentence can be conveyed by a proper messenger to other places, where those relations of his are settled, or perhaps have fled to for concealment, which must be understood of a respiting it, till they are all caught, and every-where apprehended, but only as many of the principal ones as can be found, and then, on a day appointed, they are all brought forth, and executed, in every place where they were seized.

Caron mentions, as an instance of this, in his own time, that a lord was condemned for extorting too great a tribute from his vassals, and suffered death, together with three of his brothers, one of whom was 250 miles off, an uncle, who lived still at a greater distance, and a nephew, who lived in some other part of the empire, all on the same day and hour.

country as this, will least wonder at such contradictions. Accordingly they are represented as proud, ambitious, cruel, and uncharitable; and so insensible of the miseries of their fellow-creatures, that they will suffer them to perish rather than relieve them. But this last, we have lately observed, is rather owing to the disadvantageous and unjust light in which their inhuman bonzas set those unhappy objects, than to any such savage disposition. They are likewise said *Revengeful.* to be so passionate and resenting, that they will make away with themselves, if they cannot find an opportunity of revenging an affront or injury. Their women in this respect will do the *Women's language.* same, especially whenever their chastity, conjugal fidelity, or even their modesty, is concerned; inasmuch that many of them, though conscious of their innocence, will prefer a voluntary death to an unjust suspicion, which it is not in their power to clear themselves from; and we read of some who have taken the same violent method, rather than survive the shame of some involuntary indecency^c. They moreover not only allow of polygamy, but likewise of fornication; and of brothel-houses for their unmarried youth, as well as for the conveniency of strangers; but their married men are forbidden to go into any of them. But there is still a more heinous and unnatural vice laid to their charge, *viz.* that of sodomy, which is not only impudently committed amongst them, both by priests and laity, but without either brand or disgrace. In their wars they are very fierce and cruel, seldom giving or asking for quarter; and, when a town is taken, they commonly destroy it by fire and sword. And thus much may suffice for their vices^d.

They are much extolled by the missionaries, and other writers, for their singular readiness, *Ready apprehension.* above all other eastern nations, in learning the liberal arts and sciences from them; for, before their coming, all their learning consisted in reading, writing, understanding their own history, and various religions, and some few rules of morality. As to their philosophy, mathematics, *Learning.* &c. they were less versed in them than the *Chinese*, till they learned them from the *Europeans*, under whom they made a surprising progress in, and shewed an uncommon fondness for them. Till then they knew rather less of astronomy than the *Chinese*, though they are, like *Bad astronomers and geographers.* them, so given to astrology, that they scarce undertake any thing of moment without consulting some pretender to that art. Of geography they were so ignorant, that they divided the world into three principal parts, *viz.* *Japan*, *China*, and *Siam*, and looked upon the rest as inconsiderable appendages to them; and, as for the other parts of the mathematics, they were still more remote from them, till the *Portuguese* brought them thither. How far they have cultivated them since christianity was banished out of the empire, we cannot say; how- *Great universities.* ever, it is plain that they had several famed universities among them, well stored with doctors and books, and resorted to by vast numbers of students. They are commonly very rich, and well endowed, the bonzas who preside in them being for the most part noblemen's children, who are either naturally inclined to a studious life, or chuse it, as the most creditable way of living upon their small fortunes; increasing the common treasury by their patrimony, which they leave to it after their deaths. We are told wonders by the *Portuguese* authors concerning *Vast number of students.* those universities, the vast number of their doctors and students, their lectures and doctrines, eloquence, and excellent discipline, if those good fathers have not launched out too far in their praise, in acknowledgement of the vast encouragement and success they met with among them. However, we shall, according to our usual way, give the reader a short sketch of one of the most celebrated of those academies in the margin (U), by which he may frame some idea of the rest. As for the doctors or bonzas who preside in those places, the same authors *Bonzas great moralists and orators.* assure us, among other of their excellencies, that they never heard finer discourses on the

^c CARON, VAREN, l. i. c. 14. & al.

^d CARON, VAREN. l. i. c. 14. & al.

(U) This noble edifice, or rather collection of buildings, is called *Fremaxama*, or, according to others, *Fremajama*, from a celebrated mountain within nine or ten miles of *Meaco*. The mountain [which is intersected by thirteen pleasant and fertile vallies, excellently well watered, and adorned with woods, groves, and a fine large lake stored with all manner of fish] was chosen as a fit abode for the bonzas by some of the dairos, and is said to have had no less than 3800 temples, and almost as many monasteries, founded and endowed at different times by those monarchs, when in the height of their power. They had an income of 200,000 crowns *per annum*, besides two large towns, which were then part of the suburbs of *Meaco*, situate at the foot of the mountain, and which were obliged to supply these monks with all sorts of victuals, dressed in the best manner for them, that they might have no avocations from their

studies and religious employments. It became moreover the residence of the *Xacco*, or *Jacko*, or head pontiff of all the bonzas; and on that, and all other accounts, grew into one of the most considerable seminaries in the whole empire; but, since the dairos were stripped of their civil power, as hath been lately hinted, great part of those colleges and temples have gone to decay; so that, upon the missionaries arrival there, they were reduced to little more than 500 (24).

They have about five more stately ones within the neighbourhood of *Meaco*, which have between 3 and 4000 students each, besides a vast number of others dispersed in other parts of the empire, all richly endowed, finely situated, and accommodated with all the conveniences of life, as well as with large libraries stored with plenty and variety of books (25).

(24) *Hist. Eccles. Japon. tom. i. p. 44. & seq. Vid. & Vit. & Epist. Xavier. Varen. lib. i. c. 25.*

(25) *Ibid. ibid. Vid. &*

subject of morality than they did from their professors, who did so value themselves on it; and that they were such masters of oratory, that they seldom failed of drawing tears from their audience, whenever they employed their skill in that way.

*Learned
Physic.*

THEY have neither a body of law, nor system of physic; but guide themselves in the former by reason, and in the latter by experience; and though their skill in the latter is but scanty, yet are the professors of it in high esteem, and gain great fortunes by it. They depend much upon their medicinal wares, of which they have great plenty and variety both of hot and cold. The roots of *Yagy* and *Cama*, brought thither by the *Chinese*, are in great vogue, together with other medicinal roots and plants. They pretend to a great skill in discovering the nature, cause, and degrees, of disorders, by the pulse, and by astrology; and some of them make use of charms, and other such superstitious trash. They suffer their patients to drink as much cold water as they will, though they never drink it so when in health: their medicines are commonly blended with something of saltness or sourness. They are still more unskilled in surgery; never let blood, except in a kind of endemic cholicky disorder frequent among them; and then the operation is performed by pricking the belly artfully with a fine needle made either of gold or silver, and letting out what they think the morbid matter at a certain number of holes.

*A strange sort
of cholick,
called *Sekk*,
frequent.*

THIS strange disease, which so cruelly attacks as well strangers as natives of all ages, sexes, and complexions, is by them called *Sekk*, a name not indiscriminately given to all cholicks and belly-achs, but only to that particular sort, which, besides the violent pains it causes in the bowels, extends itself to the whole abdomen and reins, where it causes a general convulsion of the muscles, even when the bowels are free from the effects of the morbid humor in the peritonæum, or some other part of the abdomen; but at some periodical times, or from some other cause, excites grievous swellings, spasms, and acute pains.

*Practised by
other parts of
India;*

THESE dreadful symptoms and affections, stubborn and unmoveable as they are by any other means, are nevertheless not only assuaged, but effectually cured, by this easy and curious operation of acupuncture, performed by a judicious hand; inasmuch that, if we may rely upon the learned Doctor *Kempfer*, who had often been an eye-witness of it, the *Sekk* pains have ceased almost in an instant, and as if they had been charmed away, as soon as the needle had performed its office on the part of the belly made choice of, after due examination by the skillful artist. We have had occasion to mention its being much esteemed among the polite *Chinese*, as well as by the *Tonquinese*, *Koreans*, and other eastern nations; the latter of whom make no scruple to affirm, that it was known and practised from the earliest ages, and even before the invention of physic; whilst the former, according to custom, ascribe the discovery of it to some of their antient monarchs soon after the flood. However, as the *Japanese* are allowed to be by far the most expert and cautious, as well as successful, in the performing of that operation, whether, as they pretend, they were the first inventors of it, or no, it was on that account that we judged this the properest place for giving our readers an account of their method of proceeding in it, as being allowed on all hands as far preferable to that of any other *Indian* nation, as their instruments, which are fabricated by them for that purpose, excel those which are made any-where out of it.

*Practised by
Japan.*

*Causes of the
disease, and
manner of
performing
the operation,
wherein the
skill of it
consists.*

WE cannot indeed say so much in praise of their theory; for which reason we shall not trouble our readers with a display of it, but refer them to the above-quoted Doctor *Kempfer* for a fuller account of it; and only observe in general, that the *Japanese* physicians ascribe the riseness of the disease chiefly to the immoderate use of the *Sak-ki*, a strong wine made of rice, which gradually fills those lower parts with humours of a sour corroding nature; and, when grown to a height, occasions those swellings, convulsions, and exquisite pains, which will hardly be alleviated till let out at those holes which the needle makes for that purpose, and are commonly divided into three rows, three punctures in each row, and the whole disposed in the form of an oblong square.

THE place made choice of for the puncture is commonly at a middle distance between the navel and the pit of the stomach; but often as much nearer to or farther from either, as the operator, after a due scrutiny, thinks most proper; and in this, and the judging rightly how deep the needle must be thrust below the skin, so as to reach the seat of the morbid matter, and giving it a proper vent, consists the main skill of the artist, and the success of the operation is said to depend. Each row hath its particular name, which carries with it a kind of direction with regard to the depth of each puncture, and the distance of the holes from each other; which last seldom exceeds half an inch in grown persons in the perpendicular rows; though something more in those which are made across the body; thus, ::::

* Vid. Hist. Eccles. Japon. vol. i. Epist. Japonic. XAVER, MAFF, VALLADA, ALMEID. & al. VAREN. lib. i. c. 25.

a THE needles which perform the operation are made, as was hinted at first, either of the finest gold or silver, and without the least dross or alloy. They must be exquisitely slender, finely polished, and carry a curious point, and with some degree of hardness, which is given to them by the maker, by tempering, and not by any mixture, in order to facilitate their entrance, and penetrating the skin. But, though the country abounds with expert artists, able to make them in the highest perfection, yet none are allowed to vend them, but such as are licensed by the emperor.

THESE needles are of two sorts with respect to their structure, as well as materials; the one, either of gold or silver indifferently, and about four inches long, very slender, and ending in a sharp point, and have at the other end a small twisted handle, which serves to turn them
b round with the extremity of the middle finger and thumb, in order to sink them into the flesh with greater ease and safety; the other sort is chiefly of silver, and much like the first in length and shape, but exceeding small towards the point, with a short thick handle, channelled for the same end of turning them about, and to prevent their going in too deep; and, for the same reason, some of them are cased in a kind of copper tube, of the bigness of a goose-quill, which serves as a sort of gauge, and lets the point in just so far as the operator hath determined it. The best sort of needles are carefully kept in a case made of bull's horn, lined with some soft
c downy stuff. This case is shaped somewhat like a hammer, having on the striking side a piece of lead, to give it a sufficient weight, and on the outside a compressed round piece of leather, to prevent a recoil, and with this they strike the needle through the thickness of the skin; after which, they keep turning the handle about with the hand till it is sunk to the depth they
d design it, that is, till it is thought to have reached the seat of the morbid virus, which, in grown persons, is seldom less than half, or more than a whole, inch. This done, he draws it out, and compresses the part, in order to force the morbid vapour or spirit out. The directions and nice rules for the performing of this curious operation are many, and require great skill and attention in the operator; and, when duly performed, may be of excellent use, not only
e against the excruciating distemper above-mentioned, but against many other topical ones, which are more commonly cured by the *Indian Moxa*, and other caustics. On the other hand, these last are often tried against the distemper above-mentioned, by applying the caustic to the belly, on each side of the navel, and about the distance of two inches from it, but mostly without any
f success, it being very unlikely that such an application should reach the seat of the distemper; whereas the benefit which hath accrued from the acupuncture, in that one disease, hath encouraged others to apply it indifferently to other parts of the body, where the *Moxa* is used; and, by a due care and precaution not to prick any nerves, tendons, or other considerable blood-vessels, have cured their patients by it, without putting them to the excruciating torture which attends that of the *Moxa*, or other caustics.

THERE is still another method of curing that and other violent disorders in the abdomen and lower belly, which is still in vogue among the *Japanese*, though nothing so effectual as the acupuncture. It is a powder taken inwardly, which is only sold in the village of *Menoki*, in the province of *Oumi*, sealed up with the arms of the inventor, who, by a pious fraud, obtained the
e sole privilege of making and vending it. This person, at first very poor, gave out, that the god *Jakusi* had revealed it to him in a dream, and shewed him the plant growing in a neighbouring mountain, famous among them for many other fabulous stories said to have happened upon or in the neighbourhood of it. The good effects which this remedy produced soon brought it into repute; and the great consumption of it enriched him to such a degree, as to enable him to build a temple to the god above-mentioned; since which, his family increasing
f still in wealth, have added two more, as so many monuments of their gratitude to him. Over-against each of these three grand structures stands a shop, in which the said powder is made and sold. Our author bought a quantity of them; but, upon trial of them, did not find them at all agreeable to his constitution, and of a most distasteful bitter, which he supposes, from some
g which he saw in the shop, to be the *Costus*, which is brought thither by the *Dutch*, in greater quantities than any other exotic, from *Surat*. However, the powder is chiefly in vogue among the common people in the cholicky distempers above-mentioned; whilst the better sort have recourse to the outward operation of acupuncture, which we have been describing †. This, however, doth not hinder the surgeons from using likewise the other method of canterising; and in some cases, as rheumatism or gout, raise a blister on some nerve with a little powder of mugwort, *Moxa*, or other herb, and some cotton set on fire ‡.

THE *Japanese* are much addicted to poetry, music, and painting; the former is said to be very grand as to the style and imagery, loftiness and cadence, but, like that of the *Chinese* formerly described §, is not easily understood or relished by the *Europeans*. The same may
g be said of their music both vocal and instrumental, the best of which of either kind would

† Vid. Kämpfer's Append. to Hist. of Japan, p. 29, & seq. before, vol. iii. p. 600, & seq.

‡ Id. ibid. CARON, VAREN, &c.

§ See

- hardly be tolerable to a nice *European* ear. They are better painters than the *Chinese*, but yet much inferior to the *Europeans*; most of their performances in that kind are either in water-colours on paper, fine leather, &c.; or in their jappanning, and fine porcelain-ware, of which we shall speak more particularly in the sequel. However, though they do not come up to our perfection, yet they are very great admirers of good paintings of all sorts; and the rich will give immense sums for a good piece, and place it among their richest rarities. As for their own paintings, what is most to be admired in them, is the singular beauty of their colours; in many of which they greatly exceed us. They have likewise a much finer way of faceting their lights and shades, and observe a much greater symmetry in the drawing than the *Chinese*, who affect to be quite careless about it.
- Fondness for fine paintings.* *Beautiful colours.* *Arithmetic.* *Printing.* *Gunpowder.* *Writing.* *Excellent method of education.* *Language.*
- THEY are generally very good and quick accountants, and make use either of the same method as the *Chinese*, described in the last chapter, or of some others equivalent, by round pieces of wood or ivory, and a chequer board not unlike our game of draughts, both the pieces and chequers of different colours, answering to our units 10, 100, &c.; but, as to any other arithmetic, we do not find any footsteps of any they have.
- THEY pretend, like the *Chinese*, to have been the inventors of printing from time immemorial; and their method is the same with theirs, upon wooden blocks^b; but they exceed them in the neatness of cutting of them, as well as the goodness of their ink and paper, and the elegance of composition. They likewise lay claim to the invention of gunpowder, tho' they are vastly inferior to them in the use of all sorts of fire-arms, especially of artillery, as well as in the curiousness of their fire-works^c.
- THEIR manner of writing is also much the same as that of the *Chinese*, viz. in columns from top to bottom, and the columns begin at the right, and end at the left hand. Their characters were originally the same; but, since then, the *Japanese* have made some alterations in theirs, but whether by way of improvement, or alteration with their neighbours, we dare not say; though the latter seems most probable, because they affect in almost every thing to be opposite to the *Chinese*, for which we shall assign a substantial reason in the sequel; so that there is now such a difference between their way of writing, that, though the learned among the *Japanese* can still read the *Chinese* characters, yet these cannot theirs (W). They use the same pencils, or small brushes, ink, and paper, with them, and train their youth from their tender years to write and read by an easy and expeditious method (X); inasmuch that most of them are masters of both before they are six or seven years old, and some of them even earlier. They have likewise an excellent way of educating their children at home: the boys and girls under their mother; and the latter, when fit to go to school, by their schoolmasters. They never inflict any corporal punishments on them, nor make use of any severe methods, or even threatenings; but strive to allure them to their learning by praises, little rewards, and other such mild incentives; and, where these fail, which seldom happens, they, especially the mothers, will add tears, and, in the most pathetic terms, complain of their ill fate, in being the parents of such heedless, stupid, or undutiful children, and what a discredit they are to their reputation, as well as to themselves; and, by such motives, seldom fail to work them into a sense of pity or shame. They take no less pains both at home and in their schools, as well as in their universities, to inspire them with the love of glory, contempt of dangers and death, to enure them to hunger, cold, pains, labours, inclemency of the weather, and to bear with patience all the miseries and inconveniencies of life; contrary to the *Chinese*, and most other oriental nations, who are justly branded for breeding up their own in luxury and effeminacy. They are no less careful to excite them to a laudable abhorrence against lying and liars, and all kinds of fraud, and to inspire them with a love of modesty, sincerity, and fidelity^k.
- THEIR language hath some affinity with the *Chinese*; though it appears, from its various dialects, to have been a kind of compound of that and other languages, according to the various nations that first peopled those islands, of which we shall find a more proper place to speak in the sequel: on that account it falls vastly short of that beautiful and peculiar simpli-

^b See before, vol. iii. p. 606, & seq. c. 25. & al. sup. laudat.

^c Ibid. p. 581, & seq. 646, & seq.

^k Vid. VAREN. lib. i.

(W) We are told farther, that though this is the common character, in which most of their learned books are written and printed, yet their doctors, merchants, tradesmen, &c. have some others much more convenient and expeditious in use among them, particularly one which consists of alphabetical characters, though more numerous and variegated than ours; which hath this farther conveniency, that, being written from the right to the left, and then again from the left to the right (like what the old *Greeks* call *Bouirophain*, or plowing with oxen), in writings of any

any breadth, one can neither skip a line, nor fall upon the same again, as is often the case with ours.

(X) This is done by writing something like what we call a copy in a fair hand, and setting a blank sheet of paper over it, which, by its fineness and transparency, discovers all the lines and strokes of the writing under it; so that a child, having been once taught how to handle the pencil, is made by these exercises to understand the power and meaning of each character or letter, at the same time that his hand is guided to form them exactly according to his copy.

a city, and other marks of antiquity, for which the *Chinese* is so justly admired. We may add, that their affectation of differing as much as possible from that haughty and rival nation hath produced still greater alterations in their language; so that, as the former affect to deal mostly in monosyllables, and these in as small a number as possible, the latter have not only enriched theirs with a greater variety of words, but have studied to lengthen them in such manner as should give them a much more agreeable harmony. However, upon the whole, the *Japanese* is not only very regular, polite, elegant, and copious, but abounds with a great variety of synonyma, adapted to the nature of the subject they are upon, whether sublime, familiar, or low; and to the quality, age, and sex, both of the speaker and persons spoken to¹.

THEY are commonly very ingenious at most handicraft trades; and excel even the *Chinese* Trades and manufactures. Silk and other manufactures. in several of their manufactures, particularly in the beauty, goodness, and variety, of silks, cottons, and other stuffs, and in their japan and porcelane works; on which account they are much more esteemed all over the east, as well as in *Europe*. But these are so well known, that we shall need say the less of them here; only, this is remarkable with respect to their japan and porcelane, that the former bears a much finer black and gloss, is harder and more lasting, and the drawing and colours more exact and beautiful; the latter is better burned, and more finely wrought and painted, than those of *China*; so that, *cæteris paribus*, they commonly bear a much higher proportion in price, which is usually about ten to one; and a much greater vent they would have for all their merchandizes, notwithstanding their high price, if the emperors did not restrain their subjects so much from trading into foreign countries, or would give greater encouragement to strangers to trade amongst them; but their natural jealousy of all foreigners, and especially of the *Europeans*, since the sad catastrophe of the Christians there, Trade restrained by the emperor's edicts. hath occasioned such severe laws and penalties to be enacted against many branches of the antient commerce, and such strict search is made, by the officers, after every commodity exported and imported, as hath greatly impaired it. What occasioned those strict prohibitions, was, their venturing to export sundry forbidden commodities, such as scymetars, swords, muskets, and other such weapons, in the tempering and fabricature whereof they are expert beyond all other eastern nations; to say nothing of the great quantities of gold and silver which were likewise clandestinely conveyed away both by the natives and foreigners, in spite of all the edicts to the contrary. But there is another motive which induces those monarchs to prevent, as much as possible, their subjects from going abroad; viz. the vast number of Christians, or, as they style them, Crossmen, that are dispersed in *China*, *Siam*, and other parts of *India*; to say nothing of those that are under the *Spanish* and *Portuguese* government, where they are still more numerous and dangerous, and the fear they are in, lest those subjects, by conversing with them, should bring home a more favourable opinion of them than they had, and inspire their countrymen with it (Y).

FOR

¹ VAREN. lib. i. c. 25. & al. sup. laudat.

(Y) To this we may add another, and perhaps not less inducing motive, viz. their pride, which is not a little raised at the sight of so many foreign nations servilely employed in fetching away all their most valuable commodities, and furnishing them with such a variety of others from all parts of the world, without being at the trouble of stirring from home. Add to this, that their own country affords them such plenty of all necessities and conveniencies of life, that scarce any other under the sun can more easily live without foreign commerce. But it is far otherwise with the *Europeans*, who, knowing the vast gain which this trade would bring to them, have all strove at different times to get it, or at least some part of it, into their hands, tho' the *Dutch* have hitherto been artful enough to prevent it. By what means these last have engrossed the trade to themselves, and on what foot they carry it on, will be seen in part in a following note, and the rest in the close of the *Japan* history: at present, we shall only give an instance or two of the extreme jealousy of the *Japan* monarchs with respect to all the *Europeans* who profess Christianity, and the advantage which the *Dutch*, who deny themselves to be of that number, take from it to disappoint all their efforts to obtain a free trade there.

Some of the *Portuguese* and *Spanish* authors indeed ascribe those ill grounded fears to an artifice of the devil, to prevent the Christian religion ever taking foot again amongst them, should ever such a trade be opened to either of those nations. As for the *Dutch*, they think he is in no fear about them, and therefore inspires those monarchs with a greater confidence in them, being well assured, that they will rather defeat than promote any attempts against his own kingdom. But, without diving too far into those pious reserves, it is but too plain, that

interest alone may be looked upon as a sufficient motive to make them strive to cherish and promote all those needless fears and jealousies in the *Japanese* emperors; if they were not indeed the very first that inspired them with them, in order to engross their sole favour and confidence, and prevent all future reconciliation between them and any other *Europeans*.

However that be, the *Portuguese* of *Ma-kau*, who had for so long time tasted the sweets of the *Japan* trade, that it was said they could pave their city with silver, but were to the last degree impoverished since the prohibition of it, would not be wanting in their endeavours to recover it; and, to that end, sent a grand embassy to *Japan*, Anno 1647, with rich presents, in two galleons; though their first, seven years before, had proved so fatal to them, for want of due caution and proper leave, that they were all put to death, through the suggestions, as they pretend, of the *Dutch* merchants, then upon the spot. This second embassy proved not more successful than the former, with respect to the end for which it was sent; and the only thing they could obtain from that monarch, was, to let them go back with their lives and vessels; and this was granted to them as a singular favour. However, as their vessels were obliged to wait before the port of *Nanguazak* from the 25th of *July* to the 6th of *September*, for an answer from the court, during which, they refused to let their masts, sails, rigging, guns, &c. be carried into the emperor's warehouse, till the answer came, or they were ready to sail away, as is commonly practised with respect to the *Dutch*, it is scarcely to be imagined what precautions the governor of the place took to prevent their landing, or sailing higher up, or lower down, that river; inasmuch that if he had expected all the *European* ships then in *Tsushima* to have

With China
often sus-
pended;

but now open-
ed by the
Tartars.

For these reasons, the *Japanese* are allowed to trade with none but the *Chinese*, *Koreans*, and the country of *Jeddo*, and with the *Dutch*; neither are they allowed to sail into any of the three former, nor to the latter, then settled at *Tay-wan*, the now common emporium of those parts, without the emperor's special licence. In former days indeed, the *Chinese* and *Japanese* monarchs lived in such perfect amity, that they sent frequent embassies to each other, and permitted their subjects not only to trade with, but to settle in each other's country: but that good understanding was frequently interrupted, and their commerce suspended for a time, and sometimes forbidden by both sides under the severest penalties. But, since the *Tartars* have become masters of *China*, those feuds, the occasion of which is variously related by both sides (Z), have so far ceased, that the *Chinese* have now free liberty to trade into *Japan*; and the *Japa-*

rendezvoused there, he could hardly have done more. He ordered a stout stately bridge, flanked with four strong towers, or forts, at equal distances, to be built just above them, over that river, which is near a mile wide there, and batteries of cannon to be placed all along the bridge; all which was done within the space of five or six days: below them he took care to have two squadrons of *Japanese* ships, amounting to near a thousand large and small, and all crowded with sailors, marines, and militia †. His pretence for it was, that he had reason to suspect, from their refusal of giving up all the tackle of their ships, that they had a design of sailing away before the orders of the court arrived, which would have disoblged the emperor in the highest manner; but the real cause of all these great preparations seems rather, that he had been prepossessed with a notion by his *Dutch* friends, that this pretended embassy was to be followed by a number of other ships of more strength and bulk, in order to execute some grand design in favour of Christianity. However, this may serve to shew what an invincible jealousy they have conceived against the professors of it.

Not many years after, the *English East India* company, being then in high favour with the king of *Siam*, who had lately married the emperor of *Japan*'s sister, having obtained a singular recommendation from the former to the latter, were in great hopes, by so powerful an interest, to have come in with the *Dutch* for a share of the *Japan* trade; to which end they likewise sent an embassy, with very considerable presents of the richest and most valuable curiosities, from *Europe*. The only obstacle to their success was, their professing Christianity; but this was easily removed, by assuring the *Japanese* court, that their Christianity was quite opposite to that of the *Spaniards* and *Portuguese*, and was in a great measure the same which was professed by the *Dutch* in their own country; for the truth of which they appealed to them, who had nothing to say against it. Matters were in this hopeful way, when some private intelligence was given to the emperor, that the king of *England* was at that time married to the king of *Portugal*'s sister; which the *English*, upon inquiry, could not deny; upon which an order came immediately from court for their sailing away with the first fair wind; and at the same time they were given to understand, that they must thank the king of *Siam*, who had so kindly recommended them to the *Japanese* monarch, for their being so favoured as to go off with their lives and vessels; but that they must not expect to be treated with the same mildness, if they should ever offer to come a second time on the same errand, let them bring what recommendations they would from that or any other prince. We need not be at a loss to guess who gave that fatal intelligence to the *Japanese*, seeing there were no other *Europeans* there but the *Dutch*: neither ought we to omit taking notice here, that the *English* company had some time before obtained a considerable part of the *Japanese* trade, and had set up a factory at the small island of *Firando*, Anno 1613, under captain *Saris*, who, in an audience he then had of the emperor *Ongoschiosamma*, at that time at *Surunga*, obtained very singular privileges for it; and for himself particularly that of sailing to, and making discoveries in, the land of *Jesso*, or

any other part of his dominions; a favour which the *Portuguese*, when in the highest credit in *Japan*, could never obtain. This trade was, however, lost again in a few years, and the factory ruined; by what means, or for what reasons, is not known. However, these few instances may suffice to shew the height, as well as the true spring, of the *Japanese* jealousy against all the professors of Christianity. We might add, that the *Dutch* themselves, notwithstanding their disclaiming it, are not exempt from their suspicion, which is the reason of that wonderful caution and strictness with which they are suffered to trade and live among them; about which see the next note but one.

(Z) We read of one of these prohibitions made by the *Chinese* emperor, not only published in the most solemn manner throughout the empire, but the memory of which was preserved by erecting a stately stone pillar, on which both that, and the occasion of it, were engraved in golden characters, and ran to this effect: That a great number of *Japanese*, settled in *China*, having joined themselves in one body, and seized upon, and settled themselves in, some territory there, after having committed the most horrid outrages, such as plundering, burning, murders, rapes, &c.; for these reasons, their whole nation was not only judged unworthy of ever settling, or even trading, in the *Chinese* empire; but the subjects of this last were forbidden, under pain of the severest deaths, to sail to *Japan*, or to trade in any-wise with that nation.

On the other hand, upon the conquest of *China* by the *Tartars*, at which time there were vast numbers of *Chinese* settled all over *Japan*, the emperor conceived such an invincible prejudice against that conquered nation, for basely abandoning the interest of their antient monarchs, suffering the invading *Tartars* to overrun the whole country with so much ease, and in so short a time, and at length so tamely submitting themselves to the yoke of those usurpers, that he caused them all to be banished out of his dominions, without permitting them to carry off any of their effects, or even their families with them, if they chanced to have married *Japan* wives; and at the same time forbade all future commerce between his subjects and the *Chinese* nation, under the severest penalties.

Neither was this their only misfortune, to be forced to abandon their habitations, families, and fortunes, and to go seek their bread in other countries; but they were made to undergo numberless affronts, insults, and injuries, from the *Japanese*, who treated them as perfidious rebels against, and betrayers of, their prince and country, and as monsters not fit to live, or deserving either mercy or pity; so that thousands of them perished in their march out of the country, through want, and other miseries, and a much greater number at sea.

Those who had the good fortune to get into new settlements (for into *China* they dared not return, the *Tartars* making every-where the greatest havock there), after having in vain tried the interest of their *Japanese* friends for a mitigation of the edict, the most that could be obtained for them from the court, was, that such as had left wives and families behind might be permitted to come and see them once a year, but never to settle there any more (26). These things the *Tartars*,

† Vid. *Palafox Conq. of China*, cap. xxiv. *Dutch Ambass. & al. sup. citat.*
Palafox Conq. of China, ch. 24.

(26) *Taren. lib. i. c. 25. Vid. &*

a *Japanese*, tho' fewer in proportion, to trade into *China*; the *Japan* emperor chusing rather to have the commerce carried on by the *Chinese*, than to suffer many of his subjects to stir out of his dominions, for the sake of the small advantage that might accrue to them by it. But it was not without great difficulty that that haughty monarch would suffer them to land in his dominions in the new *Tartarian* dress, which their conquerors had obliged them to wear in token of subjection; and it is a question whether he would ever have done it, if the *Tartar* emperor had not threatened him with a powerful invasion ^m.

There is still another considerable obstruction to their commerce, occasioned by the multitudes of pirates and corsairs, which swarm on those seas; and not only carry on a contraband trade between *Japan* and other parts, but seize on all the ships of the fair traders, where-
b ever they can catch them; and are such desperate fellows, that, if they find themselves overpowered at any time, they will blow up or sink their own ships, rather than be taken ⁿ.

The commodities exported thence are rice, silk, cotton, &c. wrought. The fine porce-
lane and japan-work lately mentioned, gold and silver, though not in such large quantities as
formerly, copper wrought and in bars, iron, steel, and other base and some artificial metals; variety of rich furs, mostly brought from the land of *Jetzo*; tea of all sorts, and much finer, and better cured, than that of *China*; some sorts of which have such an excellent flavour and taste, that they sell even above the price of gold, weight for weight. A great variety likewise of medicinal herbs, roots, woods, gums, &c. which, as well as their tea, are sold genuine, and well dried and preserved, and without the least mixture or adulteration, such as are commonly
c practised by the *Chinese* in theirs. To these we may add diamonds, and other precious stones, pearls of exquisite beauty, coral, great quantities and variety of fine sea-shells, on which the *Japanese* used to set no price, till the *Chinese* and *Europeans* taught them how to value them, by the excessive fondness they shewed for them. And, lastly, ambergrise, which they had so little esteem for, that they called it by no better name than *cusurano fu*, or excrements of the whale, as being found in the bowels of that fish, which licks it up along the coasts, where the sea throws it in great quantities.

In exchange for those commodities, the *Hollanders* bring them glasses of all sorts, which
are in great request there, especially looking-glasses; raw and wrought silks, raw hides, hem-
pen and woollen cloths, quicksilver, borax, antimony, spices of all kinds, of which they
d make an immense gain not only in *Japan*, but in all other parts of *India*, where they sell per-
haps as great quantities as they import into *Europe*, and, by them, purchase the merchandizes of one country to sell them in another (A). They likewise import thither some sorts of sugar, musk, camphire, siampan, brasil, and other woods, calembac, elephants teeth, and a great number of small wares, which come from *China*, *Tibet*, *Siam*, &c. china, jin-seng, and other medicinal roots, from *Tartary*. All these commodities are imported or exported custom-free, which is the chief encouragement given to the *Japan* commerce; and with this dreadful clause, that if any contraband goods are found upon those vessels, or the commodities be either adul-
terated or damaged, or any fraud or cheat be discovered in their invoices, &c. they are sure to be punished with the utmost severity, no nation having such severe laws against all such abuses in
e trade, as this of *Japan* ^o. As for the *Dutch*, they are still more strictly watched, and kept
under severer restraint, from the time of their arrival to that of their sailing away. At the
season in which their fleet is expected, the governor of *Nanguazak* sets centinels on the emi-
nences along the coasts, to give notice of every ship that appears; and, upon their approach-
ing, a boat is dispatched with proper officers, and men under them, to each ship, who, com-
ing on board them, take an account of their number, men, cargo, &c. as soon as they come to anchor, and dispatch it immediately to court by an express; so that they are not permitted to stir, or dispose of any thing, till an answer comes from thence; and then are all confined to their factory, or ships, till the time of their sailing away again, except those only who go to pay the usual homage and presents to the emperor at *Jeddo*.

then masters of all *China*, could not but highly resent; and as their edict, and the erecting of the pillar, followed pretty near the time of the *Chinese* being banished out of *Japan*, it is not unlikely that the former was only done in mere revenge and retaliation for the affront offered to them by the latter.

(A) This is not a proper place to inquire how they came to make themselves masters of those islands, and to monopolize all that trade, to which that of bullion is hardly to be compared. We shall have occasion to

speak more fully on that head, when we come to describe those islands: what comes nearest to our present notice is, the prodigious advantage which that single branch brings to them, by which alone they purchase almost every thing they carry into *Japan*; whereas other nations are obliged to purchase them with their goods and treasure; besides the vast exchange which the *Japanese* allow them of gold, and other merchandizes, for that one valuable commodity.

Factory at
Disnia.

Their embassy
to the Japa-
nese emperor.

THEIR factory, confinement there, together with the formalities, and occasion of it, the reader will find described in the margin (B). As to the embassy, it is generally performed with great pomp and ceremony. The first visit, accompanied with some considerable present, is paid to the governor of *Nanguazak*, by whom they are sent with a very numerous escort to the emperor. There they are introduced into the presence-hall upon their knees; and, with their hands joined together after the *Japanese* manner; and upon notice given that he is coming to his throne, which is usually surrounded with a kind of thin gauze curtain, they are obliged to prostrate themselves on their faces; and then one of the lords cries aloud, *The ambassador from Holland*, three times; which done, they retire in the same manner they came in; and, having received some presents from the emperor, are conducted back, under the same escort, to *Nanguazak*. This journey takes them up near, if not quite, three months

(B) The method they took to engross to themselves the whole traffick of this country, after the dreadful persecution of the Christians there, and the severe laws made against their ever setting foot in that empire, was, first, by pretending that they were the only people of *Europe* that were not Christians, for which they were hated by, and often at war with, all the rest; next, by informing the court of the various cabals and efforts of the *Portuguese* and *Spaniards* to regain some footing among them, in order to make themselves masters of so rich a country; and, thirdly, by directing them how to discover any of them that should come thither in disguise, viz. by obliging them to trample upon a cross or crucifix. By these means they so far ingratiated themselves with the *Japanese*, that they were admitted to trade with them upon such advantageous terms, that that sole branch was worth to them an immense sum yearly. It was not long, however, before they abused the confidence which the *Japanese* placed in them, by building a strong fort, instead of a storehouse, for their merchandizes, and bringing into it a considerable quantity of artillery, and warlike ammunition; in doing of which they were detected by the breaking of one of the carriages; upon which all these stores were seized for the emperor's use.

They found means, however, if not to clear themselves from their foul design, at least to palliate it so far, by pretending to mean no more by these preparations than to secure themselves from any insults or injuries that might be offered to them, but more especially from the numerous pirates that infest these seas, and frequently commit horrid depredations on the maritime parts, that they were again permitted to trade with them, but under such severe restrictions, and disadvantageous terms, to what they enjoyed before, as have considerably lessened their gain. They are now obliged to send and give notice of their arrival to the governor of *Nanguazak*, and, with it, an invoice of their men, their names, age, stature, &c. and of all the merchandizes they import; upon which a proper magistrate is dispatched on shipboard, to examine all their men and merchandizes, and see that they agree exactly with the invoice, and then both are suffered to land. They are again mustered up by proper officers; their names called one by one, to which they must answer, and give themselves an account of their age, quality and office. Their stature and complexion are carefully examined, to see that all agree with the first invoice in every respect; and then the invoice being translated into the *Japanese* language, and ratified by the commissary, is ordered to be dispatched immediately to court by a particular express. The next thing he is to do, is to take an exact inventory of, and to cause all the sails, masts, ropes, rudders, guns, arms, ammunition, &c. and all the tackle of the ships, to be conveyed into the emperor's warehouse, there to be kept under lock and seal till the time comes for their departure; at which time they are restored to them, according to the inventory taken of them, of which both parties have an exact duplicate. As soon as the ship's tackle is sent on shore, all the hatches are shut up and sealed by the same officer; nor can they be opened, whatever the crew that are left on board may want, without express leave from the governor, who always sends

a man to take notice of whatever is brought into, or taken out of, each ship, and to seal them down again. The crew of one ship are not permitted to converse with that of the other, neither are they allowed so much as to light a candle; and, if any noise or quarrel happens among them, they are liable to be severely punished. All the time that they ride in the harbour, no *Japanese* is permitted, under the severest penalties, to go on board them, or to trade with the sailors. Those that are allowed to carry them provisions, are forbidden to take any money, or other barter for them, till the permission for trading is arrived from court, and then they deliver up their accounts to the factors, and are paid by them. Every ship then is permitted to send six men on shore, to buy and sell for themselves; and to stay four days either in the island where their factory stands, or in the city, as they think fit; and, when they are returned to their respective ships, six others are allowed to come on shore to trade, for the like space of time; and so on.

As to their factory, it is situated on the point of a rock in a small island, or, as *Thevenot* calls it, a peninsula, named *Disnia*, or *Disima*, which is parted from the city of *Nanguazak* only by a river and a wall, which excludes them from all communication with the town. The island, according to *Thevenot*, is about two miles in compass; and no *Dutchman* dares stir out of it, during the whole time of their stay, which is about nine months in the year, without danger of being cut to pieces by the guards, which are set over them, and to guard the bridge over the river that parts them from the city. They are neither permitted to converse with those guards, nor with any natives, except such as are appointed by the governor as factors, brokers, or in some other such office. They are not so much as suffered to have a lighted candle in their houses, any more than on ship-board; and if the centinels hear any uncommon noise, or perceive any disturbance, among them, they give immediate notice of it by blowing a horn; upon which a party is dispatched by the governor, with an officer at their head, to inquire into the occasion of it, and doth not return till he hath discovered, and either punished, or at least severely threatened, the offenders. To this slavish condition, and to these severe restraints, they are forced to submit, the sailors and merchants near eight months, and the people of the factory the whole year (except the six weeks of open trade, during which great numbers of *Japanese* come into the island, and set up their rich booths, furnished with all manner of merchandizes), without any other diversion but gaming, drinking, and hiring a parcel of handsome wenches for their pleasure; for these are easily procured from the *B. yes*, or *Japanese* lords, who think it no disgrace to their dignity to trade with strangers in that sort of commodity.

Mr. *Daniel James*, accountant-general of *Batavia*, in his report made to the states general, adds to this account of their factory there, that they are obliged to make use of brokers who transact all the business between them and the *Japanese* merchants; and that the governor of *Nanguazak*, who, he believes, engrosses the greatest part of the trade to himself, compels them to deal with him upon what terms he pleases.

a and an half; during which they are not allowed to converse with any of the natives, except to answer such questions as the emperor's officers ask of them, much less to make any inquiry into the state of the empire, whether at war or in peace, whether under the former or a new emperor, &c.

As for the merchandizes brought by the company, the price of them, as well as the quantity and quality of the goods, are specified in the invoice; which, being translated into *Japanese*, is affixed on the gate that leads from the sea-port to their factory. To this last the *Japanese* resort for six weeks, to buy, sell, and barter with them, either for tea, porcelane, *Traffick with Japan, how carried on.* *Exchange of goods.* japan-work, and other commodities we have already mentioned, or for gold, silver, or copper bullion (C); but, the former of these being forbidden, the traffick of it is carried on by b stealth, and with no small risque. As soon as the six weeks are ended, the commerce is shut up for that year; and the *Japanese* are no longer permitted to go into the factory, nor the *Dutch* to go out of their ships, but sail away with the next fair wind, whilst those that belong to the factory remain alone in the island till the monsoon of the next year^p.

SHIPS of any considerable bulk or strength the *Japanese* have not had since the secular monarchs have thought fit to shut up their commerce with foreign nations. Heretofore, indeed, whilst the *Dayros* entertained large fleets, their men of war were mostly large and stout, built chiefly of cedar-wood, and fit for those tempestuous seas, and much after the *Chinese* manner; so were also then their merchant-men, with which they were wont to sail along those coasts, as far as *Tong-king*, *Siam*, *Bengal*, and other parts of *India*; but, since that time, the former *Shipping.* c have been, by order of those monarchs, either laid up or destroyed; and the latter reduced to a lesser number and standard, and built after such a manner as to render them quite unfit to venture far on those seas, or upon any long voyages; so that, excepting those which are used to carry on a contraband trade, and are still very numerous, notwithstanding the severe prohibitions against them, all the rest are only fit to cross over to *China*, *Korea*, or *Jetzo*, or to transport men and goods from one island or province to another of the empire. *Merchant-men, how built.*

THOSE which are the largest now in use are commonly between 80 and 90 feet in length, and between 22 and 25 in breadth, and built as well for rowing as for sailing. They all run tapering from the middle to the stem, and both ends of the keel stand a good way above the water. The body is not built roundish, as our *European* ships are; but that part which is below d the water runs almost in a strait line towards the keel. The stern is broad and flat, with a wide opening in the middle, reaching a good way downwards, and designed to prevent the subjects attempting to sail beyond their boundaries. The deck, which is somewhat raised towards the stern, consists only of deal boards laid loose together, without any fastening, and rises but a little above water when the ship hath its full lading. It is covered with a long cabin about six feet high, and running the length of the vessel, excepting only a small part towards the stern, where the anchors, tackle, &c. are deposited. This cabin juts out about two feet on each side of the ship, with folding windows all round, which may be either opened or shut at pleasure; and is divided into a number of partitions by folding screens, which may be taken off, or put on, in order to make them wider or lesser, for the convenience of the passengers. The far-thermost of them is always reckoned the best, and is appropriated to the noblest guest. The roof of the upper deck is almost flat, and of neat boards, curiously joined, and covered with mats, especially in wet weather. *Their length, &c.* *Decks, cabins, &c.*

THE vessel hath but one mast, and one large sail, both which are taken down when it rains; and the latter, which is large, and made of hemp, is spread out, for the sailors to shelter and lie under it. The anchors are of tough iron, and the ropes of twisted rice-straw, but very strong. Ships of bulk have commonly 30 or 40 hands to row when the wind fails; their benches are towards the stern, and their oars made bending, with a moveable joint in the middle. With these they row much after the manner of the *Chinese*, and other *Indians*, that is, by sinking them perpendicularly into the water, and raising them up again; which is done f with greater ease and advantage than ours, which only skim the surface of the water. The ship's timber and boards are fastened at each end, and in their joints, with hooks and bands of copper, and the stem is adorned with a knot of fringes made of thin, long, and black strings. Whenever any men of quality take their passage in these merchant-vessels, not only *But one mast, and one sail.* *Manner of rowing.*

^p THEVENOT, part iii. cap. 11. KEMPFER, & al.

(C) Both the silver and the copper are first weighed in scales made on purpose, and then put into boxes sealed with the emperor's seal; and the chief magistrate of the city of *Nanguesak* is security for the true weight and value of the metal in every box so sealed. Each box of the former is said to amount to 1000 crowns of *Dutch* money; and those of the latter to 130 pounds weight, and valued at twelve crowns each (27); and the *Dutch* company there make about 600 boxes of silver, and 2000 of copper, of the merchandizes they sell there, one year with another.

(27) *Conf. Dutch Embassy & Thevenot, lib. iii. cap. 11. Kemper, & al.*

Men of quality their cabins are lined and adorned with their coats of arms, and other insignia; but their pike ^a
often passen- of state, or badge of their authority, is planted upon the stern, on one side of the rudder,
gers in them. whilst the other hath a weather-flag waving for the use of the pilot. In smaller ships, as soon
 as one comes to an anchor, the rudder is wound up, and put on shore; so that one may pass
 through the opening of the stern as through a back-door, and walk over the rudder as over a
The materials. bridge to the land. Most of their vessels, both large and small, are built of fir or cedar-wood,
 both which are there in great plenty, and only differ in their make according to the purposes,
 or the chanel or seas, they are designed for.

Boats of plea- THE most beautiful of all are the pleasure-boats of the nobility, which are either made for
ture. rowing, or sailing on rivers, canals, lakes, &c. or to cross some narrow chanel from one island
 to another. These are not only very curiously wrought, carved, and gilt, but adorned with ^b
 several decks and stories, and other embellishments, according to the dignity or fancy of the
 owners. The first or lower deck is flat and low; upon which stands a second, more high and
 lofty, with open windows, and may be divided into more or fewer apartments, at pleasure,
 by means of folding-screens. Over this are built a low kind of turrets, with galleries and or-
 naments more or less lofty, according to the season, and in order to have the fuller prospect,
 when that will permit it. These are commonly adorned with the flags, and other insignia, of
 the possessor; the head and stern are raised likewise a great height above the water, and ad-
 orned with variety of carving, painting, gilding, &c. and the cabins, or apartments within,
 furnished and embellished with every thing that is curious and costly †.

A Mon. THE coin of *Japan* is either of gold, silver, or copper. The most valuable of the three is ^c
Obans, Co- well known to all the curious for its largeness and beauty, and the fineness of the metal, under
pans, their the name of *Obans*, and *Cobans* or *Copans*, the former of which goes for 10, though *Kämpfer*
marks. says it weighs but $9\frac{3}{4}$ of the latter; and this he reckons to be equivalent to $23\frac{1}{2}$ *Dutch* guilders,
 or between 42 and 43 shillings sterling. Others reckon the former to be worth 48 *Taillos*,
 each *Taillo* nearly equivalent to our crown, and the *Cobans* in proportion. Besides these, they
 have half and quarter *Cobans*, and others still smaller, down to the value of a *Taillo*; these,
 as well as some of the largest in silver, are of a beautiful oblong oval, stamped with *Japanese*
 characters expressing the *Dayro's* or emperor's name, that of the mint they were coined at, with
 that of head master of the mint, &c. to which private persons, especially merchants, add
 their own, or their mark, to know such as have passed through their hands. All these are too ^d
Silver coin. well known to the curious to need a farther description. Their silver money is rather a va-
 riety of flatted pieces of silver of different shapes, weight, and figure, than a coin; and, tho'
 some be cast more irregularly, some oblong, others round, &c. yet there was no certain rule
 either for that, or their thickness or weight. These they commonly make up in bundles, or
 rolls, each weighing exactly fifty *Taillos*, for large payments; but they had others of a less
 size and weight for smaller payments, some of them not unlike those little ones current thro'
 most parts of *India*, and the islands adjacent, 1000 of which were equivalent to 26, and others
 only to eight, of our pence; but these were all called in by the emperor *Cubosamma*, on ac-
 count of the various cheats that were committed by those that dealt in them; who, in their
 stead, ordered a copper coin to be stamped, or rather cast, of nearly an equivalent value, which, ^e
Copper. being less liable to fraud, hath been since current through the whole empire.

Architecture. THE *Japanese* architecture is much in the same taste and style as that of the *Chinese* else-
 where described, especially as to their temples, palaces, and other rich buildings; but, in
 private ones, they affect more plainness and neatness than shew. Their temples and monaste-
 ries are very numerous, and magnificent even to profusion; and both poor and rich gladly
 contribute towards the adorning the former with every thing that is grand and sumptuous, and
 the latter with all the delightful conveniencies suitable to a solitary life. But the private houses ^f
Private build- are plain, low, and mostly built of wood, and what they want in height they make up in
ings, and length and depth; the frequent hurricanes and earthquakes, to which they are subject, not
rest. permitting them to have stories one over another; nor to use stone in the building of them,
 except perhaps a platform about a foot above the ground, on which the wooden fabric stands.
Cities subject This makes their cities exceedingly liable to dreadful conflagrations, which reduce the greatest
to fires. part of them to ashes; they having neither engines, nor any method of abating the fury with
 which those dry materials usually burn. Whenever, therefore, such disasters happen, they
 only seek to save themselves, and their most valuable effects, by retiring into some low apart-
 ment built all of stone, and separate from the rest of the building; there being scarcely any
 tradesman or artificer that hath not some such place to flee to at such times, whilst the timber
 fabric serves them for dining-rooms, bed-chambers, work-shops, &c.

§ De his, vid. VAREN. lib. i. c. 27.

|| Id. ibid. CARON & al. supra citat.

* See vol. iii. p. 500.

- a THEIR furniture is commonly plain, but neat. The floor of the house is a pavement covered with mats, and always kept very clean; on these they sit with their legs across under them, like other eastern nations; and, with some small improvement, the common people make them serve for beds to lie upon. The houses of the noblemen are large, and handsomely furnished, yet without any affectation of grandeur or gaudiness. They are commonly divided into two, some into more courts or apartments, in the most remote and retired of which their females live recluse; whilst the others are occupied by the men, and never looked into by the women. Their houses have usually a spacious court, with an ascent before, and a descent behind of three or four steps; and this last leads into the gardens, which are always adorned with variety of flowers, trees, verdure, baths, terraces, and other embellishments, all which yield a delightful view from the very entrance, from which the prospect lies open through all the courts of the edifice. Their apartments are neatly wainscoted with japan-work of various colours, or are hung with curious paintings on paper neatly put together; and disposed some in the manner of landscapes, others of pannels. Both the apartments of the men and of the women are divided into a great variety of rooms; and the partitions between them so contrived, as to be taken down on any public occasion, so that five, six, or more of them, may be easily thrown into one. This is commonly done in their festivals and grand entertainments, in the grandeur and magnificence of which they are affirmed to exceed all other nations, and to which they invite not only their living, but dead relations and friends; the latter of which is done by going in troops to their graves with burning lamps in their hands, calling each of them by their names, and entreating them to favour them with their presence.
- In the furniture of those apartments the grandees rather study neatness than costliness. Their beds, couches, screens, cabinets, tables, &c. are all made of the best materials in their kinds, and with proper embellishments, but without gaudiness or profusion. The chief ornaments of their rooms, next to them, consist in a great variety of porcelane jars, vases, tea equipage, and other vessels, figures, &c. in which they vastly excel the *Chinese*; but what they take the greatest pride in, is, the fine disposition and symmetry of a great number of swords, guns, scymetars, and other armory, with which they embellish the sides of their rooms, from about six or seven feet, quite up to the ceiling. If they appear extravagant in any thing, it is in the richness and beauty of those ceilings, which are commonly of the best cedar finely carved and gilt; and sometimes plated with gold and silver curiously wrought, and intermixed with variety of ornaments. In their retinue they are no less profuse; their being obliged to wait at court six months in the year engages them to make the best and grandest figure they can, if it were only in honour to the emperor, on whom they are bound to wait at all proper occasions: and this it is which makes them vie with one another in the splendour of their dress, coaches, and equipage. Their coaches and litters are exquisitely rich and grand within and without; though they are most of them close, especially those which are for the use of the women. Their retinue is more or less numerous and splendid according to their rank; but there are few of the lords that have less than 50 or 60 men richly clad and armed, some on foot, but most on horseback. As for the petty kings and princes, they are seldom seen without 200 or 300 at least, when they either wait on the emperor, or attend him abroad.
- THE *Japanese* dress is much like that of the *Chinese*, only somewhat more elegant and neat, and most commonly of silk or cotton. It consists of one or more short vests underneath, according to the season; and a long gown over it, which reaches down below the ankles. These are tied in such a manner about them with a silken girdle, that, if they have ever so many one under another, as in extreme cold weather, they are all to be seen from the pit of the stomach upwards. To this upper gown they add a large and loose one over all the rest, when they come into their houses, but put it off when they go abroad. They wear wide breeches like the *Chinese*, which come down below the calf; and their stockings underneath are made in the shape of a short boot, commonly either of silk or cotton, and generally quilted in winter. Their slippers or sandals are much after the *Chinese* manner, and without heels. They wear nothing on their heads either in winter or summer, though they shave themselves close all over, except one lock, which is left hanging on the top by way of ornament; but, to guard themselves from sun or rain, they always carry an umbrella in one hand; and, if rich enough, have them held over their heads by a servant. The poorest have, instead of that, either a fan, or short screen. All the men, down to the lowest rank, wear a dagger hanging on their girdle; and the better sort a large scymetar, or broad sword, hanging on their right side by a silk belt. As for the fashion of their clothes, it is much the same among people of all ranks, the difference consisting only in the richness of the stuffs, and the fineness of the colours. The children only are clothed in all the gaudiness of colours; and the youth, of their flowered silks. The dress of the women is not unlike that of the men, except in its being closer to

* See CARON, KÆMPFER, HAGEN, &c.

their bodies, and that they wear close drawers instead of wide trowsers. They commonly have a black covering over their heads, under which are seen their tresses hanging down in buckles: these, as well as their head-dresses, the women of fashion, the young ones especially, usually adorn either with flowers, feathers, pearls, &c. according to their rank; but are seldom seen abroad, or even at home, by any but those of the family, without a veil. They differ, however, in several of their customs, not only from the *Chinese*, but from most other nations, in making black the proper colour for their festivals, and white for their mourning. In the like manner, instead of rising at the approach of a superior, they set themselves down (D); and, instead of bowing or prostrating when they salute, they stand upright. They chuse to have their teeth and nails of a shining black, and to let the latter grow to an excessive length.

Mourning.

Diet.

Chief food.

THEY are very moderate in their diet, eating but little, if any, flesh, and that only of such beasts as they take in hunting. They are no less sparing of their fish and fowl; and scarcely take any of the latter, except of the wild kind. Several of their sects look upon it as inhuman to kill or eat any thing that hath life; all which flows from their belief of the transmigration of the soul, mentioned in a former article; and some of them carry their scruple to such a height, that they will neither eat milk, butter, cheese, nor eggs, of any kind, nor even wear any sort of clothing that hath belonged to any animal; but these are chiefly to be found among the monkish tribes of both sexes, the laity being less scrupulous about such niceties. However, the chief food of the *Japanese* is rice, pulse, fruits, roots, and herbs; but mostly rice, which they have in great plenty and perfection, and dress in so many different ways, and give to it such variety of tastes, flavour, and colour, that a stranger would hardly know what he eats. In their kitchens, and at their tables, they are surprisngly neat. They sit at the latter cross-legged; and, instead of knives, forks, or spoons, make use of the same sort of small sticks as the *Chinese*; and with such dexterity, that they will take up the smallest grain of rice or millet with them; and, as they never touch their meat with their hands, they have no occasion for napkins or table-cloths. They use variety of dishes among the great, which are commonly served in fine earthen bowls or plates.

Drink.

Strong liquors.

THEY affect the same niceness in drinking, never touching the cup with their lips, but holding it at some small distance, and letting it run down into their mouths without spilling a drop. Their chief liquor at their meals is water made a little warm: but, as soon as they have dined or supped, they drink a pretty large quantity of tea, which they use as their common drink or refreshment whenever they are thirsty, weary, or faint. But they have variety of exhilarating liquors, like the *Chinese*, and other orientals, some made of wheat, others of rice decocted with sugar or honey, and both made more or less strong, as they like best: some spirituous ones they likewise distil from those two grains, especially from the latter. Other liquors they make of fruits, like our cyder and made wines; others they tap from the palm, birch, and other trees, at a proper season, which are rather used as cordials, they being too intoxicating when drank in a larger quantity. We must however observe, that none of those strong liquors are ever tasted by the women, except in some extraordinary cases; nor even by the men, except on public festivals, and grand entertainments.

Festivals.

Plays, &c.

ON these occasions they indulge themselves in great variety of diversions, as music, dancing, masquerading, and plays. These last are most encouraged at court, where the emperors seldom fail to be present at them, and the chief actors are some of his principal ministers and nobility. These plays are neither so elegant nor so regular as ours, either with respect to the diction, plot, scenes, or imagery. They are commonly accompanied with some musical interludes; but neither the composition nor instruments can please an *European* ear; though some of their voices might, if the music were better. These kinds of entertainments are not only usual at court, but in a lower degree, more or less, among most ranks of people, either on public or private solemnities. We have already spoken of the former in another place; and, by the latter, is chiefly meant either their marriages or funerals.

Marriages.

THEIR marriages are commonly celebrated before some of the bonzas, at the foot of some idol. The common people go thither on foot, the bride and women attending being veiled,

^a See before, vol. iii. p. 632, & seq. ^w Vide sup. p. 500. CARON, KÆMPFER, HAGEN, & al. Vide XAVIER. Epist. FROES, & al. VAREN. & al.

(D) This opposition, which some authors have exaggerated to a monstrous degree without any foundation, is so far from proceeding from a contempt of the rest of the world, as they are falsely charged, that they can readily comply with the customs of other nations whenever a fair occasion offers itself; and it is no less plain, that they approach their emperor with bended knees, and prostrate themselves before him, or even be-

fore their own petty kings and lords. But it is their singular contempt of the *Chinese* stiffness, and affected formality, which we have elsewhere described (28), as rather deserving to be laughed at than followed, that hath driven them so near the opposite extreme of ceremonial, that, in revenge, they have represented them as downright antipodes to the rest of mankind in this and most other respects.

(28) See before, vol. iii. p. 635, & seq. Vide & CARON, VAREN. & al.

- a and preceded by some kind of music ; and the richer sort are conveyed thither in close coaches, and a more splendid retinue. The bride and bridegroom have each a lighted flambeau or lamp put into their hands, whilst the bonza performs the ceremony ; after which, the company congratulate them ; and the bride throws all her childish trinkets into the fire, in lieu of which she receives suitable presents from them. The ceremony over, they return with the same solemnity to the bridegroom's house, which is fitted in the best manner, according to his rank ; and the rejoicings usually last seven or eight days, accompanied with sumptuous banquets, music, dancing, plays, and other diversions, suitable to their circumstances ; and, among other promoters of mirth, the strong liquors lately mentioned are seldom forgotten or spared. The feast once concluded, the new wife is consigned to her own apartment, whence she hardly ever *Married woman's recluse life.*
- b stirs, except once a year to the funeral rites of her family, of which we shall speak by-and-by ; nor is she permitted to see any men, except perhaps some very near relation, and that as seldom as can be. From that time all the comfort of her life must result from the good œconomy she can establish in her family, and among those servants she hath under her ; and the preserving of her husband's favour by all endearing methods, till her pregnancy and fertility intitles her to new delights and employments (E).

THE wives here, as well as in *China* and other parts of the east, bring no portion with them, but are rather bought by the husband of her parents or relations ; only with this difference, that, during the marriage solemnity, these send him some considerable presents, which he as generously returns back, with some addition and compliments. The courtship, marriage-
c contract, and other previous ceremonies, are carried on by third hands, mostly by some relations of both sides ; so that the bridegroom most commonly sees his bride for the first time upon her being brought to his house from the place of the nuptial ceremony ; for, in the temple where it is performed, she is covered with a veil which reaches from the head to the feet.

THE men allow themselves a plurality of wives, of which the first is reckoned the principal, and the rest, who are subordinate to her, are only wives of the second rank. Besides these, the richer sort commonly keep a number of concubines ; and the man hath this advantage over them all, that, if they do not please him, he can divorce any of the former, and turn away the latter, without being obliged to give any reason for either. He can even put them to a
d more or less severe death, if they give him any cause of jealousy by being seen barely to converse with another man, or suffering any of them to come into her apartment ; but, if caught in the act of infidelity, the husband never fails of revenging it in the most severe manner* : and, though these examples can rarely happen where the women are so strictly confined, and narrowly watched, yet that guilty passion hath often found means to break through all those restraints, and to leap over or break through the strongest fences, to bring the lover to the object beloved ; the reader may see two dreadful instances of this in the margin (F).

To

* XAVER. Epist. FROES, & al. Vid. & VAREN. lib. i. c. 12.

(E) The *Japanese* have a common proverb, that a woman hath no habitation of her own from her cradle to her coffin ; whilst a daughter, she is with her parents ; when a wife, with her husband ; and, when a widow, with her children. However, if she hath not the misfortune to be married to a brutish husband, she stands a good chance for a pretty comfortable life, especially if above the lower rank ; for not only the grandees and princes, but the rich merchants and tradesmen, take care to make her apartments as agreeable to her as they can, not only in the furniture and conveniencies, but likewise in the quality and number of servants under her, and in the fine gardens, walks, groves, baths, canals, fishponds, and other delightful scenes, because they seldom visit those apartments but with a view of unbending their minds, and indulging themselves in all the pleasures that the place can yield to them ; so that she hath no other care but to receive him with a modest and dutiful cheerfulness, and to see that servants, and children if she have any, and every thing about her, behave and appear before him in such a manner as to give him delight ; that the discourse, pleasures, and diversions, she proposes, be suitable to his temper ; and by all means to avoid talking or hinting a word about his own affairs, for that would be esteemed an unpardonable infringement on his prerogative, and send him away in a passion, if not perhaps give him such a disgust as to forsake her apartment, and go and solace him-

self in that of his concubines ; for they are never allowed to inquire into any thing without the limits of their own apartment, or to know more of his affairs, or of what passes in the world, than he is pleased to communicate to them.

When the *Japanese* are asked the reason for their thus immuring their women, and keeping them up with such strictness, they gravely answer, that necessity compelled them to it ; for that, in former times, they used to allow them greater liberty ; but that it was attended with such dreadful and tragical consequences, of which they say their history is full, that they were forced to restrain it, and confine them, in the manner they do, to more suitable and useful employments (29) : for, besides the care of their children and family, they commonly spend part of their time in some profitable work with their women, such as painting, flourishing, japanning, breeding of silkworms, making of clothes, and other pretty ornaments, for their children, and adding some new thing to the furniture of their apartment, or making such alteration in their house and gardens as they best know will be most agreeable to their husbands ; so that, considering they are brought up with no other notion of happiness than this, their lives are nothing so uncomfortable as we are apt to suppose them, provided their husbands be but commonly humane, and they can behave so as not to give them any cause of jealousy.

(F) The first is of a prince or lord of the small island

the sepul-
chres.

To conclude this article, the *Japanese* generally marry within their own rank, the princes^a with princeesses, nobles with noble women, and so downwards, but with respect only to the wives of the first class; the others they may take out of any inferior rank, yet not without the emperor's leave. They commonly get a number of young virgins of birth and education, and above the age of fourteen, to attend their wives, and be a kind of companions to them. These go usually dressed with the utmost gaiety and splendor; and, when they have continued some years with them, are given in marriage to some of their lord's favourites, with the addition of a certain sum of money, and other presents, according as they have behaved. Others perhaps chuse to continue in their place whilst they live; and it would be accounted the greatest disgrace either to the grandee, or to the ladies themselves, to be taken from that rank, to become his concubines. The wives of the mercantile and handicraft rank^b are not without such companions, their husbands hiring or buying them from their parents for that purpose, to what number they can best afford. Their maintenance in clothes, &c. is made the more easy to him, as they are generally employed in some profitable work; but the chief design of having them, is, rather to prevent, as much as possible, all intrigues with the wife; for it would end as fearfully with the maids as with the mistress, if any such discovery were made against her, of which they had not apprised the husband, as may be seen by the first instance we have given in the last note^c.

THE other private festival of the *Japanese* is that which they celebrate in honour of their dead relations, and is performed with at least as much ceremony and grandeur as their weddings; only in these, feasting and carousing become much more necessary ingredients, if it were but to dispel the gloominess which naturally attends those funerals and annual obsequies; which is not a little heightened by the mournful songs, verses, speeches, and gestures, of the bonzas who attend at them: for these jugglers have an excellent way of chousing the people out of their money, by describing the state of the deceased in the most moving colours, in order to procure them all sorts of assistance from the living, such as money, victuals, cloathing, &c. which they make themselves the conveyers of to them, according to their several wants, even to bills of exchange, to procure them their freedom from some dreadful servitude to an ill-natured demon, or to procure them better habitations, or to dispel those evil spirits which obstruct their passage thither; all which the credulous laity take for granted, and contribute all in their power, or even beyond it, to their supposed relief. On these anniversary occasions all the kindred of^d the deceased, rich and poor, without distinction, assemble at the house of the head of the family, whence, after an entertainment accompanied with songs and music, they proceed with great ceremony to the sepulchres of their dead, which are commonly a good way out of their cities or towns, some carrying the streamers and insignia of their ancestors, and the rest torches in their hands. There they find another banquet prepared for them, to which they invite all the deceased by name: funeral orations in prose and verse are made in praise of them; songs and music conclude the ceremony; and the remains of the banquet, as well as the presents which are brought thither for the dead, are left behind for the bonzas to dispose of to them, as they see fit. The feast lasts usually several days and nights; during which, the richer part of the kindred take care to supply it with fresh provisions, and strong liquors; and, at the end of it, they all return, in the same order, to the town, beating upon their^e

^y XAVER. Epist. FROES, & al. vid. & VAREN. lib. i. c. 12.

of *Evardo*, who having discovered that one of his wives had admitted a young nobleman to some private conference, from which he concluded she had or intended to permit him greater favours, condemned her, and two young ladies her confidants, to be shut up in a large vessel full of sharp spikes with the points inward, and to be rolled up and down in it till they were dead; and ordered her young paramour to rip up his own bowels.

The next is still more dreadful, and the only one of that kind which happened within the time of *Caron's* being in that country. A person of middle rank, suspecting his wife of carrying on an intrigue of the same kind, pretended to his family, that he was going upon some long journey; but returned so suddenly and unexpected, that he caught the man with her in her apartment, and immediately killed him. The wife he tied to a ladder by the head and feet, and left her in that condition all that night. On the morrow he invited all her friends to a splendid entertainment; and, upon their asking why she did not make her appearance

among the rest of his family? he told them, that she was taken up with preparing the remainder of the banquet; and, when it was almost over, went to the dead body of the paramour, cut off his genitals, and, having stuck them all over with flowers, clapped them in a covered vessel; then, untying his wife, bade her dress herself in her best apparel, and sent her with it to the guests, with these words, *Go, and try whether they will plead for thee, and prevail upon me to forgive thy fault, for the sake of what is here inclosed.* The wife, half-dead with fear and shame, did as he bade her; and, with wild haggard looks, entered the room, and laid the covered vessel on the table, not knowing what was in it, and fell on her knees trembling before them; but, upon uncovering it, and finding what it contained, she swooned away; and the husband, drawing out his scymetar, cut off her head; which soon put an end to the entertainment, and sent every guest home in the utmost surprise at what they had seen (30).

(30) *Caron, ubi sup. Varen, lib. i. cap. 12 & 13.*

a drums, brass pans, and other instruments, before every temple and nobleman's house they pass by ^z.

THEIR funerals are performed with much the same pomp, but with this addition, that when a prince or great man dies, there are commonly about ten, twenty, or more youths of his household, and such as were his greatest favourites, who put themselves to a voluntary death, at the place where the body is buried or burned (G). It is the common opinion of the *Japanese*, that the more pomp and grandeur is observed at their funerals, of which those voluntary victims are reckoned a considerable part, the better they shall fare in the next life. On which account, the survivors spare no cost to have them performed in the grandest manner. Among the rich, the corpse, splendidly dressed, is carried in a sumptuous litter, made of cedar, and exquisitely wrought; the women that accompany it are also carried in litters, coaches, or sedans, but closely covered, and the men relations walk on foot, not in that ragged and dirty guise which the *Chinese* do [†], but dressed in the richest manner, in white cotton stuffs, preceded and followed by multitudes of bonzas, some carrying the streamers and banners of the deceased, others singing or playing on instruments, and by all the domestics and acquaintance of the family, all likewise clad in white.

WHEN they are come to the place where the funeral pile is erected, which is generally very magnificent, and composed of the most odoriferous woods, gums, spices, oils, and other aromatic ingredients, the litter on which the corpse is laid is conveyed, by twenty or thirty bonzas, to the top of the pile. Then follow the funeral oration, songs, and other ceremonies. After which, the fire is set to several parts of the pile at once; and, whilst that burns, the relations and friends throw their presents into it, such as cloaths, arms, victuals, money, sweet herbs, flowers, and other things, which, they suppose, will be of use to him in the other world. The young men above-mentioned, after a solemn, yet seemingly joyful, farewell to all their acquaintance there present, rip up their own bowels, with their own hands, and then are flung into the pile, in order to follow their lord into the other world. We omit a great many other superstitious ceremonies performed by the bonzas, to drive away the evil spirits, and invite good ones to conduct the deceased into his new abode, and others by the rest of the company, to wish him a happy one; of the sons, daughters, wives, and concubines, to express their sorrow, as having nothing worth notice, but their odd singularity and excess. The ceremony concludes with a sumptuous banquet, of all sorts of dainties (flesh, fish, and fowl, excepted), and variety of liquors, music, &c.; and whilst the company are enjoying themselves at it, the sons, or nearest relations, who never taste of it, are employed in casting up and paying the expences of the funeral, of the sacrifices, pile, gums, lamps, music, &c. to the bonzas, who are the general undertakers there, and commonly add some further sums for the use of the deceased. The feast being ended, the same bonzas carry off the remainder, together with what other things they find unconsumed in the pile, that had been flung into it by the relations. On the next day, the sons come and gather up the bones and ashes of the deceased, and put them in some rich urn, and deposit them among those of their ancestors, either in the same place, or in some new-built one; and these are commonly sumptuous edifices, adorned with niches and altars, on which these urns are set up, together with the insignia and pedigree of each person, their characters, actions, &c. written or engraven on large tables, with all proper ornaments ^e.

THOSE of the middle or lower rank commonly bury their dead without any other burning than that of some odoriferous woods, gums, &c. and rear some kind of mound, with trees or sweet plants, over their graves, or perhaps some sort of altar tomb. They are obliged to invite the bonzas and relations, and to pay the former, and feast the latter, in the best manner their circumstances will allow, and commonly bury some valuable things with the corpse, for the use of the deceased. These sepulchres are also to be at some distance from the town; and those who can afford it usually surround them with some inclosure, planted with variety of trees, which make a handsome shew ^f.

THE *Japanese* are commonly healthy, strong, and long-lived, their moderate living and industry keep them from a great variety of distempers common in other parts of *India*. They have one, however, which is of a dreadful and nauseous nature, and against which they have

^f Ibid. ibid.

(G) It is, it seems, a common thing with these young gentlemen to engage themselves, by an oath, long before, that, upon their lord's death, they will attend him into the other world. This is done with a design to ingratiate themselves to them, and with a kind of solemnity, in which they own their great and undeserved

favours, for which they cannot make them any better returns, than by sacrificing thus their lives to their manes. The speech ended, is confirmed by drinking a cup of wine; which last ceremony is esteemed so binding, that no *Japanese* dares break an oath that is ratified by it (31).

as yet found no remedy, viz. the leprosy, which, in some parts especially, is so rife, that it gradually corrodes and rots their flesh and limbs. Those unhappy persons who are infected with it, are immediately secluded from the rest, and obliged to live at a great distance from towns and inhabited places, and, if of the poorer rank, are confined to little low huts, without either assistance or even pity, till death gives them a happy release out of their extreme misery^c. Next to that we may reckon the small pox, diarrhæa, and bloody-flux, which are frequent and rife, though not of a dangerous nature; and yet the two latter prove sometimes so excruciating, that some of the *Japanese* will chuse to put an end to them, by some speedy death, rather than endure the exquisite pain they give them. They are likewise afflicted with a variety of other cholicky distempers, one of which, called by them spasms, or convulsions of the bowels, and is, in some measure, endemial to that country, is attended with strange symptoms, not unlike those of the hysteric affection, and often puts the patient in fear of being suffocated; the whole region, from the groin up to the false ribs, and higher, being strongly convulsed; and, after it hath tormented the patient for a long time, will end in tumors and swellings in several parts of the body, particularly in the testicles of the men, and the pudenda in the women, and turn to abscesses and pustules, attended with the falling of the hair^d. These, and several other kinds of cholicks, particularly that which they cure by pricking with needles^e, are so rife among them, that scarcely one in ten grown persons is wholly free from them. As for gout, stone, or gravel, they are hardly known among them^f.

WE have, by this time, gone through the most remarkable particulars relating to the *Japanese* empire in general. But, before we come to speak of the origin, antiquity, and history, of that nation, it will be necessary to give our readers some account of the division and topography of it, which, for clearness and method's sake, we have reserved for this place, on account of the connection they have with some material changes that have happened in the government, and of which we have been obliged to speak in a former section^g, for the better understanding of what we have to say on that subject we are now going upon.

SECTION III.

Of the Division and Topography of Japan.

Japan, *how divided.*

THIS large empire consists of three principal islands; viz. 1. *Nippon*, or *Hippon*, by far the largest of all, from which the whole hath its name; 2. *Ximo*, the next in bigness; and, 3. *Xicoco*, the smallest of the three, and situate between the two former. Around these lie a great number of others, of different sizes; the most considerable of which shall be taken notice of in their order; and as for the rest, concerning which we know little, except their names and situation, we shall refer our readers to the map adjoining. To these we may add the large continent of *Jedzo*, on the north side of the great island of *Nippon*, the southern parts of which, at least, are subject to the emperor of *Japan*, as well as all the islands above-mentioned. To these we might add a vast number of other small ones, called by the *Japanese* the *Liquejo*, or *Rinku* isles, extending themselves southward, in a kind of string, from that of *Ximo* almost to that of *Formosa*, the greatest part of which are inhabited, and under the *Japanese* government, if not originally peopled by them^a.

The Liquejo, and other islands.

THE whole empire was antiently divided into seven principal regions or territories, and these into sixty-two provinces, which were again subdivided into 604 districts (A); for a farther account of which, we must refer our readers to the relation which Mr. *Kæmpfer* hath given of them^b.

The island of Nippon described.

THE island of *Nippon* lies about 30 leagues east of *Korea*, last described*, and extends itself from 33° 10' to 41° of north latitude, and from 132½° to 147½° east longitude; and is di-

^b KÆMPFER, ubi supra.

* Vol.

(A) The names of those chief regions, and the provinces belonging to each, are as follow; 1. *Tokaido*, which contains fifteen provinces; 2. *Toussando*, or mountainous eastern region, eight; 3. *Koku-rokudo*, or northern region, seven; 4. *Saniado*, or cold mountainous region, eight; 5. *Sanjado*, or warm southern mountainous region, eight; 6. *Saikaido*, or western coast, nine; 7. *Nankaido*, or southern coast, six.

The five first are situate in the great island of *Nippon*,

the other two are in those of *Ximo* and *Xicoco*, and some others adjacent, and of a smaller size. To these we may add those of *Tsuzima* and *Iki*, with a group of little ones about them, which the *Japanese* took from the *Koreans*, in their war with them. These are under a tributary prince, and are neither large nor fertile, and are only famed for a vast multitude of temples and idols, and the vast concourse of people to them, from all the adjacent countries (1).

(1) *Kæmpfer, Caron, Varen. & al.*

- a divided on the north side from the land of *Jedzo*, above-mentioned, by the double freights of *Sangaar* and *Jedzo*, erroneously called, in some of our maps, the freights of *Kamtschatta*, between which lies the island of *Matsuma* (B), and a number of smaller ones on each side, all of them belonging to the north-eastern province of *Oxu*. Its form is very irregular, and not unlike that of a jaw-bone, and with such a vast number of windings, as makes it impossible to ascertain its true circumference; only it is computed to be about 1500 miles at least. Its length from east to west, is about 660 miles; and breadth, from north to south, where broadest, about 400, but, in other parts, only between 150 and 200 miles. It was divided, in the times of the *dairo*'s, into fifty-three or fifty-five kingdoms, all tributary to them; but, since the *cubo*'s deprived these monarchs of their secular power, those divisions have not only undergone very great alterations, but have been since in a state of constant fluctuation; it being a constant policy of these last-named monarchs to suffer their tributary kings to war against, and encroach upon, each other, to depose some, if grown too powerful and obnoxious, and divide their territories between two or three of their favourites, and erect each into kingdoms or principalities; at other times, to join two or more into one, as suits best their interest or humour, but always with a view of preventing their growing too strong, and shaking off their allegiance; which hath been often the case heretofore under the *dairo*'s, and is sometimes still under the *cubo*'s, as will be seen in the sequel.

*How divided
antiently.*

*Kingdoms in a
constant fluctuation.*

THESE kingdoms are again divided into provinces, and the provinces into so many districts; both which are likewise in a constant fluctuation, and at one time belonging to one prince, by-and-by to another, and still from the same cause, and with the same views: for which reason, we shall not say more of them here, but confine ourselves to one remarkable one, which takes in almost the whole island, and is styled by the *Japanese* books, the *Gokinai*, or *Goka-kokf*, or five provinces of the imperial revenue: because the whole revenue of them is appropriated to the maintenance of the emperor and his court.

1. THE first is called *Jamasia jro*, extends about 100 *Japanese* miles, from north to south; hath a fertile soil, several considerable cities and towns, and is divided into eight districts.
 2. *Jamatto*, alias *Vos-tu*, of about the same extent and fertility, and divided into fifteen districts; it had formerly many considerable cities; great part of which are gone since into decay.
 3. *Kafsu*, or *Kavatsfu*, of about two days journey extent; tolerable good soil, and fifteen districts.
 4. *Idsumo*, alias *Sensju*, a large, though not very fertile, tract, extending 100 *Japanese*, or 250 of our miles, from south to west; it is bounded by the sea on one side, and a ridge of mountains on the other; it hath plenty of fish, corn, and pulse, and is divided into three districts.
 5. *Sit-zu*, *Siz-ju*, alias *Yfino-kuni*, extending itself about two days and a half journey in length, from south to north, the former situate on a considerable bay, and in a warm climate, abounding with variety of pulse, fish, and salt, and reckoned a plentiful country; it is divided into thirteen districts.
- Which, with those of the other four provinces, amount, in all, to fifty-four, each of which hath its capital, besides a number of other considerable towns, which we have no room to mention. The four principal cities in this island are, *Meaco*, *Jeddo*, *Osacca*, *Gurunga*, and *Saccai*.
- MEACO, or rather *Miaco*, so styled on account of its being the antient metropolis of the whole empire, and the residence of the antient and present *dairo*'s (C), is situate near the middle of the southern coast, in a fertile and spacious plain, surrounded, at some distance, by delightful high mountains, which yield a most noble prospect to the town, and country about

ties.*

*Meaco de-
scribed.*

* KÆMPFER, ubi supra, c. 5.

(B) This last particular is not yet fully agreed on, there being still some authors who think that the north part of it joint to the land of *Jedzo*, and therefore chuse to call it a peninsula, concerning which the reader may consult M. *De Lisle*'s elaborate letter on that subject. But if we may rely on the late discoveries of the *Dutch*, *Russian*, and the maps they, as well as the *Japanese*, have given us of it, but especially the latter, who carry on so considerable a trade with that country, there is no room to doubt but they are really divided from each other, by the large freights above-mentioned. The *Japanese* maps above-mentioned were in the hands of the late Sir *Hans Sloane*; and a copy of it may be seen in the *English* version which Mr. *Scheuchzer* hath given us of *Kæmpfer*'s history of *Japan* (2).

(C) The word *Miaco* signifies a city, and is here emphatically used, to express its metropolitan dignity, as the *Romans* styled their capital *urbs* (3). But though it

hath still continued to be the residence of the *dairo*'s, who keep a magnificent court in it, yet it is considerably decayed from its pristine grandeur and largeness, not only by the removal of so great a part of its glory, viz. all the tributary kings, princes, nobles, and grandees, to the other capital of *Jeddo*, where the emperor resides, but much more so by the devastations it suffered during the civil wars, when the greatest part was reduced to ashes by the *cubo*'s troops (4). It was indeed rebuilt not long after, but in nothing so grand and splendid a manner. The greatest part of its palaces were left to go to decay, and others, which had been destroyed by the wars, were never rebuilt; because the owners of them were obliged to reside at the court of *Jeddo*. We are likewise told, that some parts of the city were never rebuilt. So that from 180,000 houses, which it contained, when in its full splendor, it had, in the time of the missionaries being there, not above 100,000 (5).

(2) See Introduction to that version, and plate 8. at the end of tome i.

it, they being, for the most part, covered with stately temples, monasteries, burying places, and pleasure-houses, all of them surrounded and adorned with gardens, orchards, and the greatest variety of verdure, watered by a vast number of rivulets, which come down from those mountains. Three rivers, the largest and deepest of which springs from the great lake *Omi*, or *Oitz*, and the other two from the adjacent hills above-mentioned, after having crossed over some part, unite their waves in the centre of the city, where a noble bridge, about 200 paces long, is built over them. Thence bending their stream towards the south-west, after a course of about twenty or thirty miles, fall into the large bay of *Osacca*. Hence the city is divided into upper and lower, the former of which was by far the noblest, on account of the vast concourse of the quality, who then resided in it, as well as of the daïro's palace and court, which is situate on the north side of it, and divided from it by a high wall and broad ditch, and of which we shall give a sketch by-and-by. On the western side of the city stands a noble stout castle, all of square stones, and formerly built for the security of the daïro's, during the civil wars. It still serves as a palace for the cubo's, or emperors, when they pay their visits of homage to the daïro, and all the rest of the time is kept by a small garrison, with a commander at their head. It is about 600 yards in length, and surrounded with two ditches, the one dry, the other full, and abounding with fish, particularly carp of a delicious kind. In the center of the castle stands a tower, of a considerable height, which commands the whole city, and parts adjacent.

This twofold city appears, by the stately high walls of it, to have been about twenty miles in length, and nine or ten in breadth, when in its full splendor; besides its large suburbs, and the imperial palace, which is a city by itself, and divided from the rest. The streets are generally narrow, but long and strait, and so full of inhabitants, that, upon a public account being taken of them, according to their several sects, the whole amount was found to be near 500,000, exclusive of the several thousands that compose the daïro's court, and a much greater number of bonzas, nuns, and other recluses, who, on another list taken of the city, were found to amount to above 52,000, and the rest of the inhabitants to 477,557, in all 529,726, exclusive still of the daïro's court, and of an infinite multitude of strangers, who flock to it from all parts of the empire ^d.

We have already mentioned its university, and stately colleges, both within and without the walls, and at small distances from it ^e. The number of its temples is much greater, and some of them even magnificent beyond conception ^f. The number of those that belong to the *Budso* sect or religion, which is that which was introduced hither from *China*, and other parts, amounts to no less than 3893, small and great ones included, and those belonging to the *Sintos*, or antient religion, to 2127; princely palaces are reckoned 157; streets 18,8; bridges 87; and houses 138,979 ^g. This, as well as the estimate of the men, women, children, ecclesiastics, &c. is taken once a year, and the sects each belong to, with great exactness; a sample of one of which may be seen in the margin (D). As to the private houses, they are but low, not above two stories high, mostly built of wood covered over with clay and lime, and but slightly thatched. Most of them have either a reservoir, or some troughs full of water, with proper vessels and conveyances for extinguishing fire, to which they are very liable. In other respects, they commonly are neat, plain, and convenient, and scarcely one of them, either in the city or suburbs, that doth not deal in some commodity or other. So that, notwithstanding its great decay, on the accounts above-mentioned, it is still the grand storehouse of all the manufactures

^d KÆMPFER. lib. ii. cap. 5. Vide & VAREN. lib. i. cap. 22. CARON, FROES, & al. Vide & EPIST. XAVER. &c.

(D) *Kæmpfer* hath given us one or two of those *Ara-*
tames numberings, which were taken during his abode
among them. That which follows was in the twelfth
year of the reign of the emperor *Kinsén*, anno 1675;
and is as follows:

A List of all the Religions and Sects professed at Miaco;
together with the number of Persons belonging to each.

	Persons.
1. Of the su or sect of <i>Ten-dai</i> — —	1,009
2. ————— of <i>Singon</i> — —	18,095
3. ————— of <i>Sen</i> — —	16,058
4. ————— of <i>Riffin</i> — —	9,998
5. ————— of <i>Fosso</i> — —	5,513
6. ————— of <i>Fokke</i> — —	97,728
7. ————— of <i>Siwo-dofui</i> — —	159,113
8. ————— of <i>Dai-nembudsu</i> — —	289
9. ————— of <i>Nis-fonguan</i> — —	54,586
10. ————— of <i>Fogas-fonguan</i> — —	99,016

	Persons.
11. Of the su or sect of <i>Bukkoo</i> — —	8,576
12. ————— of <i>Takkada</i> — —	7,576
13. ————— of the <i>Jammabos</i> , or mountain priests — —	6,073
14. ————— of the <i>Siukke</i> , or priests of the <i>Budso</i> religion — —	37,093

So that the whole amount of the sectaries came to 477,557 persons, and the priests, or ecclesiastics, to 52,169 (6), besides above 9000 *Argi*, or secular persons attending the temples. All that needs be added, to explain what is said above, is, that the twelve first are sects which take their names from some of their gods, or principal temples; and the *Jammabos* and *Siukke* are regular monks, living recluse from the world, the former in monasteries built on mountains and retired places, the latter in plains, cities, towns, &c. So that the two latter orders are different from the bonzas, or priests belonging to the twelve first sects.

(6) *Kæmpfer*. lib. v. cap. 9.

a of *Japan*, and of all foreign and home merchandizes, and the principal seat of their commerce. Here they refine their metals, and coin their money, print books, and carry on all sorts of manu-^{Variety of}factures; here they weave and dye the finest and richest silks and stuffs, make and sell the most ^{wares.} beautiful japan-work, porcelane, musical instruments, paintings, carvings, all sorts of gold, silver, and copper work, in the greatest perfection, but more particularly steel of the finest temper, and curious workmanship; all sorts of gowns, and other dresses, ready-made for both sexes, and an infinite variety of toys and trinkets; in a word, there is hardly any kind of commodity but is to be sold there, nor any sort of ingenious workmanship which they will not imitate. In this, as in most other trading cities of the east, every trade hath its own particular street, ward, or quarter; if they be too numerous, every one under their proper officers and ^{Government.} inspectors, who are all accountable to the grand minister or president of justice, as he is there styled, and is a person of the greatest authority in the whole empire, next to that of the emperor. He always resides in the city, where he has a magnificent palace in one of the finest parts of it; all the grandees, governors, and other officers, who have posts in any of the imperial cities, revenue, &c. are under his inspection and authority; and he alone is the judge and moderator of all the differences that happen between them.

c Of all the sumptuous edifices of this metropolis, the daïro's palace is by far the largest and ^{Dairo's palace.} most magnificent, and is a kind of city by itself, being situated on an eminence on the north side of the town, and surrounded with stately walls flanked with high towers, and with a double, some say a treble, ditch, of a considerable breadth and depth. The inside consists of twelve or thirteen streets, or double rows of buildings, in which his court reside. In the center are his own, and his wives and childrens apartments, all built and furnished in the grandest manner, and embellished with gardens, orchards, summer-houses, terraces, and every thing that is curious and rich in art and nature, exclusive of what travellers are apt to add of their own^a. In the center of the whole, as well as in that of the castle, is a stately tower, with seven or eight stories, much like those of the *Chinese*, formerly described¹, except that they do not decline so gradually in their thickness, but are broader, and more squat, in proportion to their height.

MEACO is situate in the province of *Jamatto*, in latitude $45^{\circ} 38'$, or, according to others, 46° ; east longitude, $138^{\circ} 15'$, and about 276 miles west from *Jeddo*^k.

d JEDDO, *Jedo*, or *Yeddo*, the other metropolis of *Japan*, since the cubo's, or crown gene-^{Jeddo de-}erals, gained the supreme civil power, is situate in a fine spacious plain in the province of *Mu-*^{scribed.} *sasi*, and at the end of a large bay of its own name, famed for its vast plenty of fish, particularly its excellent lobsters, crabs, and other shell fish; but so shallow, as to admit of no ship of any bulk to come up to the city, they being forced to unlade about a league or two below it. It is, in all other respects, the most considerable city in all *Japan*, not only for its ^{Vast commerce.} richness and vast commerce, but for its largeness and populousness, on account of the many princes, lords, and grandees, who, with their numerous trains and families, swell up the court, city, and suburbs, to an incredible number. The city, towards the bay, forms the figure of a crescent; and is affirmed by the *Japanese* to be seven of their miles long, five broad, and ^{Compass.} twenty in circumference (E). It is not inclosed with any walls; but, instead of them, is, like most other cities in *Japan*, intersected with many large canals and broad ditches, with high ^{Canals and} ramparts on both sides, and planted with rows of trees, not so much for defence or ornament, as to prevent the spreading of those dreadful conflagrations to which it is frequently subjected; only, towards the castle, those ramparts are observed to be shut up by strong gates, where they probably serve likewise for a defence against any assault from the city.

f JEDDO stands on the large river *Tonkag*, which runs from the west, through it, into the ^{River.} haven, and there discharges itself by five different streams, each of which hath a bridge over it; whilst a considerable branch of it surrounds the castle, and fills its ditches with water. The ^{Principal} most considerable of the bridges above-mentioned is called *Nipponbas*, or the bridge of *Ja-*^{bridge.} *pan*; and from it all the roads, and distances of places, in the empire, are taken. It is about 250 yards long, and is laid over that branch of the river which surrounds the castle, and thence opens on both sides into a fine long street fifty paces broad, which crosses the whole city, and is always thronged with people of all sorts, and with some of the highest quality of both sexes, richly dressed, and carried through it in their chairs and palankins.

^a See it described in our English Atlases, Dutch Ambassy, VARENIUS, and others.
vol. iii. p. 641.

^k KÆMPF. VAREN. RICCI, & al.

¹ See before,

(E) The *Japan* miles are above double the length of our common ones, four of theirs making about ten of ours; so that *Jeddo* must be about 17 of these in length, and 12 in breadth; but, if our author meant *Dutch* leagues by them (7), it will be still much larger, viz.

above 20 of our miles in length, 15 in breadth, and almost 60 in compass. Most authors, who have copied after him, do indeed take him in this latter sense; but we rather think that he speaks of those of *Japan*.

(7) Conf. Kæmpf. Caron, Varen. Ricci, & al. sup. citat.

- Populousness.* The city is populous, and the number of the natives, foreigners, and ecclesiastics, is almost a
Court. incredible; neither can it be well otherwise, considering the multitudes of nobles and officers of all ranks and posts that compose the imperial court, but more especially the families of all the princes of the empire, who reside there almost all the year round, with numerous retinues suitable to their quality; whilst those princes themselves are permitted to absent themselves from court only six months in the year, to go and take care of their hereditary dominions; after which they are obliged to return, and spend the remainder of the year in that capital. *Jeddo* is not near so regularly built as *Meaco*, and other cities of *Japan*, because it swelled up by degrees to its present bulk since the cubo's began to make it their chief residence. However, as
Newly built. great part of it hath been rebuilt since the various conflagrations it hath undergone, and the other devastations made in it by earthquakes, mentioned in a former section, the streets are become more regular, wide, and handsome; the far greater part of them cutting each other at right angles, and the palaces, temples, monasteries, and other public buildings, being since built more answerably to them, as well as in a more beautiful style. We shall say the less here of the latter edifices, which, though they are very numerous, are built so like those of *Meaco*,
Palace. and others elsewhere described¹, that it were needless to enlarge upon them. As to the palaces, which must be supposed to be here in great number, they are separated from other houses by large court-yards and stately gates, a flight of steps elegantly wrought and varnished leading to the porch. The building is divided into a great variety of apartments all on a floor, and not above one story high, and some of them very magnificent, but without any of those high and stately towers which adorn their castles and palaces in their own hereditary dominions. One singularity they all have, that the principal gate is always kept shut, and is styled the emperor's gate; the reason of which is, that, as soon as a new palace is built, that monarch is invited thither to a grand entertainment; and, upon his going away, that gate is, out of respect to him, kept shut for ever after.
Private houses. As to the private houses, they are chiefly low and mean without, though neat and convenient within: they are mostly built of fir-wood, covered over with thin clay, adorned and divided in the inside with paper screens and lattice windows; the floors covered with clean mats, and the roofs with wood shavings; so that the whole fabric is hardly any thing but a composition of combustibles, which makes them liable to be set on fire, and obliges the people to keep vessels always full of water on the top of their roofs, and a good number of firemen, d
Imperial palace. with their prongs, hooks, &c. to patrolle all the night. THE most stately edifice of all, not only in this city, but in the whole empire, is the imperial palace, especially as it hath been rebuilt since that terrible fire mentioned elsewhere, which had reduced it to ashes. It stands pretty near the center of the town; and is of an irregular figure, rather round than square or oblong, and computed about five *Japan* miles, or between
Threefold inclosure. eleven and twelve of ours. It consists of three inclosures, or, as our author chuses to call them, forecastles; the third and innermost of which is that where the emperor resides, and hath some large and noble gardens behind, embellished with every thing that is beautiful, and suitable to such a place; the other two, which are strong, and well fortified, but smaller on the sides, and have likewise their gardens and other ornaments, are occupied by the rest of
First inclosure. his court, and the princes and lords that compose it; and these may be properly enough styled three castles, as they are divided from each other, and surrounded each by their particular inclosure of walls and ditches. THE first or outward inclosure, which takes in such a large piece of ground as to inclose the second, and part of the third, or imperial palace, consists of a great number of streets, in which stand the palaces of the princes of the empire, large and finely built, with spacious courts shut up by stout and heavy gates, within which they live with their families and retinues; and the whole group of streets or fabrics is inclosed within its own walls, ditches, drawbridges, &c.
Second inclosure. the gates of which are kept by a constant guard. The second takes up a much smaller spot of ground than the first, and fronts the third, in which the emperor resides, and is likewise
Third, or imperial residence. separate from the other two by walls, ditches, &c. The guard of this second is much stronger, f
Ramparts. and more numerous than that of the first, and in it reside the greatest princes, ministers, and other officers, of the empire, who are all obliged to pay a more immediate attendance on the emperor. THE third inclosure, or imperial palace, properly so called, stands higher than the other two, and on the top of an eminence made flat on purpose for this large fabric to be built on it. It is inclosed with a thick and strong wall of free-stone, flanked with salient angles, not unlike our
Ramparts. *European* bastions. The wall is supported on the inside by a rampart of earth against it; and the top of it is adorned with several long buildings, high square towers, and other guard rooms. The structures, on that side where the emperor resides, are of uncommon strength, being all g
built of free-stone of extraordinary size, barely laid on one another without mortar or cement,

¹ See before, p. 9. & seq.

- a or braces of iron, to join them together (F). Within the center of this inclosure a square white tower rises aloft above all the other edifices, which is many stories high, adorned with roofs, doors, windows, galleries, and other embellishments, particularly bended roofs projecting out from the building, with dragons, dolphins, and other creatures, at the angles and top, which make the whole fabric at a distance look altogether magnificent, and amazing to the beholder; especially as every palace within the whole imperial cincture is covered with gold, or perhaps rather with tiles finely gilt, which makes the vast fabric look like a mountain of that bright metal. On the side of this stupendous building is a second castle, but vastly smaller, and built more like a citadel, and without any ornaments on the outside. It hath but one gate, and one passage, and that is from the emperor's palace over a high and long bridge. A third castle stands by the side of this second, and much of the same structure with it, and both are strongly inclosed with lofty walls surrounded with deep ditches, filled by the great river. In these two last castles are kept the princes and princesses of the imperial family, the emperor's queens, or wives of the second rank, and all his concubines, all in their separate rich apartments; the empress, and wives of the first rank, being the only ones who are admitted to have apartments within the grand or imperial inclosure. Behind this imperial cincture rises still a delightful gradual eminence, adorned with magnificent gardens, orchards, terraces, and other embellishments, according to the country fashion, the top of which is terminated by a pleasant wood, planted with plane-trees of two different but curious kinds, whose starry leaves, variegated with yellow, red, and green, yield a most delightful prospect, especially as they are said to be in their full beauty, the one in the spring, and the other in autumn.
- b The palace itself hath but one story, but exceeding lofty. It takes in a large space of ground, and hath several long galleries, and stately rooms, which, upon putting on or taking off the screens which make the partitions between them, may be enlarged, or brought into a smaller compass, at pleasure; and are so contrived, as to receive at all times a sufficient quantity of light. The principal apartments are distinguished by their proper names, such as *the hall of attendance*, where all are to be admitted to audience either of the emperor, or his prime minister, and are to wait till they be introduced; *the council-chamber*, where his chief counsellors meet; *the hall of 1000 mats*, where the emperor receives the homage of all his tributary and vassal princes, and the ambassadors of foreign ones; the several *balls of audience*, the apartments for the emperor, his family, household, &c. Thus much may suffice for a taste of the outside of this magnificent structure, on which we may the more safely depend, as each part above described lies open to every eye, and may be easily viewed from the adjacent hills and towers. But with relation to the inside of it, the structure, symmetry, ornaments, furniture, &c. of those numerous and sumptuous apartments, we cannot have the same reliance on the descriptions which we meet with in most authors, because the entrance into them is forbidden not only to all strangers, except to ambassadors and persons in public character, but likewise to the natives, unless they be the emperor's ministers, and those who belong to his court, and both of them admitted only to such apartments as are appropriated to their character or office, as the former to the great hall of audience, and the latter to the council-chamber, and other offices belonging to their respective posts. For that reason, we shall only venture to give our readers a short sketch in the margin (G), of what those writers have said of it, that carries the face of probability; for though we need not doubt but the inside of that immense and sumptuous fa-

Second and

third castle

for the wives, &c.

Noble gardens, and wood behind.

Stately apartments.

Rich furniture, &c. within.

(F) This is done to prevent those strong walls from receiving any considerable damage from the frequent shocks and earthquakes to which this island, and especially that part of it, is subject (8).

(G) The hall of audience, where ambassadors are admitted to the emperor's presence, is a most lofty and sumptuous edifice, the roof of which is either plated or covered with gold and silver of exquisite workmanship. It is supported by stately pillars of a considerable height, beautifully carved and painted. The throne is one of the most magnificent that can be imagined, being all of massy gold, according to some, or plated over with it in the most elegant manner, and enriched with pearls, diamonds, and other precious stones, of surprising bigness, and inestimable value. The tapestry is of the finest silk, wrought by the most curious hands, and adorned with pearls, gold, and silver, and other costly embellishments.

The areas between each court, some of which are large enough to marshal a small army, are adorned with

statues, high towers, galleries, fountains, water-works, and other decorations; and that which is before the third, or innermost court, hath a noble spacious theatre, on which plays are frequently acted for the diversion of the court. Two strong rooms are said to be within that cincture, in which the immense treasures of those monarchs are kept; and these are secured from fire and thieves by stout iron bars and gates, and roofs of solid copper.

The apartments belonging to the princes of the blood, to the tributary princes, nobles, &c. are no less magnificent in their furniture and ornaments, as well as structure, each striving to outdo the rest in the richness and grandeur of them, as well as in the splendour of their retinue; it being looked upon as a mark of high respect to their monarch, to make the noblest appearance they can, according to their rank; so that, to conclude this description, the whole imperial inclosure, with all its various courts, palaces, and apartments, looks like a city within itself, inhabited only by kings, princes, and persons of the highest rank (9).

merce.

Port.
Castle.

Great plenty.

bric is in every degree answerable to the outside, and to the pomp and grandeur of those mon-
archs; yet, as to the particulars of it, we cannot but think that they have given us a great part
of them upon very slender authority; however, we may conclude, that they are in general
very grand, and of exquisite materials and workmanship, according to the architecture of the
country. The cielings, pillars, stairs, galleries, &c. are of cedar, camphire, or of jeferi-
wood, the grain whereof naturally forms itself into flowers, birds, landſchapes, and other
curious figures, which are therefore covered with a thin transparent varnish; whilst others are
finely carved, painted, and gilt, or overlaid with some of their finest japan. This palace was
not built till the reign of *Tayko*, who took upon him the supreme civil authority about the
year 1600. It hath since then been the residence of his successors, the fifth of whom from the
emperor *Jejas*, head of the then reigning family, was on the throne when our author was there,
who reckons them in the following order: 1. *Jejas*, who, after his death, was called *Gonjin*;
2. *Teytokwin*, the son of *Jejas*; 3. *Daijojin*, the son of *Teytokwin*; 4. *Genojin*, the son of
Daijojin; and, 5. *Tsinajos*, the brother's son of *Genojin*, who was then reigning. And thus
much may serve to give an idea of the imperial palace^m.

JEDDO hath two chief governors, who take the command of the town by turns, each for
the space of one year; next to them are the burgomasters, as our author styles them, who
have the government of some particular quarters of the city; and under these are the *Otto-
nas*, who preside over every street, or over a certain number of tradesmen, handicraftsmen, &c.
In other respects their government is much the same with that of most other large cities in the
empire, already describedⁿ. This city and suburbs are a nursery of artists and handicrafts-
men, of tradesmen and merchants, of all sorts. It hath a variety of noble markets; and the
streets abound with open shops, richly furnished with all sorts of merchandizes, and other
wares; but these, as well as most kinds of provisions, are sold much dearer than in any other
city in the empire, partly on account of the prodigious concourse of people that flock thither
from all parts, and the vast number of idle monks and courtiers with which it swarms; and
partly also from the difficulty of importing most commodities and necessities thither. It
stands in 35° 48' of north latitude, and 144° 10' of east longitude.

OSACCA is the most considerable city, next to the two capitals above described, for riches,
grandeur, and populousness, being most conveniently situated near the mouth of the river *Je-
dogawa*, about fifteen leagues below *Meaco*, in the province of *Setzu*, and is esteemed one of
the most considerable sea-ports in the whole empire. It is between four and five miles in
length, and three in breadth; and so populous, that it is able to raise an army of 80,000
men barely from among its inhabitants. It swarms with tradesmen and artificers of all kinds;
hath a vast number of rich merchants settled in it, besides a great many nobility and gentry,
who live in one of the most pleasant parts of it on the other side of the river above-men-
tioned, and is consequently filled with the finest houses and small palaces. The *Jedogawa*,
which is here about as broad as our *Thames* at *London* bridge, hath its spring from the lake
Oomi, or *Oits*, lately described; and, running through the towns of *Utsi* and *Jeddo*, takes its
name from the latter; and, whilst one of its branches parts itself from it, and runs directly
into the sea, the other continues its course towards *Osacca*, where it receives two other rivers,
viz. the *Firano* and *Jamata*; and, continuing its course through that city, falls into the bay of
its name, which is capacious and deep enough to receive the largest vessels.

THE port is defended by a stout square castle on the north-east end, which was built by the
emperor *Taycho*, so as to command both the city and river. The walls are strong and lofty,
flanked with bastions and towers, supported by spurs of a considerable thickness, and are about
an hour's walk in compass. It hath always a numerous garrison, and is commanded by two
officers in greatest favour with the court, one of whom hath the care of the castle, in which
are kept part of the emperor's treasure and stores, and the other presides over the garrison;
but neither of them hath any thing to do with the government of the city, which hath its own
governors and officers in the same form as at *Jeddo*, and is kept under the same strict regula-
tions as the other chief cities of the empire (11). *Osacca* abounds with all sorts of provisions,

^m See before, p. 12.

ⁿ See before, p. 35.

(H) We cannot omit one singularity observed in this city, which is, that the watchmen, instead of telling the hours of the night, by striking the number of them with two wooden cylinders one against the other, as they do in other places, they make use here of a different instrument for every third individual hour. Thus the first hour after sun-set is signified by the beating of a drum: the second, by striking of a *gungum*, or loud brass instrument like a basson; the third, by striking on a bell

with a wooden stick. At the first hour after midnight they again beat the drum; on the second, the *gungum*; and, on the third, the bell. This third hour after midnight, or sixth hour of the night, always ends with the rising, as the first of all began with the setting [of the sun, which is in this respect the same all over the empire; so that the hours of the night are either longer or shorter, according to the season of the year (10).

(10) *Kämpfer, ubi supra. lib. v. c. 9.*

merchan-

a merchandizes and diversions. The neighbouring country affords a sort of earth of a beautiful orange colour, with which they cover their houses, and great quantities of it are conveyed into other parts of the empire for the same purpose. *Osacca* is situate in north latitude $35^{\circ} 50'$, according to *Kämpfer*, but, according to others, in $35^{\circ} 15'$, and east longitude $137^{\circ} 20'$.

b SURUNGA, *Suruga*, *Syruga*, capital of the province of its name, is another maritime town with the imperial title, though it hath neither walls nor gates. What it is chiefly famed for, is, its having been once the residence of some of the cubos, or emperors, as it was when captain *Saris* was there, who says it was then as large as *London* and *Southwark*, and that the *English* were allowed to trade there; the suburbs being chiefly then inhabited by merchants and tradelmen, whilst the quality and gentry resided for the most part in the city; and, though it hath been since left to go to decay, yet it still preserves some of its antient privileges, particularly that of coining gold and silver money, especially *Cobans* and *Itzebos*, the former worth about five, and the latter two, ducats. It hath a stout castle on the north-east side, of a square form, and well fenced with walls of free stone, and ditches; and had a high stately tower, which, we are told, was since consumed by fire down to the ground (1). In this castle usually resided the emperor's eldest son, or, according to others, his eldest brother, who were governors of that and of the city; on which account the latter is by some authors styled *Sumpu*, and by others *Futzju*, both which are the names of the former. The last prince that seems to have lived in it was called *Tejitonani*, a natural son of the emperor *Gonju*, who resided here, and had made him lord of it, and of the province; but as he rebelled afterwards against his brother then on the throne, *Anno* 1620, the castle was turned into his prison, where he put an end to a long confinement by ripping up his own bowels. From that time we are told the best of the inhabitants abandoned the place, which hath gone ever since into decay.²

Surunga.

Its mint.

Castle, the residence of princes of the blood.

Turned into a prison.

City gone to decay.

SURUGA stands in latitude $35^{\circ} 22'$, and east longitude $142^{\circ} 30'$.

d THE last city we shall take notice of in this island is *Saccai*, which some have taken to be the part of *Osacca* over the river we have lately mentioned, though it stands about four or five leagues distant from it. It is not only famed on account of its inhabitants, who boast themselves to be sprung from antient kings and princes of *Japan*; but also of its advantageous situation, having the sea on the west side, and the other three being surrounded with a wide deep ditch, except only that part which lies near the foot of the mountain, and which is defended by a high and stout stone wall. It hath moreover a very strong castle on the top of the mountain, which hath no less than fifteen bastions, and is accessible only by a steep and narrow way, and commands both the city and parts adjacent. On the declivity of the mountain, on one side of the castle, is a second fortress, whose walls are fifty feet high, and of hard stone; and on the other side of it stands a magnificent palace flanked with two lofty towers, the highest of which is nine stories high, and both ending in a point; this is the usual residence of the tributary princes of that territory.

Stone castles.

Towers.

e OVER-AGAINST the harbour is the island called *Pie-nes*, famed not only for the beauty of its walks, to which crowds of people resort from the city, but for a deity worshipped there, to which vast numbers of persons devote themselves; and, in the greatest formality, go from his temple to the sea-side, where they enter into a boat fitted for the purpose; and then, launching into the deep, throw themselves overboard, and sink to the bottom through the weight of stones that are tied about them. The temple of that deity, which is called *Canon*, is very large and lofty, and so are many others in the city itself; one in particular, which is dedicated to the gods of other countries, and is thought one of the finest in the whole empire. Both the city and parts adjacent are full of such, and other fine edifices, mostly built with stone, which the neighbouring mountains afford in great plenty; and adorned with lofty towers, which yield a noble prospect from the sea and land¹. And thus much may suffice for the great island of *Nippon*.

Small island of Pie-nes.

A piece of horrid superstition.

f II. THE next in bigness and dignity is that of *Ximo* (K), lying on the west end of that of *Nippon*, and divided from it only by a narrow chanel or streight, especially on the north-west

Island of Ximo described.

¹ KÄMPFER, ubi supra.² Dutch Ambass. CORNEL. Diët. sub voc.

(1) This accident is said to have been caused by a quantity of pigeons dung being set on fire on the upper story of the tower, by the heat of the great number of those birds that were hatching their young there. This, it seems, was so common among them, and so many fires occasioned by it, that they have since taken all proper precautions to prevent their coming into their garrets, and upper parts of their towers, to lay their eggs (11).

(K) This island is also called *Bungo* from its capital; *Saykoku*, or western country, from its situation; and *Kiu-*

su, or the land of nine, because it is divided into so many provinces; viz. 1. *Bungo*; 2. *Fiungo*; 3. *Vosuma*; 4. *Saxuma*; 5. *Fingo*; 6. *Tsi-cungo*; 7. *Figen*; 8. *Chicugen*; and, 9. *Buigen*; every one of which take their names from their capitals, and were formerly so many petty kingdoms; but are now under a certain number of tributary princes, whose territories have been in a constant fluctuation, and circumscribed within no certain limits but the will of the emperors, as hath been formerly observed (12).

(11) Dutch Ambassy, *Kämpfer*, lib. v. c. 11.

(12) See before, p. 12.

side. It reaches from $31^{\circ} 45'$ to almost 35° of north latitude, and from 131° to $135^{\circ} 20'$ of east longitude, and is computed at about 290 miles in circuit, exclusive of its creeks and bays. Its soil, air, climate, product, &c. are pretty much the same with what we have said of *Nippon*; and it hath a considerable number of cities, besides the nine capitals mentioned in the last note, of which we know little else but their names and situation; the most considerable of which are *Bungo*, *Cangoxima*, and *Nangbazak*.

Chief cities.

Bungo.

BUNGO, or, as some write it, *Boengo* or *Boungo*, though said to be the capital of the whole island, is scarcely mentioned in the church history of *Japan*, notwithstanding the surprising progress which Christianity is affirmed to have made in it; which it could hardly have omitted, had any king, or tributary prince, then resided in it; whilst it mentions others of less note: it is therefore most likely, that the royal residence was then removed on some account to the city of *Funiu*, of which it takes notice; and which *Caron*, and other *Dutch* writers, tell us was a city and castle, and the seat of a prince of this island.

Cangoxima.

CANGOXIMA, *Cangoxuma*, alias *Cogoxima*, situate on the most southern verge of the isle, is the very first sea-port the *Portuguese* landed at; and which they chose since to make the center of their commerce, on account of its advantageous situation, and commodious harbour. There are indeed a great number of rocks at some distance from it, which render the

Castle.

entrance into it very dangerous; and upon one of them stands a noble stout castle built by *Ongoschio*, the grandfather of the emperor *Gongon*, or *Gongin*, with a view of securing the city, which is the key of the kingdom of *Saxuma*, and of the whole island, and to defend the road thither.

Light-house.

It is built in the sea, and of large square stones, and is of a quadrangular form, with bastions not unlike our tetragons. At the entrance of the haven stands a square light-house, built on a very high rock, which is seen at above 20 miles distance off, at sea; and hath four or five balls on the top, one less than the other; and at the foot of the rock is a convenient road for ships to ride in.

Quay.

Guard.

THE quay is guarded by a stout stone dyke, which runs quite into the sea, and hath a stone rampart, breast-high, covered with copper. At one end of it are built two large wings, in each of which 500 men keep constant watch night and day, not only to guard the port, but to be a kind of check on the kings of *Saxuma*, who had often revolted, to avoid paying tribute to the emperor.

River.

The town is watered by a river which descends from the adjacent mountains into a canal made on purpose, in the heart of it, from which it falls with great rapidity into the sea.

Public buildings.

On the south side of the river is a stately building, or custom-house, where passengers pay a second custom, besides that which is paid at the first castle. Here are other large and sumptuous magazines belonging to the emperor, some of which are proof against fire. As for temples, they are as numerous and stately as in other great cities, one of which is in the center of it, and is said to be full of riches, carried thither by one of the kings of *Saxuma*, who was forced to retire thither, and to turn monk, to save his life, for having refused to pay the usual tribute.

CANGOXIMA stands in north latitude $31^{\circ} 42'$, and east longitude $133^{\circ} 16'$.

Nangbazak.

THE last place of note in this island is *Nangbazak*, alias *Nangazaki*, situate on the western coast of it, in the province of *Figen*, or *Fisen*, and famed for being the only place in the whole *Japanese* empire where the *Dutch* are permitted to come and traffick. We have on another occasion given a sufficient account of their factory there, and the hard conditions on which they are allowed that liberty; but reserved the further description of the town and harbour to this place.

Bay and harbour described.

It stands at the farther end of a deep commodious bay of its name, and extends itself in the form of a crescent, which, together with the mountains which surround it on the land side, and which, tho' not considerably high and steep, are always verdant, and yield a most delightful prospect as you approach it; especially as it is heightened by the many stately temples, and other sumptuous buildings, which are built on the top of those hills, and terminate the view in a most surprising manner. The mouth of the harbour, which lies north of the town, is narrow, and but few fathom deep, but grows wider and deeper as you sail farther in, till you come to a rocky island (L), which hath a good riding about it, and at which all the ships bound from this port to *Batavia* come to anchor, to watch a proper time to sail out of the harbour; which might be done, with a good wind, in less than two hours, were it not for the many shoals, banks, rocks, &c. which make it both difficult and dangerous; and to avoid

^a Dutch Ambass. CORNEL. Dist. sub voc. Ambass. & al.

^b See before, p. 24, & (B).

^c KÄMPFER, Dutch

(L) To this island, or rock, which the *Japanese* call *Takajuma*, and *Taka boko*, or *bamboe mountain*, the *Dutch* have given the name of *Papenberg*, on account of the many popish priests that are said to have been thrown from the top of it into the sea in the time of the persecution. And near this island, where the harbour pro-

perly begins, is another small one, called by the *Japanese* *The burning of the hostile ships*, because it was there that the ship sent by the *Portuguese* from *Meaco* was ordered to be burnt, with all its goods on board, Anno 1642 (3); ever since that time this island hath been made use of for executions of criminals, &c.

a which, the ships must steer westward, leaving the continent to the right, and so, sailing between some small islands, get out to the main. About half a mile from the town are two imperial guards opposite to each other, and inclosed with palisades, and consisting each of 700 ^{men} ^{strong} ^{guards}, including those that are upon duty. There are also several forts, built like bastions along the harbour, but have no cannon. The haven is long and deep, and seldom without 50 or 60 merchant-men. The sea rises from four and a half to six or seven fathoms; and the bottom is a stiff clay, which affords a firm anchorage.

b THE city lies at the farther end of the harbour, where it spreads itself widest; but hath neither walls, castles, nor any other defence. The streets are neither strait nor wide, but commonly run up, and end in some temple. Three rivers run through the town, which descend from the neighbouring hills, the middlemost of which is the largest, and crosses it from east to west; the misfortune is, that they have scarcely water enough during a great part of the year to water their rice fields and gardens; though they swell to such a degree, after some long rains, as to sweep away whole houses with their fierce current. The town is divided into inner and outward, the former of which contains twenty-six, and the latter sixty-one, streets; in none of which strangers are suffered to dwell, but have particular suburbs allotted to them, where they are narrowly watched by the emperor's officers.

c THE chief public buildings in and about it are, 1. Five *Janagura's*, or large houses built of timber, not far from the shore, where are kept three imperial *Jonks*, or men of war, with all their tackle, ready to be launched at command. 2. The powder magazine, built on the shore, over-against the town; but, to prevent all accidents, a large vault hath been dug in the neighbouring hill, where the gunpowder is kept. 3. The palaces of the two residing governors, which take up a large spot of ground, and stand somewhat higher than the streets; they are strong, regular, and well guarded. 4. The palaces of about twenty other princes and grandees of the first and second rank, some of whom constantly reside there, and others only on particular occasions. 5. About sixty-two temples within and without the city, most of them stately, built on eminences, and serve not only to devotion, but also for recreation; they being surrounded with fine shady walks, and fragrant verdure, to which the people resort for the sake of the fresh air, and fine vistas they afford. 6. Their bridges, in number thirty-five, twenty of them of stone, and the rest of timber, all plain and strong. 7. The *Gakni*, or hell, called also *Roja*, or the cage or common prison, standing near the middle of the town, and consisting of about 100 small and large huts or cages, separate from each other, wherein prisoners are kept, and accommodated according to their rank, or the nature of their crimes; other apartments, where they are either put to the torture, or privately executed; places for them to wash themselves in, and such-like (M). 8. The brothel, which consists of two handsome streets, shut up at each end by strong gates, where women are kept to be hired either by natives or foreigners; and, being bought young, and brought up under the old ones who are past service, are taught to dance, sing, play on instruments, write, work, &c.

d THE houses are low and mean, though well filled with inhabitants, who are mostly merchants, tradesmen, shopkeepers, handicraftsmen, brewers, &c. The manufactures of the town are not near so good here as they are in other parts of the empire, except what is wrought in gold and silver, and designed for exportation, which, we are told, is made with a much better taste, and more curious workmanship. Most merchandizes here sell dearer than in other parts, and so do their victuals, tho' they are plentifully supplied with all kinds; the country about furnishing them with fruits, pulse, and herbage; the sea with fish; and the neighbouring countries with cattle, grain, and other provisions; but their water, though clear and well-tasted, is apt here, as well as in most other parts of the empire, to cause very violent and painful colics, such as we have elsewhere described.

(M) These prisons, in most maritime towns, besides criminals of state, have commonly between 60 and 100 prisoners, mostly either smugglers or Christians. The former of these two they execute as soon as convicted; and so they do the latter, if strangers; but, if natives, they only confine them in those huts above-mentioned, where they are kept at hard labour and short commons, and where they prefer a miserable life, rather than renounce that little Christianity they have been taught, for the greatest part of them know little more than the bare names of our Redeemer and his mother, and of a few saints, to whom they present such prayers as they have been taught; and it is, it seems, in mere pity to their ignorance that the government hath abated so much of the severity of the laws against them.

They are permitted, or rather obliged, however, to come out of their huts at least six times in a year, to wash and air themselves in apartments built for that purpose, to prevent sickness and infection; and may be released whenever they abjure their religion, but there are few such examples to be heard of. These prisons are kept very strictly, and as neat and healthy as possible; most of the prisoners, except great criminals, are allowed to air themselves for some time every day, and the rest of the time are confined to their separate cells or apartments. The women have one square court of the same nature built for them, with which no men have any communication, except through a grate, and with permission first obtained from the governor (14).

(14) *Kaiffo*, lib. iv. c. 1. *vid.* *See* *Caron, Haron, &c.*

NANGHAZAKI stands in latitude $32^{\circ} 36'$, and east longitude $131^{\circ} 22'$. And thus much a shall suffice for the island of *Ximo* ^w.

West of Xi-
coko.

III. THE last considerable island, though much less than that of *Ximo* last described, is called *Xicoko* (N), and lies between that on the west, and the great one of *Nippon* on the east. It is almost of a square figure, and extends itself from $33^{\circ} 20'$ to $33^{\circ} 50'$ north latitude, and from $134^{\circ} 24'$ to $136^{\circ} 40'$. Its circumference, exclusive of its bays and creeks, is computed to be about 190 miles, and its climate, product, &c. much the same with the great one at *Nippon*. It hath several commodious ports round it, and many towns in the island, besides the capitals of the four provinces mentioned in the last note, but of which we know little except their situation and names, and so need not dwell longer upon them ^x.

Other small
islands.

NEXT to the three large ones above-mentioned, there is a prodigious number and variety ^b of smaller ones, some inhabited, and others desert, all around the coasts of *Japan*; but very few of which are described, or indeed more than barely mentioned, by travellers, and the maps of that country; whilst others, we are told in general, are large enough to maintain a governor, and to yield not only corn, fruits, cattle, rice, sugar, and other provisions, but likewise to produce variety of metals, minerals, precious stones, quarries of marble, and other such valuable commodities.

Firando.
Dutch fac-
tory.

THE only one worth our notice is that of *Firando*, which the *Dutch* at first pitched upon to be their principal settlement. It is situate near the western coasts of the island of *Ximo*, extending itself from about $33^{\circ} 20'$ to almost 34 degrees of north latitude, and lying between the 131° and 132° of east longitude; and, though much smaller than many others around ^c these coasts, is honoured with the title of kingdom. It hath a port of its name, which, though narrow, and somewhat dangerous at its first entrance, is yet large, and commodious enough within to contain a great number of vessels, and to shelter them from all winds. It owes indeed its first rise to the *Dutch* fixing their grand staple in it, and building their magazines, fine houses, and some fortresses, upon it; by which, and other improvements, it became so considerable for its commerce, and great resort, that from one street, which it had at first, it had got above forty, most of them large and well built. Not content with this, they began to pull down some of their old magazines, which were only of timber, and gone to decay, in order to build new ones of stone. This happened in 1640, when the emperor began to suspect them ^d of some private views of designing them rather for forts than magazines; whereupon an order was immediately sent them to quit the island, and to confine themselves to their factory at *Nangbazaki* ^y.

Fine new
buildings.

Dutch dissem-
ent.

Stately castle.

THE rest of the island hath nothing considerable in it, except its castle, a noble and stately edifice, formerly belonging to *Firandono*, brother to the then king of the island. It stands on an eminence, in the midst of a spacious plain; and hath a noble bridge leading and reaching quite to the first court of it, and is defended at each end by a guard of arquebusers. It is seen at a great distance at sea, by reason of its advantageous situation, and much more on account of its lofty tower, which is several stories high, each decreasing in breadth and height as they rise upwards, from the lowest. On the sides of the castle are eight gates, with each a flight of steps leading to it. At the foot of the hill on which the castle stands are seen four pavilions or cupolas, answering to its four angles; and from each of which runs a gallery to the other, supported by a row of pillars ^e.

Liqueio, or
Riuhu island.

THE *Liqueois* islands, or, as *Kæmpfer* calls them, *Riubu*, are, as we have elsewhere hinted, a chain of them, reaching from that of *Ximo* to that of *Formosa*, or from the 24th to the 26th degree of north latitude. They are in great numbers, but only six of them are of any considerable bigness, and take their name from the largest, called *The great Liqueio*, or *Legnio*. They are supposed to have been first peopled by the *Chinese*, because the inhabitants mostly speak their language, though corruptly; but were conquered by the king of *Saxuma*, one of the tributary kings, of the isle of *Ximo*, to the emperor of *Japan*, with whose capital alone, of all the *Japanese* sea-ports, they are allowed to traffick. They likewise pay a tribute to that prince, besides a yearly present they send to the emperor of *China*, with whose subjects they ^f

^w KÆMPFER, Dutch Ambass. & al. & al. sup. citat.

^x Idem.

^y Idem, & CONNER, Dict. &c.

^z Idem,

(N) The name of *Xicoko*, or rather *Xicocoff*, signifies, in their language, *The country of four*, and is given to it on account of the four chief districts or provinces of which it consists. It is also called *Tonfa*, or rather *Tofa*, from one of its largest provinces, once perhaps the head kingdom of the four, as it is also called *Tokoji*, or ra-

ther *Sanctoi*, and *Jio*, or more properly *Hsu*, from two other provinces, then perhaps the most considerable. Lastly, it hath the name of *Xiu* from the capital of a fourth province of that name, and now the most considerable maritime town in it, it not the metropolis of the whole island (15).

a likewise carry on a considerable trade. But we do not find that they make any present, or pay any tribute, to that of *Japan*, tho' in some measure subject to him.

THE goods they commonly import into *Saxuma* are silks, cottons, stuffs, and other commodities, which they bring over from *China*, as also some products of their own, such as corn, rice, fruit, pulse, awamuri, which is a strong spirit made out of the remainder of their crop; <sup>their com-
modities with
Japan and
China.</sup> mother of pearl, and a variety of other shells, those in particular called cowries, which pass in several parts of *India* for current coin. Another sort they calcine, or prepare into a kind of white varnish, with which the boys and girls paint themselves; and a third sort of flat shell, polished very thin and transparent, which the *Japanese* use instead of glass, or oiled silk, for their windows, besides some scarce flowers, roots, and plants, esteemed by the *Japanese*,
b which we have no room to enumerate, all which they transport in their own jonks, or small vessels. However, according to the *Japan* laws, this trade should not exceed the value of 150,000 thails, or crowns, *per* year, beyond which nothing should be bought or sold; but it plainly appears, that they dispose of much greater cargoes, through the connivance of the *Japanese* directors of that trade, who find their account in it^a. The rest of the inhabitants ^{inhabitants.} of these islands are either husbandmen or fishermen, who are good-natured and affable, lead a merry life, diverting themselves with music, dancing, and drinking of their rice-beer; and, if we may believe the *Japanese*, some of their islands are so fertile, that they yield rice harvests twice a year. As for their religion or government, we know but little of it, only that they acknowledge the king of *Saxuma* for their sovereign; yet, like the *Japanese* and *Ton-
kingese*, they have a *Dayro*, or ecclesiastical hereditary monarch, whom they affirm to be de-
c scended from the gods of their country, and pay him a suitable respect: he commonly resides at the island of *Fajama*, one of the chief of the *Liquios*^b.

WE shall conclude this section of the division of *Japan* with an account of its most re-
markable curiosities, both natural and artificial. Among the former we may reckon, 1. Their <sup>Curiosities of
Japan.</sup> volcanoes, which they compute to be no fewer than eight in the empire; and some of them very terrible, having been known to cast out continual streams of fire and flame, without intermission, for several centuries. Of this nature is that which issues out of a small rocky island over-against *Nangbazak*; and another over-against *Saxuma*, which hath been known to burn for many ages, and throw up at different intervals vast quantities of sulphur, and other
d combustible stuff. The mountain of *Fesi*, in the province of *Suruga*, is no less remarkable, <sup>Burning
mountain.</sup> not only for its vast height (in which it is only exceeded by the same *Pic of Teneriff*, though in shape and beauty it excels it, and most others of that kind), but for its top being covered with everlasting snow, which, being frequently blown about by the force of the winds, represents a kind of smoking hat. This mountain, the *Japanese* tell us, was formerly a burning one; but, upon a new opening being made by the violence of the flames, the fire ceased some time after; the sulphur, and other combustibles, being in all probability exhausted by the fierceness of its burning, as it hath happened in many other such places in the empire^c.

2. THE next rank of natural rareties are their hot baths and mineral springs, many of which
e are reckoned by the *Japanese* to be infallible remedies against the venereal and other inveterate
diseases. Some of these springs are so hot as to exceed boiling water; and one of them, we <sup>Natural rare-
ties.
Hot springs.</sup> are told, which is equal in heat with boiling oil, only breaks forth twice a day, for about an hour, at which time the eruption is so violent, that it will lift up and carry off the biggest stone that can be laid on the mouth of the spring; and comes up with such a noise, that it resembles that of a cannon^d. These hot springs are in great numbers, and mostly used for bathing; but the *Japanese* commonly content themselves with repeating it five or six times, and leave off as soon as they find themselves better; whence it often happens that they are but half cured, for want of knowing how long they should continue it, and what proper regimen to observe (O). They have likewise a great variety of cold mineral springs, from which their <sup>Cold mineral
springs.</sup>

^a KEMPFER, lib. iv. c. 9.
2. 11.

^b Id. l. i. c. 4.

^c Id. ibid. lib. i. c. 8. vid. & CARON, VAREN.

(O) Their method is, to proceed from a less hot bath to one that is more so. They stay in it but a few moments; then go into a bed, and cover themselves well, in order to sweat, and keep to a warming hot diet all the time they use the bath.

The monks who live in the neighbourhood of those baths give particular names to their several springs, according to their nature, and degrees of heat, the froth that rises on the top, the sediment at the bottom, or the noise which they make as they bubble out of the ground; and, in their old way of gulling the superstitious populace, affirm them to be designed as so many

purgatories for tradesmen and handicraftsmen, whose profession bears a relation to the properties above mentioned. Thus they assign those which have a foul sediment to bad rice brewers; those which throw up much froth, to bad cooks and pastry cooks; those that spring with murmuring or frightful noise, for back-biters, wranglers, and quarrelsome people, &c.

These hot springs were put to a still more barbarous use during the time of the persecution of the Christians there, thousands of whom were flung into and kept in them either till they renounced their religion, or till their flesh dropped off their bones (10).

(10) KEMPFER, lib. i. c. 8. *Japan*, 2. 11.

High mountains.

sick might reap much greater benefit, if their physicians and quacks were more expert in the right use of them. 3. They have mountains of a prodigious height in several parts of the empire; and on some of them the roads are so steep and rugged, that those who travel on horseback are forced to alight, and either walk on foot, or be carried in *Canges* (P); notwithstanding which, as they yield most part of the year a beautiful verdure, and a variety of fragrant smells, and abound with springs and rivulets, it makes amends in a great measure for the trouble and charges they put one to. The highest and most famed mountain in the empire is that of *Fesi*, mentioned under the last article, which is visible almost forty leagues off at sea, though about eighteen miles distant from the shore. These rivulets, by joining with a multitude of others in their windings and descent, grow up into considerable rivers, and in some places form a fourth kind of natural curiosities, viz. large and surprising cataracts, like those famed ones we have formerly mentioned in the description of *Egypt*^c. The most remarkable of those in *Japan* is that which falls from the famed lake of *Togitiz*, or *Facone* (Q), which, being surrounded on all sides with high mountains, hath no outlet for its waters, but through one of them called *Fitangajama*, which lets them out through three different apertures, from whence they fall down by the side of the mountain in the nature of cataracts, from a considerable height, and with a dreadful violence and noise; thence the three streams, gathering again into one, and receiving others into it, runs down with a prodigious vehemence, and dreadful noise, by a narrow chanel, through a deep valley, over rocks and precipices, into the sea^f.

Cataracts.

Curious animal.
White ant.

AMONG the animal kind we may reckon their white ants, in shape, bigness, and other particulars, like our common pismires, but white like snow. The *Japanese* call them *Dotoes*, or *piercers*, because their snout is armed with four sharp crooked pincers, with which they will pierce through any thing but stone or ore in a very little time, and will do a great deal of mischief to whatever they get into; and no other way is yet found of keeping them from merchandizes, and things of value, than by strewing some salt under and about them. These small creatures are not able to bear the fresh air; but, in their excursions, make themselves such ways under-ground as our moles do; or if above-ground, as over a floor or table, will rear themselves arches or trenches all the way they go, which they leave behind, and are about the size of the little finger. Their male ducks are no less curious for largeness, the beauty of their shape, and variety of their colours and feathers. Their heads are covered with a stately large topping, their tails rise in a beautiful oblique manner; and their wings, which stand over their back, add still to the elegance of their shape. They have nightingales with such sweet pipes and notes, that the curious will give twenty cobans for one of them. They have a great variety of beetles; one sort of which, called *Sebi*, or *Semi*, from the music they make, which begins pretty low and slowly, and then grows quicker and louder, and gradually decreases again: they begin to sing with the rising sun, and end about noon. But the most curious of all the *Japanese* insects of the flying kind, is that which they call the night-fly; and which the ladies and virtuoso's keep among their greatest curiosities, on account of its extraordinary beauty^g. It is about a finger long, slender and round-bodied; and hath four wings, two of which are transparent, and cover a pair of others which are shining and polished, and most beautifully variegated with blue and golden lines. Its extraordinary beauty hath given rise to an ingenious fable among them, which the reader may see in the margin (R).

Fine ducks.

Night-fly.

Camphire-tree.

AMONG the vegetable curiosities the camphire-tree is well worth our notice, which is classed among the laurel kind, and bears a berry of a purple or blackish colour. Some of those

^c See before, Antient Hist. vol. i. p. 177, & seq.
VAREN. & al.

^f KÆMPFER, ubi supra, lib. v. c. 11. CARGN, TEN. RHEIN, Hort. Malab. CARGN, & al.

(P) These are not unlike our chairs here, only not so high, because the person sits on the bottom of it with his legs across under him; and, instead of being carried with two poles, have only one that goes across the top of the machine, and is heaved on two or more men's shoulders.

(Q) *Facone* is a village of about 250 houses, on the road between *Meaco* and *Jedio*. The lake, which takes its name from it, is about two miles long, and a mile broad; and the mountains are so steep, some of them perpendicular over it, that there is no possibility of going round it, but it must be crossed in boats. It yields plenty of fine fish, and one of those mountains, towards the north, affords a fine gold ore. The inhabitants affirm this lake to have been caused by an earthquake; in

proof of which they allege the vast quantity of incorruptible cedar trunks, of a prodigious size, which lie at the bottom, and are fetched out whenever the lord of the place pleases to order it; for all the country about it abounds with those trees, which are the tallest and finest in all *Japan* (17).

(R) They say that all other night-flies fall in love with it; and that, to be rid of their troublesome courtship, it maliciously, though under pretence of trying the sincerity and constancy of their passion, sends them to fetch it some fire. The blind lovers readily obey; and, flying to every candle or fire they meet with, burn themselves to death. However, it is the male, and not the female, which is so justly admired for its beauty (18).

(17) Kæmpfer, lib. v. c. 11.

(18) *Ibid.* l. i. c. 10.

- a hot springs we have lately described have them in great numbers growing about them, of an uncommon size, and full of water. The best manner of extracting the camphire from this *How extract-* noble tree, we have described at full length in the foregoing volume †, together with the *Chinese* ed. manner of purifying it, and the virtues attributed to it by them. But, in this empire, it is extracted mostly by the country-people of the province of *Saxuma*, and isle of *Gotbo*, by a simple decoction of the roots and wood cut into small pieces; whereas that of *Borneo* is said to be a natural substance, gathered on the stumps of old camphire-trees, upon incisions made between the bark and the wood ^b. They have several trees, whose wood, when sawn and polished, *Curious* is so beautifully veined and variegated with different colours and shades, representing land- *woods, &c.* shapes, birds, beasts, &c. that it looks as if it had been painted by a skillful hand; some
- b plane-trees of a singular beauty, besides their varnish and other trees, great variety of marble, and other curious stones of all colours. We pass by several curious shells, which we have no time to dwell upon ^c. The truth is, the *Japanese* were too wise a people to be fond of any such trifles; and if at any time a fisherman happened to catch any of these in his net, which is often the case, they had no better way of disposing of them, than by carrying them *Pearls not val-* to the nearest temple of *Jebis*, which is the *Neptune* of the country, and making a present *ued till* of them to the deity. Even pearls, of which great quantities are caught on their coasts, especially those of *Saykoff*, and on several kinds of shell-fish, besides the mother of pearl, they formerly set but a small value, though large and of a fine orient, till the *Chinese* taught them the price they bore in theirs and other countries; since which they have carried on a considerable *bought by the* traffick of them with *China*. The largest and finest of them are found in a small kind of oyster called *Akoya*, whose shells are as large as a man's hand, closely knit together, very thin and smooth without, but rough within, and of a shining white. *Chinese.*
- c

- THE sea likewise throws great quantities of ambergrise upon some of their coasts, on which they set little or no value, giving it no better name than that of whale's dung, probably on account of its being found in the belly of that fish, as well as of its being thrown on the shore in large dabs, not unlike those of cows dung. These, when taken up fresh, and before they have lain any time exposed to the sun and air, are of a soft glutinous nature, and yield a disagreeable burnt kind of smell, instead of a perfume; but the most odoriferous and profitable is that which is taken off the surface of the sea, and is soft enough to be kneaded together
- d into a round form, which condenses and hardens in time. *Kæmpfer* tells us, he saw one of *Ambergrise* them which weighed 130 lb. weight, and had been gathered on the coast of *Kimakuni*. We *not valued by* are told of a much larger and heavier, which was bought, by the *Dutch*, of the king of *Tidori*, for about 50,000 gilders, and is now to be seen in the museum of the *Dutch* company at *Amsterdam*; it weighs 185 lb. and is of a greyish colour, of a flat round, and very perfect in its kind †. This last we observe, because the *Japanese* are said to adulterate it by mixing a quantity of ground rice, storax, benzoin, or other sweet-scented gums, with the substance of the ambergrise, whilst it is still soft; the fraud of which is easily found out by the greater copiousness of the smoke it yields, and the greater quantity of ashes it leaves behind, when burnt upon a flat iron. However that be, the *Japanese* prefer the yellow, though less valued by other nations; and, according to *Kæmpfer*, only use the grey, though by far the most odoriferous and valuable of the two, only as a kind of specific against natural decays, *How used in* and particularly that of impotency, which is done by mixing one third part of the purest *physic.* opium with it, and making the whole into small pills; one of which, being taken some time before going to bed, seldom fails of creating a new vigour in the patient, suitable to his wish. The reader may see the receipt at full length in *Kæmpfer* above-mentioned *.

- BEING now insensibly carried from the natural to the artificial rareties of this empire, we shall proceed to give a short account of their most considerable ones in that kind; among
- f which, besides their fine temples, idols, palaces, stately towers, and other edifices already mentioned, we may reckon a great number of their fine lofty bridges, mostly built of cedar; *Artificial* and kept in such good repair, that they look still as if they were but very lately finished. *rareties.* They are all railed on both sides, and toll-free; we shall give our readers a sketch of three or four of the most remarkable ones for structure and largeness, besides the famed one formerly mentioned, before the imperial palace of *Jeddo*, and called by way of eminence *Nipponbas*, because all the distances of places through the empire are taken from it ^k. These are, 1. That of *Seltanofas*, over the river *Jedogawa*, which springs from the lake *Oomi*, elsewhere described, and is supported, near the middle, by a small island, and consequently consists of two parts, one whereof is thirty-six kiu's or fathoms, and the other ninety-six, in length. 2. That of *Jafagibas*, near the city of *Okazaki*, in the province of *Mikawa*, which is 208 fathoms long. 3. That of *Jofidanobas*, near the city of *Jofida*, in the same province, which is 220 fathoms

† KÆMPFER, ubi sup. Append. p. 47, & seq.

* Ibid. p. 50, & seq.

^k See

before, p. 35.

long, and lofty enough for the largest barges, even at high water, to pass under it to the city. ^a They are all in general very strong, wide, and lofty, and laid over the banks of the rivers at least two fathoms on each side, and widen with their rails like two wings; so that these last four fathoms may be still added to the dimensions above-mentioned ¹.

A remarkable dyke.

THEY are no less expert in the construction of their dykes, to resist the force of their tempestuous seas, and neither spare time nor cost in making them effectual. That of the harbour of *Fiogo*, in the province of *Setz*, is one of the most remarkable, and is chiefly made of sand, of a considerable breadth, and near two miles long. It proved a work of immense labour and expence, cost the lives of many thousands of men, before it could be brought to perfection, the storms and furious seas having several times spoiled, and twice thoroughly destroyed it. It was at length completed to the emperor *Feki* or *Fege*'s satisfaction, and hath proved a last- ^b ing fence both to the harbour and to the adjacent country ever since ^m. It lies on the south of the town, and hath a good number of houses built upon it (S).

Huge bells.

THE *Japanese* are fond of large bells; but theirs are such as have no clear sound, but rather a dull heavy one, answerable to the name of *gungum*, by which they call them. They are cast much after the same odd manner as those of *China*, elsewhere described ⁿ; and struck with a wooden clapper or hammer, which deadens the sound still more. The famed *Catechu*, or *japan earth*, is made chiefly in *Meaco*, and the town of *Odowara*; it is compounded of some inspissated juice, brought thither from other parts by the *Dutch* and *Chinese*; and here it is mixed with some quantity of amber, the best camphire, and some other ingredients, and made into round little balls, cakes, idols, flowers, &c. and then put into neat boxes for sale ^c and exportation. It is in great esteem, particularly among the women, because it fastens the teeth, and gives an agreeable sweetness to the breath ^o. They are also very curious in some other of their medicinal compositions; and as they are, like other *Indians*, much given to the search after the grand panpharmakon, or universal medicine, their fondness for that study hath led them to many curious discoveries, though of a different kind, as it hath in all other places where that notion prevails. As to their curious japan and porcelane, and other ingenious works, they have been mentioned in another place. We shall conclude this article with a factitious ^d metal of theirs called *Sovaas*, which is a composition of copper, with a small mixture of gold, and some other minerals; and comes so near to the beauty and colour of gold, that things made of it, when they first come out of their shops, might be easily mistaken for it; but, in

The japan earth.

Factitious metal, like gold.

time, will grow somewhat blackish. A great variety of utensils are made of it, very curiously wrought, and greatly admired; and one may say in general, that the great men of the emperor's court, who are very ingenious at most of those arts, make it their chief amusement, when in disgrace or banishment, to study after some new improvement or discoveries in this and other curious arts and manufactures, the benefit of which quickly spreads itself among the laborious part.

S E C T. IV.

The Origin, Antiquity, and History of the Japanese.

Japan, by whom first peopled.

THE generality of *Europeans* believe the *Japanese* to be descended from the *Chinese*; ^e whilst the former, scorning so base an origin, boast themselves to be the offspring of their own gods, and their nation to be much more antient than the *Chinese*, or any other upon earth. The reader may see a sketch of the fabulous account they give of themselves in the margin (A); but the *Chinese*, who pretend to have been the first peoplers of the *Japan* islands, found

¹ See KÆMPFER, lib. v. cap. 3. VAREN. lib. i. cap. 25. CARON, & al. c. 8.

^m KÆMPFER, ubi supra, l. v.

^o KÆMPFER, ubi sup. l. v. c. 11.

(S) The *Japanese* add, in their superstitious way, that it could never have been finished, had not one of their heroes (or, as others say, thirty of them), suffered himself to be buried alive, to pacify their angry *Jebis*, or god of the sea (19).

(A) The *Japanese* have two genealogies of their deities; the first of which is a succession of celestial spirits, or beings absolutely free from all mixture with corporeal substance, who ruled during an undetermined and incomprehensible number of ages. The second a race of terrestrial spirits, or good men, not quite possessed with that pure being which was peculiar only to their predecessors, and these governed the *Japan* empire in

a lineal succession, each during a long but limited term of years, till at length they begat a third race of them, who had nothing of the purity and perfections of their progenitors, and these are they by whom *Japan* is now inhabited.

Of the first sort they reckon seven, whose names are only metaphorical, nothing else being recorded in their writings, either of their actions or government, except that the three first lived without wives, and the four last each of them one, by whom they begat each his successor in a manner far above the reach of human comprehension. The last couple called *Ijanaki Mikotto* and *Ijanani Mikotto* (which last word is the epithet peculiar

(19) Kæmpfer, lib. v. c. 3.

- a found their pretence on two different records of theirs, which, though owned in part by the *Japanese*, do not carry a sufficient degree of evidence to be relied upon. The first is, that, *The Chinese* upon a great revolt in *China*, in which the rebels were defeated, and taken prisoners, their number was so great, that the emperor was prevailed upon, after a severe execution of the ringleaders, to decimate them, and to banish the remainder to the then uninhabited islands of *Japan*. The *Japanese* own part of the fact; but affirm, that they were banished not for rebellion, but for their strenuous adherence to their lawful princes against the then usurper of the *Chinese* crown^a; which is not unlikely to have been the case in some of those revolutions we have formerly mentioned, wherein the government passed from one dynasty or family to another, and that sometimes a strange one.
- b THE other is, that one of the *Chinese* monarchs, who had long been in quest of an effectual medicine to make him immortal, was at length told by one of his physicians, that such a medicine might be made, but that the simples, which were to produce that effect, only grew in the desert islands of *Japan*, and could neither be gathered nor brought over by polluted hands, without losing their virtue; to prevent which, he advised that monarch to send him thither with 300 healthy boys, and as many handsome girls; which was actually complied with; and the physician, who only wanted to go and live peaceably, and at a distance from so whimsical and tyrannic a master, settled himself there; and from them all those islands came to be peopled (B). We have shewn another account of this transaction out of the *Chinese* records^b, which affirm it to have happened in the reign of *Shi-uhang-ti*, the second monarch of the fourth dynasty, whose admiral persuaded him that nothing could be more advantageous to the trade of the empire than to have a colony settled there; and, to engage him the more effectually to consent to it, told him, that one of the islands produced an universal medicine against all diseases, and even death itself, and was accordingly sent thither with the three hundred young persons of each sex above-mentioned. He was no sooner arrived there, but, by the help of the sailors and soldiers he had taken with him, he began to build a city, of which he declared himself sovereign; and from him the whole country was soon after peopled, and the inhabitants are proud of deriving their original from the *Chinese*. But, notwithstanding the pretended concurrence between the *Chinese* and *Japanese* on this head, we shall shew in the sequel, that the latter had begun to be governed by kings of their own above 400 years before this transaction, ^{Founded on two different stories.}
- c so far was their country from being uninhabited till then. However, at present we shall only observe, from what we have mentioned in a late note^c, out of their own writings, how far they are from owning themselves descended from the *Chinese*, and shall now shew how unlikely it is they should be so. ^{Both of them confused.}
- d

DR. *Kæmpfer* hath observed such a vast difference between them, with respect to their language, writing, genius, laws, customs, and religion, that he makes no scruple to suppose them an original nation, and their language one of those primitive ones that started up at the *Babylonish* confusion of tongues; so that, according to this supposition, they must have travelled from the place of the general dispersion directly eastward, without stopping any-where, till ^{*Kæmpfer's supposition of their coming straight from Babylon, exploded.*}

^a Vid. LINSCHOT itiner. HAGENER not. in Caron.

^b See before, vol. iii. p. 697, & seq. & (A).

to those spiritual beings), are held in great veneration by the *Japanese*, and were, by their new converts to Christianity, called *Adam* and *Eve*, and are said to have been born, and to have lived and died, in some part of the province of *Ise*.

This *Iyanaki*, they pretend, was the first, who, taught by a peculiar bird of theirs, lay with his wife in a carnal manner, and begat sons and daughters of a far superior nature to the third, but vastly inferior to the first or spiritual rank of beings. This second succession is styled by them that of the five terrestrial gods, for so many they reckon them; viz. 1. *Tenso-Daro-din*; 2. *Ootsoo*; 3. *Ninikino*; 4. *Demino*, and *Awase-Dsunno*. The first of these, being the eldest son of *Iyanaki* above-mentioned, is supposed by the very law of primogeniture to have been intitled to a superiority over his brothers and sisters; and upon him is founded the right of the *Dayres*, or antient monarchs, whose eldest sons always claim the succession upon their father's demise. And with the last of the five ended what may be called the second or silver age of the *Japanese*; and from him proceeded the third generation, or that of the now living inhabitants of *Japan*. They attributed a kind of supernatural power, and unlimited authority, to the descendants of *Awase Dsunno* in a direct line, or, in case of

failure, to their next heir; and give to this day the highest titles to the whole family, especially to the chief of it, who sits upon the throne, tho' they have been so long stripped of their secular power, as we have elsewhere shewn (1).

(B) The *Japanese*, we are told, are so far from denying this story, that they still shew a place upon the south coasts, where he landed, and afterwards settled, with his gallant colony; and the remains of a temple, said to have been erected to his memory, for having brought over to them, from *China*, good manners, and useful arts and sciences (2).

This is, however, so contrary to what we mentioned in the last note out of their own writings, that we see no way of reconciling it, but by supposing that such a colony might come and settle there from *China*, though several parts of these islands might have been inhabited by other nations long before, who not only might give him a kind reception on account of his introducing some arts and sciences, and a greater degree of politeness than they knew before, but might erect some temple or monument in memory of it; and this might be sufficient to make the haughty *Chinese* boast themselves the first peoplers of that country, though they appear to have had kings of their own several centuries before.

(1) See before, p. 10, & seq. *Kæmpfer*, lib. i. c. 7. *Karen*.

(2) *Kæmpfer*, lib. i. c. 2.

they

Japan probably peopled by shipwrecks of other nations.

Where first settled.

Their first settlements,

and government.

they came to the peninsula of *Korea*, from which they had but a short passage into *Japan*; and, in all probability, sailed over thither soon after, as to a country the most agreeably situated for their convenience and safety^d. But what seems wholly to overthrow this conjecture, as well as the *Chinese* pretence above-mentioned, is not so much the great difference that is found between their language, religion, customs, genius, complexion, &c. and those of their neighbours, which might and hath been accounted for by some authors in another way (C), as from that which is still observed to this day to reign among themselves in all those respects; and this not only between one island and another, but even several parts of one and the same island, or even provinces, notwithstanding their having been so long united under one monarch. All which seems to us to prove evidently, that these islands were at first peopled by different nations, driven upon their coasts by storms and contrary winds, and at different times, and not by any single one at any one certain period. What still farther confirms this assertion is, that the difference between their languages, customs, stature, complexion, &c. from those of other nations, is so far from being so universal as is pretended, that one may rather observe such a visible conformity between them and all the neighbouring trading nations, as far at least as the coasts of *Malabar* (D), as seem plainly to point to us the origin from which each of them sprung. To this might be added, that the oldest inhabitants are said to have settled in the province of *Isje*, now *Iga*, on the southern coasts, on which account it is still remembered, and honoured with pilgrimages; which makes it more probable that they were cast there by chance, or some tempest, than that they travelled thither from the northern parts of that large island, after their crossing thither from *Korea*, in search of a warmer climate to settle in. However that be, it would be doing them an injury to suppose them descended from the effeminate *Chinese*; and, if we must needs allow them the offspring of one single nation, that of the *Tartars* bids fairest for it, for they have indeed more of the genius of it, though softened by a degree of politeness above them.

WHEN these early settlements were first made, it is hard to guess at, unless we will suppose with *Kämpfer*, that they came thither by land, and directly, and by constant marches from *Babylon*, in which case a few years might suffice to bring them thither; but, as we have shewn the other hypotheses to be better founded, it cannot be supposed, with any probability, to have happened till navigation began to be frequent on those seas; but how soon that was, it is impossible to determine with any tolerable certainty. Whilst these were busy in fixing, improving, and enlarging, their settlements, in this fertile and delightful spot, other colonies might land in other parts, and be readily admitted, as there was no want of room, but rather of hands to cultivate those vast tracts that were still uninhabited; and so by degrees each colony might draw nearer to the other as they grew more numerous, till at length they were forced to set boundaries to each other; and, where any wanted room, they might send some of their own people to seek new habitations among the other adjacent isles.

THIS conjecture (and more than conjecture cannot be offered in a case of such distance both of time and place) will lead us to another equally probable; viz. that each of these colonies had their own respective heads or sovereigns, under whom they lived: much after the same

^d KÄMPFER. lib. i. cap. 5. Vide & COUPLET, & al.

(C) *Linschott*, and, after him, *Hagener*, in his notes on *Caren*, tell us, on the authority of the *Japanese* themselves, that they conceived such an invincible hatred to the *Chinese*, upon their being banished from that country for their loyalty to their natural princes, that they agreed one and all to eradicate as much as possible the memory of their origin, by gradually altering their religion, laws, language, and character, and introducing new customs and manners quite opposite to those they had brought from thence. And we have had occasion to observe, that in many things they seem to be downright antipodes to the *Chinese*; but that this should be done with a design to root out all remembrance of their extract, and that they should so readily own both, is too inconsistent to be urged as a proof of either, wherever they had it from; and, if real fact, can only be true of one part of the inhabitants, as will be farther seen in the sequel.

(D) The *Japanese* records mention an island discovered by them some centuries ago, called *Genkaisima*, lying on the north coasts, and inhabited by *Oni*, or black devils, against whom they waged a bloody war, till they had cleared the place of that vermin, as they called them, and sent thither a colony of their own in their stead. These black devils are supposed with great pro-

bability to have been some *Malayan* merchants, who were lost or shipwrecked upon that uninhabited island, and peopled it, because the history of that war takes notice of their wearing long hair spread over their shoulders, like what is done by the *Malayans* to this day; and that they drove a great commerce along those seas, from *Madagascar* quite to *China*, and islands adjacent, is evident not only from the title which their monarchs assume of lords of the winds and seas to the east and to the west, but much more from their language, which spread itself almost over all those eastern countries (3).

Other black inhabitants are also mentioned, in the *Japanese* history, to have been found in some other islands on the south coasts of *Nippon*, which could hardly be other than some *Malayan* merchants, or else inhabitants of the *Molucca* islands, who were cast upon them by stress of weather, and settled themselves in them.

To all this we may add the great variety of complexions, hairs, shape, manners, &c. which reigns thro' the whole empire, and answers, in some respect or other, to those of the *Chinese*, *Tong-kinese*, *Siamese*, *Malabaric*, and other maritime nations along those seas; all of whom seem to have put a helping hand to the peopling of those islands.

(3) Vide *Kämpfer*, ubi supra, lib. i. c. 5. et seq.

a manner as most other nations did, or even as the *Tartars*, *Arabs*, and others, do to this day in hords or tribes; and wandering with their families and cattle from place to place, for the convenience of pasture. This polyarchal government might last some series of centuries, each hord or tribe having its own laws, customs, language, &c. and in time, as they grew more numerous, they began to encroach upon, and war against, each other, till at length, either their continual feuds and depredations obliged them to put themselves all under the government of one sole monarch; or, which may be as probable, and hath often proved the case among other nations, till one chief, more potent and politic than the rest, might bring them all under his subjection, and assume that universal power, both ecclesiastical and civil, and pompous titles, which we have formerly observed the *Japanese* *dairo's* did^c. But, before we come to speak of the succession of these monarchs, it will not be amiss to give our readers a short account of the *Japanese* chronology.

We have observed lately, that they have, like other antient nations, three æras or epochs; the first, of their seven gods, consisting of an almost an infinite number of ages; the second, of their demi-gods, or five heroes, which, that they might not come behind the *Chinese* in point of antiquity, they pretend lasted 2,342,467 years; and the third, that of the mortal men, or ecclesiastical hereditary emperors, the successors of *Avase-dsunô*, the last of the heroic race; and this last is agreed to have begun about 657 or 660 years before Christ, which was the seventeenth year of *Kaiwo*, or, as the *Chinese* call him, *Hui-wam*, or rather *Whey-vang*, the seventeenth emperor of the *Chew*, or third *Chinese* dynasty^d. From that time to the year of Christ 1693, they reckon 114 emperors, all of the same family, to have successively sat on the *Japanese* throne; and these value themselves highly, upon being the eldest branch of *Tensio-dai-sin*, the first founder of the *Japanese* monarchy, and the lineal issue of the eldest son, and so downwards (E).

THE title those monarchs are commonly called by, is that of *Mikaddo*, which is a kind of diminutive of *Mikotto*, the grand title by which their pretended divine predecessors used to be distinguished, that of *Dairo* signifying rather their court than their dignity, though they are frequently called by it. To these we may add those of *Day*, *Oo*, *Kawo*, and *Tay*, all which signify a sovereign prince, a supreme lord; that of *Tensin*, which signifies the son of heaven; and some others equally august; but when he speaks of himself, he only styles himself *Tsin*, or prince; and when he signs, it is by that of *Maro*, the signification of which our author hath not told us^e.

BEFORE we come to the history and succession of these monarchs, it will not be amiss to apprise our readers, that, to avoid all confusion in their chronology, their historical books always begin the reign of each of them with the next new year, though they have been in possession of the throne several months before, which are added to that of their predecessors. But, in the historical remarks upon them, they always take notice of the day and month in which every *Mikaddo* came to the crown. As to the *Japanese* histories, they say but little of the lives, virtues, and vices, or political government, of their monarchs; but chiefly take notice of their names, descent, birth, succession, length of their reigns, the *Nengos*, or short æras, instituted by them, the place of their residence, and the most material occurrences that happen

^c KÆMPFER, lib. i. cap. 5. Vide & COUPLET, MARTINI, DU HALDE, CARON, & al. See also before, p. 12, & seq. ^d See before, vol. iii. p. 463. ^e KÆMPFER, ubi supra, lib. ii. cap. 4.

(E) The *Japanese* make use of two different æras; the first and the most common of which is styled by them *Nin-o*, which properly signifies a great or powerful monarch. And here, by way of emphasis, the very first begins from *Sin-mu*, their first emperor, who began his reign 660 years before Christ. So that, according to this æra, the year of Christ 1756, is with them the year 2415.

The other, called *Nengo*, was antiently invented by the *Chinese*, but not introduced into *Japan* till the reign of their thirty-sixth emperor, and takes in only a period of a few years, sometimes under 20, and seldom above it. Its beginning, and name or character, which is commonly taken from some memorable accident, is appointed by the emperor, and by him continued at will. It is made use of in their proclamations, orders, journals, letters, and almanacs, and, upon proper occasion, the first grand æra of *Nin-o* is added to it. When our author came into *Japan*, anno 1693, the *Nengo* was called *Gen-rok*, which signifies the happiness of nature and art, and was so called by the then reigning emperor, on account of his father's resigning the crown, in order to

lead a retired life; and that year was then the sixth of that æra, and the 2353 of the grand one, or *Nin-o* (4).

Besides these two, they have a third way of computing by cycles of sixty years, which they have adopted from the *Chinese*, whose third emperor *Wang-ti* is said to have been the inventor of (5); but with this difference, we are told, that whereas the *Chinese* mention the number of the cycle, as well as the year of it, the *Japanese* only mention the latter, without the former; the reason of which is, to avoid acknowledging themselves inferior to the *Chinese* in point of antiquity, who can shew a succession of cycles for many centuries, before the foundation of their monarchy.

The beginning of their year falls in between the winter solstice and spring equinox, about the 5th of *February*; but as they are extremely superstitious in celebrating the day of the new moon, they commonly begin it with the nearest new moon which either precedes or follows the 5th of *February*. They likewise make use of leap-years, every other or every third year, or seven leap-years in the cycle of nineteen years (6).

(4) Vide Kæmpfer, ubi supra, lib. ii. cap. 2. ^{eund} (6) *Ibid.* lib. ii.

in the empire, such as wars, fires, earthquakes, rebellions, comets, strange meteors, building of temples, palaces, &c. births or deaths of great men, or great saints, downfall of great ministers, introduction of new sects, idols, priests, and festivals, from other countries, miracles, prophecies, and other wonders, performed by their gods, saints, and priests, and other such superstitious trash; to which we may add what other remarkable occurrences have happened in *China*, and other neighbouring countries; from which we shall only extract out of our authors what we think most deserving a place in a work of this nature.

Emperors of
Japan.

The Reigns of the Mikaddos, or original Emperors of Japan.

- I. **SIN-MU**, founder of the *Japanese* monarchy, began his reign, as hath been already hinted, in the year before Christ 660, and seventieth of his age (F). He civilized his subjects, made a thorough reformation of the laws and government, and introduced chronology amongst them, dividing the time into years, months, and days. In the sixtieth year of his reign, were first introduced the worship of foreign idols, brought thither from *China*, and other parts of *India*, which we have mentioned in a former chapter ^b. *Sin mu* reigned seventy-nine years, and, having secured the throne to his posterity, died in the 157th year of his age; and with his reign begins the grand *Japanese* æra of *Nin-o*.
- II. **SUI-SEI**, *Sin-mu*'s third son, succeeded him in the eightieth year of that æra, and fifty-first of his age. He reigned thirty-three years, and died in the eighty-fourth of his age. He was succeeded by his son,
- III. **ENEI**, in the 113th year of the æra, and twentieth of his age; who, after a reign of thirty-eight years, left the crown to his second son *I-toku*.
- IV. **I-TOKU** mounted the throne in the forty-fourth year of his age, and the 151st of the æra. He removed his court to *Keitz*, where he died, after a reign of thirty-five years, in the seventy-seventh year of his age. He was succeeded by his son,
- V. **KOSIO**, in the year of the æra 186, and thirty-third of his age; and, in the fifth year of his reign, a war arose between the provinces of *Go* and *Jetz*, which is the first that is mentioned by any *Japanese* history. He reigned near eighty-three years, and died in the 115th of his age, and was succeeded by his second son *Koan*.
- VI. **KOAN** mounted the throne in the thirty-sixth year of his age, and 269th of the æra; and removed the imperial residence to *Muro*, in the province of *Farima*, and some years after to *Khuroda*. Under his reign there happened a great eclipse of the sun, and a comet appeared in *China*. He reigned 101 years, and died in the 137th of his age.
- VII. **KOREI**, alias *Koffi*, the eldest son of *Koan*, succeeded him, in the fifty-third year of his age, and 371st of the æra. In the 6th year of his reign, the lake and river of *Oomi* are said to have sprung up suddenly, in one night, in the province of that name, by some earthquake, or subterranean eruption ⁱ; and, in the 46th year of his reign, the *Japanese* empire was divided into thirty-six provinces. *Korei* reigned seventy-six years, and lived 128. He was succeeded by his son,
- VIII. **KOWKIN**, in the year of the æra 447, and sixtieth of his age; and removed his court to *Karutz*. In his time reigned the first of the three *Chinese* *Neros*, who sent the 300 youths, and as many maids, into *Japan*, to fetch him the universal medicine promised to him by his physician. The *Japanese* history calls him *Sick-wo*, and *Sino-fico*; but he is the same whom the *Chinese* call *Shi-whang-ti*; an account of whose reign we have given in the history of their country ^{*}, and have lately observed how absurdly they ascribe the first peopling of *Japan* to those 300 couples, at a time when they had been already governed by their emperors near 450 years. *Kowkin* reigned fifty-six, and lived 116 years, and was succeeded by his second son,
- IX. **KAY-KWO**, or *Kay-quo*, in the fifty-second year of his age, and of the æra 504. He removed his court to *Isagava*, in the third year of his reign; and, in the nineteenth of it, was begun in *China* the first *Nengo*, or short æra, lately mentioned, but which was not introduced into *Japan* till about 780 years after, as will be seen in the sequel. In the eighteenth year of his reign, the moon appeared of a purple colour. *Kay-kwo* reigned fifty-nine years, and died in the 111th of his age.

^b See before, vol. iii. p. 561, & seq. & (A).

ⁱ See before, p. 3, & seq.

^{*} See before, vol. iii. p. 562,

(F) *Sin mu* was the fourth and youngest of all his brothers, and they all reigned before him in their turns; but their reigns proved so short, and so obscure, in comparison of his, that they were not thought worth recording, but were purposely passed by in silence, that the whole honour of founding the *Japanese* monarchy, and

æra of *Nin-bo*, might intirely redound to him; so that he hath been ever since looked upon as the *Julius Cæsar* of that nation. His name, before he ascended the throne, was *I-wa-fkono-mikoto*; but he then changed it for that of *Sin-mu-ten-oo* (7).

(7) *Kämpfer, ubi supra, cap. 3.*

- a X. SIUN-SIN, or *Sin jin*, his son, succeeded him, in the year of the æra 564, and fifty-second of his age. In the fourth year of his reign, he removed his court to *Siki*; and, in the seventh, a great mortality spread itself over the empire. In the eleventh, he erected the title and office of *Seogun*, who hath the direction of all military affairs, and command of the army, in case of war or rebellion, and bestowed it upon one of his sons. In the nineteenth year of his reign, the first men of war and merchant-ships were built in *Japan*; and, in the last year of it, two moons were seen in the east. He reigned sixty-eight years, and lived 119.
- b XI. SYNIN, his third son, succeeded him in the 632d year of the æra, and forty-first of his age. In the thirty-sixth year of his reign, it rained stars from heaven; and, in the fortieth year, comets and uncommon meteors appeared in the air, followed with a fiery train. In the sixtieth, they began to make fish-ponds in *Japan*, to cultivate rice-fields, and inclose them with ditches. A famous horse, that could run 1000 miles a day, is recorded to have been brought into *Japan*, from some part of the *Indies*. In the ninety-fifth year of his reign, *Bupo*, otherwise called *Kobot*, landed in *Japan*, from the *Indies*, and brought with him, on a white horse, a book, called *Kio*, containing the mysteries of his religion; not long after which, a temple was erected to him, which is still called *Fakkubasi*, or the temple of the white horse. From that time, the worship of *China*, and other parts of *India*, began to spread through this empire; and the number of temples, idols, monasteries, &c. daily increased. *Synin* reigned longer than any of his predecessors or successors, viz. ninety-eight years (F), and lived 139.
- c The twenty-ninth year of his reign, which was the 661st of the æra, was remarkable for the birth of the Redeemer of the world; and the sixty-sixth was no less dignified by his crucifixion and resurrection, supposing it to have happened in the thirty-third year of his age, as is generally believed.
- d XII. KEY-KO, the third son of *Synin*, mounted the throne in the eighty-fourth year of his age, 731st of the *Japanese*, and seventy-first of the Christian æra; and, in the twenty-third year of his reign, a new island is recorded to have started out of the bottom of the sea, near the great one of *Nippon*. It had the name of *Tsicuba-sima* given to it, and was consecrated to *Jebis*, the *Neptune* of the *Japanese*. Three years after, a *Mia*, or temple, called *Takajonomia*, was built on the island, in honour of him, and a sufficient number of priests or bonzas appointed to attend his worship. Both temple and island became famous and rich, on account of the great concourse of people to it; and the latter is affirmed to have been always free from earthquakes. *Keyko* reigned sixty, and lived 143 years.
- XIII. SEY-MUU, his fourth son, succeeded him in the 49th year of his age, and 791st of the æra; and removed his court to *Siggu*, in the province of *Oomi*. He settled the confines of all the provinces of his empire in the sixth year of his reign; and died in the sixtieth year of it, and the 108th of his age.
- e XIV. TSIAU-AI, the second son of *Sey-muu's* sister (who was married to *Jamatta-takino-mikotto*), and was grandson to *Keko*, or *Keyko*, the twelfth emperor, mounted the throne in the 852d year of the æra, and forty-fourth year of his age. He made his way to it by the murder of *Kumasi-usomu-kuno-mikotto*, and died in the ninth year of his reign, and fifty-second of his age.
- f XV. SINKU-COGU, or *Tsin-gukwoo-guu*, succeeded him in the thirtieth year of her age, and 861st of the æra. She was the late emperor's relict; and had a farther title to the crown, by the relation she bore, in the fifth degree, to the emperor *Keyko*. She carried on the war against the *Korcans*; and, in the beginning of her reign, went over thither, at the head of a numerous army, which she commanded in person. Here finding herself pregnant, she hasted back to *Japan*, and was delivered of a son in the town of *Tsikusen*, in the province of *Mikassa*, which was then her residence. This son was called *Vacono-ooji*, but, after he mounted the throne, took the title of *Oofin-ten-oo*, and, after his death, had that of *Jamata-fatz-man*, or *Mars* of *Javata*, given him, and was, for his martial exploits, numbered among the gods of *Japan*. His mother was no less honoured after her death, and, after a glorious reign of seventy-years, was ranked among the goddesses of that country, with the title of *Kassino-day-miosin*. She was succeeded by her warlike son above-mentioned.
- XVI. WOOSIN, or *Oofin*, in the 930th of the æra, and seventy-first of his age. He proved a great prince, both in peace and war, and a true father of his country, which he governed with great prudence and clemency, during a reign of forty-three years. He lived 113 years, and left the crown to his fourth son,

(F) Our author should have excepted their sixth daïro *Koan*, to whom he gives a reign of 101 years*, unless we suppose an error to have crept either into his, or his English translator's copy †.

* See, *Before*, p. 50.

† Conf. *Kämpf. Engl.* p. 161, & 163.

- XVII. NINTOKU, who mounted the throne in the 973d year of the æra, and twenty-fourth of his age; and proved likewise a good and virtuous prince, and was highly revered by his subjects, to whom he remitted the taxes at several times (G). He reigned eighty-seven years, and died in the 111th of his age. There is a temple built to his honour in the city of *Tsino-kuni*, where he is honoured with the titles of *Naniva*, *Taka-kuno*, *Mia-koresinaro*, *Day-mio-tsin*, all pompous in their kind.
- XVIII. RITSU, his eldest son, succeeded him in the 1060th year of the æra, and seventy-second of his age. His usual residence was at *Kozur-koos*, in the province of *Jamatta*, where he reigned only six years, and was succeeded by his younger brother,
- XIX. FAN-SEY, who mounted the throne in the year of the æra 1066, and in the fifty-fifth of his age. He removed his imperial residence to *Sivagakki*, in the province of *Kaa-waatz*; where, after a short reign of eight years, he left the crown to his younger brother,
- XX. INKIOO, in the year of the æra 1074, and thirty-ninth of his age. This prince resided at *Aska*, in the province of *Jamatto*; and sent for a *Chinese* physician, to take care of his health, and died in the fortieth year of his reign, and eightieth of his age.
- XXI. ANKOO, his son, succeeded him in the year of the æra 1114, and fifty-fourth of his age; and resided at *Jamatto*. He had not reigned three years before *Maijuwa*, a near relation of his, rebelled against him, and defeated and killed him. He was, however, succeeded by
- XXII. IN-RUKIA, his younger brother, and *Inkioo*'s fifth son, in the year of the æra 1117 (H); who revenged his brother's murder, by putting the traitor *Maijuwa*, or, as others style him, *Maijuvano-o sin*, to a condign death. In the seventh year of his reign he married the princess *Vakaki*, whom he declared empress; and made a law, which still subsists, importing, that the children of such of the dairo's wives as should be declared empress, should be acknowledged as lawful heirs to the crown. In the ninth year of his reign, the first putjes, a round copper coin, with a square hole in the middle, for the conveniency of stringing them, after the manner of those of the *Chinese* †, were first coined in *Japan*. He reigned twenty-three years; but how long he lived is uncertain.
- XXIII. SE-NEI, his second son, succeeded him in the year of the æra 1140, and of his age thirty-seven, and reigned only five years, and left the crown to,
- XXIV. GEN-SOO, a grandson of *Riaku*, who succeeded him, and reigned three years; and then resigned the crown to his brother. He lived eighty-five years.
- XXV. NIN-KEN reigned eleven years, and lived fifty-seven.
- XXVI. BURETZ, the son of *Nin-ken*, succeeded his father in the year of the æra 1159; that of his age is not mentioned. He proved a cruel tyrant, and took delight in cutting off people's heads unawares, and ripping up pregnant women, and other such acts of barbarity (I). He reigned but eight years, and was succeeded by,
- XXVII. KEI-TEI, who was the great grandson of the emperor *Oosin*, and mounted the throne in the 1167th year of the æra, and fifty-fourth of his age. He removed his court from *Tsutuki*, his usual residence, to *Fotoguani*, in the province of *Jamatto*. His reign, which lasted twenty-seven years, is recorded as a glorious one, though we are not told for what; and, after his demise, in the eighty-first year of his age, his successor deified him with the titles of *Askano*, *Day*, *Mia*, *Sin*.
- XXVIII. AN-KAN, his son, succeeded him in the year of the æra 1194, and of his age sixty-nine; and, after a short reign of two years, was deified, and is still worshipped as the protector of the province of *Jamatto*.
- XXIX. SENK-VA, his brother, succeeded, and deified him, in the 1196th year of the æra, and, after a reign of four years, died in the seventy-fourth year of his age.
- XXX. KIM-ME, vulgarly *Kin-mei*, another brother of *An-kan*, succeeded *Senk-va*, in the thirty-second year of his age, and 1200th of the æra. He was a religious prince, but much addicted to the foreign pagan worship, especially that of *Budsdso*, which spread itself in his dominions, and caused the idols of *Buds*, or *Foloque*, to be carved in *China*, and set up in *Japan*. What inclined him to this sort of superstition, is the pretended miraculous apparition of some

† De his, vide vol. iii. p. 621, & seq.

(G) In his reign a child is said to have been born in *Fida* with two faces, four arms, and four feet.

(H) He is reported to have been born with grey hairs; and hence it is thought, that some historians put his accession to the crown in the seventy-first year of his age, tho' it be plainly inconsistent with the chronology and the age of his predecessors (8).

(I) Some add, that he was, on that account, like to have been consumed with fire from heaven; and that, to

prevent further damage from it, he caused a subterranean room to be built, all of stone, in some part of the palace, to which he used to repair whenever it thundered.

He took delight in plucking people's nails off their hands and feet; their hair from all parts off their bodies; to make people climb up to the tops of trees, and then shake or shoot them down, and laugh heartily at their falling.

(8) *Kampfer, ubi supra, lib. ii. c. 4.*

of

a of those idols in *China*, and other parts of *India*; particularly in *Japan*, that of the god *Amida*, which was seen at the entry of a pond near the city of *Naniwa*, environed with golden rays, no one knowing how it was conveyed thither. In memory of it, the emperor instituted the first *Nengo*, or short æra, in *Japan*, and called it *Conquo*. The *Japanese* historian adds, that this miraculous idol was afterwards carried, in great pomp, into the country of *Sinako*, and deposited in the stately temple of *Sinquosi*; where it wrought many miracles, and hath rendered that place famous all over the empire. *Kim-me* reigned thirty-two years, and lived sixty-three.

XXXI. *Fit-atzu*, or *Fin-tatz*, his second son, succeeded him, in the 1232d year of the æra, but no mention is made of his age. He was no less superstitious than his father, nor his reign less pregnant of wonders; and particularly, the birth of the great apostle of *Japan* *Sotoktais*, which was preceded and followed by very surprising circumstances, some of which the reader may see in the margin (K). This proved a rare time for idol-carvers, priests, and temple-builders, who flocked thither from other parts; so that idol-worship spread far and wide over his dominions. He was no less superstitious in other respects; particularly with relation to brutes, in whose behalf he enacted a law, that, on six several days of each month, every living creature whatsoever should be set at liberty; and that every one who had none of them, would do well to procure some, that they might not want an opportunity of giving a proof, on those days, of their merciful disposition towards those creatures. In the eighth year of his reign the first image of *Siaka*, or *Xacca*, was brought over from beyond sea, and conveyed into the temple of *Kobusi*, in the city of *Nara*, where it hath been held in great veneration ever since, and still occupies the most eminent place in that grand edifice. In the fourteenth year of his reign one *Moria*, a great opposer of *Sotoktais*, raised great commotions in the empire. He bore such a mortal hatred to all the idols of the country, that he took, burnt, and destroyed them, where-ever he came; but, in about two years time, his party was quite defeated, and he put to death for his presumptuous enterprise. They add, that having thrown the ashes of those burnt idols into a lake, there arose suddenly a most dreadful storm of rain, thunder, and lightning. *Fit-atzu* reigned fourteen years, and was succeeded by his fourth son,

XXXII. *Joo-mei*, in the year 1246 of the æra; and, in his reign, a temple was built, in the small province of *Tamatsucuri*, in memory of the defeat of *Moria*, above-mentioned. *Joo-mei* reigned only two years, his age is not mentioned, and,

XXXIII. *Siu-siun*, his brother, succeeded him; in the third year of whose reign, and in the seventh month, the empire of *Japan* was divided into seven large tracts of land, called *Gokisizido*, which division still subsists, and is to be met with in all the *Japanese* maps. We have taken notice of it in the last section ‡. *Siu-siun* reigned only five years, and left the crown to,

XXXIV. *Syko*, or *Swiko*, grand-daughter of the emperor *Kim-me*, and relict of *Fit-atzu*, in the year of the æra 1253. In the sixth year of her reign a peacock and a crow were brought from beyond sea, among other presents to her, the breed of which still subsists, and the latter have multiplied to such a degree, that they are become a nuisance. The next year was signalized by dreadful earthquakes, which spread almost over the whole empire, and caused great devastations every-where. The next was still more remarkably terrible, not only from fire that fell from heaven, but from the heavy rains which followed immediately after, and laid many towns under water. In the twelfth year she caused the statue of *Siaka* to be cast in brass, which was not long after melted, and coined into small money, and another of plaster put in its room. In the same year gold was first brought into *Japan*, from *Korea*. In the twenty-first year of her reign, died the celebrated *Sotoktais*, in the fifty-ninth year of his age. And, in the thirty-fifth, a swarm of strange flies was observed in the country, which made a loud humming noise, and did a great deal of mischief. *Syko* died in the thirty-sixth year of her reign. Her age is not taken notice of.

XXXV. *Dsiome*, grandson to the late emperor *Fit-atzu*, succeeded her, in the 1289th year of the æra; and resided at *Jamatto*. In the third year of his reign, was born the celebrated devote *Gienna-giosa*, founder of the order of the *Jammabos*, or mountain priests. In

‡ See before, p. 33, & seq.

(K) His mother, before her pregnancy, saw herself, in a dream, surrounded with celestial rays, as bright as the sun, and heard herself addressed in the following words: *I, the holy Gufo-bosatz, must be born again, to teach the world; therefore I am come down to enter into thy womb.* Upon which she awoke, and found herself with child. Eight months after she heard the babe speak distinctly in her womb; and in the twelfth month she was, not only without pain, but with great pleasure and

delight, delivered of a son, who was then named *Fit-siun*, but afterwards *Tais*, and *Sotoktais*. He began, from his tenderest infancy, to give singular tokens of his future greatness, and extraordinary piety, and took the greatest delight in prayers, and other parts of devotion; insomuch that once, when he was but four years old, and had been praying very fervently, the burnt bones and relics of the great *Siaka* were, in a miraculous manner, put into his hands.

the same year a comet was seen for some time. And in the twentieth year of his reign, on the tenth day of the second month, a star was observed in the moon. He reigned twelve years, and left the crown to,

Kwokoku.
After Christ,
642.

XXXVI. Kwokoku, his imperial consort, and adopted daughter of the emperor *Tenmu*, in the year of the æra 1302. In the second year of her reign, five different colours were observed in the sky. She reigned but three years, and was succeeded by,

XXXVII.
Kookoku.
After Christ,
645.

XXXVII. Kookoku, her younger brother; who removed his *Alaca*, or palace of residence, to *Nagora-tojosaki*. He was the first who honoured the ministers and officers of his court with titles, and marks of distinction, according to their several ranks. He also regulated what respects should be paid to those who only enjoyed secular offices. He was also the first who introduced the *Chinese Nengos*, or short periods, and ordered them to be used through the empire. We have given an account of them at the beginning of this section. He reigned ten years, and was succeeded by,

38. Si me.

XXXVIII. Si-me, the empress *Kwokoku's* daughter, who reigned only seven years.

XXXIX.
Ten tai.
After Chr.
652.

XXXIX. TEN-TSU, the emperor *Dsiome's* son, in partnership with the *Itoku*, or nearest relations, succeeded her, in the year of the æra 1322. In the fourth year of his reign was built the famous temple of *See-guanfi*, and its chief idol, carved by the celebrated *Kahga*, who, for his incomparable skill in this kind, was afterwards fainted. In the tenth year of his reign was shewn, in the province of *Xikugo*, a monstrous stag with eight legs. He reigned ten years, and was succeeded by,

XL.
Ten-mu.
After Chr.

Opposed by a
brother.
Defeats him.
Silver brought
over.

XL. TEN-MU, his younger brother, in the year of the æra 1332. This prince met with no small opposition from a younger brother, named *Oto-mo-no-oshi*, who was then at the head of a numerous army; but, after a contest which lasted about five months, he had the good fortune to defeat him, and obliged him to rip up his own bowels; in memory of which, he instituted a new *Nengo*. In the second year of his reign he built the stately temple of *Atsuta*; and, in the third, silver was brought over from the island of *Tjusinia*, belonging to the *Koreans*, where they had been to dig and work a mine of it. In the fourth year the great festival, called *Matfuri* (L), was celebrated for the first time at *Nara*, *Tu-atu*, and other places of the empire. In the seventh year there fell hail as big as peaches; and, on the next, they had peaches full ripe in *February*. In that same year there was seen something like the *Aurora borealis* towards the east, which made that part of the sky appear as if all in a flame. c

The coin of it
forbid.

An earthquake.

In the tenth the use of silver coin was forbid, and the round pieces of copper and brass substituted in its stead. About the same time the empire was divided into sixty-six provinces. A violent earthquake was felt in the thirteenth year of his reign; and, on the next, the emperor died, on the ninth day of the ninth month, and in the fourteenth of his reign. His death occasioned fresh troubles at the ecclesiastical court about the succession; notwithstanding which,

XLI.
Tito.

Coins gold and
silver.

XLIII. GENMEI, daughter to the emperor *Ten-ishi*, in the 1368th year of the æra. She ordered gold and silver money to be coined, in the first year of her reign; but prohibited the latter in the year following. In the same year was born *Abeno-kamar*, a prince of the imperial blood, very famous in the *Japanese* history. In the third year of her reign was built the famed temple of *Koubokusi*, in which is an idol of *Akica*, cast in a mixed metal of brass and gold, by the great master *Taisoquan*. Three years after she settled the names of all the provinces, cities, and villages, throughout the empire, and ordered them to be entered in the public records. She reigned seven years, and was succeeded by,

XLIV.
Gen-hoo.
After Christ,
715.

XLIV. GEN-SHO, grand-daughter to the emperor *Ten-mu*, by his son, in the year of the æra 1375. Her reign is famed for some short *Nengos*; but more particularly for the miracu-

(L) This festival was instituted in honour of the god who is acknowledged the tutelary guardian or patron of a city or district, and hath been celebrated all over the empire, with all possible pomp and splendor, with solemn processions, vocal and instrumental music, dancing, plays, and other diversions. These tutelary gods are often changed for others, by cities and provinces, es-

pecially after any public calamities, as famines, earthquakes, &c.; for, in such cases, the gods of those countries which have suffered most are disarmed, as unworthy of any further regard; and those that are supposed to have protected their votaries best, that is, of those countries or cities which have escaped, are adopted in their room.

a lous appearances of the gods *Kumano-gongin*, *Anida*, *Jakusi*, *Senju quam-wong*, and *Biffam-montem*, in several parts of the empire. From the first year of her reign she made some regulations for the dress of the women; and, after a reign of nine years, resigned the crown to her brother's son *Sio-mu*; after which she lived twenty-five years, and died in the forty-eighth year of her age.

Apparition of
some of the
gods.

XLV. *Sio-mu* mounted the throne in the year of the æra 1384; In the eighth year of whose reign, they say the sea-coasts of *Kiz* looked like blood during five whole days; which was followed, on the next year, by great storms, a great drought, and a steril crop, which caused a famine in some parts of the empire. In the thirteenth year of his reign the small-pox proved very mortal through the empire (M). He began to build the first nunneries in the sixteenth year of his reign; and in the twentieth was finished the famed temple of *Day-bods*. He reigned twenty-five years, and was succeeded by his daughter,

Violent earth-
quakes.

(M) The *Japanese* physicians distinguish three sorts of small pox; viz. the *siô h*, which is properly that disease; the *fajika*, which is rather a kind of measles; and the *kare*, which signifies watry pustules.

In their treating of the small pox, they commonly wrap up the patient in red cloth. And when one of the emperor's children falls ill of that distemper, not only the bed and room, &c. are furnished with red, but all the persons that come near the patient must be clad in the same colour.

As to the venereal, or great-pox, it is not unknown among them, but is called the *Portuguese* disease, as hath been elsewhere hinted.

(N) The history adds, that, upon the consecration of that edifice, one *Giogii* obtained, by his prayers, the miraculous presence of *Barramou*, an eminent god in *Jada*, who came accordingly over, and assisted at it.

LVI.
Sei-va.
After Chr.
859.
A famed prince
born.

LVI. SEI-VA, in the year of the æra 1519; in the fifth year of whose reign the books of the great *Confucius* were first brought, read, and approved of, at the imperial court. In the ninth year of his reign was born, in *Jamatto*, the celebrated princess *Tijue*, daughter of *Tsike-kugu*, a prince of the imperial blood, who became famous for her extraordinary learning, and whose writings are highly esteemed in *Japan*. *Sei-va* reigned eighteen years, and resigned the crown to his son, and died four years after his abdication.

LVII.
Jo-sey.
After Chr.
877.
Runs mad.

LVII. JO-SEY, *Sei-va*'s eldest son, was but nine years old when his father reigned, in the year of the æra 1537. In the second year of his reign two fairs appeared in *Osaka*. This prince found the crown fit so heavy upon him, that he lost his senses in a short time; on which account the prime minister thought fit to depose him, after he had reigned eight years.

LVIII.
Kooko.
885.
A strange
rain.

LVIII. KOOKO, the emperor *Ni-mio*'s second son, was placed on the throne in the year of the æra 1545; in the seventh month of the first year of whose reign it rained sand and stones, which destroyed almost the whole crop of rice. He reigned only three years, and was succeeded by his third son,

LIX.
Uda.
883.
LX.

LIX. UDA; in the second year of whose reign there fell so much rain all the summer, that the fields were overflowed, and the harvest greatly damaged. He reigned ten years.

Day-go.
After Chr.
888.
A total dark-
ness.
A great fire
at Meaco.

LX. DAY-GO, his eldest son, succeeded him, in the year of the æra 1557; and on the first year of his reign, on the third day of the sixth month, it grew on a sudden so dark (probably by a total eclipse of the sun) that the people could not see one another. In the second year died *Somme-Dono*, who had been declared *Kiffaki*, that is, the supreme woman, or empress, and mother of the presumptive heir to the throne. In the 16th year, on the second day of the fifth month, a great fire happened at the capital of *Meaco*, which consumed 617 houses. On the twenty-sixth year a hare was sent to court which had eight legs, out of the province of *Jamatto*. *Day-go* reigned thirty-three years, and was succeeded by his twelfth son,

LXI.
Siu-zaku.
After Chr.
931.

LXI. SIU-ZAKU, in the year of the æra 1591; in the second year of whose reign, *Mas-fakaddo*, a prince of the imperial blood, revolted; and the rebellion could not be quelled till seven years after, when the author of it was defeated and killed. In the third year of his reign, on the twenty-seventh day of the seventh month, was felt a violent earthquake, and another on the seventh year, on the fifteenth of the fourth month. Most of this prince's reign was troubled with storms of thunder and lightning, which reduced a great number of temples and monasteries to ashes; particularly in the thirteenth year, during which the storms were almost universal in all the provinces of the empire. *Siu-zaku* reigned sixteen years, and was succeeded by,

LXII.
Murakami.
917.
A general
flood.

LXII. MURAKAMI the emperor *Day-go*'s fourteenth son, in the year of the æra 1607; who, in the fourth year of his reign, called a synod together, at which assisted all the heads of the different sects, to deliberate about some matters of religion. He reigned twenty-one years, and left the crown to his second son,

Turns monk.

LXIII. REN-SEI, or *Rei-sen*, in the year of the æra 1628, aged then sixty-one. He reigned but two years, and was succeeded by his younger brother,

LXIV. JEN-VO, or *Jen-ho*, who reigned fifteen years, and left the crown to his nephew, LXV. KWASSAN, or *Quassan*, was the son of the late emperor *Ren-sei*, and was but seventeen years old when he mounted the throne, in the year of the æra 1645; and had scarcely reigned two years when he was seized with a religious fit, left his imperial palace in the middle of the night, and retired into the monastery of *Quan-si*, where he was shaved, and dedicated himself to a retired life. He continued twenty-two years in the same monastery, and died in the fortieth year of his age.

LXVI.
Itsi-dsio.
After Chr.
987.

LXVI. ITSU-DSIO, his cousin, and son of the late emperor *Jen-vo*, succeeded him immediately upon his abdication, in the year of the æra 1647. His reign is famed for the number of learned men who then flourished at his court, but the eighteenth year of it was visited with a mortality which raged all over the empire. He reigned twenty-five years, and was succeeded by,

LXVII.
San-dsio.
After Chr.
1112.

LXVII. SAN-DSIO, the emperor *Ren-sei*'s second son, in the year of the æra 1672. He reigned five years: in the third of which his residence was burnt down, as was a great part of another on the next.

LXVIII.
Itsi-dsio II.
Cachibudans.
1112.
A great
plague.
A great
flood.
A great
flood.

LXVIII. GO-ITSU-DSIO, or *Itsi-dsio* the second, succeeded him in the year of the æra 1677. In the fifth year of his reign *Sai-siu* obtained leave of him to be drawn about in a covered chariot drawn by two oxen; which new fashion was so well liked, that the whole ecclesiastical court soon followed it. On the twenty-second day of the seventh month of the same year there was a violent storm, which did a considerable deal of mischief; and in the sixth year a grievous plague raged through most parts of the empire. In the twelfth year, and in the fourth month, answering to our *June*, there fell such quantities of snow as covered the ground to the height of above four feet. He reigned twenty years, and was succeeded by his younger brother,

LXIX.

- a LXXIX. Go-siu-samv, or *Siu-faka* the second, in the 28th year of his age, and 1697 of the æra: in the fifth year of whose reign, in the first month, there was a violent earthquake. He reigned nine years, and left the crown to his eldest son, LXXIX. *Go-siu-samv*.
 LXX. Go-rei-sin, in the year of the æra 1706; in the thirteenth year of whose reign a rebellion was raised in the province of *Oju*, by one *Jori-jie*, which lasted five years, till the emperor's crown-general totally defeated the rebels, and slew their two head commanders. He reigned twenty three years, and died in the forty-ninth year of his age. LXX. *Go-rei-sin*.
 LXXI. Go-san-dsio succeeded him in the year of the æra 1729, and thirty-sixth of his age; and, after a short reign of four years, left the crown to his eldest son. LXXI. *Go-san-dsio*.
 LXXII. Siira-kava, in the year of the æra 1733; in the ninth year of whose reign there was a very great drought. He reigned fourteen years, and was succeeded by his second son, LXXII. *Siira-kava*.
 LXXIII. Fori-kava, in the year of the æra 1747; who reigned twenty-one years, and died in the thirtieth of his age. LXXIII. *Fori-kava*.
 LXXIV. Toba, his eldest son, succeeded him in the year of the æra 1768; in the first year of whose reign a noise was heard in the air like that of the beating of drums, which continued several days. In the fourteenth was born *Kijomori*, a prince of the blood, very famous in the *Japanese* history (O). He reigned sixteen years, and was succeeded by his eldest son, LXXIV. *Toba*.
 LXXV. Siu-toku, in the year of the æra 1784; in whose reign was built the town of *Kama kura*. He reigned eighteen years, and was succeeded by his youngest brother, LXXV. *Siu-toku*.
 LXXVI. Kon-jey, the emperor *Toba*'s eighth son, in the year of the æra 1802; in the sixth year of whose reign a comet appeared. At this time flourished the famed *Jorimassa*, a prince of the blood, who, by the assistance of *Fatsman*, the *Mars* of the *Japanese*, performed many great exploits (P) during the civil wars carried on between four of the most potent princes of the empire; and, at the end of twenty-seven years, was extirpated with his whole family. LXXVI. *Kon-jey*.
 In the tenth year of his reign was born at court the first great *Seogun*, or crown-general, *Joritomo*, who was pitched upon by the *Dayro* to go, at the head of a powerful army, and terminate the wars between the competitors. This subtle general, abusing the power put into his hands, readily espoused the interest of that party which was most likely to support his own; by which he became so powerful, that he at length found himself strong enough to strip the *Dayros* of their secular power, and to intail it on his own posterity, as we shall see in the sequel. *Kon-jey* reigned fourteen years, and was succeeded by his elder brother, LXXVII. *Goffii-rakava*.
 LXXVII. Gossii-rakava, in the year of the æra 1810; in the very first year of whose reign *Iffi-ju* revolted, and occasioned a bloody and destructive war, which, from the time of its beginning, was called *Foggianno Midarri*, or *The desolation of the Foggien æra*. In the third year of his reign, and in the eighth month, happened a new rebellion; soon after which he resigned the crown to his eldest son, and some twelve years after turned monk. LXXVIII. *Nidzio*.
 LXXVIII. Nidzio was then but sixteen years old; and, in the first year of his reign, his two generals *Nobujori* and *Jositomo* (the father of *Joritomo*) rebelled against him; the latter of whom was killed two years after, and his son banished to *Idsu*. *Nidzio* reigned seven years, and left the crown to his eldest son, LXXIX. *Roku-dsio*.
 LXXIX. Roku-dsio, in the year of the æra 1826; who was then but ten years old, and died in the third year of his reign. After his death, LXXX. *Taka-kura*.
 LXXX. Taka-kura, the third son of the late emperor *Goffii-rakava*, was raised to the throne in the ninth year of his age; and, in the fourth year of his reign, a great part of the imperial city and palace was laid in ashes. In the seventh the small-pox was very fatal all over the empire; and, in the twelfth, the enemies of *Joritomo* were defeated in the province of *Isju*; and *Jorimassa*, the *Japanese Hercules* lately mentioned, destroyed, with his whole family. *Taka-kura* reigned twelve years, and left the crown to his eldest son, LXXXI. *Taka-kura*.

(O) This prince assumed the title of *Dayro*, and got a court of his own adherents, like that of those monarchs; but, not being able to maintain his title and dignity, was forced to flee to the famed convent of *Abaka*, on the mountain of *Yotom*, where the monks protected him against the imperial court, and the troops sent against him: soon after which he turned monk, lived fourteen years in that monastery, and died in the sixtieth year of his age, of a malignant fever, which made his flesh look as red as if he had been all on fire: a just punishment, says the *Japanese* historian, for his treacherable presumption.

(P) Among other of his feats, he is said to have shot to death, with his arrows, the infernal serpent *Naga*, a monstrous creature, which had the head of a monkey,

the tail of a serpent, and the body and claws of a tiger, and harboured in the imperial palace, to the no small dread and disturbance both of the *Dayro* and his court: if this be not rather an hieroglyphical picture of some chief rebel; for by that time those monarchs, who had enjoyed so high and unlimited an authority during such a long series of ages, and governed with such an absolute sway, began to feel a sensible decay of their power, the vassal and tributary princes, imitating their example, and every where assuming an independent power, being chiefly actuated by ambition and jealousy against each other, till they kindled that most destructive war above-mentioned, which had like to have ruined the empire.

Kame jam-
ma.
1260.

LXXXI. AN-TOKU, in the year of the æra 1141; in the first year of whose reign there was a grievous famine, occasioned by the badness of the crop, and the civil wars then raging. In the same year *Kadſuwara* (Q) went over from the party of *Feki* to that of *Joritomo*, who was then called *Tiojenuſi*, and had at that time a son born, and named *Jori Ije*, who succeeded him afterwards in the government of secular affairs. *An-toku*, after a three years troublesome reign, was forced to resign the crown to a fourth son of the emperor *Takakura*, and about two years afterwards was drowned in his flight from some of his enemies, in the western sea.

LXXXII. GO-TA-BA, or *Toba* the second, mounted the throne in the year of the æra 1184; and, in the twelfth year of his reign, *Joritomo*, who had had such success against the generals of the contending parties, came to *Meaco* to pay his respects to the *Mikaddo*, or, as he is vulgarly called, the *Dayro*, and obtained from him the title of *Sey Seogun*, or grand general of the crown (R), and took upon him the command of the imperial forces, and soon after the greatest branch of the secular power. This title is still enjoyed by all who are raised to that dignity, and with the addition of that of *Day*, or high lord, as they came to grow more powerful; for they did not absolutely strip the imperial monarchs of every branch of their secular authority till the time of *Taycho*, or *Taycho amma*, of whom we shall speak in the sequel; but kept within some bounds with them, and contented themselves with infringing some part of it gradually, and as occasion offered. *Joritomo* therefore, though not the first that abused this important trust, may be said to have been the first who made a successful attempt on this branch of the imperial prerogative, and who found means to intail this ill-gotten power on his posterity.

GO-TA-BA reigned fifteen years, and then resigned the crown to his eldest son, and died in the sixtieth year of his age.

LXXXIII. TSUTSI, alias *Tſutſi Mikaddo*, was but three years old when he succeeded his father in the year 1189; and *Joritomo* died in the first year of his reign, leaving his power and dignity to his son *Jori Ije*, which last had it confirmed to him by *Tſutſi*, in the fifth year of his reign, and was killed two years after. *Tſutſi* reigned twelve years, and resigned the crown to his younger brother, and lived in all thirty-seven years.

LXXXIV. SIUN-TOKU succeeded his brother in the year of the æra 1191; and, in the sixth year of his reign, the first *Fune*, or men of war, were built in *Japan* by order of *Sonne-tomo*, the second son and successor of *Joritomo*, who was then endeavouring to maintain himself in his post of *Sey Seogun* by force of arms. The emperor reigned eleven years, and resigned the crown to,

LXXXV. GO-FORIKAVA, or *Forikava* the second, grandson to the emperor *Takakura*; who reigned eleven years, lived twenty-four, and was succeeded by his eldest son,

LXXXVI. SI-DSIO, was but five years of age when he mounted the throne; and, in the seventh year of his reign, *Joritſue*, the then *Seogun*, or crown-general, whose usual residence was at *Kamakura*, came thence to *Meaco*, to pay homage to him. *Si-dſio* reigned ten, and lived fifteen years, and was succeeded by,

LXXXVII. GO-SAGA, or *Saga* the second, the second son of *Tſutſi Mikaddo*; who, after a short reign of four years, died in the fifty-third year of his age, and left the crown to his second son,

LXXXVIII. GO-FIKAKUSA, in the year of the æra 1207; in the eleventh year of whose reign happened a violent earthquake. He reigned thirteen years, and lived sixty, but resigned the crown to his younger brother,

LXXXIX. KAME-JAMMA; in the seventh year of whose reign appeared a comet, which was also seen in *China*; and in the ninth year, on the eighth day of the fifth month, were seen

(Q) *Kadſuwara* was a man of mean extraction, but, by his bravery and noble exploits, had raised himself to the degree of one of the most considerable princes of the empire; and, by his now siding with that revolted general, turned the balance almost wholly on his side.

We read of several eminent generals who were killed in this civil war, particularly *Josſaga*, a hero much cried up in the *Japanese* history; and, after him, *Joritſue*, another great commander, whose death was followed by that of his lieutenant-general, and the extirpation of his whole family.

(R) This is the same title with that of *Cubo*, mentioned in the letters of the missionaries, *Varenius*, and other *Japanese* writers; and which we have therefore made use of in the former part of this chapter, as the most known of the two. Dr. *Kämpfer*, who hath given us this extract of their history out of the *Japanese* annals, gives them that of *Sey Seogun*; but, from his and their accounts, it plainly appears, that the dignity is the same; and

that they originally meant the generalissimo of the emperor's forces, whose office it was to decide all competitions between contending tributary princes, to quell all rebellions, and to command all the imperial forces. This post, therefore, was of such importance, that the emperors generally bestowed it on their second, or some younger or favourite son that was fit for it; or, in want of that, to some favourite brother, nephew, cousin, &c.; and these were styled *Cubos*, some of whom, hurried by their unmeasurable ambition, have raised very unnatural rebellions and civil wars, instead of quelling them, as hath been formerly observed. *Joritomo* seems to be the first who had the title of *Seogun* given to him; but, whether because he was not of the imperial blood, or at some great remove from the reigning branch, we will not affirm; only thus much is plain, that his office and power was the same with that of the *Cubos*; and that, like some of them, he found an effectual way of abusing both against his lawful sovereign.

a two fans; and on the second day of the eleventh month were seen three moons. He reigned fifteen years, and resigned the crown to his eldest son, and lived thirty-two years after it.

XC. Gouda succeeded him in the year of the æra 1935; and in the nineteenth year of his reign, and twenty-first day of the fifth month, the *Tartar* general *Mokko*, as he is called by the *Japanese* historians, appeared upon the coasts of *Japan* with a fleet of 4000 sail, and 240,000 men. The then reigning *Tartar* emperor *Syfu*, after having completed the conquest of *China*, about the year of Christ 1270, resolved upon that of *Japan* also. We have formerly given an account of this abortive expedition^a; which, if we will believe the *Japanese* writers, proved so by reason of the tutelar gods of *Japan* relenting the insult offered to them by those invaders, to such a degree, that, on the first day of the seventh month, they excited a vehement storm,

b which destroyed their boasted invincible armada (S). Gouda reigned thirteen, and lived fifty-eight years. He was succeeded by his cousin,

XCI. FUSIMI, *Hikakusa* II.'s son, in the year of the æra 1948; who had a son born in the first year of his reign, to whom he resigned his crown in the eleventh, and died in the fifty-third year of his age.

XCII. GO-FUSIMI mounted the throne in the eleventh year of his age, and 1959th of the æra; and, after a short reign of three years, resigned the throne, and died in the forty-eighth year of his age.

XCIII. GO-NIDSIÖ, or *Nidzio* II. the emperor Gouda's eldest son, succeeded him in the year of the æra 1962. His reign is remarkable for a violent earthquake; for the death of the emperor *Kame-jamma*, thirty-two years after his resignation of the crown; as also for the birth of *Takaudsi*, who became afterwards a celebrated *Seogun*, or secular monarch. *Nidzio* reigned only six years, and resigned the throne to,

XCIV. FANNASONNO, younger brother to *Fusimi* II. in the year of the æra 1968; who reigned eleven years, and resigned the crown to,

XCV. GO-DAYGO II. *Nidzio*'s second brother, in the year of the æra 1979: in the latter end of whose reign the civil wars then raging occasioned the shedding of a vast deal of blood. These wars are related at length in a *Japanese* history called *Teyfeki*. Daygo, after a reign of thirteen years, resigned the crown to,

d XCVI. KWO-GIEN, or *Kow-gien*, in the year of the æra 1992: in the second year of whose reign, *Takaudsi*, then *Seogun*, or secular monarch, came to pay his homage to him. He resigned the crown to his predecessor, after he had enjoyed it two years, and lived thirty-two years after that.

GO-DAYGO resumed the throne; and, three years after, the isle of *Nippon* was shook with a violent earthquake. He reigned this second time but three years, and was succeeded by,

XCVII. QUO-MIO, the fourth son of the emperor *Fusimi* II. and younger brother of *Kwo-gien*, in the year of the æra 1996: in the second year of whose reign the then *Seogun*, or crown general, was honoured with the additional and illustrious title of *Day*, or lord. The *Japanese* historians differ about the length of *Quo-mio*'s reign, one giving him twelve, and another but two years: however, he was succeeded by,

e GO-MURACAMI II. *Daygo* II.'s seventh son, in the year of the æra 1999, who yet hath no rank assigned to him in the list of the *Mikaddos*, though we find three *Nengos*, or short æras, mentioned during his reign: the two first of three, and the last of four, years. However, at the expiration of the last,

XCVIII. SIUK-VO mounted the throne in the year of the æra 2039: in the first year of whose reign an end was put to the war called *Sidjo Navatto*. He reigned but three years, and was succeeded by his younger brother,

f XCIX. GO-KWO-GEN II. or *Kwo-gen* II. in the year of the æra 2012: in the third year of whose reign *Jesifaki*, the third son of *Takaudsi* the *Day-Seogun*, came to court; and, on the next year, *Takaudsi* himself was sent by that monarch to compose some tumults in the pro-

^a See before, vol. ii. p. 384, & seq. & (M). & iii. 754, & seq.

(S) Both the *Chinese* and *Japanese* histories take notice of this invasion, though they differ somewhat as to the time, and other circumstances. Father *Copley*, in his chronological tables of the *Chinese* empire, and *Du Halde*, in his description of it, place the complete conquest of it in the year 1281; and the *Japanese* in the ninth year of the emperor Gouda's reign, which will fall in with the year of Christ 1284. They differ likewise as to the number of ships and men, their total defeat, and other less material points; and it is not to be doubted but the *Japanese*, who were the gainers in it, have magnified the loss of the *Tartars*; inasmuch that, of that vast navy, few men escaped, according to them, to carry the dreadful news to *China*. However, *Marco*

Polo, the *Venetian* traveller, confirms the main points both of the invasion and great loss of the *Tartars*; and, to the account of that dreadful storm, adds another cause of their defeat, *viz.* the dissensions and jealousies that arose between the two *Tartar* generals. What he adds to it, *viz.* that they were forced to abandon what they had already conquered, seems likewise to intimate as if they had made some considerable progress in it. But the truth is, he was not among them, but resided then at the *Tartar* court in *China*; so that he must take his account from the *Tartars* themselves, who would not fail of representing this great defeat and loss in the most favourable light.

vince of *Oomi*. That general died four years after, and was succeeded by his son above-named, who had the title of *Sei Day Seogun* confirmed unto him, as had also his son and successor *Jossumitz*. *Kwo-gen* reigned twenty years, and was succeeded by,

CII. SEO-KWO, in the year of the æra 2073: in the 4th year of whose reign, *Uje*, of the family of the *Suggi*, rebelled against him. In the ninth year, on the twelfth day of the tenth month, there appeared two suns. He reigned sixteen years, and was succeeded by his son,

CIII.
Go funna-so.
After Chr.
1429.
Strange appearances and calamities.

CIII. GO-FUNNA-SO, in the year of the æra 2089. In this year appeared a very large and terrible comet, and another in the eleventh year of his reign. In the sixteenth year, *Josimassa* was honoured with the title of *Sey Seogun*; and, in the eighteenth, the imperial palace was burnt to ashes. During the seven last years of this reign, many strange and dreadful appearances in the heavens are mentioned by the *Japanese* historians, which were followed by famine, pestilence, and a grievous mortality all over the empire. He reigned thirty-six years, and was succeeded by his son,

CIV.
Tsutsumi-kaddo.
After Chr.
1465.
Some comets seen.

CIV. GO-TSUTSI-MIKADDO, in the year of the æra 2121. In the second month of this year was seen a comet, whose tail appeared to be about eighteen feet long; and in the next were felt several dreadful earthquakes. The third year was very fatal to the empire, which was filled with troubles, civil wars, and desolations. On the fifth year appeared another comet; and, in the seventh, on the first day of the twelfth month, was seen a new and larger one than any that had been observed before, and with a tail as long, according to the *Japanese* historian, as a street. This year was likewise remarkable for a great mortality throughout the empire; and, in the eleventh, the waters about *Amagasaaki*, in the province of *Setz*, were driven with such fury, by a vehement wind, into the land, that they overflowed a great part of that country, and drowned great numbers of the inhabitants. In the 25th year of this reign, and on the sixth day of the third month, died *Josinavo*, the son and colleague of *Josimassa*, the then crown-general; and in the next died his father also, and very much regretted. In the 29th year, *Josifsimmi*, having been honoured by the emperor with the title of *Sey-Day-Seogun*, went and commanded the army in *Jesiro*. *Tsutsi Mikaddo* reigned thirty-six years, and was succeeded by his son,

Josi-tir murders himself.

CVI. GONARA, in the year of the æra 2187: the beginning of whose reign was signalized by the conclusion of a grievous war between the two great princes *Fosokava* and *Kad-suragava*; the former of whom, two years after, put an end to his life by ripping up his own bowels, with that courage and resolution which is the peculiar character of the *Japanese* heroes. During this monarch's reign, the empire was visited twice with pestilence and a grievous mortality, thrice with vast rains and inundations, and once with such an universal storm as blew down a prodigious number of buildings through the island, and in particular the imperial palace. In the 21st year *Josi-tir* received the titles of *Sey-Day-Seogun*; eighteen years after which he ripped up his own bowels. He was the son of *Josisar*, and twenty-fourth in descent from *Joritomo*; and was raised to that dignity in colleagueship with his father, who died three years after, in the 24th of *Gonara*'s reign. *Gonara* reigned thirty-one years, and was succeeded by his son,

CVII. OOKIMATZ, whose reign began with a grievous drought and famine, in the year of the æra 2218. In the 11th year of his reign, *Jositira*, the son of *Josi-tir*, was raised to the dignity of *Sey-Day-Seogun*, or secular monarch, in his father's stead, who had ripped up his own bowels three years before. In the sixteenth year, *Kamio*, which is the upper city of *Me-aco*, was set on fire by incendiaries, by which the greatest part of it, and of the imperial palace,

- a lace, were burnt down. In the 20th year, in the beginning of the ninth month, appeared a large comet, which did not go off till the next year. In the 25th year, on the second day of the fifth month, the famed *Nobunanga*, the then *Sey-Day-Seogun*, and twenty-seventh in descent from *Joritomo*, and his eldest son, were killed at *Meaco* (T); and, on the next year, came some ambassadors from the *Riuku* or *Laqueo* islands. In the 28th year of this reign, and in the seventh month, *Fide Jofi*, who afterwards took the name of *Taycho* and *Taychosamma*, was by the emperor raised to the dignity of *Quanbuku*, which was then the next to that of the *Dayro*, by virtue of which they acted as his vicegerents. We shall give a farther account of him in the sequel, when we come to speak of the secular monarchs; and only observe here, that it was he who stripped the emperors of the last remains of their secular authority, and made himself absolutely independent of them in all secular affairs, except the paying a kind of formal homage once in three, four, or five years, as hath been formerly hinted ^b.

Taycho raised to the dignity of vicegerent.

Becomes absolute.

THIS 28th year was likewise remarkable for a violent earthquake which happened at the end of the eleventh month, and continued to repeat its frequent, though gentler, shocks the best part of the next year, which was the 29th, and last of *Ookimatz's* reign, who then resigned the crown to his grandson, and died seven years after.

CVIII. GO-JOSEI, who was the eldest son of the hereditary prince *Jookvo*, who died the year before, on the seventh day of the eleventh month, in the year of the æra 2247. In the third year of his reign, *Fide Tsugu*, a nephew of *Taychosamma* above-mentioned, and by him declared his heir and successor (though afterwards disgraced, and condemned to rip up his bowels) a cruel and bloody prince, killed *Foodsjo*, a revolted tributary king, in the province of *Sagami*, and extirpated his whole race, according to the *Japanese* rules of war, which advise, by that means, to root out and destroy at once the cause and the evil; and on the next year was invested with the title and dignity of *Quambuku*.

CVIII.

Go-josei.

After Chr.

- c IN the sixth year of this reign, *Taychosamma* carried the war into the peninsula of *Korea*, of which we have given an account at the end of the last volume ^c, and with a view, as he pretended, of conquering afterwards the empire of *China*, but ended the war in the seventh year of it. In the eleventh year of *Go-Josei*, and on the twelfth day of the eleventh month, happened several violent earthquakes, which continued their shocks for a whole month; and about the same time it rained hair of four or five inches long in several parts of the empire; which phenomenon is often mentioned in the *Japanese* histories.

Korean war.

1592.

Dreadful earthquakes.

Rain of hair.

- d IN the twelfth year, which was the 2258th of the æra, *Fide Jofi*, the twenty-ninth in descent from *Joritomo*, took upon him the title of *Taycho*, or great prince, having by that time got the supreme and absolute power and command over all secular affairs; and died on the 16th of *December* of the same year, leaving his son and successor *Fide-jori*, then under age, to the care of *Jejas-sama*, one of his favourite counsellors. In the fourteenth year, *Jofida Tsibu*, who had some place at *Fide-jori's* court, rebelled against the emperor; but he and his adherents were soon after defeated, and the chief of them, with all their families, exterminated. In the seventeenth year, the title of *Sey-Day-Seogun* was given to *Jejas*, or *Jejas-sama*, the governor of *Taycho's* son, probably on account of his having suppressed the rebellion above-mentioned, whilst that of *Nay-Day-Sin* was given to *Fide-jori*; and two years after, the former of those titles was given to *Fide-tada*, *Jejas's* son. In the same 19th year of this reign, a mountain arose out of the sea in one night's time, near the rocky island of *Fatsisco*, whither the grandees in disgrace are commonly banished. In the 21st year arrived at *Suruga* an ambassador from *China*, sent thither to compliment the secular monarch, or, as the *Chinese* historians pretend, to present him with the letters patent, and title of king, from the *Chinese* emperor. In the 23d year, *Jejas* ordered a strong castle to be built in the province of *Owari*; and on the next year the *Riuku* or *Laqueo* isles, which had sent an embassy to *Japan* in some former reign, were subdued by the prince of *Satzuma*, or *Sazuma*, in the great island of *Ximo*, a tributary of *Japan*; ever since which time, they have been looked upon as belonging to the empire.

CX. NIO-TE, or *Sio-te*, came to the crown in the year of the æra 2200: in the third year of whose reign died *Ide-tada*, the secular monarch; and his son and successor *Jemitz* went soon after to pay his homage to that prince. In the seventh year of her reign, the *Chinese*, who had been for some time forbidden to come into *Japan*, on account of their suffering cowards and traitors, like their natural princes, to be dethroned and destroyed by the conquering *Tartars*, were again permitted to trade, though not to settle there. By this time the Christian religion had been propagated with such surprising success throughout the empire, and was favoured and embraced by so many of the petty princes, and even by some of the secular monarchs, according to some relations [*Ide-jori*, the son of the great *Taycho*, being affirmed to have been of that number], that it had already kindled an universal persecution against them, and one of the bloodiest that ever was known in any age or country. We shall find a more proper place to speak of it under the next article; and only observe here, that it was about the latter end of the eighth year of this prince's reign that the famous rebellion of the Christians happened at *Simabara*, in the province of *Iizen*, which brought on the utter extirpation of Christianity out of the empire; though neither she, nor any of her predecessors, had any hand in either the promoting or the abolition of it. The secular monarchs were the chief actors in both; and these rather acted according to their own inclinations and interests, than by any directions from the ecclesiastical throne, of which they were now become quite independent. All therefore that the *dairo's* could do to stop the progress of a new religion, so contrary to their glory and interest, could be only setting the vast numbers of priests and monks to preach against, and all the superstitious laity to oppose themselves to it; tho' all this would have proved ineffectual, if the secular monarchs had not given the finishing stroke to it by that cruel persecution, and the severe laws they enacted against it.

THE twelfth year of this prince's reign was attended with a grievous famine and great mortality; and, in the fourteenth, she resigned the crown to her younger brother,

CXII. SININ, in the year of the æra 2314: in the third year of whose reign, and not before, some authors pretend that the *Chinese* obtained leave to renew their traffick with *Japan*. In the same year a dreadful fire broke out at *Jeddo*, the residence of the secular monarch, which continued burning several days, and laid the greatest part of that noble capital in ashes (U). In the seventh year, the palace of the *Dayro* at *Meaco* was likewise set on fire, and a great part of it laid in ashes. In the eighth year, on the first day of the fifth month, happened a vehement earthquake, by which a mountain in the province of *Oomi*, upon the river *Katzira*, was sunk so deep into the ground, as not to leave the least footstep of its having stood there. *Sinin* reigned eight years, and was succeeded by his younger brother,

CXIII. KINSEN, or *Teysen*, the youngest son of the late emperor *Day-seo kwo-tey*, in the year of the æra 2323. This prince, in the third year of his reign, established a court of inquiry in all the cities, towns, and villages, throughout the empire; whose business was, to examine what belief or sect each family, and each individual of it, was of, and to be continued once a year from that time forward, not on any determinate day, but on some convenient time either before or after the ceremony of trampling upon the crucifix, and other Christian images (W), but

(U) This terrible fire, which happened on the 13th day of the first month (February), Anno Chr. 1657, Mr *Hageraer*, who was then residing at that metropolis, as ambassador from the *Dutch East India* company to the secular emperor, hath given a full and curious account, which hath been since inserted in *Montanus's Memorable Events to Japan*, p. 370.

(W) We have already hinted something of this cere-

mony upon another occasion (1): it having been imposed with a design of discovering those who are Christians, or christen, from those that are not; the former chusing rather to lose their lives than to offer such an indignity to their religion; and the latter not only complying with, but performing it in such a manner as may best express their abhorrence of it.

(2) See before, p. 23, & seq. (B), & alibi passim.

a but more probably before it, if we may guess at it by what is still practised at *Nagasaki*, and other places, where Christianity had flourished most ^a.

In the sixth year of this reign, on the first day of the second month, and for forty-five days successively, the capital of *Jeddo* suffered greatly by fire, which seems to have been done designedly, and the malicious intent levelled chiefly against the merchants warehouses, and those parts where they were quartered. The 6th year, having suffered by a long and continued drought, brought on a famine in the next; and the emperor ordered, that, from the twentieth day of the first month, for 100 days successively, boiled rice should be distributed to the poor, at his own charge, in all the parts of the empire. The next year is noted in their history for grievous storms and inundations in most of the maritime provinces, and for a great mortality among men and cattle. On the next year, as they were cleaning the river that runs by the port of *Osacca*, they took up great quantities of gold and silver, which had, in all probability, been sunk there during the late civil wars. On the eleventh year, and the ninth day of the fifth month, not only the *Dayro's* palace, but a great part of the city of *Meaco*, were again reduced to ashes; on which account that monarch ordered, that certain quantities of rice should be given or lent to those who stood in need of it, as is frequently done in time of famine. On the eighteenth year died the then secular monarch *Jjetzua*, and in the next his successor *Tsinajos* had the following pompous titles bestowed upon him by the emperor *Kinsén*, and super-added to those of *Sey-Day-Scogun*; viz. *Nadai Sin, Sioni-j-ukonjeno Taifo* (X). In the twentieth year there was again a great famine and mortality in the empire, especially in and about the capital of *Meaco*; and, in the last month of that year, the city of *Jeddo* was again set on fire, and the greatest part of it destroyed. In the twenty-first year died *Tokumatz*, the son and presumptive heir of *Tsinajo samma*, the then reigning secular monarch; on which occasion the whole empire went into a general mourning, and all music, and other rejoicings, were forbidden for the space of three years. On the last month of the same year the city of *Jeddo* suffered a fresh conflagration; and about three years after, *Kinsén*, having then reigned twenty-four years, resigned the crown to his son,

CXIV. KINSEN, or *Kinséokwo*, in the year of the æra 2347, of Christ 1687, which was the year in which our author was in *Japan*, and with which he concludes his list of ecclesiastical monarchs, which is extracted out of their history ^c.

CXIV.
Kinsén II.

^a Vide KÆMPFER, lib. ii. c. 5. lib. iv. c. 3. & seq.

^c Idem ibid.

Whether or no the court of inquiry, and the ceremony of trampling upon the cross, were established at the same time, we cannot affirm, though, in point of time, they follow one another. However that be, these courts are obliged first to take a list of every inhabitant within their verge, old and young, and to what sect each individual belongs, which list is afterwards to be conveyed by the proper officers to the court; and this is commonly taken at the close of the old year; after which they proceed to that which they deem the more important ceremony, viz. the *Jetomi*, or *figure-treading*, as they there style it. This is performed by trampling upon a crucifix, upon the image of the Virgin *Mary*, or of some other saint, and shewing some other tokens of contempt and abhorrence to them: even the children, that are not capable of performing it, are held up in the arms of some relation, and made to touch the figures with their feet. These images are about a foot long, and cast in brass; and, when every person belonging to one street, none excepted, hath gone through this detestable ceremony, they immediately go on with the next, till they have gone through the whole city, town, or district; after which, the officers, who are obliged to assist at the ceremony, perform it themselves in the same manner, and then witness with their hands and seals, both for each other, and for all the rest, at the bottom of the list, that it hath been duly performed by all those whose names are inserted in it. If any hath dared to refuse to comply with it, they are condemned to death, if they are persons of any note; or, if only poor, ignorant, and vulgar people, are either imprisoned for life, or at least till they publicly renounce and renounce the little Christianity they have.

This ceremony was, soon after the abolition of Chri-

stianity, ordered to be performed in every place belonging to the *Japanese* empire, on the second day of the year, which immediately followed the general inquiry above-mentioned; and lasted longer or shorter, according to the number of inhabitants belonging to each district; and, when finished, the pictures were locked up in a box, and preserved by the magistrate till the next year. But they have since much abated of its strictness, and only compel strangers or suspected persons to it, as they have taken such precautions against that religion being ever introduced again among them; so that it is only at some of their trading sea-ports that they kept it up at the time of our author's residing there (3).

(X) What the import of those titles is, we are not told, but only in general, that they are of the most pompous kind; and we only mention them here, to shew how far the dignity and authority of those monarchs was sunk by this time, that they had no other way of preserving the poor remains of it, but by bestowing on those secular upstarts such singular honours and swollen titles; but their complaisance did not stop there; for, as soon as any of them died, they made no difficulty of placing them among their gods, and to give them some new names, still more sublime and pompous, if possible, in order to secure the favour of the next successor. On the other hand, as the bulk of the nation still retained a profound regard for their natural and antient monarchs, the secular ones could not fall upon a more effectual way of preventing any new revolt in their favour, than by thus endeavouring to obtain such signal tokens of their favour and esteem, as might induce the people to believe that there was a perfect harmony between the two courts, and that they acted every thing in concert with each other.

^c Kæmpfer, lib. iv. cap. 3. & all the pages.

The names and
reigns of the 36
secular mo-
narchs.

THE following is a regular list of their cubos, or secular monarchs, from *Joritomo*, who laid the foundation of this new kind of monarchy, down to *Tsinajos*, who was then reigning in the year of Christ 1687 above-mentioned. But in this we shall content ourselves with the bare mention of their names, succession, and length of their reigns, at least as far down as the great *Taycho*, because we find little recorded of them but what we have already taken notice of under the reigns of the *Dayro*'s, with whom they were contemporary.

1. JORITOMO was born in the tenth year of the reign of *Konjey*, the seventy-sixth *Dayro*, *An. Chr.* 1152, or 1154 according to others, and began his reign about *An. Chr.* 1188. He reigned eleven years, and died in the first year of the *Dayro Tsutsi Mikaddo*, *An. Chr.* 1199.

2. JORI-IJE, his eldest son, succeeded him, and reigned five years.

3. SANNETOMO, *Joritomo*'s second son, reigned seventeen years.

4. JORITZNE, a son of *Quan-Baku-Dooka*, reigned eighteen years.

5. JORI-SANE, alias *Jori-suga*, the son of *Joritzne*, reigned eight years.

6. MUNE-TAKA-SINNO, alias *Soo-Son-Sinno*, the son of the *Dayro Sayga II.* reigned fifteen years.

7. KORE-JAS-SINNO, his eldest son, reigned twenty-four years.

8. KUME-SINNO, alias *Sanno-Ofi*, the *Dayro Fikakusa II.*'s third son, reigned twenty years.

9. MORI-KUNI-SINNO, the son of *Kume-sinno*, reigned twenty-five years.

10. SONUN-SINNO, the son of the *Dayro Daogo*'s II.'s second son, reigned two years.

11. NARI-JOSI-SINNO, the fourth son of the same *Dayro*, reigned three years.

12. TAKA-UDSI, a son of *Askugo-Sanno-kino-Cami-nago-Udsi*, reigned twenty-five years.

13. JOSI-JAKI, the third son of *Taka-udsi*, reigned ten years.

14. JOSI-MITZ, *Josi-jaki*'s son, reigned forty years.

15. JOSI-MOTZI, the son of *Taka-mitz*, reigned twenty-one years.

16. JOSI-KASSU, *Josi-motzi*'s son, reigned under his father.

17. JOSI-NORI, another of his sons, reigned fourteen years.

18. JOSI-KATZ, *Josi-nori*'s eldest son, reigned three years.

19. JOSI-MASSA, another son of *Josi-nori*, reigned forty-nine years.

20. JOSI-NAVO reigned under his father *Josi-massa*.

21. JOSI-TANNE, another son of *Josi-massa*, reigned eighteen years.

22. JOSI-SYMMI, *Josi-tanne*'s son, reigned fourteen years.

23. JOSI-FAR, *Josi-symmi*'s son, reigned thirty years.

24. JOSI-TIR, *Josi-far*'s son, reigned sixteen years.

25. JOSI-TAIRA, or TIRA, *Josi-tia*'s son, reigned four years.

26. JOSI-AKI, *Josi-taira*'s son, reigned five years.

27. NOBENAGA, alias *Nobunaga*, or *Nubunanga*, *Oridano Dansio*, *Tayra*'s second son, reigned ten years.

28. FIDE-NOBU, *Nobu-Tada*'s son, reigned three years.

Taycho-
samma's
line extract,
and sigil.

29. FIDE-JOSI, afterwards styled *Taycho* and *Taycho-samma*, the first that deserved the title of secular emperor, was a man of obscure birth, a mere peasant's son; but from his younger years raised himself to be butler to a *Japanese* nobleman, some say a tributary prince. We have elsewhere seen what a mean and disadvantageous account the *Chinese* give of his extract, and surprising rise and fortune^f. The *Japanese*, though they own him to have sprung from the lowest rank, are not agreed about the means and manner by which he raised himself to such a height of wealth, power, and credit, as to be at length created *Quambocu*, or vicegerent of the empire, by the *Dayro* himself; but all own that his valour and merit, and the services he did to his country in suppressing the pirates at sea, and quelling several feuds and rebellions on land, made him highly deserving of it. We have already taken notice of several of the cubos, or crown-generals, having raised themselves to a prodigious height of secular power; but more particularly about the latter end of the sixteenth century, when one of them, the emperor's second son, had stripped his father of all his secular authority, and left him only his ecclesiastical power and dignity untouched, as being a privilege derived to him from his pretended divine extraction, and lineal descent from the gods; to all which his father, whether by force or through fondness or indolence, consented, as if it had been by a mutual compromise.

Cubos exorbi-
tant power

gives rise to a
new govern-
ment.

The cubo op-
posed by the
other princes.

HOWEVER, this bold step proved more beneficial to the empire than it did to the new secular emperor, as it laid the foundation of a new form of government, highly conducing to the peace and happiness of it, and the most likely to keep the *Japanese* nation in awe, till then too much inclined to revolts and seditions; for whether the *Dayro* was forced, or willingly consented, to that change, it was not to be expected that the rest of the princes of the empire would sit contented under it; their ambition and insolence, as well as their power, was by that time risen to too great a height to suffer these new monarchs to tyrannise over them, whom the old ones

^f See before, vol. iii. p. 755, & seq.

- a were not able, for near four centuries, to keep within their duty; insomuch that it was in order to curb and suppress their frequent wars and seditions that those *Dayros* had suffered the crown-generals gradually to usurp so great an authority. It was therefore no wonder that the most powerful of them should unite their forces against such an upstart and dangerous enemy; and they accordingly opposed them with such warm vigour, as soon after paved an easy way to their total reduction, and to that final blow which the brave *Taycho* gave to their power and lawless tyranny. This remarkable revolution happened about the year of Christ 1583; by which time those tributary kings and princes had so weakened each other, by their mutual wars and depredations, as well as by their strenuous opposition to the cubos, that he, who was a person of the most consummate wisdom, and perfectly well acquainted with the present state of the empire, could easily foresee what poor resistance they would be able to make against him, at the head of such a numerous army as he then had under him; his title of *Quamboku*, or vicegerent, empowering him to raise what number of them he thought fit, and to oblige those tributaries to furnish their quotas, under the penalty of military execution. He was no less dreaded for his courage than his wisdom, of both which he had already given sufficient proofs, both by sea and land; and it was more by these, than by force of arms, that he brought about that glorious work within the short space of ten years, and made himself as absolute over the whole empire as any monarch in the east.
- b Both reduced by the brave *Taycho*. After Christ, 1583. His character.
- c The first step he took towards the effectual suppressing the strength of those princes he had not quite reduced, was, to undertake the *Korean* war, of which we have given an account in the last volume; and which, though it had not the success as might have been expected, yet proved so far serviceable to him, and which perhaps was all he aimed at by it, that he thereby removed those discontented leaders, and their troops, out of a native into a foreign country, where they could not fail of exhausting their strength and treasure against the warlike *Tartars*; whilst he was pursuing the most proper measures for securing to himself the possession of his new-acquired authority, and being at last so wearied and battered as to be glad to be recalled upon any terms; and, instead of being in a condition to revolt again in haste, be willing to be re-admitted to their own native dominions, on such conditions as he should be pleased to impose upon them; some of which were no less hard upon them, than effectual to his own designs (Y).
- d The princes forced to submit to his terms. Severe laws against the people.
- e When he had thus happily suppressed the power of those petty monarchs beyond all danger of their attempting any thing to recover it, his next business was, to restrain the insolence and unruliness of the common people, who are always lovers of change, and easily drawn into parties and factions, where care is not taken to curb them; and this he did by enacting such severe laws as could not but effectually deter them from all kinds of revolt. We have given an account of them in a former section^b; and well was it for him, as well as the peace of the empire, that the circumstances of it were such, that no one dared, or was in a condition, to oppose them. Thus having by these means subdued all the provinces of *Japan*, and made himself absolute over all those princes who had formerly governed them, he took upon him the title of *Taycho*, or sovereign lord, and began to lay the plan for new regulations, in order to establish his new government on such a firm foundation as should not be easily shaken. Among these were the shutting up of the empire to all foreigners, particularly to the *Portuguese*, who were grown very powerful, rich, and numerous; and the total extirpation of Christianity out of it, under the severest laws and penalties; but, as these were a work of time, he was obliged to leave it to his successors to finish; and died in the same year, on the sixth of December Anno Cbr. 1598, leaving the government to his son *Fide-jori*. After his death, he was, according to the *Japanese* custom, numbered among the gods, and honoured by the then *Dayro*, *Jofey* II. with the divine title of *Tojokumi Daimiosin*, and with that of *Tsin Satzman*, or *Satzman* the modern, or the second *Mars* of *Japan*. The temple in which his urn is kept is still standing at *Meaco*, though much gone to decay, by reason of the secular government passing soon after into another family.
- f Takes the title of *Taycho*. His plan, and new regulations. Death. Divine honours.
30. HE had a nephew named *Quambacundono*, alias *Fide-tsugu*, to whom he designed to have bequeathed the throne, and had already made him his colleague; but the young prince, having
- His nephew put to death.

^b See before, p. 13, & seq.

(Y) Among other of these conditions (which, how disagreeable soever they were, it seems, forced to submit to) one was, that their wives and families should live within his court, and place of residence, which he had, on that occasion, taken care to fortify, as well as to adorn with suitable palaces for their reception. The pretence for it was, indeed, their safety, and the security of their persons, wealth, &c. in those troublesome and dangerous times; but, in reality, they were to be there as hostages they could give him, or he

desire, of their fidelity. On this condition they were promised to be put in possession of their dominions on their return; and that a time should be afterwards fixed for them to make their appearance at court, and see their families once a year. And thus it was that that politic prince, by one fatal stroke, settled the government of the empire upon such a foot, as put it wholly out of their power to raise any new disturbances or seditions in their respective territories.

highly disabled him by some means not known, was soon after disgraced, and by him ordered ^a to rip up his own bowels.

His new regu-
lations and
acts.*

31. FIDE-JORI, *Taycho-samma's* son, was but six years of age when he succeeded his father, and was by him committed to the care of *Iejas-samma*, one of his favourite counsellors of state. Him the old emperor had engaged by a solemn contract, signed with his blood, and backed by the most binding oaths, to resign the crown to his son, as soon as he came of age, and deliver the regency and government into his hands. To secure the crown still faster to him, he had made him marry the daughter of *Iejas*; so that *Fide-jori* had enjoyed, if not the government, yet at least the title of emperor, during the space of fourteen years, under the tuition of his father-in-law, when he was at length deprived by him both of that and his life. *Iejas*, or, as ^b he was formerly called, *Ongosio*, who descended from the illustrious family of *Toku-gawa*, was not inferior in politics to the great *Taycho*, and intirely gave into his design of driving the *Portuguese*, and extirpating Christianity, out of *Japan*. Their motives for it may be seen in the margin (Z); but *Fide-jori* was against both, and was even suspected to have been a secret convert to that religion; but whether justly or no, is not easy to determine. However, his father-in-law, whether on that account, or hurried on by his ambition, made that his chief pretence for dethroning him; and, having streightly besieged him in the castle of *Osacca*, a place of prodigious strength, and built by the late *Taycho*, for the security of his own person whilst he was pursuing the *Korean* war ^c, obliged him to surrender in the fourth year, and in the seventh day of the fifth month. The unfortunate prince, retiring thereupon into the palace with his most faithful friends and adherents, caused it to be set on fire, chusing rather to perish in the flames than fall into the hands of his treacherous and victorious father-in-law. This siege, so famed in the *Japan* history, happened in the third year of the reign of the *Dayro* *Day-se-kwo-tey*, in the year of Christ 1612 *: And, after its surrender,

32. IJEJAS-SAMMA, or as he was called before he mounted the throne, *Ongosio*, or *Ongoschio-samma*, was now at full liberty to follow the measures which *Taycho* had chalked out for his son; the principal of which were, 1. To banish the *Portuguese*, and other foreigners, out of the empire. We have indeed seen in another section, that he granted liberty to the *English* to establish a factory at *Firando*, and made some extraordinary grants to Captain *Saris*; but these favours proved short-lived; and, upon his conceiving a jealousy of the *English* and *Portu- d* *guese* being nearly allied, deprived them on a sudden of all further commerce with *Japan*. The second was, the forbidding the subjects of his empire to go abroad either for trade, or on any other pretence, and the recalling all that had been settled in foreign countries, and obliging them to return within a time limited. 3. The prohibition of cards, dice, duels, luxury, and profusenefs either of cloathing or table, and all foreign dainties, as hindrances to the practice

^a See before, vol. iii. p. 755, & (I).

* See before, p. 61.

(Z) Among other things of less moment laid to the charge of the *Portuguese* in *Japan*, one was, their being grown so rich and dangerous by a flourishing trade, as well as by their intermarriages among the natives, as to have entertained some strange hopes, and even to have concerted some treasonable measures, for making themselves masters of the empire. This appeared from two letters full of dangerous projects, the one intercepted by the *Dutch*, then at war with the *Portuguese*, and in full pursuit after this profitable branch of trade, of which they were resolved to supplant them, and another sent by the *Japanese* then settled at *Quang-tong*, which were brought to court, and are said to have filled the then emperor with horror and surprise, and to have determined him to root them totally out of his dominions, they being fraught not only with the highest sentiments of ingratitude and malice against him, but with the most sanguine hopes of shortly seeing the whole empire freed from his tyrannical yoke, and submitted to that of a Christian sovereign, which was by the *Japanese* interpreted to be the king of *Portugal*; but the *Portuguese* protested, it meant no more than a spiritual submission to the pope. Whether of the two soever the letters might point at, the matter could not but have a bad aspect; and, taking it even in the most favourable sense, neither *Taycho*, nor any of his successors, could bear with any patience the thoughts of being obliged to owe their investiture to so distant a pontiff, when they had one of their own so near, and so intirely at their devotion: much less still could they bear the thoughts of such a bold attempt being made on the dignity and authority of the latter, antient and venerable as it is looked upon

to be by the whole nation, in favour of the former, of whom they knew so little, and who resided at such a vast distance from them. The *Dayro*, his court and family, as well as the whole tribe of monks and priests, must have been still more alarmed and exasperated at a design so detrimental and dishonourable to them, and have looked upon the authors of it with the utmost abhorrence.

Several other circumstances appeared still more to their disadvantage, such as the contempt which the new converts shewed for the gods, religion, and priests, of the country, the great veneration and respect they had for their own, the vast number of profelytes they made daily, and the flaming zeal and constancy they shewed in defence of this new faith; but, above all, the extraordinary joy and exultation that had appeared in the looks of all their new converts, a little before the intercepting of the letters above-mentioned; and the haughtiness and insolence with which some of their prelates behaved towards persons of distinction, to whom they then refused to pay the usual respects due to their rank; heavy complaints of which were made at court. All these things put together were sufficient to alarm the government against them, and to make them apprehend, that, if they were suffered to increase, they would foment new revolts and seditions against those very monarchs who had, with so much pains and loss of blood, so lately broken the strength of the little tyrants of the empire, and thereby put a most effectual end to the civil wars which had for so many centuries been the bane and ruin of it.

- a of virtue and continence. 4. To grant the *Dutch East India* company a free trade into *Japan*, *Admits the*
in consideration of the services done by them to their nation, some of them mentioned in the *Dutch to*
last note. Of the expulsion of the *Portuguese*, and the settling of the *Dutch* factory there, we *trade.*

most difficult task, and such as could not be completed but by the most horrid persecutions and *Christians.*
butcheries; infomuch that it cost less heathen blood to acquire the supreme government of the
empire, than there was now shed of the Christian to establish and secure it. *Taycho*, who, as *Taycho's pro-*
we observed before, was the first projector of this bloody scheme, began with issuing out a *clamations and*
proclamation against them, *An. Chr. 1586*, the very year after he was made *Quambacu*, or *laws against*
vicegerent, and several persons were executed soon after for not conforming to it; yet this was *them.*
- b so far from stopping the progress of it, that, if we may believe the Jesuits letters, 20,570 per- *Great numbers*
sons were butchered for it four years after; and in the two following ones, 1591 and 1592, after *of them mas-*
their churches had been actually shut up, they made above 12,000 new profelytes: and the *cred.*
Japanese writers do not disown, that not only *Fide-jori*, *Taycho's* son, dethroned, as we lately
hinted, *Anno 1616*, but the greatest part of his court, his soldiers and military officers, were of
that number, which the more exasperated his father-in-law against them when he came to the
crown, and made him wreak his fury the more severely upon them.
- BUT those zealous converts, notwithstanding their being deprived of their chief guides, who *Their surpris-*
were either forced to flee, or were put to some cruel deaths, were neither to be reasoned out *ing constancy;*
of their religion, nor frightened by swords, hatchets, halters, gibbets, crosses, fire, or any other
c cruel punishments, but readily submitted themselves to the most unheard-of tortures, and bore
them with such unparalleled constancy, as struck their bitterest enemies with admiration and
astonishment. We may add, that the cheerfulness with which they suffered the most cruel *during a 40*
deaths, rather than renounce their divine Saviour, excited so much the more the curiosity of *yars bloody*
the heathen to know what doctrine it was that produced such miraculous effects; and these, *persecution.*
when once instructed in it, found it so full of truth and comfort, that they could not forbear
embracing it at all hazards. And hence it was that this persecution, dreadful as it was beyond
any thing we meet with in history, continued to rage with near the same vehemence full forty
years, and was not ended till the reign of *Fide-tada*, or, as he was otherwise called, *Taito-konni*,
the third son, or, according to others, the grandson, of *Jejas-samma*, who gave at once the
d finishing stroke to Christianity, as we shall relate under the next reign.
- JEJAS-SAMMA reigned fourteen years, taking in some of his regency, or, according to others, *Ijejas's death.*
about four or five from the death of *Fide-jori*, at which time they suppose him to have been
seventy years old. He lies buried at *Nico*, near the city of *Meaco*, the burial place of that
family, and was succeeded by his third son, or, as others say, his grandson,
33. FIDE-TADA, or, as he was called after his father's death, *Taito-konni*, or *Taito-kuin*- *Fide-tada re-*
samma. This prince followed the steps of his predecessors; he renewed the privileges which *news the per-*
his father had granted to the *Dutch* company in the years 1616 and 1617; and went on per- *secutions a-*
secuting the Christians with the utmost rigour and cruelty, till at length these, being tired with *gainst them.*
seeing such myriads of their brethren butchered and tortured in the most inhuman manner, and
e seeing no prospect of an end being ever put to their miseries, in a fit of despair, retired, to *They retire in-*
the number of thirty-seven thousand, into the castle of *Sima-bara*, seated on the coasts of *to a castle;*
Arima, in the island of *Ximo*, and province of *Fisen* or *Figen*, with a firm resolution to defend
their lives to the very last. They were soon after closely besieged in it; and defended them- *are besieged and*
selves with surprising valour during three months, but were at length forced to yield to the *butchered.*
superior strength of *Taito-konni*. The castle was taken on the 28th day of the second month,
that is, on the 12th of *April 1631*, and all the besieged put to death; so that the last drops *A final end to*
of Christian blood, as one may say, being by this means spilt, the persecution and butchery *Christianity in*
of them ceased soon after, and the empire was cleared at once, and shut up against them for *Japan.*
ever after, not only against natives, but against all foreigners that professed Christianity, and
f more especially the *Portuguese*, who, having made some attempts to retrieve an access to *Ja-*
pan by means of an embassy sent thither from *Ma-cau*, had the mortification to hear that the
chief of them were all put to death, as we have formerly hinted ¹.
- THIS prohibition, however, did not extend to the *Chinese*, who were for some time per- *Chinese per-*
mitted to trade with them; only with this restriction, that they should have liberty to come *mitted to trade*
to *Nangbazaki*, and into no other port; so that they came thither not only from *China*, but *there.*
from other parts of *India*, where vast numbers had settled themselves after the conquest of that
country by the *Tartars*. But this privilege, which was granted them chiefly on account of the *Their liberty*
arts and sciences, and some branches of heathenish superstitions which had been brought from *restrained.*
China into *Japan*, was not long after taken away in a great measure, on account of their pre-
g suming to bring with them, and sell, Christian books, sent thither by the missionaries, with
a view of reviving, if possible, the Christian religion among them; which so exasperated the

¹ See before, p. 21, & seq. sub not. (Y)

government, that they resolved to put them upon the same foot with the *Dutch*, and to confine them much after the same manner; and how narrowly that is done, we have shewn in a former section ^k.

FIDE-TADA reigned eighteen years, and was succeeded by his son,

Ijemitz and
his two suc-
cessors.

34. IJEMITZ, alias *Ijemits-ko*, and *Ijeti-ru-ko*. From this time, we may look upon the empire of *Japan* as entirely shut up against all strangers, and every thing that is done there as impenetrable; except that our author, who was there in 1692, and attended the *Dutch* ambassador to *Yeddo*, hath given us the bare names of two of his successors, without any other particulars than the length of their reigns.

IJEMITZ reigned twenty-one years, and was succeeded by his son,

35. IJETZNAKO, who, after a thirty years reign, left the crown to his son,

The character
of the law.

The present
condition of the
Japanese.

36. TSINAJOS, alias *Tsinajosiko*, who was at that time upon the throne, and in the forty-third year of his age, and thirteenth of his reign. He was, we are told, a great and wise prince, and inherited all the virtues of his predecessors; eminent for his clemency, yet a strict maintainer of the laws of his country. He was brought up in the politics and philosophy of *Confucius*, and his subjects lived in peace and amity under his mild government; and, if he debarred them from the benefit of a foreign commerce, and the liberty of visiting other countries, he took care at the same time to promote a domestic one between the several islands and provinces of his empire; which he rightly thought sufficient to make them happy, since his dominions are naturally provided with all the necessaries of life, improved by the singular industry of his subjects, and the blessings of peace and tranquillity. These are the advantages they enjoy by being now shut up and kept from all commerce and communication with foreign nations; but we have had occasion to shew elsewhere, that this was not the principal motive that induced those late monarchs to confine their subjects within those bounds; but that their own safety, and superstitious fears, and dreams of foreign invasions, backed by some pretended prophecies to the same tenor, and to which they give great heed, was the main spring which moved them to use such extraordinary precautions against any attempts of that kind.

APPENDIX to the History of Japan:

O R,

A description of the Land of Jedso, and the Islands belonging to it.

The land of
Jedso describ-
ed.

Whether an
island or conti-
nent, divided
from Japan.

Its extent.

IT hath been much disputed, whether the vast tract of land lying on the north side of the great isle of *Nippon*, or *Japan*, and is commonly looked upon as part of that empire, and subject to it, be contiguous to or separate from it, by an arm of the sea; and secondly, whether it be an island, or a large continent joining to *Tartary* on the west, and to *America* on the east. As to the first, we have already shewn, from some of the latest discoveries of the *Dutch*, and of Captain *Saris*, as well as from the *Muscovite* and *Japanese* maps, that *Jedso*, or *Yesso*, is divided from *Japan* by an arm of the sea, or, to speak more properly, by a double streight, viz. of *Sangaar* on the *Japan* side, and of *Jeso*, or, as some of our maps erroneously call it, *Kamtshatka*, on the north, between which lies the island of *Matsuma*, or, as the *Russian* maps call it, *Matmanska*, and in those of the *Japanese* *Matsumai*, with about half a score of others of lesser size. The other question, whether it be a continent or an island, and, if the former, whether it be contiguous to *Tartary* and *America*, or divided from them, is not yet agreed on; we shall, in the sequel, take notice of all that hath been discovered and said about it ^{*}.

JEDSO, or *Yedso* (A), extends itself from 42° to 50° north latitude, and whether or how far beyond is not known. As for its breadth and figure from east to west, we are still more in the

^{*} De hoc, vide int. al. Sum. of Discov. of the N. E. passage, in *Philos. Transf.* N° 118.

(A) This name is variously written, *Jedso*, *Jetso*, *Jetsoo*, *Jezzo*, *Yedso*, *Yesso*, *Yetso*, and *Jeso*, and is much the same with the *Japanese* *Jeso-gajima*, or the island of *Jeso*.

We must not omit observing here, that several modern geographers have, after Mr. *Strahlenberg*, confounded this land of *Jedso* with the peninsula of *Kamtshatka*, lying between the gulf of its name, and the

northern *Japan* sea, on the easternmost borders of the *Russian* empire; whereas it is, in fact, different, and divided from it, at least on the west side, by the sea above-mentioned, though, perhaps, contiguous to it on the north. We have ourselves fallen into the same mistake, in the last volume of our *Antient History* (4), and take this early opportunity of acknowledging it to our candid readers.

(4) *Additions to the Ant. Hist.* p. 253.

dark

- a dark about it, the coasts being intersected by many deep and large gulfs, hitherto unpenetrated, which makes it look rather like a group of islands. The *Japanese*, who have been masters of it at least ever since the reign of *Yoritomo*, their first secular monarch, call it *Jeso-gasima*, or the *Called Great* island of *Jeso* (B), and distinguish it from the northern part, called *Oku-jeso*, that is, the upper *Jeso-gasima*, or higher *Jeso*, which they look upon as a continent. But how those two are divided from each ^{its northern} other, and how far the former, or island, reaches northward, is not easy to guess, either from ^{extent nor} their maps, which are very obscurely drawn, and imperfect in that respect, nor from their ^{known} report, their commerce with it reaching little farther than the southern coasts. However, tho' Mr. *D'Anville* hath ventured to make two islands of it, yet the generality of geographers make the southern part of it to be an island, and the rest a continent, of an unknown extent.
- b THE southern coasts of it lie just opposite to the most northern ones of the isle of *Nippon*, ^{Sanguin, and} and both together form the double strait, lately mentioned, of *Sangaar* and *Jeso*, which is ^{large la-} divided by the island of *Matsuma*. The passage from the one to the other coast is but of one day's sail, and in some part, as between the capes of *Tanjasakki* and *Euroen*, not above thirty miles, yet is not to be made at all times, by reason of the currents, which run strongly, sometimes to the east, and sometimes to the west. The *Japanese* therefore are they that chiefly carry on that little trade that is between them, the *Jesoites* not being expert sailors enough to ^{Trade with} venture over that strait, except in very calm weather. This traffick consists only in some ^{Japan} fine furs, and a sort of fish called *Karazakki*, which is caught in great plenty about those coasts, and is reckoned a great dainty among the *Japanese*, who eat it as we do our cod.
- c THE account which these give us of the natives of *Jedso*, is, that they are a strong, but ^{Native de-} savage people, wearing their hair, beards, and mustacho's, to such a length, as quite dis- ^{tinguish} guises them; especially, as they are said, by some, to be hairy all over their bodies, or, which is more probable, to cover their bodies with the skins of wild beasts, with the fur outward, which, together with their long beards, makes them look quite frightful. But Captain *Saris* had a much more favourable account of them from a *Japanese*, who had been twice amongst them, and told him, that they were a fair and civilized people; and that those of the south part understood commerce, though those of the inland knew nothing of it: that they were much of the same stature with the *Japanese*, from whom they had their cloathing, rice, &c. and made payments in silver and gold dust; that the emperor of *Japan* kept a governor and
- d garrison at the capital, called *Matzimai*, and received his tribute in furs, feathers, and silver: and that the natives came frequently over to the north part of *Japan* to trade, in vessels sewed ^{Small vessels} together with cordage, without any iron-work about them. Thus far the Captain. To which we may add, that they are generally allowed to be very expert at their bows and arrows, which seem to be the chief weapon they have. They are no less skilful in fishing and hunting, the ^{Fishing} greatest part of them living chiefly upon that.
- As to the country itself, it is represented as very rocky, mountainous, and full of large forests, for the most part uncultivated, and but thinly inhabited^a, producing but very few ^{Product} wild fruits and roots, and in some parts a kind of barley, of which they make a coarse kind of bread. They are affirmed to worship the heavens, but without observing any religious rites; ^{Religion} to have their women in common, like the antient *Scythians* and *Britons*; and to be much addicted to wine and strong liquors, tho' we are not told whence they have them. They are so stout and hardy, that, we are told, they have no other cure for their wounds, than that of ^{Hardiness} bathing them with salt water.

^a KÆMPFER, ubi supra, lib. i. cap. 4. DE ANGELIS, apud Charlevoix Hist. Japan, north voyages.

(B) This they probably do, upon the bare report of the inhabitants of it; for they own, they never penetrated so far as to the sea which divides it from *North Jeso*; neither do their maps express any such partition, but seem rather to join both tracts confusedly together, which would incline one to believe, that they mean no more by the word *gasima* than a peninsula, they having no proper term in their language to distinguish that from a real island.

What seems to confirm this conjecture is, that there is an arm of the sea which runs northward, how far is not yet discovered, between *Jedso* and *Tartary*; and the *Japanese* maps have placed another on the other side likewise, which they have probably discovered, but not penetrated far enough; so that, for aught that appears hitherto, *Jedso* may be only such another long peninsula as that of *Korea*, which was also thought formerly to have been an island, as we have elsewhere shewn (5).

The coasts of it on the east and west side have been, at different times, discovered, and visited by the *Portuguese*, *Dutch*, and by Capt. *Saris*; but none of them have penetrated far enough northward, to be able to assure us, whether or no they were really divided from the continent by those creeks and bays that intersected them. Father *Hieronimo de Angelis*, who went thither from *Japan*, calls it indeed an island, in his second relation, but most probably upon no other authority than that of the *Japanese*; for he doth not mention any discovery he made, to convince him of its being so, which he would not have failed to have done, had that been his case; especially as he had spoken of it in his first, as if it had been a continent. Upon the whole, we must therefore wait till some farther discoveries be made, before we can be fully satisfied of its being one or more islands, or a peninsula joined to the large continent beyond it.

(5) See before, vol. iii. p. 748.

This part of
Jedso not well
known yet.

It seems, indeed, as if, in *Kämpfer's* time, these parts were but imperfectly known, seeing neither he, nor his *English* translator, have ventured to give us any of the particulars of the manners and customs of these people. And it was not till the year 1620, when Father *De Angelis*, a Jesuit, and native of *Sicily*, who ventured to penetrate into those northern parts, to preach the gospel among them, that we became somewhat better acquainted with their way of life: and though we cannot say that he hath communicated any thing very remarkable in his letters to his society, yet our *English* readers may not, we hope, be displeased with an extract of what is most curious in them, as we find it extracted by his brother *Charlevoix*, in his History of *Japan*; which is as follows:

The natives
described by
Father De
Angelis.

“THE natives of *Jedso* are more stout and robust, taller and whiter, than the *Japanese*.
“They let their beards grow so long, that, in some, they reach down to their girdles; but
“they commonly shave the fore-part of their heads. Both the men and the women have
“their ears bored, and wear some kind of ornament hanging to them; those of the better

Their diet and
drink.

“sort, of silver; and those of the meaner, of some coloured silk. They make a sort of wine,
“which is very strong, and very common amongst them, probably by reason of the cold-
“ness of the climate, which may be also the reason why they are seldom drunk with it,
“though they drink it so freely, and even to excess;” yet our author assigns another cause for
this, *viz.* their use of the *toda nuevo* (C), which is a kind of oil drawn from a fish of the
same name, and with which they commonly season their rice, which, as in most of those east-
ern countries, is their common food.

Dress of both
sexes.

“THE dress, both of the men and women, is a long gown, of silk, cotton, or linen, spot-
“ted, and bordered with the same stuff, embellished with some sort of needle-work, as

Weapons.

“crosses, flowers, &c. Their weapons are the bow and arrow, the lance, and a kind of scy-
“metar, not much above a cubit in length, but exceedingly keen, and of special temper;
“and they are base enough to use poisoned arrows on certain occasions; being naturally cho-
“leric, quarrelsome, and revengeful. Notwithstanding which, our author observes, there
“are but seldom any murders committed amongst them. Instead of shield or cuirass, they
“wear a coat of mail, made of small thin boards, which gives them a mean and ridiculous

Courtesy.

“appearance. They are very courteous towards one another, and ceremonious to excess.
“They are naturally averse to that brutish and detestable sin which is so common in *China*,
“*Japan*, and other parts of *India*, and, on that account, they allow themselves a plurality
“of wives, though only one of them has the pre-eminence, and bears the name and au-

Breach of con-
jugal faith,
how punished.

“thority of wife. If any of them be found guilty of the breach of conjugal fidelity, she
“is condemned to have her head, body, &c. closely shaved, as a brand or public mark of
“her incontinence. But her paramour is only punished with a certain fine, such as her hus-

Religion, very
crude.

“band or parents shall agree to lay upon him. If he refuses to submit to their decision, they
“have a right to strip him not only of his weapons, but of his cloaths, as often as they meet
“him, and to send him home naked. If he makes any resistance, he only augments his
“guilt and fine, and they are empowered to call all that are within hearing to their help, and
“are presently surrounded by a posse, who flock readily to assist them. Their notion of a
“Supreme Being is very crude and imperfect, and unproductive of any worship to him;
“though they pay a considerable one to the sun and moon, as the chief authors and dispensers
“of all good things. They speak indeed of, and pretend to reverence, an invisible mon-
“arch, who presides over mountains, forests, seas, rivers, &c. but that is all the homage
“they pay to him; and even that which they pay to the two great luminaries is neither con-
“stant nor regular, they having neither priests nor doctors, nor settled rites, nor indeed any
“kind of writing; and all that they know of their own history, is only what is transmitted
“to them by tradition; and this is very succinct and imperfect, as well as in many respects
“uncertain, or fabulous.”

No writing
among them.

Arrival of
the Dutch.

FROM this account of Father *De Angelis*, which is likewise confirmed by those of several
Dutch travellers, who have since ventured farther east up the country, *viz.* about the year
1643, under the conduct of the famous *Martin Uriel* (D), it appears, that the natives of this
part

(C) Or rather, as it seems to us, *toda nuevo*, which, in the *Sicilian* language, signifies altogether new, is the name or epithet which the author himself gave to this strange fish, it being a small hairy creature, with four feet, like those of a hog, and yielding this sweet kind of oil, which they not only season their victuals with, but of which they make a considerable traffick, and exchange with the *Chinese*, *Japanese*, and *Koreans*, for rice, cotton, silks, and other commodities, of which their country is destitute, instead of bartering it for gold or silver, with which it abounds.

(D) This celebrated sailor, who had embarked in the

Castricoun, anno 1643, having discovered the coasts of that part of *Jedso*, known since by the name of *Kuritky*, and to the *Japanese* by that of *Oku-jedso*, or *High Jedso*, advanced much farther up into the land than the Jesuit above-mentioned; and though he staid not so long as he in the country, yet made such discoveries in it, as not only confirm the account given us by him, as we have extracted it above from *Charlevoix*, but likewise some new ones, not taken notice of by either, though no less worthy of it. The reader may find a fuller relation or journal of that descent, in the third volume of *Voyages into the North*, out of which we shall men-

tion

a part of *Jedso* are strangers to that industry in agriculture, for which the *Japanese* are so justly famed, and live chiefly upon hunting and fishing. In the latter they make use of boats, put together without nails or pegs, and only sewed together by a kind of cordage made of the bark of a tree, which they call *Coxo*, and which is again untied at their return, and the boards laid on the shore to dry.

To what *De Angelis* said of them, the *Dutch* accounts add, that the men, in general, are ^{much} alike, stout and strong, their skin dark and hairy, and their faces not unhandsome, ^{and not of} nor their noses flat. Their eyes of a fine black; but the worst of their heads and faces is, ^{Jedso.} that they are sadly disfigured with scars and flashes, occasioned, as is supposed, by their quar- ^{Nature de-} relsome, or, perhaps more probably, their jealous temper. The women are much fairer, and ^{scribed.} either shave the fore-part of their head, or tie their hair smooth behind, to prevent its hiding any part of the forehead. They wear ear-rings like the men, and some of them rings upon their fingers, and all of them colour their lips and eye-brows of a fine blue. Their chief employment is of the domestic kind, in dressing of victuals, making cloaths for their husbands and families, in weaving of mats for their houses, and such-like; and some of them are likewise busied in fetching home what the husbands bring in their boats; tho' this last is not very common, because their husbands are extremely jealous of them, and would revenge any attempt made upon their wives or daughters, in the highest degree. In other re- ^{gularity.} spects, we are told, they are good-natured, affable, and courteous, to strangers, and most so to those who converse with them in a free familiar way, and with a chearful countenance; to such they behave with singular modesty and respect; and, when they are to appear before them, they do it in the best apparel they can afford, accost them with great ceremony, laying their hands upon their breasts, bowing respectfully low to them; and, after a short acquaintance, will eat and drink with them, with as much freedom as they do with one another.

As they do not appear to have any settled worship or religion, so neither do they seem to ^{Religion.} have any sort of government, laws, or even subordination, except paying some sort of tribute to their respective lords, as these do to the emperors of *Japan*; but we do not find that they exercise any other authority over them. Some superstitious customs they were observed to practise, as when they are drinking by the fire (for both men and women, we are told, will drink, ^{Given to drink.} and be drunk), they commonly sprinkle some drops of their liquor upon the hearth; in the inside and outside of their houses they likewise stick some cleft bits of wood into the ground, with a kind of small flag of paper, silk, or other stuff stuck into the top of them.

THE women, when ready to lie-in, are removed into separate houses, into which the men ^{Women lie in} are not permitted to come, during the space of about three weeks. This decent custom is the ^{in separate} more easily observed amongst them, as their houses consist of little else than four stumps of ^{houses, poorly} wood, which support an ordinary thatch, or covering, made of the barks of trees; and the walls, or rather sides, made of boards fastened together. The hearth is commonly in the center; and on the top, and one or two of the sides, are left some large apertures, to admit the light in, and let the smoke out. Yet, though so plain and ordinary, they are generally ^{built.} very clean, as well as the few utensils they contain; and the floor is always covered with mats, which are the manufacture of their females, and serve for beds, tables, and stools. Each house, or rather hut, hath a separate apartment, or chamber, about ten or twelve feet long, and seven or eight in breadth, and divided from the rest by a slight partition. The whole building is about twice the height of a man; but the entrance is so low, that one must stoop pretty much to go in and out.

THEIR children, when newly born, are very white, but contract a brownish complexion as ^{Their mode of} they grow up: boys and girls go naked till about ten or twelve years of age; yet are brought up with so much modesty, that when they meet with strangers, especially *Europeans*, they always turn their faces towards them in a stooping posture, and with their thighs crossed; ^{if} but, if they have time for it, they will hang something like a short apron before them. Whenever the mothers give suck to a child, especially to a girl, before strangers, they take care to expose no more of their breasts than the nipple, nor any more of the child's body than the arms, legs, and face; they likewise wrap them up in some cloaths, and carry them hanging on their back, by a girt, when they work or go abroad.

tion what seems most worthy our reader's perusal, concerning these natives.

As to what we hinted just now, about the plenty of gold in this part of *Jedso*, Father *De Angelis* tells us, that, at his arrival there, he found a great number of *Japanese* merchants, who employed the natives in gathering up the grains of that metal, which were washed down by a river which runs near the city of *Matzenay*; and for the liberty of doing which, they paid a consi-

derable tribute to the prince or lord of the country. Their method of getting it from the sand, is, by making a dam, by means of a sufficient number of piles, driven first in to one part of the river, and, when they have picked up all they can find, they remove to another part of it. This was the only instance which he saw; but, no doubt, there are other rivers like this in the country, which contribute to make that precious metal so common among them.

Meat diet.

THEY are not by far so nice either in their cloathing or eating; the one of which they will wear without ever washing, till they rot, in some measure, on their backs, with old age and dirtiness; and, in the other, seasoning their rice, fish, flesh, roots, and herbs, with oil, which they extract from their whales, and their *todo-nuevo*, described in a former note; yet, bad as this food is, they eat it out of dishes made of the same materials as our brown earthen-ware, nicely turned and glazed, and with a couple of sticks, like those used by the *Chinese* and *Japanese**, without touching it with their hands. They have likewise a sort of meat, not unlike in colour and bigness to our hips, but in taste and shape like our medlars, which they chiefly lay up against winter. The poorer sort, and they are mostly such, make themselves cloaths of a sort of hemp which grows wild in the woods; for even these are too lazy to plant or sow it; and, if they wear any thing better, they must have it from the *Japanese* or *Chinese*, as they have their other ornamental trinkets, their rice, sugar, spice, tobacco, pipes made of copper, knives, and other sharp iron tools, &c.; in lieu of which they gave them their fish, oil, wool dried in smoke, furs, skins, feathers of various fine birds, and such-like: in bartering of which commodities, they are affirmed to observe the same laudable exactness and honesty on both sides, without the least fraud or disguise. They easily traffick with one another, their language being originally the same, and their frequent converse quickly obliterating whatever difference there may be in their dialects.

Exchange of commodities with Japan.

Language.

Chief prince's capital.

Other towns.

Tribute to the emperor of Japan.

Executions of prisoners.

and adulterers.

Whether they be contiguous to Tartary, America, &c.

THEY have but few cities in this large tract of ground, if any of them can deserve that name. Even their capital, called by the natives *Matzmay*, which is also the residence of their prince, or chief governor under the emperor of *Japan*, is but an inconsiderable town, in comparison of those of *Japan* and *China*, either with regard to extent, richness, or elegant buildings. The rest, still inferior to it, are those that follow; *Sirarcha*, *Tocapfi*, *Centchiori*, *Croen*, *Ootchoeira*, *Ejan*, and *Sirocani*. But it is from *Matz-may* that the prince takes his progress once a year, or every other year, for the metropolis of *Edo*, where he is obliged to pay homage to the *Japanese* monarch, and to pay him the usual tribute, which consists chiefly in a large quantity of gold, some of the richest furs, and a great variety of the finest feathers. ALL that our *Dutch* travellers add worth taking notice of, is their manner of executing any noted prisoner they make, or any man they surprise in too familiar a converse with their wives or daughters. The criminals, surrounded by numerous crouds, is laid down flat upon his back, on the bare ground, and is held by the arms and legs, each by two stout fellows, whilst the executioner stands over his head, holding a short club, shod with iron, with both his hands. As soon as the word is given, he jumps or dances ten or twelve paces backwards, and then forwards, singing some ditty all the way suitable to the occasion, and, when come near enough to him, discharges a blow on his head, with such force, as fails not to shatter his skull; then stretching out his club, gives him several more upon his breast, till he hath quite dispatched him. This, with respect to the case of adultery, seems to contradict what we have quoted a little higher, out of *De Angelis*, of their compromising the offence by a fine. But in so large a tract of land, it is not unlikely that one part might have laws or customs different from another, and punish a crime of this nature more severely in the one than in the other; a thing which the good father, not having penetrated so far, might not have had the opportunity of observing.

It will not be improper here to observe, that several geographers have supposed this land to be contiguous to *America* on one side, and to *Tartary* on the other; and that it is through it that the first peoplers of the former have steered their course from the latter†. Others pretend, that *Jedso* and *America* are divided by an arm of the sea, much sought after hitherto, which hath a communication with the northern ocean. This seems, in some measure, confirmed by the current which hath been observed to flow constantly from the coasts of *Jedso* directly towards the north, which induces one to suppose, that there is some strait passage, not yet discovered, which joins these two seas, as that of *Gibraltar* doth the ocean and *Mediterranean*. And this seems farther confirmed by what we have elsewhere hinted, of some whales caught in that sea by the *Koreans*, which had *Dutch* fishing-hooks sticking in their flesh§. But that passage, if any such there be, though often attempted, hath been found hitherto impracticable, on many accounts, more particularly on that of the vast mountains of ice which float on those seas, and which seldom, if ever, melt, even in summer (E).

§ See the

(E) We shall not here repeat what we have so fully discussed, in our Antient History, about this pretended passage, but only remind our readers of what we there observed, out of Father *Hinnopin*, who affirms to have seen, on the north side of the *Mississippi*, some *savages*, as he calls them, who came more than 500 leagues from

the west, which he judged to be from *Japan* (6). But as the name of *savage* cannot be properly applied to the *Japanese*, we are rather inclined to think that they came from this, or some part of *Jedso*, or from *Kamtschatta*, or some other still more northern tracts.

(6) Vid. Additions to Ant. Hist. vol. vii. p. 249. in fin. not. (D), & alib. pass.

a THE account which the *Japanese* give of the *Oku*, or *Higher Jedso*, is only that it is 300 *Oku*, or of their leagues in length, but on what authority is hard to guess, seeing they do not pretend *Higher Jedso* to have even penetrated so far as into *Jeso-gasima*. However, we are told, that a ship having been cast, some years ago, upon the coasts of that continent, found there, among the rude *Natives* and savage inhabitants, some persons clad in fine *Chinese* silks; from which it is conjectured, that they must have some communication with the neighbouring *Daats*, or *Tartary*, from which it cannot be very far distant^b. This account was confirmed since, by an imperial junk sent thither from *Japan*, on purpose to make some farther discoveries, *anno* 1684, but without *Attempts to* bringing any other particulars, though it spent three months on that expedition. Not long *discover it* after, another was dispatched on much the same errand, which sailed from the east coasts of *Japan*, and, after having endured many storms and hardships, between the fortieth and fiftieth degrees of north latitude, discovered a large continent, supposed to be *America*, where, having met with a good harbour, they staid till the next spring, and returned, without any other account of the country, and its inhabitants, than that it ran still farther to the north-west. Since that time it was resolved, at the *Japanese* court, that no farther pains or expence should be thrown away about the discovery of those countries.

b *Japan*, and, after having endured many storms and hardships, between the fortieth and fiftieth degrees of north latitude, discovered a large continent, supposed to be *America*, where, having met with a good harbour, they staid till the next spring, and returned, without any other account of the country, and its inhabitants, than that it ran still farther to the north-west. Since that time it was resolved, at the *Japanese* court, that no farther pains or expence should be thrown away about the discovery of those countries.

THE island, or south part of *Jedso*, which is the most northern part of the *Japanese* domi-^{The south part,} nion, was first invaded, and conquered, by *Joritomo*, the first cubo, or secular monarch, who ^{when first} committed the government of it to the prince of *Matsuma*, or *Matsumai*, the large island, ^{conquered,} lately mentioned, in the straits of *Sangaar*, and then belonging to the great northern province of *Osiu*, or *Oxu*. Some time after, the natives, weary of a foreign yoke, fell suddenly ^{murder the} on the garison which that prince had left there, and butchered them all to a man. The news ^{garison.} of this had no sooner reached his ears, than he sent over a good army, with three hundred horse, to demand, and, in case of refusal, to take, ample satisfaction, and punish the rebels with military execution. This so alarmed the prince of *Jedso*, that, to prevent all farther mischief, and to take off all suspicion of his having had any hand in, or knowlege of, that treacherous action, he delivered up twenty of the ringleaders to him, who were all executed, and ^{Punishment,} their heads impaled along the coasts of *Jedso*. This act of submission pacified the prince of *Matsumai* for the present, and every thing was again restored to peaceable order. However, ^{and submission.} the natives have been ever since looked upon as a stubborn and untractable people, that would

d not fail taking every opportunity that offered to regain their liberty; to prevent which, strong ^{Kept under by} garisons have been constantly kept upon the southern coasts; and the *Jedsoan* prince hath ever ^{strong gari-} since been obliged to send an ambassy to that of *Matsumai*, with presents to a certain value. ^{sms,}

THE secular emperors of *Japan* have, ever since that conquest, styled themselves lords of ^{under the} the island of *Jedso*, and the princes of *Matsumai* pay them homage for it; but it is likely that ^{prince of} their dominion extends little farther than the southern coasts, and that all the rest, both of the *Matsumai* lower and upper *Jedso*, live under the government of their own princes, and are not only independent, but, for aught that appears to the contrary, are unknown and unregarded by the *Japanese*. As to the latter part of the question, whether the northern part of *Jedso* be conti-^{Northern parts} guous to *Tartary*, or the peninsula of *Kamtschatka*, on the west, or to *America* on the east, ^{not under him.} it being foreign to the history of *Japan*, we shall refer our readers to some hints we have given of it in our Antient history^c, and to the description we shall give of those northern tracts in the sequel of this work.

ON the coasts of *Oxiu*, or *Osiu*, or *Higher Jedso*, on the east-north-east of it, are two small ^{The gold and} islands, to which the *Japanese* also lay claim, but which we should hardly have thought worth ^{silver island,} taking notice of but for the pompous names they have given to them, whether deservedly or not, we cannot determine. The smaller and more remote from them they call *Ginsima*, or the island of silver, and the larger and nearest *Kinsima*, or the island of gold. However, they keep their state and situation very secret from all strangers, chiefly from the *Europeans*; because those names have already tempted some of the latter to go in quest of them, but hitherto ^{In vain at-} without success. Among the rest, the king of *Spain*, having been informed that they lie ^{tempted by the} westward of *America*, and consequently in that part of the world, which, by the pope's divi- ^{Europeans.} sion, was assigned to him, as all those that lay to the east were to the king of *Portugal*, sent out an expert pilot to search for them, *anno* 1620; but his attempt proved abortive. The ^{Unfortunate} *Dutch* made the same attempt some time after, particularly once in the year 1639, and twice ^{attempt of the} *anno* 1643; but all without any success, and the two last very unfortunate: for, besides ^{Dutch.} that they suffered much by storms on those rough seas, the captain of one of those ships having ventured to go on shore, with several of his men, in some port in *Japan*, under the fortieth degree of latitude, they were all seized, and clapt in irons, and conveyed to *Jeddo*; where they were as severely treated, as if their intention had been to betray or invade the empire, though they pretended to have been sent only from *Batavia* to make some further discovery on the coasts of *Tartary* and *America*, and were cast upon that coast by stress of weather.

^b KÆMPF, ubi supra, lib. i. cap. 4.
MOD. HIST. VOL. IV.

^c Additions to Ant. Hist. p. 244. & seq.

so watchful and vigorous are they against all attempts upon any part of their dominions: and it is not unlikely that this severity hath deterred the *Dutch*, and other nations, from either going in quest of those islands, or venturing to come too near these tempestuous coasts.

Thus much shall suffice for the empire of *Japan*, which we shall now conclude, according to our former engagement, with an account of the magnificent procession, and grand ceremony, of the two *Japanese* monarchs, the daïro and cubo, paying their visits to each other, at the great metropolis of *Meaco*, which, as hath been formerly observed, is the usual residence of the former, and the place where the latter was obliged to repair, to pay him this kind of formal homage^d, every five years.

A short description of the magnificent march of the Japanese cubo, from Jeddo to Meaco, and of his entry into that metropolis.

*The cubo's
splendid march
to Meaco.*

WE observed formerly, that this grand visit, or homage, was usually paid to the daïro at his own palace, where he was obliged to keep himself, in some measure, immured from public sight, and without any other appearance of grandeur, than that of a numerous court. But, by the account we are going to give of it, from an eye-witness (namely, his excellency *Conrard Krammar*, who resided there, as an ambassador from the states of *Holland*, anno 1626, and was present at the splendid entry of the cubo into that capital, as well as at a great part of that grand ceremony), it appears, that it was then performed at one of the cubo's palaces in that capital, to which the daïro himself repaired, with a splendid retinue, if possible superior to that of his competitor, lest, probably, the ceremonious formality should be looked upon as more glorious to the all-powerful vassal who performs it, than to the impotent and merely titular monarch to whom it is paid. So that we need not wonder at their mutual emulation, to make each the most magnificent appearance, both with respect to their numerous retinue, the richness of their equipage, and the excessive value of the presents they make to each other, upon this solemn occasion.

*Divided into
28 stages.*

*with their
equipages.*

BUT, before we come to speak of this, it will not be improper to observe, with regard to the cubo's procession, and vast retinue, that the preparatives of it took up a whole year*; that the route from *Jeddo* thither was divided into twenty-eight stages, or relays, two of which he takes up each day, the one at noon, and the other at night, and in each of which he meets with fresh equipages, and a new set of guards, and all of which follow him quite to the daïro's court; so that, by the time of their arrival at *Meaco*, they amount to such a considerable body, that they are obliged to rear up tents in the streets, for the accommodation of the soldiery; whilst the cubo, and his numerous court, repair to his own imperial palace, there to receive the daïro's grand visit, on the day appointed, instead of paying it to him at his own, as was usually done before.

*Is joined by the
daïro, in the
same pompous
state.*

THIS we are speaking of, our author tells us, happened on the 15th of *October*, in the year 1626, above-mentioned; when, to render the procession still more magnificent, the two monarchs agreed to unite their splendid and numerous retinues, and to march jointly through the streets of that metropolis, to the palace appointed for that grand interview. Every street, through which they were to pass, instead of being covered with the finest of silks, was strewed over with a shining kind of white sand, mixed with a certain quantity of powder of talc, which formed a smooth but hard kind of silvered road all the way. On each side of the streets, close to the houses, was raised a sort of balustrade, which was lined with a double file of soldiers, cloathed in white robes, with a small cap on their heads, finely varnished, each having a couple of scymetars hanging by their sides, and holding a short pike in their hand.

*This joint
march thro'
the streets.
His presents
carried before,
followed by
100 rich
chairs.*

THE march began before the break of day, and was preceded by the domestics of each monarch; those of the daïro carrying the presents, which were designed for the cubo, in large chests, beautifully varnished, and having his arms finely painted upon them, and these were guarded by some companies of soldiers.

THESE were followed by about 100 stately norimos, or chairs, each carried by four men cloathed in white, and all made of fine wood, some of an exquisite white, others of a shining brown, delicately polished, the tops of which were of copper, curiously wrought with feltoons, and other embellishments, and these contained the ladies and gentlemen of the daïro's court, all richly dressed; and each norimo was preceded by a fellow who held a large umbrella over it, the ground of which was flowered with gold, and other rich embroidery.

*The guards
richly dressed.*

THESE were followed by twenty-four gentlemen on horseback, with small brown caps varnished, on their heads, and a black plume hanging over it. The sleeves of their gowns were long, their boots made of smooth leather gilt, and their drawers were of satin of va-

* See before, p. 13, sub not.

* CHARLEVOIX, Prelim. Disc. to the Hist. of Japan

rious colours, covered with gold and silver lace. The handles of their scymetars were of silver gilt, and each had a quiver and arrows hanging to his saddle, the two ends of which waved behind on the crupper of his horse. These were of the smaller kind, but full of mettle, and richly caparisoned. Their saddles were finely embroidered; the holsters were made of tygers skins, adorned with lace, and hinges of red silk, which hung down below the girths. Each horse had, besides, two small gilt horns between their ears, and their manes curiously interwoven with gold and silver wire. Each of these horses was led by two men, who held the bridle with one hand, and with the other an umbrella of crimson damask richly embroidered and fringed. Each of these gentlemen was followed by eight servants in white, each having two scymetars hanging by his side. As for the horses, they had no other shoeing than a piece of red silk. After these came three stately coaches, drawn each by two black bulls, covered with a rich crimson silk, and each led by four men. Each coach was of a shining brown, richly gilt and embellished; and each had three doors, one on each side, and one behind, which last was that they went in at; and each was flanked with festoons, and other ornaments. The wheels were shot with gold, and the spokes plated with the same metal finely enamelled. The roofs were high and round, and the rest square; the sides covered with plate of gold: the inside was of a fine shining black varnish, on which were painted in gold the arms of the dairo. In each coach was one of the wives or mistresses of the dairo, with a suitable female attendance within, and guarded by a great number of footmen. Behind each coach was carried a stool or boot, with several steps covered with plate of gold, to help the ladies to go in and out, and upon each of them were laid the rich varnished slippers of the daires, or mistresses of the dairo. If we may believe our author *Krammar*, the charge of all these sumptuous equipages amounted to above 500,000 guilders.

Next to those three coaches, followed twenty-three norimo's of a fine wood, as white and sleek as any polished alabaster, all covered and adorned with plates of copper of curious workmanship; each norimo being filled with ladies of honour richly dressed, who made another part of the three sultanessies retinue, and all of them escorted by a numerous attendance; and each of them carried by four stout fellows in white, and each followed by two others who held each a stately umbrella over them. Next to these came on horseback sixty-eight gentlemen more, marching two and two, and attended by a numerous retinue of footmen; after whom came a great number of lords of the highest rank, who carried some other presents for the cubo, the most considerable of which were a couple of scymetars, the handles of which were enriched with diamonds, a clock of most curious workmanship, two large candlesticks of beaten gold, two ebony columns, and three escritaires of the same wood, inlaid with ivory and mother of pearl, the drawers of which were filled with curious books; and, lastly, two large dishes of beaten gold, besides a number of others of less value. Next to these came 260 noblemen, of the best families in the empire, on horseback, marching two and two, and were followed by the cubo's brothers, and by 164 tributary kings, and each with a retinue suitable to his dignity; the emperor's brethren marching one by one, and the tributary princes two and two, according to their rank; those of the higher rank taking the left hand of the others, as being esteemed the most honourable among the *Japanese*. These preceded two other stately coaches, much more magnificent than any of the former, and attended with far richer equipages than any we have hitherto mentioned; in the first of which was the late cubo or emperor *Fedj-tedda*, who had resigned the throne to his son *Toxo-gunfama*, then reigning, and who was in the other state-coach; and these were followed by a detachment of 400 soldiers well accoutred, who closed up the cubo's retinue. These were again attended by a vast number of coaches, chairs, waggons, and other carriages, and, amongst them, about thirty norimo's of ivory and ebony richly adorned, and surrounded by a proportionable number of sumptuous umbrellas, and all escorted by a great number of gentlemen and servants on horseback and on foot; and followed by a great company of musicians, who filled the air with their songs, and with the sound of various instruments.

This superb cavalcade was closed by the dairo's norimo, preceded by forty life-guards, and carried by fifty gentlemen in the richest dresses. The chair itself was enriched within and without with all the embellishments of art and costly materials; the top of it was altogether magnificent both in its structure and ornaments; and the inside represented a fine blue sky, with the sun, moon, and stars, of the most costly materials; and in the center, on the outside, was planted a cock of massive gold, with its wings extended, as if going to take its flight. A numerous retinue, all richly clad, closed up the procession, followed by vast crowds of spectators of all ranks, who were come on purpose to that metropolis, from all parts of the empire, to see that grand ceremony. The misfortune was, that the streets were immediately thronged with such vast multitudes, that great numbers of them were squeezed or trampled to death by the press; and what added still more to the general disaster, was, the darkness and confusion which then reigned through the streets, the procession having taken up the whole day in going through the city: so that many of them, striving to break through the croud with

Many females
carried off.

with their scymetars, wounded and slew all that stood in their way, without distinction; to a
to say nothing of a great number of rogues and villains, who were come thither with no other
end than to rob and plunder every coach and chair they met with, not only of their costly
ornaments, but, what was still worse, to rob parents of their daughters, and men of their wives
or female relations, who were sought after for many days, in vain.

The dairo's
reception and
entertainment
at the cubo's
palace.

We omit a great number of other disorders which were committed on that night, as well
as many other circumstances relating to that superb cavalcade, all which the reader may see at
full length in the description which the ambassador above-mentioned hath given of it, or in the
extract which Father *Charlevoix* hath published of it in the history of *Japan* †; all that needs
be farther added to it from our author, is, that the dairo staid three days in the cubo's pa- b
lace, and was entertained by him with the greatest splendor, and outward marks of respect,
being attended and served all that time either by himself, by his sons, or by the late emperor
his father, who, if we may believe the account which *Krammar* gives us of it, even conde-
scended to dress all his victuals; whilst the prime ministers of state in the like manner waited
upon the dairo's three wives. The presents likewise which the cubo made to him at his de-
parture, in return for his, were no less magnificent, consisting of 3000 ingots of silver, two
rich scymetars of exquisite temper and workmanship, and with sheaths of massive gold, 200
sumptuous garments, 300 pieces of sattin, 12,000 pounds weight of silk, stately horses richly
harnessed, and five large silver pots full of musk, ambergris, and other costly perfumes.
From this way of the cubo's performing, and the dairo's receiving, this ceremonious homage, c
so different from what we have shewn was performed before that time, one may reasonably
conclude, that there is a much better understanding between the courts of those two mon-
archs; but, whether so or not, we can only conjecture, seeing all the avenues to that empire
have been so closely shut, and all possible intelligence from thence so effectually prevented
ever since, as we have lately shewn; and, as a farther instance of which, we shall subjoin the
ill success which one of the *Romish* missionaries met with in his attempt to penetrate thither in
disguise from the *Philippine Islands*, where he had resided some time.

All farther
intelligence
from Japan
prevented.

Abbot Sidoti's
attempt to
land in it.

His name was *Sidoti*; and he had the title of abbot given him by the pope, upon his set-
ting out from *Rome* for *Manilla*, whence he hoped to find out means to contrive a passage
into *Japan*. Accordingly, having been recommended to the governor of that capital, and
procured a vessel to be built there, out of the charitable sums he had collected among the d
zealots of his church for that intent, he set sail in it in the month of *August* 1709, under the
conduct of *Miguel Floriano*, an expert sailor, who offered himself to conduct him thither,
and arrived in sight of the *Japan* coasts on the ninth of *October* following. They came as
near the land as they dared; and, perceiving a fisher-boat at some distance, they agreed to go
and speak to it. They were provided for this purpose with a *Japanese*, who, though a hea-
then, had promised the governor of *Manilla* to introduce *Sidoti* into land, and to keep him
concealed there, if need required it. This fellow was accordingly dispatched to the fisher-boat,
and talked a good while with the people; but was so terrified at the answer they gave him,
that he would not suffer his own boat to come nearer to them, though to all appearance ear-
nestly invited to it by the fishermen. At his return to the vessel, he strove all he could to di- e
vert the abbot from landing; assuring him, that he could not escape being seized, and conveyed
to the emperor, who, being a bitter enemy to the Christians, would immediately condemn him
to the most excruciating death. The terror which appeared in his looks, and some expressions
which his fright extorted from him, made *Sidoti* and his company suspect that he had betrayed
their design to the fishermen: but neither that, nor all that the *Japanese* could say, were suf-
ficient to divert him from his resolution of landing out of hand into what he called that long-
wished-for spot; so that, after the usual prayers, and other preparatives, the good abbot, ac- f
companied by the captain *Floriano*, and seven others, went into the long-boat about midnight,
and with great difficulty climbed up the rugged coast, and got to land, which he devoutly
kissed as soon as he set foot upon it. The rest of his company, fearing to be surpris'd, thought
fit, after many pious and good wishes, and a melancholy farewell, to return to their ship;
which they safely reached by eight in the morning, and sailed away, leaving the zealous *Si-*
doti to the care of the Divine Providence. Thus far goes the account of this voyage; in which
we have omitted several circumstances in the behaviour of that missionary, which savour more
of enthusiasm than discrete zeal. It was not till near seven years after that the news of his
death were brought to *Quang-tong* by some *Chinese* vessels which arrived there in the month
of *May* 1716; the substance of which, if it may be depended upon, was, that “ *Sidoti* had g
“ scarcely landed in *Japan*, before he was discovered, and sent prisoner to the mandarin, who
“ immediately sent notice of it to the court. The emperor, being desirous to hear from his
“ own mouth the design of his coming, ordered him to be conducted thither under a proper
“ guard; but, not being able to understand him, caused him to be strictly guarded till he

His arrival,

strict guard.

† Vid. Prelim. Discours. & lib. xvii. KRAMMAR in Collect. of Voyages.

- a “ could learn so much of the *Japanese* tongue (a grammar of which he had, among other
 “ books, brought on purpose with him^c), as to be able to express himself intelligibly in it.
 “ It is reported, adds the publisher on that account, but without any foundation, that that
 “ monarch had given him four young gentlemen of his court, to learn the *Latin* tongue of
 “ him. This fact is very uncertain; but it is false that he caused them to be shut up in an
 “ iron cage, and to be committed to the custody of the *Dutch* factory at *Nangbazak*. The *News of his*
 “ *Chinese* captain, from whom we have these particulars, attributes *Sidoti*’s death to his long *death brought*
 “ and austere fasting, which he carried much too far. Yet, faithful as this relation may *to Quang-*
 “ appear (concludes the publisher), we think we ought to wait for some more authentic ac-
 “ count of that missionary’s death, before we venture wholly to rely upon it^f.”
- b Thus far the account of the ill success of this fresh attempt; and which, how artfully so-
 ever worded with respect to that person’s death, yet sufficiently shews the vigilance of the
Japanese government to stop up all the avenues to that empire from all *Europeans* excepting the
Dutch, and to prevent these from getting any intelligence of what is done within their domi-
 nions. We have already seen in a former section how narrowly they are confined within the *The Dutch in*
 limits of their little factory, and how carefully they are watched from prying into, or getting *Japan kept*
 the least information of, what is transacted either at court, or in any part of the country. *closely guard-*
 The haughtiness and tyranny which they are obliged to stoop to under that jealous and despotic go-
 vernment, which looks upon them as no better than spies and traitors, would be nothing to *Exposed to*
 what themselves would be made to suffer, should they give them the least umbrage, or even *great indigni-*
 c shadow of suspicion; to say nothing of the irretrievable loss of this beneficial trade to their *ties;*
 countrymen and principals; to prevent which it is that they submit themselves to be thus
 hardly used, and immured, like prisoners and malefactors^g. But lest we should be suspected
 by our readers of exaggerating their confinement and severe treatment, we shall close this his-
 tory of *Japan* with a passage out of their countryman *Kämpfer*, who doubtless could have no
 interest or inclination to disparage his fellow-sufferers, seeing he shared the same fate. His
 words are these: “ So great was the avarice of the *Dutch*, and such the alluring power of the *which their*
 “ *Japanese* gold, that, rather than forego the prospect of a trade so very advantageous, they *gain renders*
 “ submitted themselves to an almost perpetual imprisonment (for such in fact is their abode *tolerable.*
 “ at *Desima*), and chose to undergo many severe hardships from a foreign heathen nation;
 d “ such as, to avoid performing divine service on *Sundays* and solemn festivals, to abstain from
 “ praying or singing of psalms in public, intirely to avoid the sign of the cross, the calling
 “ upon Christ before the natives, and all other outward marks of Christianity; and, lastly,
 “ submissively and patiently to bear the abusive and injurious treatment of those insolent in-
 “ fidels towards them, than which nothing can be offered more shocking to a noble and gene-
 “ rous mind.”

The history of the commerce to, and the settlements in, the East Indies, by the several European nations.

C H A P. I.

Of the nature, extent, and importance, of the commerce between the inhabitants of Europe and the East Indies.

The reason why Europe is so much preferable to the rest of the quarters of the globe.

WHEN we consider and compare the antient empires with modern sovereignties; or the vast dominions of some of those monarchs with the small countries, the possession of which renders a king in *Europe* great and formidable, at least in the conceptions of his neighbours; the bulk of mankind is apt to think that the circumstances of things are strangely altered; that crowns, in these days, are not to be compared with the imperial diadems of old; and that our western principalities deserve hardly to be named at the same time with those enormous territories which belong to the emperor of *China*, the Khân of *Great Tartary*, the *Mogul*, or even the Shâh^a. But, upon mature reflection, it will be found, that neither the great monarchies of old, or those vast empires that still subsist in the remote parts of *Asia*^b, deserve, all circumstances considered, to be preferred to the sovereignties of *Europe*; because the foundations of their respective governments were never so secure, the welfare of the generality of their subjects was not near so well provided for; and, though their dominions might be more extensive, yet the influence of their power did not reach so far as some of those kingdoms and republics that now subsist in *Europe*^c.

The design and method of this chapter.

THIS has chiefly arisen from their entering deeper into the nature and importance of foreign commerce, which has never failed to improve, to polish, and to enrich, the inhabitants of every country where it has been cultivated with any degree of attention; and, of all the branches of foreign commerce which the working mind or enterprising heart of man has been able to discover or pursue, that of the *East Indies* has been ever esteemed the chief^d. It is true, that some questions have arisen, whether the motives, on which this preference is founded, are quite so strong as they are commonly thought. But experience, which is universally allowed to give the best lessons upon this subject, has fully justified this notion for above two centuries and an half^e; which sufficiently proves the importance of this part of our history, in which we are to give the reader an account of the rise, progress, and extent, as well as the revolutions in, and present state of, the commerce and plantations of the *Europeans* in the *East Indies*: a subject in itself equally instructive and agreeable; and which, being fully and fairly handled, without prejudice to those nations that first opened a way thither, or partiality to the people, who, in process of time, have reaped the benefit of their labours, will be found as entertaining as it is important.

The maritime power of the antients much inferior to that of the moderns, and the reason.

BUT, previous to this, it will be requisite to make a few general observations, in order to establish the truth of what has been already advanced; and to shew, beyond a possibility of contradiction, that this commerce with the *East Indies* has been the real source of that beneficial alteration which has been so conspicuous, within the space of the last two hundred and fifty years, throughout almost all *Europe*. Before the commencement of that period, naval power, considered in the light in which it now stands, was hardly known. The same ships served indifferently for trade and for war: in time of peace they carried merchandize; and, when that was interrupted, they were employed in transporting soldiers^f. It is true, that history mentions very numerous fleets, and great battles at sea; but when we come to inquire

^a strictly into the size, the strength, and the structure, of the vessels employed on such occasions, we find them very far inferior in every respect, not only to those that are now in use, but to the vessels that were built in *Spain* and *Portugal*, in a very short time after they became maritime powers ² (A).

In reality, nothing but long voyages can procure, encourage, or preserve, a naval strength; ^{the decay of} because such voyages supply the materials for, as well as excite a spirit of, general commerce. ^{the true} A few branches of trade may reward the industry of the subjects of a small principality, and ^{ground of ma-} enable them to live in a state of ease and affluence, in comparison of their neighbours ^{ritim}; but ^{strength, and} the true spirit of commerce, like that of empire, will never be at a stand; for, if it does not ^{have the pro-} swell and enlarge, it will quickly dwindle and decrease. It was the opening of a new route to ^{ferous Europe.} the *East Indies* that gave rise to maritime power, in the modern sense of the word, not only by making ships of force necessary, but by raising and employing constantly a much greater number of seamen than had been ever heard of in former times; and the immediate consequence of this was, giving a check to the *Mohammedan* powers, and obliging them to bend their care to defend their own territories, instead of threatening, as they had done a little before, to over-run all their neighbours. Before this period the *Turkish* fleets were extremely formidable, and were so at the time the *Spaniards* and *Portuguese* began to make a figure at sea, but their forces were quickly crushed; and, as they had not the same resources with the Christian powers ³, they were unable to repair or recruit them; so that they have gradually sunk into that despicable state in which they remain at present (B).

^c As there is a natural connection between all the constituent parts of the empire, so the increase of naval power brought with it other advantages, and enabled princes to provide in a ^{sequence to-} more effectual manner for the security of their dominions, and the protection of their subjects, ^{wards pre-} than was practicable in preceding ages; and this is the true reason why things have been more ^{venting these} at a stay since that time, and that an end has been in a manner put to sudden revolutions, and ^{destructive re-} rapid conquests ^{volutions that}. It is true, that the passions of mankind remaining always the same, there ^{happened here-} have arisen from time to time restless and ambitious princes, who have shewn the greatest ^{before.} willingness to over-run the countries, and enslave the persons, of their neighbours; but, who ever will consider how these attempts have been defeated, and what inconsiderable changes have been made even by the longest wars that have been maintained within this period, will be ^d satisfied that some great alteration must have happened to produce an effect so different from what usually followed upon such wars in earlier ages, when kingdoms were quickly overthrown; and, property being every-where at the mercy of power, none were suffered to enjoy the benefits bestowed by Providence, but such as were able to defend their possessions by the sword; which was attended with such inconveniencies, as much lessened the value of those possessions ¹.

We shall understand this matter better, if we consider the visible change that has been wrought in the manners of most of the *European* nations since the opening of the trade to the *Indies*, which may be truly considered as the main wheel of the great machine of commerce; ^{The commerce} since, by the emulation which the very search of a passage to it raised, *America* was discovered; ^{of India is the} and all the advantages derived from thence, are justly therefore ascribed to this, as the first ^{prime mover} cause ^{in respect of}. This change of manners grew from the many new and different employments which ^{that general} trade furnished in a greater or less proportion, where-ever it prevailed. By this means multi- ^{trade which} tudes were brought to devote their time and their labour to cultivating the arts of peace, and ^{has changed} to the improvement of the countries which they inhabited; instead of placing all their hopes of ^{the manners of} aggrandizing and enriching themselves by plundering and oppressing their neighbours; and ^{the European} nations.

(A) There is not any fact, in proof of which better evidence may be brought, than this. In the war so long carried on by the Christians against the *Saracens*, and other infidels, the *Venetians*, the *Genese*, the *Pisians*, furnished the best part of the ships they employed, even to the greatest princes in *Europe* (1). In the war between *England* and *France* both nations hired ships for their respective services, and discharged them when the war was over (2). In the north of *Europe*, trade and naval power were in the hands of the *Hanse Towns* (3). How great changes have been gradually made, and how things have settled to the state they are now in, will appear from the following sections.

(B) This great event of finding a direct passage by sea to the *East Indies* was very critical; for it happened, as will be hereafter shewn, at the very juncture when the *Mohammedans* had reached even to the *Spice Islands*; and when, in consequence of their trade, they had a very considerable force, not in *Europe* only, but in the *East Indies* (4); which is now so intirely destroyed, that, except the piratical states of *Barbary*, there is no *Mohammedan* power, in any part of the world, that has a fleet worth mentioning (5).

this it was that by degrees, as the many good effects of such a disposition appeared, gave a new turn to politics, and induced princes, and their ministers, to turn their views to the encouragement of industry, as the fittest and most effectual means of rendering their subjects, and consequently themselves, rich and powerfulⁿ. This alteration in policy was quickly attended with such evident advantages, as, in spite of all prejudice, established those maxims so beneficial to the liberties and welfare of mankind, that we are no longer in danger of seeing that ancient spirit of barbarism arise, which for so many ages overwhelmed the finest countries in blood and confusion (C).

Which is the result of commerce, and power of wealth, notwithstanding what has been suggested to the contrary.

THERE is one point that it is fit should be cleared, in order to free this method of reasoning from any objection; and it is this: That it being allowed the disposition to labour, to improve and to carry on trade, is very different from that martial spirit which is requisite to render a nation either formidable to others, or secure from their attempts; it should seem, that, in all competitions, power would be rather on the opposite side than on that of trade. But as history and experience, so, when closely attended to, reason and the nature of things, will shew that it is otherwise^o; for armies are raised, and fortresses are maintained, by money; and, where trade accumulates that, those who have the management of the affairs of such a nation will be always able to avail themselves not only of as great, but of a greater, strength than they would be able to raise any other way^p. And whereas, in disputes managed merely by strength and courage, a few great actions are commonly decisive, and the party beaten ruined without resource; it has happened quite otherwise, as indeed it is natural it should happen, in the wars managed by trading nations, who, notwithstanding repeated losses by land, have recruited their forces, repaired their fortresses, and, by drawing wars into a great length, have, in process of time, diminished and weakened superior powers, so as to oblige them to conclude treaties upon equal and moderate terms, and to abandon and forego their conquests^r.

The trade to the East Indies the soul of all commerce throughout Europe.

WHATEVER may be affirmed of trade in general, we may with good grounds apply to the commerce of the *East Indies* in particular, for the reason that has been before assigned; because it was the original source of all that naval power, and of all the advantages accruing from it, which, since the discovery of a passage by the *Cape of Good Hope*, have resulted to the princes and states of *Europe*^s. It is to this they owe that apparent, that undeniable, that distinguishing, superiority, which the inhabitants of this quarter of the globe have over the inhabitants of the other parts of the earth^t. From hence arose those numerous settlements, those powerful colonies, and that general influence which extends so far, and from whence such continual and prodigious benefits are received. It is to this discovery, and the consequences that have attended it, that we are indebted for that high respect, and profound submission, which are paid to the *Europeans* in climates at the greatest distance from them, and that by nations, who, till they were taught by experience, thought of themselves more highly than of any other people^u.

Is the source of the superiority of the Europeans over the inhabitants of the other parts of the world.

THESE are not, like the imaginations of oriental poets and historians, or the lofty titles of their conceited monarchs prerogatives, derived from fancy, and confessed only by such abject slaves as dare not question, much less deny them; but solid and substantial marks of superior power and wisdom, which the most sceptical persons in these parts of the world cannot call in question, and which even the haughtiest of those great princes are, however unwilling, constrained to acknowledge and confess^v. Neither is this description placing things in a false and extravagant light; for we might still go farther without offending truth. We might say, it is not only the princes and states of *Europe*, but their trading companies, composed of their subjects, and deriving both their authority and power from the governments under which they live, that lord it in the east, and give at their pleasure either peace or war to its sovereigns^x. It was not the crown of *Britain*, but the *English East India* company, with whom the Shah of

(C) In order to be convinced of the truth of what is asserted in the text, the curious and inquisitive reader need only cast his eyes upon what the wisest and greatest of all *French* ministers is said to have written on this subject (6); from whence it manifestly appears, that, without paying a due regard to commerce, it is impos-

sible that any monarchy or state can attain to universal influence. Agreeable to the advice given long before by *Antonio Perez* to *Henry IV.* contained in three words, *Conséjo, Palajo, Roma*; that is, A steady ministry, naval power, and uniformity in religion, were the means of acquiring and maintaining universal influence (7).

(6) Testament Politique du Cardinal Richelieu, p. ii. §. 5, 6, 7.

(7) *Essai sur la Marine, & sur le Commerce*, p. 97. *Persia*

a *Persia*, and he too one of the greatest princes that ever sat upon that throne, concluded an alliance, and purchased their assistance with a grant of the moiety of the customs of the only port in his dominions². It is not the states of *Holland*, but the company of *Dutch* merchants incorporated by their authority, for a certain term, and under such limitations as they formerly thought, and from time to time think fit; that maintain so formidable an empire in the *Indies*, and retain at the court of their governor general the sons of many *Indian* monarchs³ as hostages for their fathers obedience (D).

But that it may not seem as if we had taken pains to give an air of grandeur and importance to the subject which is to employ our attention in this part of our history, without considering the abatements that have been or may be suggested, we shall, tho' they will be more fully refuted in the course of this work, take notice here of two plausible objections that some, who, for particular reasons, have been enemies to this commerce, and others, who, for the sake of singularity, have affected to treat every received opinion as ill-founded, have laboured to adorn with the fairest colours, and whatever might give the nearest resemblance to truth. Neither will we in the least diminish the force of these objections, that they may be the more easily answered; but, on the contrary, will propose them to the view of the reader with all the circumstances of advantage that can be given them; and this, tho' strictly speaking we are not bound to do it⁴. The proper business of this part of the Universal History is to account for the discovery of the *East Indies* by the *Europeans*, for their wars, conquests, and settlements, therein, and for the establishments that subsist at present in those parts, and the advantages which arise from them unto those nations to whom they belong. But as such a history would lose very much of its utility, if either of these objections had any tolerable foundation; so it becomes a thing expedient to explain and remove all doubts about them, that the reader may not be embarrassed in the perusal of the following history, much less perplex himself at every turn with inquiries whether the discoverers, the admirals, the generals, the councils, or the monarchs, occasionally commended, did in reality deserve censure or applause⁵, and whether their acquisitions were certain and solid, or only seeming and fallacious benefits (E).

The first of these objections may be thus stated: *It is generally apprehended that trade is advantageous or detrimental according as its balance is in favour of, or against, the nation by which it is carried on; and the usual criterion is the exportation or importation of silver*⁶. But it is universally agreed, that the trade of the *Europeans* to the *East Indies* is in a great measure carried on not by the exportation and barter of commodities, and manufactures for commodities and manufactures, but by sending silver from *Europe* to purchase commodities and manufactures in the *East Indies*; which being rather instruments of luxury and superfluities than necessities, or even conveniencies, of life, it follows from thence, that this commerce is very detrimental to *Europeans* in general, though it may be advantageous to the particular nations by which it is carried on⁷; for they, by re-exporting part of the effects that they bring home, may not only reimburse themselves intirely for the silver originally carried out, but also draw an additional quantity of specie into their own countries; and yet this, being constantly and uniformly a losing trade, upon the whole, to the people of *Europe*, it must by degrees exhaust the wealth of all nations; first, of those who buy these unnecessary commodities and manufactures, perhaps at the fourth or fifth hand; and, by degrees, such as are the immediate purchasers⁸. For, if the silver thus carried out never return, as it is allowed it never can return, the commerce of the *Indies*, however rich in its appearance, however specious in its consequences, such as fleets, settlements, and fortresses, yet, closely examined, and at the bottom, is no better than a perpetual drain, and a sort of under-current, by which the intrinsic riches of *Europe* are conveyed into the *East Indies* to purchase spices, perfumes, and painted linens, which, thro' the blessing of Providence, and the natural industry of the people, are inexhaustible funds of riches to them⁹; while it remains impossible and impracticable for the *Europeans* to replace those immense sums of ready money with which they are purchased (F).

As

² Relation of the taking Ormus from the Portuguese by the English and Persians, by W. WINDER. ³ JACQUET. (D) The reader will easily perceive that these facts, which are absolutely certain, fully demonstrate, that the present potentates of *Europe* enjoy a more extensive and better established authority than any of the antient empires; that this is owing intirely to their naval power, as that is to their commerce, which is the basis of companies; things alike unknown to antiquity and to the oriental nations.

(E) These questions have been already treated by several authors, without giving much satisfaction, not Mod. Hist. Vol. IV.

from any want of skill or capacity in them. but because the controversy turning in the end upon facts, nothing but such a history as this, taking in the whole progress of the trade, from the time it was first opened, to our own days, the several hands it has been in, and the consequences which have attended it, could complete the design, and afford all the necessary lights to an impartial and curious inquirer.

(F) It must be allowed, that these suggestions have had so great weight, even with persons perfectly well skilled

Which has
long been con-
sidered in some
degree conclu-
sive; but,
however,
clearly an-
swered.

As this objection was made very early by men of great knowledge and experience, one would have imagined that it must have received long ago, if capable of it, a clear and satisfactory answer; which, not to dissemble the truth, is so far from being the case, that some of the strongest advocates for the *East India* trade in *England* have given this point intirely up, and contented themselves with proving, that, how ruinous soever the commerce of the *East Indies* may be to the *Europeans* in general, yet it had been, and might be carried on to our annual benefit of at least six hundred thousand pounds^a. How well this answered their purpose of defending the trade thither, as beneficial to us upon the balance, is not material to this question; but I shall take the liberty of saying, that it was the desire of coming immediately, and without any previous disputes, to the decision of this point, that led ingenious men to make such concessions, which, however, do not by any means bind those who come afterwards from considering this point in another light. It might be urged, that this being a matter of fact, and the objection being now above one hundred years old, we may oppose experience to this conjecture; for, if the drain had been so very great, or the detriment to *Europe* of such consequence, as was then suggested, the dismal effects of it must have been long ago apparent from the great want of silver in all the countries of *Europe*. But as no such thing is visible, and as those countries, that, in the nature of things, must have soonest felt, and that too in the highest degree, such a misfortune, have been so far from being disgusted with *Indian* commodities, as to aim at having a share in that trade themselves; this conjecture, however plausible, seems to be groundless; neither is there the least reason to fear, that, in the space of another century, this trade will be attended with worse consequences than those that have flowed from it already^b. But there is no need of relying solely upon this answer, though, at the same time, it may be affirmed to be both strong and clear, conjectures being never better refuted than by experiments. That reasoning ought never to be suspected in politics, which, without scruple, would be admitted in philosophy or physics; neither can any candid or impartial inquirer after truth suppose, that what is found to be false in fact may nevertheless have a foundation in reason.

The balance of
trade not so
certainly
known
by exporting
or importing
of silver.

BUT, to come close to the point, the fact is, that this doctrine of the balance of trade, and of the standard by which it is discovered, is not true beyond a certain degree. Silver is considered in two very different lights, as the common measure of all commodities, and as a commodity; and it is by confounding these considerations that some very able writers fall into great mistakes. In countries where there are no mines, silver is, generally speaking, to be taken in the first light, as a common measure, and then the state of the inhabitants will be properly enough denominated from its plenty or its scarcity. If they are frugal, industrious, and enjoy a large share of trade, silver will abound amongst them; and if, on the contrary, they are profuse, lazy, or without trade, they will have very little silver^c. But, in countries where there are mines, silver is no more than a commodity; and if the inhabitants of such countries, either through defects in government, or for want of trade, are without the necessities or conveniencies of life, we cannot surely style them rich, whatever quantities of silver they may have in their possession^d. This plainly shews, that silver is not essentially wealth, but only circumstantially so; and that, when it abounds much beyond that proportion which is necessary to render it a common measure, it will in all countries, whether they have mines or not, become a downright commodity, as we see it actually does, and is converted into lace and plate, upon which there is likewise a considerable loss; nor can there be any reason given why the clamour should be greater for the silver exported to the *East Indies*, than for the silver wasted and consumed in all kinds of manufactures^e. By the trade to the *East Indies*, a prodigious quantity of shipping is employed both there and in *Europe*, vast numbers of seamen raised, and consequently a great naval force maintained; and therefore, though spices, perfumes, and painted linens, may be instruments of luxury and superfluities, yet ships, seamen, and a naval power, are things of intrinsic value; and if it cannot be denied that the *Europeans* have these into the bargain, it must be acknowledged they have no hard bargain; since it has

^a Dr. DAVENANT's Essay on the East India Trade, and advantage of Trade, p. 29.

^b COCKBURN's Travels through the continent of Mexico, a thorough search into the true nature of coin and bullion, p. 5.

^d Benefits of foreign Trade, p. 13.

in the nature of mercantile and maritime affairs, that they have declared against this commerce with much vehemence (10); from whence the only conclusion that can be drawn is this; that to form a thorough and settled judgment of the utility or detriment of any trade whatever, we must rely upon experience, which furnishes new lights, and opens new paths that never could have been discovered by dint of thinking; for,

after all, there is no reasoning against facts; and if it can be shewn, that nations were weak and indigent before they had this trade, rich and powerful while they enjoyed it, feeble and exhausted after they lost it, it is absolutely vain to allege arguments against encouraging it; for, how strong soever these may appear, they can prove no more than this, that men may be very learnedly and very logically mistaken.

(10) See Mun's Discourse of the East India Trade, Sir William Monson in his Naval Tracts, and Dr. Paxton, in his Discourse of the nature, advantage, and improvement of Trade.

a been very fully shewn, silver itself, beyond a certain reasonable proportion, is but a superfluity^a.

We may pursue this method of reasoning still farther. It has been asserted, and it cannot be denied, that the endeavours to discover a new route by sea to the *East Indies* produced the discovery of the *West Indies*. Now it is very certain, that the far greater part of the silver that is in *Europe* comes from *America*; and it is no less certain, that a very large proportion of that silver comes into the possession of *Europeans* by the purchase of *East India* goods and commodities^b. What reason then is there to fear, that a trade, which, in its consequences, furnishes us with silver, should bring us into indigence from the want of it? or how can we apprehend that *Europe* in general is more impoverished by the annual exportation of a certain quantity of this metal, than any particular country which exports silver to the *Indies* with a view of consuming a great quantity of *Indian* commodities without expence, and, besides, of bringing back the original silver carried out by the sale of the overplus of those commodities? Is not *America* to *Europe* in general, what the countries in *Europe*, that do not trade to the *East Indies*, are to those countries that do? And when we allow that silver is brought as a commodity from *America*, why should we be so blind as not to see that it is exported also as a commodity into the most distant parts of *Asia*? where, if the people keep or hide it, they are certainly not so wise as the *Europeans*, who use it, and, by the use of it, render themselves rich and powerful, and, in a great degree, the masters of those who dig the silver in the *West Indies*, and of those who are distracted with the desire of hoarding it in the *East*^c (G).

The second objection to this trade may be answered more concisely, because it takes the first in some measure for its ground; that objection stands thus: *It may be doubted whether the passage by the Cape of Good Hope can be truly styled a discovery of the East Indies, since they were known, frequented, and a great trade carried on in the commodities and manufactures brought from thence, long before. It may be farther doubted whether this trade, through that channel, has been beneficial to Europe in general, since it has occasioned a much greater consumption of the product of the Indies, that always was, and ever must be, in a great measure, purchased for ready money.* The restraining a destructive trade is as much a benefit as the extending a beneficial one; and consequently the increasing of a trade, where the balance is against us, must be considered as a manifest disadvantage; neither are these arguments unsupported by experience, since, as it might be naturally expected, the intercourse with the *Indies* becoming easier and more direct, the demand for *Indian* commodities rose in proportion; and the increase of the demand has so far raised the price, that we pay as dear for *Indian* commodities now, though imported intirely by *Europeans*, as when we had no trade thither by sea, but received all these commodities and manufactures by land-carriage^d. On the whole, this being a losing trade for *Europe*, augmenting that trade must augment the loss; which must be still farther augmented by the advanced price of the commodities and manufactures; whence it follows, that whatever benefits the *Portuguese* and *Spaniards* at first, and the *English* and *Dutch* since, have derived from this trade, the people of *Europe* in general have been made poorer by the opening of this passage by sea to the *East Indies*; and therefore, instead of

^f MANOUCHI's Histoire de

(G) It is certainly a point of very great consequence, in order to set truth in a clear light, to prevail upon such as inquire after it, to consider attentively the meaning of the words that are made use of in discussing any subject; because it will be often found that the warmest disputes are not about things, but words, sometimes used in one sense, and sometimes in another, in the course of the same debate. As for instance; in the case before us, there is nothing more common than to speak of the *rich* commodities of the east; and, if you desire to have this explained, they enumerate precious stones, spices, silks, &c. If you inquire the reason why they are styled *rich* commodities, the reason assigned is, because they are sold for a great deal of money. But those who consider things in another light, change the term, and tell us, that these things, as they are not necessary to life, are not really valuable; and if you inquire of them what is valuable, they answer, *Silver*, or money, because that will purchase the necessities of life at all times, and in all places. The inference they make from this is, that the inhabitants of the *Indies* are the real gainers, because they obtain money; and those who deal with them losers, because they part with

money. A little reflection will shew, that the opinion of men governs in both cases. Now if it be certain, as indeed there is nothing more certain, than that, in the opinion of mankind, from the earliest ages down to the present, precious stones, spices, silks, &c. have been always held *valuable*, or, in other words, could be sold or exchanged for large sums of money, or, in other words still, for great quantities of *silver*; then it follows, that, in obtaining these, we obtain things valuable; and unless those, who maintain the contrary, could alter the opinions of mankind, and induce a general persuasion, that there is nothing worth possessing but *silver*, they dispute about words, and not things; neither can there be any thing more childish than to grudge the *Indians* the possession of what they esteem valuable, in exchange for what other nations think so; more especially when we consider that this silver, for which we contend so much, is, in strictness of speech, as little, if not less, a necessary of life, than those commodities that are brought from the *Indies*, for those we eat, drink, and wear; whereas the *Indians* are truly misers, and brood over their silver, without making any use of it at all.

being

being celebrated as an advantageous and important discovery, it ought, notwithstanding its a specious appearance, to be considered as a real misfortune^r.

Answered, by
showing it
carried more
silver out,
when we had
small dealings
than now we
have great
dealings there.

WE must acknowledge, that, when this objection was first started, it might very easily mislead those who had a natural jealousy of foreign trade; and those were not only once a party, but continued long a formidable party, in this kingdom; neither perhaps are they yet extinguished: but, with how much address soever facts and falsehoods are blended in this prospect of the *India* trade, it is very far from being impracticable to disentangle them, and to make the reader sensible, that there is even less in this than in the former objection. If, by purchasing *East India* commodities, there was always such a draught of silver out of *Europe*, as is suggested, it would be a very difficult matter to shew how this, before the discovery of *America*, was replaced; and if it had not been replaced, no doubt, in process of time, the b evil must have become very perceptible, and a gradual declension of silver in *Europe* would have been a general subject of complaint. Whatever sums were then sent into the *Indies*, to purchase commodities and manufactures, must have been laid out to great disadvantage^s. The returns could be but small; and the prices must be high, because of the expences and hazard with which land-carriage must be attended. If ever, therefore, there was room to consider this commerce as prejudicial to *Europe*, it must have been then; when the merchants, factors, carriers, were all infidels, and the Christians paid annually vast sums in ready money for a few spices, perfumes, and precious stones, the intrinsic value of which did not amount to a tenth part of what is now brought from the *Indies*. By this means also, contrary to the genius of their religion, the *Mohammedans* became great and general traders; and *Arabians*, c *Moors*, and negro merchants, were spread as far as *China* and the *Moluccas*, and had settlements, besides, in all the great trading ports throughout the *Indies*; the consequence of which, if it had not been checked by the *Portuguese* happily penetrating into those parts, is much easier to conceive than to describe.

The true and
certain benefits
which have
accrued from
the discovery
of a passage by
sea to the
Indies.

ONE thing is very certain, that the greatest part of the money carried out of *Europe* fell by the way, and enriched the *Mamluks* on one side, and the subjects of the *Turkish* empire on the other; for the *Indians* did not sell at a much higher rate than they do now. When, therefore, a direct passage to the *Indies* was opened by sea, the *Europeans* were plainly delivered from this imposition; and whatever price the commodities and manufactures of *India* bore, it was the *Portuguese* that reaped that profit, which, till then, had enriched the *Mohammedans*.^d It is therefore not true, that, by augmenting this trade, the quantity of silver was augmented that went yearly out of *Europe*; but the very contrary. The *Europeans* had much greater quantities, and a far greater variety, of *Indian* goods, for much less silver; because the expence of brokerage, factorage, and land-carriage, was intirely taken away. Neither ought we to be in any doubt about this, from what is asserted as to the keeping up the price of the product of the *Indies*, because this may be easily accounted for another way^e. The *Portuguese*, the *Spaniards*, the *Dutch*, and indeed every nation trading to the *Indies*, have an interest in keeping up the price of whatever they bring from thence, that they may the sooner, and with more certainty, indemnify themselves for their annual exports in silver. Besides, the navigation being long, hazardous, and expensive, it is impossible that the merchandize brought from thence should be afforded to the last purchaser or consumer but at a large rate; however, as the far greater part of the expence, with which this commerce is now attended, is actually incurred in *Europe*, and timber, naval stores, and provisions, are all provided here, it is manifest, that not above a tenth part of the gross amount of *Indian* commodities, at the rate they are sold in *Europe*, can be paid for them in the *Indies*; and, of that, the fifth part is generally allowed to be discharged by commodities^f. From this method of reasoning the reader will see good reason to conclude, that though this trade be carried on in the same manner as before, that is to say, in a good measure, with money; and though, since the discovery of a direct passage thither by sea, there has been a constant increase of this trade; yet there is no reason to believe that greater, if so great, sums of money are carried out of *Europe* now than were formerly, when we dealt under such prodigious disadvantages, and were obliged to take what was brought to market at whatever rates those who brought it thought fit to demand (H).

^e Histoire des

^f Dr. DAVENANT'S

^w MUN's Discourse of the East India Trade.

(H) The reader will consider, that this is barely a discourse introductory to our history, in which we touch only the general heads of a subject, upon which many volumes have been written, and therefore must not expect to find every thing that might be offered upon this

topic. We brought formerly many things from the *East Indies*, with which we are now furnished from *America*, such as sugar, indigo, and several kinds of drugs: we have likewise transplanted some of their commodities into *Europe*, and some of their manufactures

- a We might add to all this, that if the price of *Indian* commodities should be equal, or even *greater*, to the consumer than before a direct passage was opened by sea, we ought at the same time to consider, that every thing is grown dearer, or, which is the same thing in other words, money is become cheaper, or less valuable; which will be easily accounted for, when it is remembered, that, since the discovery of *America*, there have been brought into *Europe* to the value of one thousand millions sterling at least¹. Upon the winding up, therefore, of this bottom, it appears, that, if the *Europeans* were not exhausted, or left without silver, while the *East India* trade was in the hands of the *Venetians* and *Genoese*, who bought chiefly with ready money, and had all their *Indian* merchandize with the loads and incumbrances that have been already mentioned, there can be no great danger that this trade should impoverish us now, when there are annually such large supplies by the *Spanish* plate-fleets². It is also evident, that, by having a direct passage by sea, this exportation of silver is not near so great as it would be if the *East India* commodities and manufactures were to come, as they were wont to come, by different routes, and in some measure over-land. It is farther clear, that the trade carried on in the *Indies* from the *European* settlements is of very great consequence, and contributes to our importing prodigious quantities of goods at a very low rate, which, though here in *Europe* sold at a very high price, yet the profit accrues not to the *Indians*, but from one *European* nation to another; and, when the reader sees hereafter that the *Dutch* have burnt great quantities of spices in their own country, to keep up the market, he cannot but conclude that this objection is far from being so well founded as it seems to be at the first view³; so that, after all, such as have laboured to bring an odium upon this commerce, have misrepresented some facts, exaggerated others, and then drawn by sophistical reasonings unfair conclusions; whereas the advocates for it argue from facts about which there can be no dispute, and from the experience of two hundred and fifty years, which will admit of no reply.
- b
- c

As to any slighter objections that have been thrown out from the consumption of seamen in *these long voyages*, the wearing out of ships, the raising the price of naval stores, and others of a like nature, they arise plainly from a narrowness of mind, and from a want of that comprehensive talent which is absolutely necessary to reason judiciously and conclusively, upon a subject of such importance⁴. For, in proportion as trade has increased, if the lives of multitudes of men have been exposed at sea, it is no more than what happened in former times, in almost continual wars, where the hazard was much greater, and not to so good a purpose. The lives of seamen are exposed for maintaining an intercourse between the most remote parts of the habitable world; which encourages industry, and furnishes a vast variety of employments worthy of rational beings. The wearing out of ships, and the expence of naval stores, have also had a consequence little attended to, which was, the carrying back very considerable sums of money into those countries that were most drained by purchasing the commodities of the *Indies*; and thus, according to the nature of trade, or rather from the wise disposition of Providence, such a circulation has been and ever will be maintained, as is necessary to keep all the wheels of universal traffick in motion, and this to the common benefit of mankind in general⁵. So that we had reason to insist more largely on the exportation of silver, as being the capital point by which this subject has been so long embarrassed; and, to leave no room for future doubts upon this head, let it be observed, that, upon the strictest calculations, it has appeared, that not above a sixth part, at most, of the annual produce of the *American* mines has been exported by all the *European* nations that have a share in the trade to the *East Indies*, and that the quantity of *European* commodities sent thither is continually increasing; whence we may safely infer, that, till the quantity of silver (which, as we have shewn, is a commodity as well as a common measure) which is constantly brought into *Europe*, shall be considerably diminished, there can be no just ground for any melancholy apprehension, about the consequences of the *East India* trade (I).

tures likewise; so that by degrees this commerce will become more and more advantageous to us, and less so to them. These particulars, and many others, are not mentioned in the text, and yet what is there offered is very conclusive, as well as very consistent; neither is it altogether impossible that, by the invention of engines to supply labour, we may likewise acquire other manufactures; but, whether we do, or not, this trade may

be carried on without prejudice to those we have already.

(I) It is very justly observed, by an author who was perfectly well acquainted with things of this nature, that there is nothing so difficult as to search out and discover all the secret channels by which trade rolls wealth both out and into every country (11). Most certainly, had there been any scarcity of silver induced by the

(11) Dr. DAVENANT, and, since him, the best authors on the subject of Commerce.

Why it is necessary to understand this subject, to inquire into the methods in use among the antients for carrying on a correspondence to the Indies.

THESE considerations being premised, as absolutely necessary to set the value of our discoveries and plantations in a true light, we may with greater alacrity and cheartulness proceed to our intended history; but, in order to do this in a proper method, we must begin with shewing what was the state of things before the passage by the *Cape of Good Hope* was found out; and how this trade was managed of old by different routes, according to the innumerable alterations that were made from time to time, by the frequent revolutions that happened amongst the nations concerned in this trade, and in the countries through which it was carried on^d. This, as it is a very necessary disquisition, will be found to be extremely entertaining, as well as highly useful; and, though it may seem to carry us into ages somewhat higher than will fall properly under the character of modern history, yet no just objection can arise from thence, when it shall be known that there is nothing improbable in supposing that some of those old correspondencies may be hereafter revived, and consequently this history of antient commerce connected with future events, and become thereby something more than modern^e. Neither is this the only point of our apology; for, as the old and almost forgotten roads to the *Indies* may possibly be again traced out and restored, so there have not been wanting some who have suggested, that those new discovered ways which the *Portuguese* and *Spaniards* have magnified to so great a degree, though certainly unknown to the darker ages after the destruction of the *Roman* empire, were nevertheless explored in earlier and better times; and that of this there are some proofs to be met with in authentic authors^f. Nay, the lovers of antiquity go farther still; and very confidently assert, that at least two other passages to the *East Indies* by sea, than the great discoverers of later ages have passed through, with all their mathematical skill and learning, were nevertheless traversed long ago by the unlettered *Indians*^g, of which some records remain. We shall find it then highly requisite, to the right knowledge of this subject, to spend some short time in thus enquiring what methods of corresponding with the east were really in use of old, and what are suggested to have been so without any reason.

How essential a part this is of Universal History, and the advantages that flow from it.

By a just examination of these points, setting truth in a right light, detecting falsehoods, and representing the evidence fairly on both sides, where matters are doubtful; many important passages are brought to the reader's notice, which are not only consistent with, but absolutely necessary to complete, the views of an Universal History. It must be confessed, that though hardly any thing can be more obvious than the great utility of such an inquiry into points of this nature, yet most writers of history have been very negligent about them; so that there is hardly any thing more difficult than to collect together, and as it were glean, the several matters of fact that relate to them, as they lie hid here and there, in the works of different authors, and of such too as have written on various subjects^h. Yet, whatever trouble there may be in performing this, it is a very essential point of our business; for, as the writers either of particular nations, or of determinate periods of time, either touch things of this nature but slightly, or, if they dwell upon any, do it only with a view to the main design of their histories; and as those who extend their plans are for that reason obliged to be more succinct, and, though they mention perhaps a greater variety of facts, seldom do any thing more than mention them; we cannot justly expect any tolerable satisfaction from their relationsⁱ. But, in the very scheme of an Universal History, an account of the discoveries made, of the commercial intercourse subsisting, or colonies transported, from one quarter of the terraqueous globe to another, becomes a capital consideration, demands a distinct article, and, being deduced in a natural method, shews manifestly the truth of those observations made at the beginning of this chapter, and, being thus related together, explain and illustrate each other; by which they enable the attentive reader to penetrate thoroughly into the true nature of commerce in general, and free him from those prejudices and prepossessions that inevitably infect the minds of those

augmentation of the *India* trade, it would have altered the proportion between gold and silver; which it has not done, though such as consider things superficially might be easily brought to believe the contrary. In the first year of King *Henry* the eighth, gold was coined of the same fineness that it is now, and a pound of gold troy weight was then worth twenty-five pounds two shillings and six pence, whereas it is now worth forty-four pounds ten shillings, from whence it seems as if gold was become dearer; but neither is that the case, for both these

sums in silver are very near the same weight, that is about fourteen pounds and four ounces; consequently the proportion is not at all altered, or very little (12); which must be owing to our receiving in *Europe* great quantities of gold from *Africa*, the *East Indies*, *Peru*, and *Chili*, as well as silver from *America* (13). We may therefore be sure, that, while this proportion continues the same, we cannot suffer any real evil by the quantities carried out of either of these metals.

(12) *Fleetwood's Chronicon pretiosum*, p. 20.

(13) *Davenant's Essay on the East India Trade*, p. 17.

who

a who take their notions of this subject from such as write of the affairs of any one nation whatever ^k (K).

BESIDES, that kind of science, which arises from this reading, is the true political key by which a variety of mysterious events are opened; so that we see clearly the true grounds of the rise of one nation, and the decay of another; the causes why at certain times there are such vast changes even in the exterior appearances of countries, which, from paradises in one age, become deserts in the next^l. We likewise discern how as great alterations are wrought in the tempers of whole nations, who, from being restless, ambitious, and continually disturbing their neighbours, become industrious, peaceable, and even protectors of those to whom they were once enemies; and then again by degrees, perhaps, degenerate into indolence, avarice, and a spirit of tricking. We perceive that there are natural causes why trade so often shifts its channels; why it seems sometimes perfectly docile, and obedient to laws, and at others is injured and destroyed by the very measures that are taken to protect and promote it^m. These are certainly acquisitions of real consequence, more especially in these times, when, without a tincture of this kind of science, history may very easily mislead, and can hardly instruct to any great purpose (L).

We may likewise add, that this is that knowledge which forms the true connection between ancient and modern history, since, by becoming thoroughly versed in it, we are enabled to distinguish between those principles on which the great monarchies of old were constructed, and the fundamental maxims of modern governmentsⁿ. We are convinced, from an infinity of examples, that, whenever the fermentations occasioned reciprocally by the ambition of princes, and the resentment of their subjects, subside, the natural turn of the human race is, to have a quiet intercourse with each other, and a reciprocal exchange of those blessings which Providence has liberally bestowed on all, though in different proportions. We cannot help perceiving, that, in consequence of this universal disposition, several old routes, by which the communications were maintained between very remote countries, subsist either in whole or in part at this day, notwithstanding temporary interruptions; and we learn how to make a just distinction between the partial and bounded endeavours of the ancients in this respect, in comparison of the extensive navigation of the moderns^o; which so fully verifies that hitherto uncontradicted maxim, *that whatever nation, whatever empire, whatever quarter of the globe, is distinguished by its power at sea, will be superior also on land*^p; upon which, as has been already said, the high prerogatives of the inhabitants of *Europe* are certainly founded, and upon which they must ever depend. For, after all, the arts of peace alone contribute

^o *Traité sur le Commerce*, par M. DESLAUDES, P. iv. p. 59.

^p CICERO ad Attic. lib. x. ep. 7.

(K) The learned Bishop *Huet*, speaking to Mr. *Colbert*, at whose command he wrote his history of the commerce of the ancients, complains of this negligence in the following terms (14): "The very reason which you alledge, that little care has hitherto been taken to set these matters in a proper light, is precisely that which makes me apprehend the difficulty of the undertaking, and anxious as to the event, none having gone before me to clear the road, being to set out myself without a guide, and not knowing where to seek assistance or support." It is very strange, tho' at the same time very honourable for that *French* minister, that he should be the first who saw the necessity of having such a history; and it is very remarkable that he was led to this, as we shall see in another place, by his scheme of setting up an *East India* company in *France*. He directed, and in part dictated, a treatise upon that subject, shewing the advantages that would attend it, and obviating the difficulties that might be raised against it, which was received with universal applause (15). But how well soever he might satisfy others, he was very far from satisfying himself; and it was to clear up his own doubts, by obtaining an historical deduction of what had formerly been done in this trade, that he engaged this very learned person, then a young man, in this enterprize, very succint, if we consider its extent, and which, in respect to many things, gives us rather hints than explanations. There therefore it is the business of those, who are to employ their talents in illustrating any par-

ticular branch of this general system, to improve from those lights which have been supplied by subsequent inquiries.

(L) The reader will be easily convinced of the truth of what is advanced in this paragraph, if he reflects on the various fortunes of the inhabitants of *Venice*. At first, vagabonds, who had taken shelter in a few desert islands scattered in a shallow sea, subsisting partly by their fishing, partly by piracy, or at the best privateering; then betaking themselves to commerce, they became a well governed, rich, and potent people: corrupted by prosperity, they became haughty and ambitious, exhausted their strength and wealth in making conquests on the continent; and, for want of adhering steadily to what had been the source of their good fortune, in a great measure lost it (16). That country, which is now called *Crim Tartary*, was once in the possession of the *Genoese*; and, from its excellent situation, became very populous, and its inhabitants very rich: but, by ill management, the *Genoese* lost it, the trade quickly after sunk, and there is nothing now remarkable in it but the ruins of those magnificent palaces formerly raised by its opulent merchants (17). In the same condition are many of the great cities in *Italy*, in times past free and rich, thro' the industry of their inhabitants, now occupying the same space of ground, but poor, empty, decaying, and, in short, the melancholy monuments of their own departed grandeur.

to what may be stiled true greatness; as the rules of justice, when well understood, will be found the safest and most successful maxims of policy. By the former, countries are improved, their inhabitants rendered civilized and polite, industry encouraged, and the faculties both of the body and of the mind applied to their proper uses: in consequence of the latter, men yield a willing obedience to government, from a due sense of its being their interest to be governed; exert themselves to the utmost, in order to obtain property, because the laws protect them in the full and quiet possession of the fruits of their labours; and engage with alacrity in long and dangerous voyages, from the prospect of increasing their substance, and providing, by the fatigues of their youth, for spending their advanced age in ease. These are great and rational views, and manifestly coincide with those of the great Author of nature, who certainly meant that all men should taste of happiness; and that the wisest and the best, those who bent their thoughts, and employed their strength, to honest and manly purposes, should be most happy^a.

^a EVELYN'S Treatise of Navigation and Commerce, sect. ix. Testament Politique du Cardinal DE RICHELIEU, P. ii. § 5, 6, 7. SECONDAIRE de l'esprit du Loi, liv. xx, xxi.

CHAP. II.

The methods of communication between the inhabitants of Europe and the East Indies, before the discovery of a direct passage by sea round the Cape of Good Hope.

A succinct account of the ancient commerce of the East Indies.

ACCORDING to the history which *Moses* has given us of the peopling the earth after the deluge, we might reasonably suppose that an intercourse between all the inhabitants of the east must have subsisted very early, or, to speak with greater propriety, must have continued from the beginning; and it is very remarkable, that this fact is confirmed by authors sacred and profane^a. It is most probable that the inhabitants of *Arabia* were the first that sailed thither by sea; as we know that the *Ismaelites*, who dwelt in the same country, were the first that carried spices by land into *Egypt*^b. It was, however, many ages before the *Greeks* had any distinct notions upon this head, and indeed till the time of *Alexander*; they were so corrupted by fables, or misrepresented by ignorant historians, that the wisest men amongst them could scarce distinguish between fiction and truth^c. The desire of magnifying the great action performed by that conqueror, and the *Grecians* under his command, became a new source of errors, to which additions were continually made, after his conquests were abandoned. Of all his successors, *Ptolemy Philadelphus* alone had a just sense of the importance of these countries, and took care to be perfectly well informed about them; whence came the better part of those memoirs that serve to give light to succeeding times^d. But the love of the marvellous still so much prevailed, that they also became corrupted, and that to a great degree. This was done with so much the more facility, as the figure of the earth, the disposition of countries, and the true principles of navigation, were but very indifferently understood. It is indeed said, that in very early times the *Chinese* were a very knowing, active, and enterprising people; and that they extended their conquests, or at least their influence, as far as the *Cape of good Hope*; and for this there is a small degree of evidence, yet nothing capable of giving the colour of truth to what some have fancied upon this subject.

Some have asserted, that a passage by the north was not unknown to the ancients.

ABOUT two hundred years ago, when, from the discoveries of *Vasquez de Gama* and *Christopher Columbus*, intelligent persons began to discourse of the possibility of sailing northwards into these countries; some undertook to prove that this had actually been done above a thousand years before, whether out of veneration for antiquity, or to cast a sort of reflection upon the moderns, is uncertain^e. But, upon whatever motive they proceeded, they appealed to authority in maintenance of what they said. The chief fact they relied upon is thus related by *Pliny*, about fifty-seven years before the coming of Christ: A small vessel, having several *Indians* on board, was shipwrecked on the coast of *Germany*; and all the persons who escaped that misfortune, were courteously received by the king of the *Suevi*, who presented them to

- a *Metellus Celer*, then the Roman proconsul in Gaul^f. The writers who defend the notions before-mentioned are very positive that these *Indians* came from *Japan*, or the land of *Jedso*, through the streights of *Weygatz*, and so into the northern ocean. It is added, that the historian, who has preserved this memorable event, could not, from his own relation, but conclude the same thing. But upon this many things have been, and may be said. As for example: that these *Indians* might be cast upon the coast of *Germany* another way; which is beyond all question practicable. For instance, they might be supposed to have embarked on the river *Oxus*, and so to have passed through the *Caspian* sea, thence up the river *Volga*, and so into the *Dwina*, which, falling into the *Baltic*, might well enough have brought them to the coast on which they are supposed to have been shipwrecked. It is however very improbable
- b that such a thing should have happened, because it supposes these *Indians* to have been perfectly acquainted with the navigation of rivers, of which it is much more likely they never heard, and, it is very possible, are unacquainted with so much as their names, to this very day. Yet other nations there are perfectly well acquainted with them, and with their navigation; nay, were so well acquainted with it many years ago, that it was proposed to King *James* the First to open a trade this way to the *Indies*, which the statesmen of those times were wise enough to treat as a chimera^g; and perhaps it is owing to there being much the same measure of wisdom in the ministers of a certain northern power, that this passage has been hitherto traced only upon paper (A). This, however, not being our present business, let us proceed.
- c THESE, without doubt, are sufficient answers, upon the supposition that they were *Indians*. But we may also say, that it is much to be questioned whether these people were *Indians*, because it is very certain the antients frequently bestowed that appellation upon very remote nations, merely because they were remote^h. It is therefore much more probable that those people, who were thus cast on shore on the coast of *Germany*, were *Norwegians* or *Scritofinians*, the same people that we now style *Laplanders*; or it may be they were *Islanders*, if we credit the northern histories to such a degree, as to suppose that island was so early inhabited. This one may even prove, and is infinitely more credible than that they were *Indians* strictly and properly speaking, since accidents of the like nature have fallen out elsewhere; that is, some of these people have been driven on shore in their little fishing-boats; and, when
- d any accident of this sort happened in those early times, before the northern parts of the world were so well known as they are at present, it is no great wonder that such people should be taken for *Indians*, as in our times they would be unanimously called savagesⁱ. The same method of arguing may be applied to another fact of the same nature, since it is affirmed, that, under the reign of the emperor *Frederick Barbarossa*, A. D. 1160, certain *Indians* were again cast upon the coast of *Germany*; for there is no more proof that these were really *Indians* than the former^k. In both cases, it is acknowledged that they were a strange people, whose language was not understood; which might be true, if they were *Norwegians*; but most certainly is no kind of evidence that they came either from the *East* or from the *West Indies*, or that they made their way through the north-east or north-west passage (B).

BUT,

^f Hist. Nat. lib. ii. cap. lxvii.^g WINWOOD'S Memorials, or State Papers, published by Edm. Sawyer, Esq; vol. iii. p. 453. ^h HUET Histoire du Commerce & de la Navigation des Anciens, c. iii. ⁱ GALVANO'S Discoveries. Mr. JOHN RAY'S Account of the Trinity-house at Hull. ^k GALVANO'S Discoveries, translated by Hackluyt, c. 1.

(A) The passage referred to in the text is very curious, and occurs in a letter from one Mr. Chamberlain to Sir Ralph Winwood, afterwards secretary of state; wherein, having mentioned *Muscovy*, he proceeds thus (1): "Indeed we have great doings in hand, and strange projects for that place, which I doubt will all prove discourses in the air, for they be grounded upon certain speeches of the nobility to an *English* merchant about two years since; but *tempora mutantur*, and the case is much altered there since that time. Yet the king apprehends the business very earnestly, and hath caused Sir Henry Newill to confer with some of the council about it several times, wherein they say he hath shewed great sufficiency, and discoursed at large what commodity might arise by bringing the whole trade of *Persia*, and the inland parts of the *East Indies*, up the river *Hydaspes*; and so, with a short cut, down the river *Oxus* into the *Caspian* sea, and then up the river *Volga* to a streight of land, that will carry

"all into the river *Davina*, that runs down to *St. Nicholas* and the town of *Archangel*, the ordinary port and station of our shipping in those parts. These are goodly specious discourses of things not so easily done as spoken." But, as light as this gentleman makes of the matter, this passage was and is very practicable; and, except the latter part of it, is the individual scheme, for carrying which into execution the *Russia* company not many years ago procured an act of parliament: and, while there was such a thing as government in *Persia*, carried on a trade thither very successfully.

(B) When one considers the learning and good sense of those great men who have urged these facts as a proof of there being actually a passage by the north to the *East Indies*, one is naturally inclined to think that they did not do it from a persuasion that the fact was really so, but because they were sensible that examples weigh much more with the generality of readers than

(1) Winwood's Memorials, vol. iii. p. 452.

Arguments by which this opinion is clearly and fully refuted.

BUT, after all, from whatever country these people came, or by whatever route they might come, it is very certain that *Pliny* had not the least notion of their arriving by any northern passage; on the contrary, he very plainly suggests their coming round the coast of *Africa*, which shews how long ago there was a suspicion that there might be a passage that way to the *Indies*¹. Yet, how reasonable soever that sentiment might be, most certainly the consequence drawn from it, that the *Indians* thrown upon the *German* coast might come this way, is very hard to conceive; or, to speak plainly, is not to be conceived at all, any more than that the *Molucca* beans, which are thrown upon the coasts of the *Shetland* islands, should make their way thither by the same passage^m. The truth certainly is, that whatever the antient historians might collect from the genuine writings of *Hanno* the *Carthaginian*, which they had in their hands, or whatever some learned men amongst them might conjecture, they had no knowledge of a passage by sea; for, if there ever had been such a thing known, accounts of it would at least have been preserved, even if the passage had been neglectedⁿ. The most judicious critics among the moderns are unanimously of this opinion, for which they also assign another reason; that, not having the use of the compass, it was impossible they should make any voyage of this kind, since the *Portuguese* found such difficulty, while they continued to creep along the coast of *Africa*; and were afraid of keeping far enough out to sea, in order to double the *Cape* with safety^o. We may add to these still another argument that has been hitherto omitted; which is, that none of those nations that were possessed of this commerce in antient times, had any interest in finding such a passage, but directly the contrary; and consequently we have the utmost reason to believe they did not bend their thoughts that way, for the very same reason that some have suggested a neighbouring nation to ours thought proper to suppress the passage of one of their ships from *Greenland* to *Japan*; which charge on them, if we had sufficient evidence to prove the fact, would appear highly probable^p; since such a discovery must have been by no means pleasing to those who are in possession of the best part of the commerce to the *Indies*, in the way that it is now carried on (C). But it is time to quit this discourse of passages, with which the antients could not be acquainted, in order to speak of those by which, while it was in their hands, this trade was actually pursued, though not with the like ease, or with the same advantages, as at present.

It is not impossible that the commerce between the Chinese and the northern nations is of great antiquity.

THE intercourse between the people of *Russia* and the inhabitants of *China* is a thing now commonly known to be extremely practicable, ever since the embassy sent by the Czar in the year 1659, when his minister passed to the north of the kingdom of *Boutan* or *Tibet*, through the deserts of *Great Tartary*^q. But though the assertion may seem strange, there is no reason to believe that this passage is by any means a new discovery, or that it had not been as much frequented of old as in the present times; for, as might be easily shewn, it was in the very early ages of the world that the *Chinese* and *Indian* empires were in their most flourishing condition, and carried on their most extensive commerce; whence we may conceive it highly probable that they made use of caravans on this side, in the same manner as they do now; and it is not impossible that it was by the passage of these caravans through the northern *Indies*, the antients came to hear of the *Seres*; since it is very certain that the country in which they placed them is not very far distant from the route these caravans must have taken, supposing such a passage to have been then used^r. But that there must have been some passage on the north, appears also from hence, that the antients were so fully persuaded that the *Indian* ocean communicated with the *Caspian* sea; a notion that could never have gained credit, if they had not been informed that there was some kind of commerce carried on between the northern

arguments; by which they expose themselves to this disadvantage, that shewing the improbability of these facts, which was easily done, made more against their opinion, that such a passage was practicable, than in reason it ought; for, in truth, what they urged of another kind was very strong and convincing; and it is now in some measure certain, by comparing the attempts of the *Dutch* with what has been actually done of late years by the *Russians*, that a north east passage is really practicable (2).

(C) There is in the *Philosophical Transactions* an account given by Mr. *Joseph Moxon*, of a *Dutch* ship employed in the *Greenland* fishery, that actually sailed two

degrees beyond the north pole (3); which relation he had from the mouth of the steersman of that very ship, who affirmed that they had an open sea, and as warm weather as at *Amsterdam*, during the summer-season; which fact, if true, as Mr. *Moxon* testifies his persuasion that it really was, is decisive as to this point; and shews that there is a short passage to the *Indies*, with which it is not easy to believe, that, after such an experiment as this, the *Dutch* should be unacquainted; but as it neither is, nor in all probability will be, their interest to make use of it, there is no wonder that they conceal it.

(2) *Ellis's Voyage to Hudson's Bay, P. iii.*

(3) *Phil. Trans. vol. LXXV. p. 110.*

a parts and the *Indies* ¹; and it is not easy to comprehend how any commerce of that kind should be carried on, unless by the method which we have mentioned, which was always practicable, and which therefore there is no improbability in supposing formerly practised ²; which is very much strengthened by the authority of the original histories of these remote countries.

THE only plausible objection that can be made is, the fierceness and barbarity of the nations inhabiting between *China* and *Russia*; and therefore this deserves some consideration. To remove this doubt, let us in the first place observe, that the antients had no distinct account of these people at all; and therefore whatever they have advanced ought to make no impression to the disadvantage of these nations ³. In the next place, what they have told us of the *Seres* does not appear to agree in any manner with the *Chinese* history; and, though we are very far from asserting that we ought to give an implicit credit to all that is advanced in that history, yet we think there is nothing absurd in supposing that the *Indians* or the *Chinese* might be as intelligent, and as industrious in commerce, as we know with the utmost certainty the *Chaldeans* and the *Ismaelites* were in times much earlier than those in which we conceive this commerce to have been practised. Human nature is every-where the same; and it appears, even from the reports of the *Greek* historians, that the *Indians*, from the earliest accounts they had of them, were as well governed a people as any in the world ⁴; which certainly adds some credit to the *Chinese* history, whether we are inclined to believe that the *Indians* derived any part of their knowledge from the *Chinese*; or, which is a notion more probable in itself, and much better supported by authority, that the *Chinese* were indebted for the best part of their improvements to the light they received from the *Indians* ⁵. The first accounts we had of the *Tartars*, or rather *Tatars*, represented them as a race of stupid and ignorant barbarians; but their own histories shew quite the contrary; because, if they had been really such, those histories could not have been written by them with so much simplicity, perspicuity, and elegance, as we see that they actually are ⁶ (D).

We may add to all this, that it is very far from being improbable, that those people, that now inhabit the greatest part of these far-extended countries, are not the descendants of those who were possessed of them in past times; neither is this supposition altogether grounded upon the hints received from such as have studied the *Chinese* and other oriental memoirs, but upon the concurring testimonies of other writers. We are well informed, that even in those places that are now styled *steps* or *deserts*, there are evident remains not only of former inhabitants, but of inhabitants very different in their dispositions and manners from those of the adjacent nations ⁷. Tombs have been found, in which were the relics of persons well clothed, and with whom gold rings and other precious ornaments had been interred; and, which is still stronger and clearer evidence to this purpose, so lately as 1721, there was found in the midst of the great desert, on the banks of the river *Txulim*, a needle or obelisk sixteen feet in height, of very beautiful white stone, surrounded by several hundred monuments of the same kind, but of a much smaller size, upon which were inscriptions, much effaced by time, in characters that bear not the least resemblance to those that are at present in use amongst any of the nations that inhabit the north-east of *Asia* ⁸. As farther discoveries are made on this side, we may very probably receive greater lights; but, in the meantime, these are certainly sufficient to convince us, that great changes have happened in these parts; and that we should run a great hazard of deceiving ourselves, if we should form our idea of the state of things in past ages from the appearance of those countries at present. But we shall hereafter have occasion more than once to insist farther upon this subject, as it stands connected with other parts of our history; and therefore will not dwell upon it longer here, as having already set it in as clear a light as these inquiries seem to demand ⁹ (E).

(D) All the *Chinese* histories refer the forming of their constitution, as rational as any, and evidently the most lasting in the world, to very early times, that is, to almost two thousand years before Christ. The same books, speaking of the succeeding ages, represent the northern and north-east countries as fully peopled, and granted as sovereignties dependent on the empire, to princes of the blood: from whence we must conclude, that the in-

habitants were as much civilized, and lived under the same laws with the *Chinese* (4). The other oriental histories accord very well with these accounts; so that it does not seem in any degree reasonable to set all these aside in favour of our own conjectures.

(E) There cannot be a fact better attested than that mentioned in the text; to which we may add, that all the accounts we have from the *Persians*, even of the most

(4) Martin, L. Geogr. De Holl. 2^e.

northern

A correspondence between the Indies and Spain practicable, without entering the ocean.

THE next communication between the *Indies* and the north was by *Samarcand*, the capital of *Transoxiana*, that is, the country beyond the river *Oxus*, or *Amu*. It was by this river, which runs at no great distance from *Samarcand*, that a trade was antiently carried on by sailing down it into the *Caspian* sea, and so to the mouth of the *Volga*^c. Bishop *Huet* very justly observed, that, by this route, there was no great difficulty in passing from the *Indies* to *Spain*, without ever entering the ocean; for, as he remarks, if, after passing the *Caspian* sea to the mouth of the *Volga*, and sailing up that river as high as the country of the *Cossacks*, the merchandize was transported by land for no greater space than six *German* leagues, they might then be conveyed down the *Tanaïs*, and so into the *Black Sea*, and, passing the streights of *Constantinople*, proceed by the *Mediterranean* to those of *Gibraltar*^d. But the learned *Strabo* has pointed out another route by the *Caspian* sea, still shorter than that of the *Volga*, which was, by turning towards *Albania*, and so entering the river *Cyrus*, and sailing up as far as that is navigable, and then proceeding by land directly to the *Black Sea*^e. Yet, notwithstanding this might be a shorter way than the former, most certainly it was not so commodious, nor at that time so practicable. However, the account he has given of it is a plain indication that all these things had been very well considered by the antients, who knew the importance of this commerce, and managed it as well as they could, making such alterations from time to time as the revolutions to which all countries are liable, rendered necessary (F).

These passages no new discoveries in the time of the Romans, but quite the contrary.

BUT *Pliny* informs us this was no new discovery, since, as he reports on the authority of *Varro*, *Pompey the Great*, during the war against *Mithridates*, had actually a design of opening such a commerce on this side. He was, says he, informed that it was but seven days journey from the frontiers of *India*, thro' the country of the *Bactrians*, to the river *Icarus*, which falls into the *Oxus*; so that the merchandize of *India* might be transported by that river into the *Caspian* sea, and from thence carried up the river *Cyrus*, within five days journey to *Phasis* in *Pontus*; which five days journey might very easily be performed over land^f. *Solinus* indeed speaks of vessels passing this way; but that is a mistake, he must certainly have meant the merchandize. It is impossible to mention this passage to and from the *Indies* without observing, that it was the nearest and most convenient that could be to *Constantinople*; and there seems to be no reason to doubt that it was now in use, especially when the inhabitants of the coasts of *Pontus Euxinus*, or *Black Sea*, were subjects to the *Greek* emperors, or in times of peace; and by this means it might probably happen that the commerce of the *Indies* was preserved after the eastern provinces of the empire were lost; because it was not till a long time after that this road was in any danger of being disturbed by the excursions of the *Arabs*, who put an end to the trade through *Persia*^g. This would have become an easier and better method of carrying on this commerce; perhaps we should not err much in saying the easiest and best of all, if the project which *Pliny* tells us on no less authority than that of the emperor *Claudius*, was formed by *Seleucus Nicator*, had been carried into execution either by him or by the *Greek* emperors, who had a much better opportunity of doing it, which was by cutting a canal from the *Cimmerian Bosphorus* to the *Caspian* sea, which would have shortened the passage extremely, and would, besides, have enabled the merchants to have conveyed their goods by water all the way^h (G).

^h HUET Histoire du Commerce des Anciens,

northern and barbarous nations, either subject to them, or with whom they converse, agree that these people have traditions of their having been formerly in a better state, and of more civilized nations that antiently inhabited those countries, and are now extirpated; and perhaps, in process of time, we may hear of farther monuments, that may put the truth of these things out of question; for what we have yet heard are but rude hints reported by such as have accidentally conversed with, or made but a short stay among, these barbarous people (5).

(F) We ought to consider, that as the antients were but timid navigators, and unacquainted with the means of making long voyages by sea, they were under the necessity of having recourse to all possible methods for supplying this defect by the use of caravans, and an inland navigation; so that it would not be at all surprising if it should appear that they exceeded the moderns in these kinds of conveyances, since we exceed them so much in naval skill, and maritime expeditions. Besides, if we reflect on the great empires that subsisted in those times, and the vast extent of country comprehended

under them, we shall perceive that, in this respect, they had vast advantages, which there is no reason to doubt that they improved, since the facts mentioned in the text are evidences of such a disposition, and these improvements might be carried much farther than we can possibly collect from those small and imperfect records that yet remain to us.

(G) At first sight it may seem as if reviving the memory of these antient projects was not the business of a modern historian; whereas, in reality, there is nothing more so, since, while these countries remain, every great genius, sustained by superior power, will naturally have recourse to schemes of the like nature. Thus the Czar *Peter the First* had this very notion in his head, which made him so desirous of being lord of the *Black Sea* on one side, as well as of the *Baltic* on the other. The *Shah Nadir*, or *Kouli Khân*, likewise turned his thoughts this way; but the progress of his arms was checked by the vigorous opposition of the people inhabiting the country between the *Caspian* and the *Euxine* seas. Neither have the *Venetians* been wanting in their endeavours to put the *Turks* upon opening some such correspon-

(5) Voyage de Mafon à la Chine, par M. Everard Isbrants Ides, c. 19, 20.

dence

a The scheme itself, which must be acknowledged truly great, was originally that of *Alexander*, who ordered the *Caspian* sea to be carefully surveyed, with this very intention of finding some communication between that and the *Pontus Euxinus*, that he might thereby open a passage from the *Indies* to his hereditary dominions of *Macedon*, which, by that means, might have been rendered the center of the commerce of *Europe*.

Some writers inform us, that the city of *Samarcand* became large, rich, populous, and a place of great trade, at the expence of that of *Bogar*, the capital of *Great Buchar*^a, which, in earlier times, served as a magazine, to which the love of gain attracted nations very far removed from each other by nature: for thither resorted merchants from all parts of *India*, from the different countries inhabited by the *Tartars*, from *Persia*, and even from the dominions of the Grand Signior, on one side; and from *Russia* and *Poland*, on the other: so that in the warehouses and markets here, might be seen a large variety of oriental and *European* merchandise^b. The strongest argument for the antiquity of this commerce, was the extent of the city, and the beauty of its buildings. A countryman of ours, one *Anthony Jenkins*, visited it about the middle of the sixteenth century; and his account of this mart has been esteemed so curious and important, that it has been translated into other languages, and copied by the best writers. But if it was injured by the neighbourhood of *Samarcand* in those days, it has since had its revenge, as it is now become the seat of the Khan of the *Usbeck Tartars*, who is master also of *Samarcand*, which he visits only in the summer-season^c. In consequence of this new change of fortune, the commerce of *Bogar* is revived; and, as it is situated in a fruitful and pleasant country, the resort of merchants is as great there as ever; which sufficiently proves, that, notwithstanding the fluctuations of commerce, when once the situation of a place is found to be extremely convenient, it is seldom ruined to such a degree, as not, some time or other, to lift up its head again. And therefore, it is always a point of consequence, to such as will understand these things to the bottom, to be well informed of the antient channels of trade, that they may not be surpris'd by new relations, and thereby led to ascribe more to the spirit and industry of the moderns, than justly belongs to them. There is a perplexed and obscure passage in the history of an antient author^d, which may be rendered intelligible by this account: for though it may not be very easy to settle the situation of the cities and rivers which he mentions, yet, upon the whole, there is good reason to believe, that the communication he describes between the eastern and western nations, must be referred either to the trade carried on at *Bogar*, or at *Samarcand* (H).

Another city, still more famous for the same commerce, is *Cabul*, or *Gaboul*, seated in the latitude of thirty-four degrees north, on the frontiers of *Great Buchar*^a, on the south side of the mountains which divide the territories of the *Mogul* from that part of *Great Tartary*. This city of *Cabul* is the capital of a little province called from thence *Cabulistan*. It is one of the finest places in that part of the world, large, rich, and very populous. As it is considered as the key of the *Great Mogul's* dominions on that side, great care is taken to keep its fortifications in constant repair, and a numerous garrison is maintained for its security^b. This city is very antient, and has been always famous, as it still is, for being the prime resort of merchants from *India*, *Persia*, and *Great Buchar*^a. The *Usbeck Tartars* drive there a great trade in slaves and horses, of which, it is said, that no fewer than sixty thousand are sold every year. It stands on a little river which falls into the *Indus*, and thereby affords a short and speedy passage for all the rich commodities in the country behind it, which when brought to *Cabul*, are there exchanged for slaves and horses, and then conveyed, by merchants of different countries, from thence into other parts of the world. The neighbourhood of this city is one of the pleasantest and most fertile regions that can be imagined, the climate temperate and wholesome, well watered, producing fruits of all kinds, in equal plenty and perfection^c. The inhabitants are most of them *Indian* pagans, though the officers of the *Mogul*, and most of the garrison, are

dence (G). It is true, none of these schemes have hitherto met with success; but it does not follow from hence that they never will, or that it is of no use to comprehend them.

(H) The author alluded to in the text is *Ammianus Marcellinus* (7), who, in his history, mentions a passage from the country of the *Arians*, which lies north-west from the *Seres*, quite to the *Caspian* sea. He mentions the river *Arias* as running through that country, and

navigable by boats. This also receives some light from the description that *Strabo* has given us of the same country (8). The first-mentioned historian describes another route, which was longer, and less commodious, through the country of the *Saci*. All which are pregnant proofs of the indefatigable pains heretofore taken, in order to keep up a correspondence with the *Indies*; for these reports arose not from speculation, but from practice.

Mohammedans. In time of war, and public distractions, such as have long reigned in *Persia*,^a no doubt the trade here is much lessened, and often interrupted; but as things return again into their old channels, merchants resume their former methods; and from hence it is, the *Armenians* frequently bring silk, and other rich commodities, by the way of the *Caspian* sea, into *Russia*, where hitherto they have generally disposed of them to the *Dutch*, for manufactures, with which they return the next season to the same market (1).

Candahar
the greatest of
all these marts,
till the com-
merce was
lessened by the
European
settlements.

BUT the most considerable road of all lay through *Candahar*, for many ages the center of commerce between *Persia* and the *Indies*. This city is seated in thirty-three degrees ten minutes north, and by nature, as well as art, rendered one of the strongest places in the east. There are good reasons to believe, from the comparison of our modern maps with the old tables of *Ptolemy*, that this city either arose out of the ruins, or was built very near the place^b where *Alexandria* stood; which is a proof of the wisdom of *Alexander* the Great, in the choice of proper situations for the colonies he intended in this part of the world^c. This city and province have been exposed to many revolutions. It was long an independent principality, preserved in that condition not so much by the strength of the place, and the power of its princes, though both were antiently very considerable, as by its advantageous situation on the frontiers of the two great empires of *Persia* and the *Indies*, which secured it a powerful protector on one side, whenever it was attacked on the other. It has been since sometimes in the hands of the *Mogul*, sometimes in those of the *Persian*, where it now remains. It is not very large, but was, before the last wars, well built and peopled^d. The caravans from *Ispahan* and *Agra* passed constantly through it, and even continued there some time, for the conveniency of merchants of all nations, who resort thither to barter the commodities of their own countries for those of the east; and in few places of *Asia* or *Europe* trade rose higher than here. It is extremely probable, that this commerce was in a very flourishing condition under the *Persian* kings cotemporary with the first emperors of *Constantinople*; and that, by the regular returns of caravans from the *Indies*, the *Persians* were furnished with vast quantities of the commodities of those countries, which they afterwards carried into the frontier provinces, to dispose of them at the fairs in which they traded with the *Greeks*^e. The settlements of the *Europeans* in the *Indies* have very considerably lessened this commerce by *Candahar*, as well as all the inland trade of those parts. But it is, for all that, a thing of consequence still, and must always continue so, from the natural conveniency of the place, which renders it the staple^d of *Persian* as well as *Indian* commodities, for the sake of which, there is, from several countries, a great resort. It is very likely, that the long wars, and great confusions, which have for so many years reigned in this part of the world, must, in this, as well as in many other respects, have produced, for the present, great alterations; so that the relations of modern travellers will, probably, correspond but little with the foregoing account. But this ought, however, to make no impression on a judicious and considerate reader; because experience has shewn, that such temporary cessations never change a well established road, unless, during the interruption of commerce, some other is discovered, or through the prospect of gain, or from the motive of necessity, made as convenient. The very next instance will set this in the fairest and strongest point of view, and make it as apparent in point of fact, as it is in own nature^e reasonable.

Tadmor, or
Palmyra, an
antient mart
for these com-
modities,
which from
thence were
carried into
Syria.

THE city, to which oriental commodities were carried, in antient times, from any of those marts before-mentioned, was originally built by King *Solomon*, after he had conquered the king of *Hamath-zoba*, a little *Syrian* prince, within whose dominions the country lay upon which this city was afterwards erected^f. It was called by *Solomon*, *Tadmor*, and, from its situation in the midst of a sandy desert, which surrounded it on all sides, *Tadmor in the Wilderness*, of which we have spoken largely elsewhere, and shall avoid repeating it here^g. As the singularity of its situation was sufficient to charm whoever attentively considered it, so, in the decline of the *Macedonian* empire in the east, it became a free city, or rather the head of a small principality, under the name of *Palmyra*, from whence the country under its jurisdiction^f

^s Antient History. vol. i. p. 361—370.

(1) The people of this province are mentioned by *Ptolemy*, on the very same account for which we have taken notice of them here. As there are no countries in the world so subject to revolutions as these of which we are speaking, this may be looked upon as the true cause of the frequent variation of these inland correspondencies, which are removed from one place to another, according as they become more or less safe from the tumults of war, or the oppressions of arbitrary

princes. But as the subjects of *Russia* frequent them all, and commonly vend what they purchase to the *Armenian* merchants at *Altracan* (9), these sold them again to the *Dutch*, or parted with them for the manufactures of *Europe*; but, of late years, other nations have been wise enough to vend their manufactures to these *Armenians*, and, by that means, have procured silks, and other valuable commodities, on very moderate terms.

(2) *Asia*, cap. 18. tab. 9.

- a was called *Palmyrene*. This city and country are very well described by *Pliny*¹. *Palmyra*, says he, is excellently situated, as well in regard to the pleasantness of the adjacent country, as from the great abundance of water; so that this little territory seems to be set apart by nature for a peaceful and undisturbed retreat, being surrounded on every side with dry and sandy deserts, which reach as far as the very confines of *Arabia*. This small state lay between the two mighty empires of *Rome* and *Parthia*, when the disputes between them were at the highest, having the *Parthian* on the east, and the *Roman* territory on the west². So that it seemed to be perpetually in danger; and yet, though exceeding rich, it was so wisely governed, as to escape any great loss, during all those confusions; and never ran any eminent hazard, except from *Mark Antony*, who, being distressed for money to pay his army, sent a body of horse to plunder it; but the inhabitants, having notice of his intention, removed their effects, and so prevented that desolation with which they were threatened³. The source of its great wealth, was the share it had in the commerce of the *Indies*⁴. This commerce was carried on thus: the goods were brought by sea to the mouth of the *Euphrates*, and perhaps a little higher; and thence they were sent by land, in caravans, for some hundred miles through the deserts, to *Palmyra*⁵; which stood one day's journey from the *Euphrates*, 127 miles from *Damascus*, and about 203 miles from the maritime coast of *Syria*, by the ports of which, it dispersed those goods to all the different parts of the *Roman* empire, that did not immediately correspond with the port of *Alexandria*⁶.
- c WHEN *Trajan* overturned the *Parthian* empire, the principality of *Palmyra* declared for the *Romans*; and they submitted themselves to *Adrian*, who was then marching with his army from *Syria* into *Egypt*; who was so well pleased with the situation of the place, and the behaviour of the people, that he granted them the privileges of a colony, and adorned the city with so many beautiful structures, that the inhabitants, in compliment to their benefactor, called it, for some time, *Adrianople*⁷. From the time of *Adrian* to that of *Aurelian*, which comprehended the space of 140 years, this city, and the territory under its jurisdiction, so flourished and increased, that, when *Valerian* was taken prisoner by *Sapores* king of *Persia*, *Odenathus*, who then governed *Palmyra*, was able to bring a powerful army into the field, to recover *Mesopotamia* from the *Persians*, and even to penetrate as far as the capital city *Ctesiphon*; which was so acceptable a service to the *Roman* empire, then governed by *Gallienus*, a lazy and inactive prince, that, with the consent of the senate, he took *Odenathus* into partnership with him, and gave him the title of *Augustus*; which incident, by a strange turn of affairs, proved the cause of the utter ruin and subversion of the place⁸. For his consort *Zenobia*, in right of her son *Wabalamat*, then a minor, assumed the government of the east; which she managed with so much discretion, that, after the death of *Gallienus*, she made herself mistress of *Egypt*, and held it during the short reign of *Claudius*. She might have enjoyed this prosperity longer, if she had entertained it with greater moderation; but, refusing all terms of accommodation offered by the emperor *Aurelian*, she obliged him, against his will, to employ in a manner the whole force of the *Roman* empire for her destruction, which, as we have elsewhere shewn, he very fully completed; and, having dissipated her troops, exhausted her treasures, and reduced her country, he carried her away prisoner to *Rome*, where she was led in triumph; but spent the remainder of her days in honourable privacy⁹ (K).

(K) There were some very peculiar and singular circumstances attending this small sovereignty, which are worthy the reader's notice. It was an inland district, and yet supported by commerce; which is very extraordinary and uncommon. Its inhabitants were equally remarkable for their industry, courage, and magnificence, all of which were produced by their manner of living. The trade by which they subsisted made persons of all ranks, some way or other, industrious. Their situation inured them to war, and obliged them to much caution and circumspection. Their wealth being great, and their territory but small, it is not at all strange, that, in a long course of prosperity, they rendered it as fruitful and pleasant as possible, and filled their capital, together with the places adjacent, as also their other cities, and their suburbs, with stately structures, and whatever might contribute to make that spot agreeable, to which, except when their commerce called them abroad, they were, in a manner, absolutely confined. And,

lastly, this wonderful display of riches, in a great measure dispensed to procure the necessities and conveniences of life, proves, that there is scarce any thing too hard for commerce; and that there can scarce be any situation so untoward, as not to be rendered flourishing, happy, and powerful, if it will admit of such a kind of correspondence, and is inhabited by those who prefer labour to want, and have a talent of applying the succours of art, to improve the blessings bestowed, and to acquire such as are denied by nature: for as idleness will introduce poverty in the best countries, so there are hardly any into which industry may not bring plenty, and even profusion. It is also observable, that science and politeness are ever the concomitants of habitual industry; and, in this respect, *Palmyra* was as remarkable as in any other; and the virtue and learning of *Zenobia* made her esteemed, admired, and celebrated, at *Rome*, in spite of the frowns of fortune, and the loss of her dominions (10).

(10) FLAV. VOPISC. in Vit. Aurelian. ZOSIM. ZONAR.

Notwithstanding which, this commerce is still carried on by the way of Aleppo.

A. D. 272.

THE sweets of a lucrative commerce, as they come to be diffused, have as strong an influence upon the minds of private people, as upon those of princes; and, in truth, the pride of riches is commonly more apparent in the former than in the latter; so that it is not at all astonishing if it proved so here. If the inhabitants of *Palmyra* could have forgot the figure they made under her reign, or, from her example, learned to bear a change of fortune with discretion, they might have escaped, without suffering much by this unlucky accident; but believing, after *Aurelian* was once returned into *Europe*, that there was no danger of his coming back, they massacred the soldiers he had left in garison; which so much incensed him, that he took an inflexible resolution of marching to chastise them; which he did; and, having made himself master of the place, caused the inhabitants to be destroyed, without mercy, and gave the pillage of the city to his soldiers^a. This destruction of *Palmyra* put an end to the principality: but it is not probable that the city was ruined to the degree which travellers see it now, because we find it mentioned in history as a very considerable place after this, though not as the seat of government, as in times past, when there were no less than sixteen cities under its jurisdiction^b. The ruins of *Palmyra* itself are allowed, by all who have visited them, to be equal, if not superior, to any thing of the same kind yet subsisting in the world, and consequently still remain a proof of the wealth and magnificence of its antient masters^c. As for the course of that part of the *Indian* traffick which passed this way, it has, after some variation, been in a great measure fixed to *Aleppo*; particularly that part of it which is the consequence of an intercourse with the *Persians*, some provinces of that empire being, within this period, always regarded by the western nations as part of the *Indies*^d. Hence it is that *Aleppo* is considered as the third city in the *Turkish* empire, in point of size, *Constantinople* and *Cairo* being the two first, and the second in point of trade, being preceded only by *Smyrna*. Standing as it does, about seventy miles from the sea, and having *Alexandretta* for its port, it reaps the double advantage of serving for a magazine of oriental commodities, for the use of the *English*, *French*, and *Dutch* merchants, and, in the same manner, supplying the *Indian*, *Tartar*, and *Persian* traders, with all the goods and manufactures of *Europe*. This commerce keeps up a continual hurry, and finds employment for upwards of 12,000 *Armenian* merchants, who live in the city, and are employed as brokers. So that we had sufficient reason for saying, that this old road was not intirely lost, but only altered a little, in compliance with the changes that have happened in other things^e.

The Arabians endeavour to fix this trade to their empire very early.

A. D. 636.

As the empire of the *Mohammedan Arabs*, or *Saracens*, took its rise in the peninsula of *Arabia*, so as soon as their princes had any leisure to form schemes of politics, they began to entertain a design of attracting the *Indian* trade from the country of *Persia*, where it was then carried on, as near as they could bring it, to the capital of their dominions^f. It was with this view that *Omar*, the second *Khâlif*, in the fifteenth year of the *Hegira*, caused the city of *Bassora*, or *Balsora*, to be built a little above the entrance into the *Persian* gulf. There never, perhaps, was any city more happily erected, or which sooner came to answer the end for which it was designed, than this^g. The *Khâlifs* did not, indeed, make it the place of their residence; and, if they had, it is highly probable it would have been rather disadvantageous than serviceable to it. But they always sent thither a person of distinction as governor, and made it the chief port of their extensive dominions. It became, by this means, and by the privileges allowed to all merchants that settled there, exceeding rich, as well as very populous, and that too in a surprising short space of time. It was, for several ages, a place of the greatest concourse, and of the greatest trade, in the known world. The richest commodities in the east, but more especially spices, precious stones, drugs, silk, and cotton manufactures, were brought hither, and dispersed from hence, by caravans, till the *Portuguese* became masters of the city and island of *Ormuz*, on the coast of *Persia*; which, for a long time, sunk the commerce of *Bassora*, and brought it to decay^h. But after *Shâh Abbas*, with the assistance of the *English*, made himself master of that island, and rendered it almost desert, he raised the famous emporium of *Bander Abassi*, or *Gambroon*, on the opposite coast of *Persia*; by which means the trade of *Bassora* began very speedily to revive, and has been ever since considered as beyond comparison the greatest mart of this part of the world, ingrossing all the trade of the *Persian* gulf. The situation of the place, its wealth, and importance, have made it a bone of contention between the *Turkish* and *Persian* empires, for the sake of the large revenue arising from the taxes levied there. At present it is, and has been long, in the possession of the *Turks*, who, though ruder and less polished, are, notwithstanding, allowed to be the better masters of the two. But the late famous *Achmet*, bashaw of *Bagdat*, who knew

so well how to preserve himself against the grand signor and the *Shah Nadir*, that the latter said he was the greatest prince of the three, kept always a governor in *Bassora*, where the *English* and *Dutch* have long, and the *French* have lately, had a consul, to regulate their trade, and protect their subjects^m (L.).

We might very easily find a great deal more to say upon a subject so curious, so extensive, and, in truth, so inexhaustible; but as what we have already delivered in this chapter is sufficient to answer the purposes intended by it, we shall now conclude with a few short reflections, in order more effectually to explain the uses to which these historical deductions may be applied. In the first place, they will serve to make us sensible, that, whatever has been said of the industry, enterprising disposition, and sagacity, of the moderns, it must, nevertheless, be allowed, that, considering the difficulties the antients had to struggle with, they made very extraordinary efforts to maintain a correspondence with the *Indies*, and were so successful in their endeavours, that hardly any of the routes at present practised by land were unknown to, or unexperienced by, them. In the next place, we cannot but be satisfied, that as in our times, so in theirs, this commerce with the east was the great source of wealth, the true parent of magnificence and luxury, and the great object of ambition in those princes, who were wise enough to despise the vanity of useless conquests, and chose to establish their grandeur upon the more solid basis of their subjects' affluenceⁿ.

If we look into the Sacred History, we shall find, that, in the most early ages, the *Ismaelites* carried spices into *Egypt*. From whence it is apparent, that the inhabitants of the coasts of *Arabia* had already found their way to the *Indies*. The *Edomites* next possessed themselves of this lucrative trade, of which they were deprived by the *Israelites*, in the glorious reign of *Solomon*; and, from them, it passed into the hands of their respective conquerors. If, on the other hand, we examine profane histories, the expedition of *Semiramis*, whether true or false, will bring the same thing to our view; as will also the boasted enterprise of the *Egyptian Bacchus*. When the foundations were laid of the *Persian* empire, the commerce of the *Indies* was one of its first acquisitions; and when *Alexander*, at the head of his *Greeks*, attempted and achieved the subversion of that empire, he looked upon this as nothing, in comparison of reducing the *Indies*; and those who have narrowly inquired into, and maturely considered, the plan he formed, for maintaining a general correspondence through all his dominions, esteem him as a statesman, to the full as much as those, who, from the picture drawn of him by *Curtius*, admire him as a hero^o. His companion, and his pupil, *Ptolemy*, discovered, in *Egypt*, how well he had digested lessons given him by so consummate a master. His successors prosecuted those views with such steadiness, that the wealth and trade of *Egypt* was the wonder of the world. And yet the *Tyrians*, and their colonies, found means to preserve some part of this traffick, of which, under the protection of the *Persian* government, they, in a manner, possessed the whole. When the *Romans* conquered *Egypt*, their becoming masters of this trade highly advanced the value of that conquest, which contributed not a little to sustain the majesty of *Rome*, while her sons retained virtue enough to preserve that power which their ancestors had acquired. Upon the division of the empire, *Egypt* remained to those monarchs who fixed their imperial seat at *Constantinople*. Nor was the *Indian* trade wholly lost by these princes, till they lost all; and then it came to those by whom they had been despoiled. Lastly, we may perceive how all parts of *Asia*, and some also of the northern parts of *Europe*, were, and still are, supplied with *Indian* commodities and manufactures, by

Recapitulation of the first nations possessing this commerce, and the advantages they derived from thence.

(L) As we shall have often occasion to mention this place in the chapters ensuing, it may not be amiss to give the reader a short account of the time and manner in which it was reduced under the power of the *Turks*. This fell out in 1668, when *Hossein Bashaw*, the last of the *Arabian* princes, who governed there with that modest title, and paid only an acknowledgement to the *Porte*, was betrayed by his son-in-law; and, to prevent falling into the hands of the *Turks*, embarked, with his whole seraglio, and immense treasures, on board the vessels that were in the port, and retired to *Surat*, where *Aurangzebe*, who then filled the throne of the *Mogols*, granted him his protection, where he spent the remainder of his days in honour and quiet. His son-in-law *Hioja*, according to the agreement made with the *Turks*, succeeded him, repaired and restored the place, which

Hossein had, in some measure, demolished before his departure. In a short time, however, the *Turkish* garison treated the Bashaw with contempt; who, retiring secretly into the adjacent country, raised an army of 20,000 men, with which he made himself absolute master of the city. However, in a few months, the *Turks* came down upon him with so great an army, that he thought it best to retire, as his father had done, and chose for his protector *Sewa-gi*, who had revolted from the *Mogul*, in whose service he spent the remainder of his life. These Bashaws, while they governed *Bassora*, enjoyed a revenue of near one million of pieces of eight per annum, arising from the taxes laid upon their subjects, and from the customs of the port, which, in their time, were fixed at four per cent. (11).

(11) Voyage aux Indes Orientales, par M. Carre, tom. i. p. 100—130.

the help chiefly of caravans ; and we may likewise discern, from some of these passages, how ^a very possible, and even practicable, it may be for certain princes to recover old, to open new, and to improve very much the passages that continue still to be frequented ^p.

The necessity of continuing the history of this trade, when again restored to Egypt.

BUT before we can proceed with regularity and perspicuity to that discovery of a direct passage by sea, which, as we have shewn in the former chapter, has had so great an effect upon the affairs of *Europe*, it will be necessary to give a distinct view of the manner in which the commerce ^q was conducted in *Europe*, before the *Portuguese* attempted to double the *Cape of Good Hope*. This might have been dispatched in the present chapter, to which it is, in some measure, connected ; but because it is a matter of more importance than any thing we have treated therein, and requires a more punctual and precise explanation, we judged it might be ^b more expedient to comprise the matters relating to it in a chapter by themselves. We were the rather inclined to this, because, though they have been briefly touched by many writers, who, with different views, have had occasion to mention them, yet they have been hardly anywhere so fully and so clearly stated, as to answer the intention of an inquisitive reader, desirous of penetrating thoroughly into a matter of such consequence, and thereby obtaining a true light into the transitions by which this commerce has become the source of riches, grandeur, and more especially naval power, to so many different nations. The task, indeed, of displaying this effectually is embarrassed with many difficulties, and requires bringing into a narrow compass a multitude of facts not easy to be found, or, when found, to be arranged in such a manner as may adapt them perfectly to this design ; but it is our duty to attempt ; and our ^c utmost endeavours shall not be wanting, in some measure at least, to accomplish it. The subject, indeed, would supply materials for a moderate volume ; but, as we have but little room to spare, we shall contract them into as small a compass as may be, referring, at the same time, to other parts of this work, in which it will be requisite to insist upon some points more particularly ; and, by this method, we hope to avoid all unnecessary repetitions, at the same time that we provide against obscurity on one side, and prolixity on the other ; knowing well, that nothing can please which is so perplexed as hardly to be understood, or which is so diffused, as not to be without difficulty remembered.

^p SANUDO *Secreta Fidelium Crucis*. ^q See Sir WILLIAM MONSON'S *Naval Tracts*, in Churchill's Collection of Voyages. MUN'S *Discourses upon the East India Commerce*. And PURCHAS'S *Apology for the Trade to the East Indies*, inserted in his *Pilgrimage*.

C H A P. III.

The history of the commerce of the Indies, while carried on by the Venetians, and other states of Italy.

A succinct view of the correspondence between the Greek empire and the Indies.

IT appears clearly, that, under the *Greek* emperors, voyages to the *Indies* were become ^d more common than in former times ; but we could scarce have believed, that so many different kinds of *Indian* commodities, and almost from every part of *India*, were common at *Constantinople*, if it were not verified by the public laws of the empire, as they stand collected by the emperor *Justinian* ; from whence it is evident, that there were several duties imposed upon a multitude of goods brought from the *Indies*, such as spices of different kinds. For instance, cinnamon, which came from the island of *Ceylon* ; but not in any great quantity, for it was always very dear. The xilo-cinnamomum was no other than the wood of the cinnamon-tree, on which there was also a duty ^a. Cassia, described at large by several antient authors, appears to have been a sort of milder cinnamon ; this likewise came from *Malabar* and *Ceylon*. Some very judicious writers, and who are well acquainted with the manner of ^e collecting spices in the *Indies*, assure us, that the cassia lignea is in truth nothing more than the thick bark of the true cinnamon-tree, which has very little flavour ; by which they mean, that this was the spice known to the antients by that name ; but for the modern cassia, it is another thing, and has a somewhat higher flavour ^b. Pepper of several kinds, such as long pepper, white pepper, and black pepper, all of them from the *Indies*. *Pliny* is very angry that this spice should be so much admired ; for, as he observes, other things are either pleasant to the sight, the smell, or the taste, whereas there is nothing in pepper agreeable to either of these senses ^c. In his time long pepper was worth about nine or ten shillings a pound of our money ; white pepper was of half that value, and black pepper about half a crown a pound ; neither does it

^a Digest. lib. xxxix. tom. iv. PLIN. Hist. Nat. lib. xii. cap. 19. ^b PROSPER ALPIN. Medicin. Ægypt. lib. iv. cap. 5. ACOST. BOTIUS, &c. ^c Hist. Nat. lib. xii. cap. vii.

- ^a seem to have been cheaper at *Constantinople* ^d. Ginger, of which *Pliny* tells us, that many in his time thought it the root of the pepper-tree. It did not bear a very high price among the ancients; for, in the time of *Pliny*, it was not worth above three shillings a pound, and at *Constantinople* not so much ^e. It may not be amiss to observe, that in those days, authors affirm, they adulterated their spices very dexterously; from whence it is evident they were much in use, and, consequently, must have been brought from the *Indies* in considerable quantities. They had likewise precious stones of all kinds; but our enumerating them would signify very little, since it is very much doubted, whether the names by which jewels were then, and are now, distinguished, implied always the same; for, if not, we should be able to say little or nothing of them here to the purpose. Silk, cotton, mohair, and other manufactures, came also from thence in vast quantities; and to these other things might be added, if what has been already mentioned were not more than sufficient ^f (A).

- WHILE the *Greek* empire continued in a flourishing condition, *Constantinople* was the center ^{How the states of Italy drew to themselves such prodigious advantages from this trade.} of trade to *Europe* and *Asia*; and the inhabitants grew so immensely rich, and more especially by the gain they made of this commerce with the *Indies*, that they grew excessively insolent and ungovernable. Out of the many different ways of corresponding with the oriental nations mentioned in the foregoing chapter, there were very few, indeed hardly any, that did not benefit this great city. The caravans that proceeded from *India*, through *Candabar*, into *Persia*, supplied those factors plentifully, who managed their traffick with the *Greeks*, at the great fairs upon the frontiers of the two empires ^g. No inconsiderable part of what was carried by the northern routes and *Caspian* sea found its way to *Constantinople*, through the *Pontus Euxinus*. What was conveyed by the *Persian* coast, and afterwards by land into *Syria*, came from thence by sea to this great city. But, above all, they received from *Egypt*, while it remained under the same sovereign, prodigious quantities of valuable goods ^h. The citizens of *Constantinople* were too opulent, and too lazy, to make use of their own ships for transporting this merchandize into the different parts of *Europe*, where there was always a demand for them; so that this fell to the share of the *Italian* states. From whence we may discern, that as the *Greeks* grew rich by this commerce, so the *Venetians*, the *Genoese*, the *Florentines*, and other maritime states in *Italy*, were indebted to it for their naval power ⁱ. It was this that enabled them to fit out such formidable fleets, to make themselves masters of several fruitful islands, as well as of convenient ports, in *Asia*, and in *Europe*; while the *Greeks*, pleased with the temporary assistance that from time to time they derived from squadrons which they took into their service, never considered the declension of their own maritime strength, or regretted those advantages which the subtle *Italians* drew from their negligence and inactivity. While they could raise their magnificent structures to gratify their propensity to pomp and splendor, and enjoy in any degree of quiet their excessive and expensive luxury, all went well in their opinion, and they had the vanity to conceit themselves the greatest and most potent of all nations, while every day furnished them with new instances of that imbecillity which was produced by their ill management ^k (B).

- It was by this absurd and distracted manner of acting that the *Roman*, as themselves called ^{The rise of the Saracen empire, and the ruin of that of the Greeks, by which this commerce was in a great mea-} it, or the *Greek* empire, as it was called by the rest of the world, was in the end brought to absolute ruin, as by the same errors it lost, long before, the important province of *Egypt*, to a power that never could have raised itself, if there had been the least foresight or firmness in those who administered public affairs at *Constantinople*. We are under a necessity of taking this matter a little higher, and of pursuing the thread of its history closely, though very con-

(A) The decline of the empire of the *Greeks*, while in the full possession, and that in a more absolute degree than any other nation whatever, of this lucrative trade of the *Indies*, seems to be a strong objection to the principle laid down at the beginning, and maintained thro' the course of this chapter. But this, as the reader will see, is fully accounted for by their conduct; for, while in their hands, this commerce was really the source of vast riches, and great power; a great part of the former the *Greeks* retained; the remainder, together with the naval force, they abandoned. The objection then vanishes; for it is impossible to furnish a wanton, idle, and profligate nation with power of any kind, and least of all with a naval power.

(B) This increase of the shipping and naval force of the *Venetians*, and of the states of *Italy*, was the mere effect of their making a right use of the indolence and folly of the *Greeks*; but, trusting too much to that power, and not considering enough the sources from whence it flowed, they did not assist the *Greeks* as they ought to have done if they had been true to their own interests; and they perceived their error the less, because for a long time they were as great gainers by the *Turks* and *Saracens*, and afterwards by the *Mamelucs*, as they had been by the *Greeks*. In the end, however, they saw it sufficiently, but then it was too late; for they had it no longer in their power to give laws, or in a short time to avoid receiving them (1).

red to the for-
mer.

cisely, that it may the better appear how much the eastern commerce still benefited that a country; and how, notwithstanding repeated interruptions, it constantly raised its head, and forced even the most barbarous masters to discover and cherish it. The second monarch of the *Saracens* from *Mohammed*, who set up for a sovereign when he had no more than thirty subjects, found himself strong enough, after the conquest of *Persia*, to exact a vast annual tribute from *Egypt*; which country though the emperor *Heraclius* was unable to defend, yet he could not bear that such a sum as two hundred thousand crowns of gold should be paid to any prince but himself by its inhabitants¹. He commanded, therefore, the tribute to be refused; upon this, war ensued; which ended in beating his troops, breaking his heart, and losing the country (C). *Omar*, the second Khâlif, who made this conquest, reigned but ten years and a half, and in that space of time subdued *Syria*, *Chaldaea*, *Mejopotamia*, *Persia*, *Egypt*, b and part of *Africa*, that is to say, as far as *Tripoly* in *Barbary*. By this blow the *Greeks* lost all their eastern provinces, and the trade to the *Indies*, at least on that side, intirely^m. It is scarcely to be conceived how great an alteration the rise of this new empire made in the face of affairs; and what prodigious desolation ensued, before these conquerors came to be softened so far as to cultivate the arts of peace, and to endeavour, by any rules of policy, to establish and maintain the empire they had acquired; the greatest indeed that the world had ever seen, reaching westward as far as *Spain*, and eastward to the very frontiers of the *Indies*ⁿ. That impetuosity, which enabled the *Saracens* to make themselves masters in so short a time of such vast dominions, was not likely to suffer them to continue long under one head, which was undoubtedly the design of their founder. Not to enter further into their history than is absolutely c necessary, let us observe, that *Abulcassem Mohammed Ben Abdallah*, being in possession of part of *Africa*, set up for himself in the year of the *Hegira* 296, and took the title, not of Khâlif, but of Mahadi, which signifies director^o. He fixed the seat of his monarchy at *Cairoan*, which is the name the *Arabs* bestowed on the city of *Cyrene*, or rather a new city built on the ruins of the old one. He left the government to his son *Cajem*, who removed the seat of the empire to *Mabadi*, a new city which his father had erected; and his grandson *Abou Temim Maad*, surnamed *Moez Ledinillab*, who succeeded in the year of the *Hegira* 341, prosecuted the design which his ancestors had entertained of making himself sovereign of *Egypt*^p.

A. D. 558.
Cairo becomes
the capital of
Egypt, and
the center of
this trade in
that country.

His general *Jawhar*, a *Greek* by birth, accordingly invaded that country, of which he made himself intirely master; and, in the year of the *Hegira* 358, laid the foundation of a new city d called *Caberah*, or *Al Caberah*, that is, *the victorious*, which the *Europeans* call *Cairo*, or *Grand Cairo*^q. As soon as *Moez Ledinillab* was informed that this city was finished, he removed from his old capital, and made his entry into *Cairo* in the year of the *Hegira* 362, and there took the title of Khâlif. His successors were styled Khâlifs of *Egypt*, to distinguish them from the Khâlifs of *Bagdat*, the true successors of *Mohammed*^r. This city was very conveniently situated on the *Nile*, and became in time no less considerable for its commerce than for its being the seat of the empire: and it was by this means that the old trade by the way of the *Red Sea* was once more restored to *Egypt*, which flourished exceedingly under this new race of princes, as appears by the revenue which it produced to its Khâlif, and which, as *Elmacinus* tells us, amounted to no less than three hundred millions of crowns of gold^s. The Khâlifs of *Egypt* e were nine in number; and the last of them was *Adbad*, who was deposed by *Saladin*, general of *Noureddin*, Sultan of *Damascus*, in the year of the *Hegira* 567. *Saladin*, entering the palace of the Khâlif, who died immediately after he was deposed, found prodigious riches; and, among the rest, a noble proof of the commerce of the *Indies*, which was, the richest ruby in the world, perfectly fine and bright, and weighing very near an ounce and a half^t. This, and the having a great army at his devotion, tempted him to set up for himself; which he did, and afterwards extended his dominions over all the countries of *Damascus*, *Palestine*, and *Syria*. He left at his decease his kingdom of *Egypt* to his second son *Otteman*, who died in the year of the *Hegira* 595, and was succeeded by his brother, who was soon deposed by his uncle *Malek Al Adel*, whose grandson *Malek Al Salek* succeeded in the year of the *Hegira* 647. He f enlarged the city of *Cairo*, and fortified it with a strong wall, and was victorious over St.

(C) At that time the people of *Egypt* were so rich, that they were very well able to bear this large tribute, and to pay the revenue of the *Greek* emperor besides; which if he had caused to be expended in that country for raising fortresses, equipping a fleet, and assembling an army, he might have preserved that province, which

was the best of his dominions; but his avaricious desire of keeping all was the true cause of his losing all, and throwing that country into the hands of barbarians, from whom it neither has been, or, as far as we can foresee, ever will be recovered (2).

(2) Gregorii Abul Pharajii Historia Dynastiarum, p. 179.

a *Lewis of France*. But this prince, however, was the last of his house; for, not long after, the *Mamlouks*, or *Mamelucs*, as they are generally called, who were a kind of mercenary soldiers, revolted from him, and forced him to take shelter in a wooden tower which hung over the *Nile*. To this tower the mutineers set fire, and thereby compelled the unfortunate monarch to jump into the river, where he was drowned ^a.

In consequence of this surprizing revolution, these *Mamelucs* became sovereigns of *Egypt*, ^{who the} and chose their general Sultan, who thereupon took the name of *Al Malek Al Azis*. He was ^{Mamelucs, or} the first prince of the dynasty of *Mamelucs* distinguished by the name of *Babrites*, *Babarites*, ^{Mamlouks,} or marines; for these people were either young *Turks* or *Tartars*, sold to private persons by ^{were that} the merchants, from whom they were bought by the Sultan, educated at his expence, and, ^{possessed them-} when qualified, employed to defend the maritime places in the kingdom ^{self, of E}. The reason of ^{gypt} this institution was, that the native *Egyptians* were found so cowardly, treacherous, and effeminate, from a long course of slavery, that they were unfit for arms. These foundlings made excellent soldiers; for, having no friends but amongst their own corps, they turned all their thoughts to their profession, as they placed their hopes in acquiring the principal posts in their militia: for these were bestowed only as merit directed; and, upon the demise of a Sultan, his successor was taken from among the officers of the first rank ^a. One would have imagined that this military government, so well constituted, and founded upon so broad a basis, must have subsisted a long time; and yet, in about one hundred and thirty years, it sunk as suddenly as it rose, by an error in politics, the more inexcusable, since experience had read them a lecture against this solecism, in the very sedition which changed their own fortune from that of slaves to sovereigns. In few words, that error was this: As they were originally but a small part of the standing forces of the monarchs of *Egypt*, as a numerous standing army was absolutely necessary in a country where the first maxim of government was, that every native of *Egypt* must be a slave; and, as they were justly suspicious of all who had served before, they were under great difficulties how to act; but at length resolved to buy Christian children, and to bring them up in the same discipline which had been the source of so much good fortune to themselves (D). Thus far they acted sensibly; but, by a refinement upon this scheme, they rendered what had been otherwise a means of safety the sure instrument of their own destruction. By the way, these Christian children were bought in *Circassia*, from their own parents, who were d pleased to style themselves Christians, but, by that infamous practice, shewed that their faith had no influence on their morals; but, what is still stranger than this, the *Greek* emperors of *Constantinople* made a treaty with the *Mamelucs*, by which they were permitted to send an annual ship into the *Black Sea*, to fetch these unhappy infants ^e. When they had gone through their military education, and were fit for service, they were disposed through all the inland fortresses, erected to bridle the inhabitants; and, because in their language such a fort was called *Borge*, this new militia was called *Borgites*. By this scheme the *Mamelucs* thought to secure the sovereignty to their own body, in which it might have been easily foreseen they were quite mistaken. In process of time the old *Mamelucs* began to grow proud, insolent, and lazy; the *Borgites* took the advantage of this, rose upon their masters, deprived them of the government, and transferred e it to themselves, in the year of the *Hegira* 784 ^a.

THESE, as well as the former, were styled *Mamelucs*; but the reader will easily perceive, ^{The manner in} that to the latter dynasty, rather than the first, must be applied what is commonly said of ^{which the} the *Mamelucs* by the Christian historians. Under both dynasties, but more especially under the last, the *Indian* commerce flourished in *Egypt*, though they had very little concern in it other- ^{Arabs, Sa-} wise than as factors; for, on the one side, it was managed intirely by the *Arabs*, and was as ^{racens, or} absolutely in the hands of the Christians on the other. This it shall be our next business to ex- ^{Moors, spread} plain, as concisely as is consistent with that clearness at which we endeavour. One would naturally imagine, from the accounts of them in general, that they were not the best disposed ^{over the east.}

(D) We must put the reader in mind, that there is nothing more intended in the text than to connect the variations of this commerce with the known history of the people in whose hands it was, which is the sole reason of our mentioning the *Mamelucs*. They were of a turbulent race, almost continually engaged either in foreign or civil wars, and jealous to the last degree of strangers; so that while they held *Egypt*, the *Indian* trade sunk much below what it produced to the last line of

princes; yet in their times it was managed in the same manner as afterwards; and those who dealt with them drew a prodigious profit to themselves by the sale of the commodities they purchased, and which they carried in their own vessels to *Spain*, *France*, *England*, and *Flanders*, and carried back all the native goods of those countries in return, many of which, when manufactured, were re-exported to the places from whence they came (3).

(3) *Abraham Peritfol Itiner. Mundi*, c. xxvi.

for settling themselves in different parts of the world, with a view to commerce; and yet it appears plainly, that they were at this time actually dispersed into the most distant countries in the *Indies*, nay, and through *China* itself, without the assistance of force, and whither they could not have been led by the spirit of ambition (E). We learn from their own histories, that the *Arabs* formed their settlements four several ways; by conquest, by discovery, by pursuing trade, and by missions, to establish their religion^a. By the first, they possessed themselves of all the provinces which composed their vast empire; by the second, they fixed themselves in *Africa*, down to cape *Corientes*, among the poor unarmed *Cefres*, who had it not in their power to prevent them from seizing on what parts they judged most convenient. Their colonies of *Magadoxo*, *Brava*, and *Quiloa*, were somewhat in the nature of ours at this day; but not so difficult to maintain, because of the proximity of the *Red Sea*, whence the *Arabs* had all sorts of assistance. By the two remaining methods they seated themselves in all other parts, but more especially by commerce^b. These voyages were not in those days so safe and so frequent; and therefore merchants were under a necessity of making a long stay at the principal marts, where they took wives, their religion allowing plurality. These new families quickly produced others in the places of their residence; and the princes being sensible it was for their advantage to draw the trade of *Persia*, *Arabia*, and at the same time of *Aegypt* and *Europe*, by the *Red Sea*, into their own ports, these merchants met every where with the kindest usage they could wish^c. The idolatrous princes, confirmed in their old superstitions, were not at all scrupulous about religion, but admitted all indifferently; so they readily allowed their subjects to embrace *Mohammedism*, which they preferred to the rest, because of the hopes these *Arabs* gave them of protection from their Sultans, whose power was known in the remotest parts of the east. Even princes themselves made profession of *Mohammedism* in troublesome times, that the *Moors* might join them; for, in latter days, they were so multiplied, that they inhabited whole cities, and at least a part of the most considerable. Thus this religion, which, to the lovers of this world, has nothing very inconvenient in it, obtained in many places, and at length received an accession of power, when some of its professors, being raised to the highest posts in the courts of *Cambaya* and *Guzarat*, invited a great number of those *Asiatic Turks* called *Rumis*, and even seized on some posts; as for instance, at *Diu*, from whence they for a long time infested the *Portuguese*, when they came first into these parts^d.

Began to propagate their religion amongst the *Indians*, 120 years before the discovery of the *North*.

By such steps the *Arabs* seated themselves in some parts of *Malabar*; and, by the same means they came to be very considerable upon the coast of *Malacca*. They first went thither as merchants; and some of them, fixing there, gained many of the idolaters over to *Mohammedism*. From *Malacca* they sailed round to the *Moluccas*; and having prevailed on the kings of *Tidore* and *Ternate*, together with several others, to join with them in religion, they reaped immense advantages from these princes, whom the concerns of trade, and the influence of these *Moors*, gave them room to hope confirmed in the religion of *Mohammed*. According to the *Portuguese* writers, they had not been long settled in the *Moluccas* before their discovery of the *Indies*^e. Thus in a very short space of time, and without the assistance of any considerable maritime force, the *Arabs* did more than the *Greeks* and *Romans* in the course of so many ages; and it is highly probable they would have pushed matters still farther on this side, if they had not been hindered by the coming of the *Portuguese* into this part of the world, which put an immediate stop to their progress, and in process of time weakened them very much. They found, however, so long as it lasted, means to make the most of their good fortune, and to become the carriers of *Europe*, with respect to the commerce of the east; and this in such a manner,

^a See the Abbé *RENAUDOT*'s Preface prefixed to the Travels of two Arabian merchants into China. ^b ARGENSOLA Conquista de las Islas Malucas, l. i. ^c L'Abbé *RENAUDOT* Dissertation sur l'entrée des Mahométans dans la Chine, p. 302. 303. ^d P. LAFITAU Histoire des Conquêtes des Portugais, vol. ii. p. 394. ^e ARGENSOLA Conquista de las Islas Malucas, l. i.

(E) A learned French writer has given us a large and clear account of this matter in his preface to the travels of certain Arabian merchants into China, which account does not at all depend upon the genuineness of those travels which some have suspected, because independent of them; it is supported throughout by facts, and more especially by the accounts given by the *Portuguese* at their first entrance into the *Indies*, when the *Moors* had spread their religion as far as the *Moluccas* and the adjacent islands, though their conquests had not reached near so far. Their progress into these parts appears to have been chiefly owing to a commercial spirit which prevailed strongly amongst them at that time; but that, at the same time they promoted their trade, they like-

wife propagated their religion, which was chiefly owing to the temper and understanding of the nations with whom they conversed; for, when they made a free inquiry into their doctrines, they saw sufficient cause to reject their own idolatrous and superstitious opinions, which were in many respects equally ridiculous and absurd; and there seems to be little reason to doubt that they would have converted the inhabitants of all the islands, as far as the *Philippines* (1), if the Christians had not come in at that juncture, and put a stop as well to their religion as to their influence and their commerce, which would otherwise have spread to the utmost limits of Asia.

(1) L'Abbé *RENAUDOT* Dissertation sur l'entrée des Mahométans dans la Chine.

that

- a that they shut out all others from navigating those seas, and thereby drew an immense profit to themselves. For the *Indians* brought by land to *Cabul*, and some other places, and by sea to *Bassora* and *Siraf*, all the commodities of the *Indies* and *China*. Furs were introduced into *Syria* by the provinces of *Aderbejan*, by *Curdistan*, and other parts more to the north. Great quantities of the same they also had from the *Barbary* coast, and by the way of the *Red Sea*, from whence a trade was carried on throughout *Egypt*. From the same places they had gold-dust, as also from the mines of *Sofala*, brought to them by the negroes who traded into *Egypt* by the way of the desert, or from port to port quite to the *Red Sea*, from *Ceylon* and the *Indies*. They, by their trade with the *Chinese* and *Indian* merchants, had silk, rich stuffs, and many other manufactures, drugs, and spices ¹ (F).
- b WITH this stock of goods they drove an extensive commerce, by the way of *Cairo*, with *Italy*, *Alexandria*, the *Venetians*, the *Genoese*, the *Catalans*, and the *Greeks*, which was easily done by their dilating and reviving the old mart of *Alexandria*; which port, though it was far from recovering its former magnificence, grew once more famous, by becoming, what it formerly was, the centre of the commerce between the eastern parts of the world and the west. It is true that the revolutions which happened in the government of *Egypt*, after it fell under the dominion of the *Mohammedans*, and of which we have already given a succinct account, frequently affected this city to a very great degree; but still the excellence of her port, and the innumerable conveniencies that resulted from the commerce carried on there, to whoever were masters of *Egypt*, preserved her from total destruction, though in the hands of the most barbarous nations. Before we speak of the last fatal revolution in this country, and the great declension of its commerce, it will be proper to say a few words of another chanel by which the commodities and manufactures of the *Indies* were for a time brought into *Europe*; and this for two reasons; first, because it has been in a good measure overlooked; and next, because experience having shewn it practicable, it is not impossible that it may some time or other be revived ².

THE reader will remember, that we have already given him a description of the wretched state of the *Greek* empire for many centuries before its total dissolution, when, in its few gleams of prosperity, it had the *Italian* states for allies; and, in its frequent turns of adverse fortune, was obliged to suffer them to occupy whatever places (even to the suburbs of the imperial city) which they judged most for their conveniency. Amongst these, none served them better on some occasions, or on others treated them worse, than the *Genoese*; always esteemed a bold, plotting, and enterprising people. They had for many ages a large share in the trade of the *Greek* dominions, and were not so scrupulous as to decline profiting by their commerce with the *Mohammedans*; yet all this did not satisfy either their ambition or their avarice. They judged it possible, by securing a convenient station in the *Black Sea*, to gain for their republic a kind of exclusive trade, which might prove very beneficial. This temptation they could not resist; and the place, which they thought proper to seize with this view, was the port of *Caffa* in *Crim Tartary* ³. This country was antiently called the *Chersonesus Taurica*; and we find this city very often mentioned by old writers under the name of *Theudisia*. They found it in a tolerable condition; but they improved it exceedingly. They adorned the port, they strengthened and augmented the fortifications, and they embellished the city with many stately edifices, the ruins of which are visible even at this day. All this they were well enabled to do out of the immense riches they acquired by the dominion of the *Black Sea*, which, so long as they held *Caffa*, remained in their hands, and in those with whom they were obliged, for the sake of their correspondence with the countries beyond the *Caspian*, to share it ⁴. At last, when they had basely assisted in bringing the *Turks* into *Europe*, and in the taking of *Constantinople*, against all the rules of true policy, as well as dictates of religion, they were deprived of it, *Anno Domini* 1475, by *Mohammed the Great*; an event which ought to be a warning to all com-

⁴ HUNT Histoire du Commerce des Anciens.

(F) It is impossible, within the narrow compass of this chapter, to give the reader an accurate history of the variations to which this trade was subject; all that we propose therein is, to point out clearly the cause of those variations; to shew who profited by them, and how that profit accrued. After the power of the *Mohammedans* was firmly established in the east, all the valuable commodities and manufactures, that passed by sea, came either into the *Arabian* gulph, and so through *Egypt*, to *Alexandria*, or else to *Ormuz*, and from thence up the *Persian* gulph to *Bassora*, *Bassora*, or *Bassora*, from whence they were carried mostly by caravans to *Alippo*. While

the power of the *Khálifs* subsisted in its full vigour, this passage had the advantage; and the best part of the *Indian* goods, that came to the several markets of *Europe*, were purchased at *Alippo* by *Italian* merchants, and chiefly by the *Venetians*; but in succeeding times, when *Egypt* threw off the yoke of the *Khálifs*, the far greater part of the trade passed that way, and came almost wholly into the hands of the *Venetians*, who took great pains to make the rest of *Europe* believe that the *Saracens* and *Mamluks* were the most barbarous and intractable people in the world; which was one means of their keeping that trade almost wholly to themselves.

mercial states, never, for the lucre of immediate advantage, to desert their ancient allies, or a
listen to the deceitful promises of a potent neighbour; princes of all religions being least apt
to pique themselves on punctuality, when both profit and impunity are on the side of infide-
lity^k. But it is now high time to return from reflections to facts; and to pursue this subject,
which we shall scarce have occasion to resume to its latest period.

In order to
which, they
make them-
selves masters
of the city and
port of Caffa.

CAFFA was then in a very flourishing condition, and was one of the best built and richest
places of its size in *Europe*. We may the more easily credit this from its excellent situation;
for it stands at the foot of a small hill upon the sea shore, the buildings extending themselves
north and south, with long walls stretching on both sides down to the sea; so that from the
port, which is large, safe, and commodious, it makes a very agreeable appearance. There
is a castle on the south side, in which the *Turkish* Bashaw resides with his garrison. The num- b
ber of houses in the place are about 4000, of which 500 b. long to Christians, the rest to *Turks*
and *Tartars*; but the former are masters here, and it is the only place the Grand Signor has
in *Tartary*; of which it is esteemed, and justly, the key, which is the reason he keeps it.
After the *Genoese* were driven from hence as masters, they still carried on, for a long time, as
merchants, a very advantageous commerce with the inhabitants, who, by the way of the *Cas-*
pian sea, found means to enter into a considerable trade in spices, drugs, cotton, silk, and
other *Indian* commodities^l. At last the *Turks*, growing jealous of the intercourse of the *Ge-*
noese in these parts, absolutely excluded them, as well as all other nations, from trading to,
or even so much as entering into, the *Black Sea*. Yet this did not immediately put an end c
to the commerce between *Caffa* and *Genoa*; for the *Tartars* preserved so strong a sense of the
advantages derived from this commerce, that for some time they prosecuted it in their own
vessels; and carried the spices, and other *Indian* goods, which they received by caravans from
Assracan, and which had been brought thither from the opposite side of the *Caspian* sea to
Genoa^m. But the *Turks*, equally displeased with that as they had been with the former cor-
respondence, soon put an end to this intercourse likewise, and thereby secured themselves from
the fear of seeing a Christian fleet in those seas, at least from *Italy* (G).

The present
state of that
important
place, and the
probability of
its being, some
time or other
restored.

YET *Caffa* still remains a place of very great trade, and the staple of the *Black Sea*; in-
fomuch that Sir *John Chardin* tells us he saw, in the space of forty days, no less than four hun-
dred ships sail in and out of this port. The *Venetians*, in hopes perhaps of reviving in some d
measure the old trade, procured at a very large expence, in the year 1672, leave from the
Ottoman port to send annually a cargo of their manufactures, on board a small squadron of
their own, into the *Black Sea*ⁿ. But this trade did not last long; for the *Jews* intimated so
many dangers would arise from permitting this commerce, that in one year's time, notwith-
standing the money advanced, the licence was retracted; and thus ended all attempts for
retrieving the commerce of the *Indies* by this route. In process of time, however, it is not
altogether incredible that it may be restored; for, since the *Russians* are masters of *Azoff*, and
have a considerable number of trading vessels in those seas, some such revolution may happen,
as will set the navigation of the *Black Sea* intirely open, and thereby restore the *Europeans* in
general, but more especially the *Italian* states, to a commerce highly profitable in itself, and
capable of very great improvements; which, should it ever happen, would give a new turn e
to the trade of *Europe* in general^o.

The vast ad-
vantages de-

LET us now return to that great chanel of the *Indian* commerce before the passage by
the *Cape of Good Hope* was found, the port of *Alexandria*; and let us consider a little of

^k HERBELOT *Bibliothèque Orientale*, p. 615. ^l *Dictionnaire de Commerce*, vol. ii. col. 582. ^m HUBERT
Histoire de Commerce des Anciens. ⁿ *Histoire de Venise*, p. 391. ^o *Dictionnaire de Commerce*, vol.
ii. col. 587.

(G) We shall have occasion to treat of this matter again
more fully in another place; so that what is said of it
here is purely to connect the several parts of the history of
this commerce, and to make the reader sensible of that
industry and zeal which all trading nations have ever ex-
pressed for acquiring this, as the surest means of driving
every other branch of commerce with advantage; and to
explain the several methods by which, through so long a
course of time, the *Italians* maintained themselves in the
possession of this trade; and in all probability would
have maintained themselves much longer, if the passage
to the *Cape of Good Hope* had not been discovered. In
respect to what we farther hint, that it is not absolutely
impossible this communication may be some time or
other restored, let us put the reader in mind of the
mighty projects formed and executed by *Peter the Great*

in *Russia* (6); let us farther recall to his memory, that,
in our own times, the *Russians* have been masters of the
capital, and all the open country, of *Crim Tartary* (7);
and leave it to him to decide, whether there be any
thing improbable in the supposition, that their good for-
tune in another war may put them in possession of the
fortress and port of *Caffa*; after which there will be
nothing to hinder their reviving this commerce, which,
as we say in the text, would not fail of being attended
with very extraordinary consequences. In the mean
time there is a wide difference between prophecies and
conjectures: we do not pretend to foretel that this event
ever will, we only affirm that this possibly may, happen;
and to point out, in case it should, what relation such
an event would have to the subject of which we are
treating.

(7) *Histoire de la dernière Guerre*, p. 397.

what

- a what consequence it was to those by whom it was managed. It was indisputably the true foundation of the extensive trade, the prodigious wealth, and the formidable naval power, of the *Italian* states. It was in consequence of this that they not only drew a considerable balance to themselves from every other nation in *Europe*; but, which is much more surprising, actually sent their agents to reside in, and to manage the trade of, other countries, as if there had been some natural incapacity in the minds of their inhabitants^p. If, in time of peace, money was to be remitted from one country to another, they must have the management of it: exchanges were so intirely in their hands, that *Lombard* and *Banker* were synonymous terms. If taxes were to be imposed, they were sure to be employed; and this contributed not a little to render them odious in *Spain*, *France*, and *England*. In time of war they furnished both parties with ships, because other nations had them not; and the reason why other nations had them not, was, that these *Italian* states were in possession of all the commerce of the *Mediterranean*, and not only supplied, but carried their goods to most foreign markets^q. We say most, and not all; because the *Hanse Towns* were in those days very powerful, and had a great deal of shipping; but then it is to be considered, that the prosperity of these northern cities arose chiefly from their trade to *Italy*, and their carrying thither cargoes collected from different countries, and returning into the north with those kind of goods and manufactures which they obtained by that chanel which has been so often mentioned^r. There is therefore nothing in nature clearer, than that this commerce gave the superiority in wealth and naval power to those who enjoyed it before the *Portuguese*; to the *Portuguese*, in consequence of their supplanting them; and to every other nation that, following the lights, and improving on the example, of the *Portuguese*, has sent their fleets, and established colonies in the *Indies*.

- We need not therefore be at all surpris'd at the *Italian* states expressing not barely uneasiness and displeasure, but even passion and resentment, when, from the passage of the *Portuguese* to the *Indies* by sea directly, they saw themselves in danger of losing in a great measure that trade, which, of all others, it imported them most to keep. We must admit, that, as politicians, they were not to be blamed; tho' certainly inexcusable, as Christians, for assisting the monarch of the *Mamelucs*, or, as he is commonly styled by historians, the sultan of *Egypt*, to protect the *Arabs* and *Moors*, that were scattered throughout *Asia*, against the subjects of the crown of *Portugal*, and such of the *Indian* princes as were contented to receive them (H). The *Venetians* particularly pushed this matter so far, and offered the *Mohammedan* prince so freely, and yet so sincerely (it being for their own sakes), naval and military stores, to be employed in driving the Christians out of *India*, that, if he had pursued his own interest with any proportion of that vigour used by them in prosecuting theirs, it may be esteemed highly probable that he might have succeeded, since, at that juncture, the naval power of the *Mohammed-*

Concern for their own interest induced them to offer assistance to the Mohammedans against the Portuguese, in order to keep all Christians out of the Indies.

^p GERARD MALINUS *Lex Mercatoria*, l. xi. c. 12. Naval Tracts. Antient Treatise of Commerce in verse, printed in Hakluyt. fur le Commerce, p. 177.

^q DE WITT's Maxims. Sir WILLIAM MONSON's Effai sur la Marine, &

(H) We are informed by Cardinal Bembo, that the senate of *Venice* could not help expressing the greatest sorrow and consternation, when, in the year 1499, they received advice from their ambassador at *Lisbon*, that the *Portuguese* had effected their design, and actually opened a communication by sea with the *Indies* (8). Another great historian of the same country speaks of this as one of the heaviest misfortunes that ever befel that republic (9); and indeed, to a people subsisting by trade, what blow could be greater than that which deprived her at once of a branch of commerce more valuable than all the rest, and to the possession of which she owed her wealth, her influence, and naval power? Yet, great as this loss was, it will not excuse what is mentioned in the text, viz. their exciting the sultan of *Egypt* to attack and drive the *Portuguese* out of the *Indies*, while it was yet in his power, and before they were in a capacity to prevent it, which is by some writers positively averred; and that they supplied the best part of the timber, artillery, and naval stores, with which the fleet he equipped with that design was built and furnished. It is likewise added, that he was assisted with engineers from the same quarter (10). But, on the other hand, there are not wanting some authors, who positively deny all this, and treat the several particulars of this charge as so many calumnies (11). Some circumstances

there are, however, which have not been thoroughly cleared up; such as, that the sultan should, at so critical a juncture, be in a condition to build, and that all at once, a powerful squadron in the *Red Sea*, while the materials for such an undertaking were the only commodities of which the *Egyptians* were in want; and though it be true that he had other dominions where timber was plentiful enough, yet what was employed in building these ships and gallies was transported cross the continent from *Alexandria*, as the great guns and other necessaries likewise were (12); which looks as if some of his neighbours had been exceedingly concerned for his misfortune, and equally ready at the same time to assist him in his distress; for otherwise the preparations for this expedition would have taken up more years than it did months; but, as it did not answer its purpose, it is prudent enough to disown it. About 16 years after, when the *Portuguese* were thoroughly settled, so as to send and receive annual fleets to and from the *Indies*, we are assured, that the *Venetians* sent an embassy to *Emanuel* king of *Portugal*, to desire they might become the sole purchasers of the spices which remained, after the wants of his own subjects were supplied (13); which negotiation came to nothing, as might well have been expected.

dans in the *Indian* seas was incomparably greater than any the crown of *Portugal* could have sent thither *. But, in events of this nature, those who have any tolerable penetration may very easily discern the interposition of an over-ruling Power, against which no human policy could provide, or force prevail.

*How the
scheme failed
them.*

THE sultan of *Egypt* found his dominions but ill provided for a war; and, though violently solicited by those of his own faith in the *Indies*, and by those who preferred gain to any faith in *Europe*, yet, frightened with the apprehensions of bringing all Christendom upon him, if he attacked the *Portuguese*, he lost that short opportunity, in which, with any probability of success, they might have been attacked. His successor *Thomam Bey* was the last monarch of the second dynasty of the *Mamelucs*; and perished, together with their principality, under the victorious arms of the first *Ottoman* emperor *Selim* †. By this means *Egypt* was annexed to the *Turkish* empire, of which it has continued a province ever since; but the confusion which naturally attends a violent revolution, prevented any interruption from being given to the *Portuguese* by that power which was most able to oppose them. Thus the commerce of *Alexandria* received its last and most fatal blow; not that the port is absolutely deserted, or that ships from *Venice* and other places do not trade thither, and even for *Indian* commodities, to this day, but not to an amount in any degree comparable to what they did 300 years ago ‡. If, therefore, the *Italian* states sustained themselves notwithstanding, kept up their power at sea, and their credit at land, for some time after this, we ought to ascribe it to the wealth they had acquired while their commerce was in a prosperous condition, which they frugally kept, and wisely managed, for a long series of years. There is no need of bringing proofs to support this, because the fact shews itself; the commerce of *Alexandria*, and the power of the *Italian* states, have been sinking ever since; not in the same proportion indeed, because the *Venetians* have been assisted by the wisest councils in *Europe*, and the *Turks* have acted without any policy, or, if with policy, such a one as none could ever yet penetrate or understand except themselves §.

*A succinct
view of the
prodigious pro-
fits accruing
from this com-
merce to the
possessors of
Egypt.*

IT will certainly be acceptable to the curious reader, if, after discoursing so long on the profits which accrued to the people of *Egypt*, by having this commerce for so many ages fixed, as it were, to their country, we should attempt to form some computation, or, to speak with greater propriety, indicate certain circumstances, which may enable us to form some notion of the different state of the affairs of this people, while this trade was in their hands. As to the immense wealth of the *Egyptians* in the earliest times, it would require more time and room than we have to spare, to give so much as a concise account of it. *Diodorus Siculus* speaks of three thousand cities in that country, where now it would be very difficult to find the tenth part of as many towns *. Under the *Romans* they were so rich, that it was a point of policy to oppress them; and, after the defeat of *Zenobia*, there was a single merchant of *Alexandria*, who undertook to raise and pay an army out of the profits of his trade †. The *Greek* emperors drew from thence prodigious tributes; and yet the *Arabian* Khalifs of *Egypt* found their subjects in so good circumstances, as to screw their revenues up to three hundred millions of crowns. Under the first dynasty of *Mamelucs*, things seem to have gone worse; but under the last, trade flourished; and, though the people became wanton and weak, yet both the subject and government were wealthy. The last sultan of *Egypt* but one gave twenty millions of ducats, as a bounty to the soldiers, upon his election ‡; and yet at this day the *Turks* levy but three millions, and are hardly ever without a civil war upon their hands, from the difficulty with which this inconsiderable sum is raised. Yet the antient fertility of *Egypt* still remains; it is still extremely populous; it enjoys to this hour the advantage of its most happy situation; what then can be the reason of this amazing alteration? Why, it is fallen under the government of *Turks*, who prefer immediate profit to every thing; and it has thereby lost the *Indian* trade, which is a convincing argument that its prodigious wealth in antient times flowed in a great measure from that commerce, and from the consequences inseparably annexed to it. If any doubt remains of this, what follows will intirely take it away. We are to shew where the *Indian* commerce went next; and, in doing this, we cannot help shewing that wealth, industry, and a superior naval power, went along with it, and were held precisely by the same tenure with that commerce. ¶

CHAP. IV.

The history of the discoveries, conquests, and establishments, made by the Portuguese in the East Indies.

SECT. I.

By what means the Portuguese were induced to undertake expeditions on the coast of Africa, the series of these expeditions, and the long-wished-for discovery and doubling of the Cape of GOOD HOPE.

AFTER the riches and delicacies of the *Indies* were spread, by the luxury of the *Roman* commanders, to the utmost limits of their empire, such a relish of them prevailed through all nations, that it appears plainly enough, even from the dark and ill-written histories of those times, that these precious commodities were known to, and esteemed by, princes, prelates, and other great men, through all the intermediate ages; notwithstanding there was no direct communication between *Europe* and the *Indies*, so much as by land; neither have we any accounts, at least that can be depended upon, of private travels, from the fifth down to the twelfth century^a. It will therefore be a necessary introduction to the business of this chapter, to shew the reader how the first streaks of light broke through this gloomy obscurity, in respect to the people of *Europe* in general, so as to restore to them some imperfect acquaintance at least with countries that had been so long hidden; and, next, by what means it fell to the share of the *Portuguese* to make the earliest attempts for extending their dominions and their revenues by this new method of discovery. The design indeed is both great and difficult; the bounds prescribed us are narrow; but, notwithstanding these obstacles, we will use our utmost endeavours to treat it in a manner that may be at once succinct and satisfactory.

THE holy war, as it was called, in which most of the Christian princes of *Europe* were, by the solicitations of several popes, engaged to rescue the city of *Jerusalem*, and the country of *Palestine*, out of the hands of the infidels, gave the first opening to the renewing of a direct correspondence between the people of *Europe* and those who inhabited the remotest countries of the east^b. There is no doubt that a violent spirit of ambition, together with a great mixture of private views and political intrigue, had a great share in exciting and supporting this long and bloody war, which in some respects, no doubt, had very untoward consequences with regard to those countries in *Europe*, whose monarchs, to signalize their courage, and to acquire the then fashionable reputation of martial piety, left their dominions exposed to many inconveniencies, while, with a vast expence of blood and treasure, they were engaged in expeditions which promised little, and which produced still less^c. But, notwithstanding this, the consequences of the holy war were highly beneficial to *Christendom*; they gave a check to the *Mohammedan* power when at its height; they taught the *European* princes the value of a naval force; and, by affording them an opportunity of gaining a much truer knowledge than otherwise they could have done of the situation, produce, and state, at that time, of the great powers in *Asia*, and made way for those discoveries and conquests which have been since attended with such mighty advantages. It must be allowed that this followed at a great distance of time, and when these expeditions were all laid aside; which is the reason that very few writers have considered the thing in the light we have placed it; but this derogates not at all from the truth of it, as will hereafter fully appear^d. Besides, it was proposed and pointed out at the very time by a *Venetian*, who wrote a learned and judicious treatise upon the subject, which, though in that season it might have little or no effect, yet remains an incontestable proof that these beneficial consequences were foreseen long before they were either felt or understood^e.

ANOTHER great event contributed not a little to the same purpose. This was the amazing irruption of the great *Tartar* monarch *Jenghiz Khân*, who, in the space of twenty-five years, from being the inconsiderable and unknown head of a tribe of his own nation, became the greatest and most famous prince of his time; and, all things considered, perhaps of any time. He died in the year 1227, after overturning the antient empire of *China*, making himself master of the best part of the *Indies*, and subverting the great monarchies which the *Mohammedans* had erected in *Persia* and *Chaldea*^f. His immediate successors extended their domi-

nions still farther ; and, having thus changed the face of affairs in the east entirely, we need not at all wonder that the Christian princes, who were then warmly engaged in the holy war, were very desirous of procuring the friendship of these new conquerors ¹. It was this disposition that produced the embassies that were soon after sent into *Great Tartary*; and as, according to the genius of those times, these were chiefly managed by monks, it was from the accounts they gave of their travels that the *Europeans* came to have any distinct knowledge of the remoter parts of *Asia*; and indeed, except this, hardly any thing resulted from their negotiations (A).

Voyages of Du Plant Carpin and Rubruquis into the heart of Grand Tartary.

THE first of these ambassadors, or rather agents, was a *Franciscan* monk, one *John Du Plant Carpin*, who, with five or six other monks, carried letters from *Pope Innocent IV.* to the Grand Khân of *Tartary*, in favour of the Christians inhabiting in his dominions. He made this journey in the year 1246; and, at his return, he wrote an account of his travels, in which he has inserted many ridiculous and absurd things upon hearsay; but what he reports of his own knowledge seems agreeable enough to truth, but contains nothing very considerable ². Seven years after this, the *French* king *St. Lewis* sent *William Rubruquis* to establish, if possible, an amicable correspondence with that monarch ³. He embarked at *Constantinople*; and, having passed the *Black Sea*, traversed the vast country of *Tartary*; and, having done as much as could be expected from him, returned by another route; and, having passed the river *Euphrates*, continued his journey to *Tripoli* in *Syria*, from whence he wrote to the king his master, and afterwards composed a large account of his whole journey, which was very faithful, very exact, and gave a just notion of the *Tartars* and their conquests. It does not appear that either of these pieces could have been of any great use towards facilitating a correspondence between the western parts of *Europe* and the interior parts of *Asia*; but the humour of travelling, and seeing strange places, and penetrating, if possible, farther than others had done, began strongly to prevail; inasmuch that several, moved partly by curiosity, and partly from the hopes of making their fortune at the court of the *Tartar* emperor, resolved to run the risque of visiting his dominions ⁴ (B). To this humour we owe the history of *Marco Paolo*, to whom the *Europeans* are indebted for the first clear and distinct account of the utmost limits of *Asia*. His discoveries were of such importance, and were attended with consequences of such a nature, as that the reader will be certainly pleased to meet with a short account of him, his family, and adventures.

The wonderful discoveries of Marco Polo, and the distant travels of Sir John Mandeville.

SIGNIOR *Nicolo Polo*, the father of *Marco*, and his brother Signior *Maffio*, began their travels from *Constantinople* in the year 1250; and, having proceeded to the court of the Grand Khân of *Tartary*, resided there for many years; and returned, as the reader will see, to *Venice*, about the year 1269, where they found the wife of Signior *Nicolo* deceased, and her son, of whom she was left big at the time of their departure, a well-accomplished youth of nineteen years of age ¹. Him they carried back to the court of the Khân; and, after having spent twenty-six years more, without any news being heard of them by their friends at *Venice*, returned safely thither in the year 1295. A short time after his return, *Marco Polo* serving his country at sea against the *Genoese*, his galley, in a great naval engagement, was sunk, and himself taken prisoner, and carried to *Genoa*. He remained there many years in confinement; and, as well to amuse his melancholy, as to gratify those who desired it from him, he sent for his notes from *Venice*, and composed the history of his travels. In this work there are, without doubt, many strange, and some false things, which he wrote from report; but what he wrote from his own knowledge are both curious and just. He not only gave better accounts of *China* than had

(A) The reader may possibly wonder that these travels did not produce an extraordinary effect immediately; but, if he considers the countries through which these monks travelled, the least inviting perhaps in the world, and at that time in no very flourishing condition, he will easily see they were rather calculated to raise wonder and amazement, than to afford satisfaction or delight; and yet our famous Frier *Bacon* (1) collected enough from them to make him tolerably master of the geography of this part of the world, as may be easily discerned by consulting his works, or the collections, in which what he relates of the *Tartars* is contained (2).

(B) An excellent collection of these antient writers

has been published not many years ago in *Holland*, with proper maps, and their voyages and travels very distinctly marked (3). We say nothing in the text of the famous Jew traveller *Benjamin* of *Tudela* (4), because there seem to be good grounds to question whether that work be genuine; and, if it be, it is certainly in many respects inferior to those which are above-mentioned, and to which, with justice, we may ascribe the honour of traversing the deserts of *Tartary*, in order to visit the court of the Great Khân, where it appears that persons of all nations and of all religions, who had any degree of capacity, were kindly entertained, and often preferred.

before

- a before been received, but likewise furnished a description of *Japan*, of many of the islands in the *East Indies*, of *Madagascar*, and the coasts of *Africa*; so that from his work it might be easily collected, that a direct passage by sea to the *Indies* was not only possible, but practicable. *Ayton*, or *Haiton*, king of *Armenia*^m, after he had traversed many of the most remarkable countries in the east, about the year 1303, retired to *Cyprus*, and there took the habit of a monk; after which he wrote, or caused to be written, a kind of history of the empire of the *Tartars*, to which he added the principal observations made by him in his travels, which, in respect as well to the dignity of the author, as to the many new and surprising particulars which they contain, were much esteemed, and universally read (C). Our countryman Sir *John Mandeville*, a man of a good family, liberal education, and who had applied himself to the study of physic, b being very desirous of visiting remote countries, and more especially those of which he had read such strange things in ancient authors, set out on this design in the year 1332, and spent no less than 34 years in his peregrinations through *Armenia*, *Egypt*, *Lybia*, *Arabia*, *Syria*, *Mesopotamia*, *Persia*, *Grand Tartary*, and other countries, of which he wrote an account, which has been very differently censured; some esteeming it an excellent piece, and others looking upon it as a heap of fables and falsehoodⁿ. The truth is, that his learning, his curiosity, and his desire to excite the wonder of his readers, have had a very bad effect upon his work, into which he has thrust every thing that he had either read or heard, as well as what he had seen, which is the reason his writings have been considered in such different lights. But, whatever may be thought of them now, they were highly valued at the time they appeared, and had a considerable effect in supporting this humour of visiting remote countries, which must have been strong enough before, since, as he tells us in the relation of his travels, the world was amused in his youth with the story of a man who had gone round the world^o; upon which he makes some remarks, which shew him plainly to have been a man of parts, and no despicable mathematician for those times (D).

THERE was yet another great event that happened towards the close of the fourteenth century, which operated powerfully towards removing those obstacles the *Europeans* would undoubtedly have met with upon their coming into the *Indies*; whereas the reader will see they found but a feeble resistance, most of the nations they had to deal with being hardly recovered from former confusions. This great event was the second irruption of the *Tartars* under *Ti-*
d *mur Bec*, or, as our histories call him, *Tamerlane*, who resolved, though perhaps his rights were not extremely well founded, to vindicate the title derived to him from *Jenghiz Khân*; which he fortunately performed, becoming in process of time master of the greater part of *Asia*, which he divided amongst his sons, leaving to his third, *Miracha*, the empire of the *Indies*, with other territories; and though parts of these were afterwards lost, yet the *Indies* remain in the possession of his posterity to this day^p. By this time the humour of travelling, and seeking adventures in the east, had prevailed so much in *Europe*, that several persons of courage, and some of good families, but for the most part *Italians*, were in *Tamerlane's* army,

^m Inserted also in the Collections of RAMUSIO, PURCHAS, and HARRIS. ⁿ His Travels, or rather extracts from them, are to be found in various collections; but the only genuine edition bears this title, The Voyage and Travaile of Sir JOHN MAUNDEVILLE, Knight, which treateth of the way to Hierusalem, and of Marvayles of Inde, with other Ilaunds and Countreyes. From an original MS. in the Cotton library; 8vo, 1727. ^o MAUNDEVILLE's Travels, p. 222. ^p D'HERB. Biblioth. Orient. au mot Timur, & autres.

(C) There are certainly, in all these treatises, abundance of strange, and, at first sight, incredible and ridiculous passages, which, after the countries they described were somewhat better known, not only lessened their credit, but brought them into absolute contempt; and yet, in succeeding times, those who have looked more closely into the history and learning, as well as geography, of these distant countries, have discovered that there was a ground of truth in many passages of these writers that were held most glaringly absurd (5). However, at the time they appeared, the wonders they contained had a very good effect; for they roused all the stirring spirits in *Italy*, *Spain*, and *Portugal*, which produced those inquiries and enterprizes that have furnished us with materials for this and the following sections.

(D) This story that he tells of a man who travelled round the world, he says he heard in his youth, and affirms it to be a possible thing. But that he believed it, especially with that remarkable circumstance, which he gives of his returning into this island, and hearing his own tongue spoken, and the customs he had seen in his youth still practised, without knowing it to be his own

country, does not very clearly appear. One would rather think, that he introduced it for the sake of shewing how it might be, and removing those objections which prevailed strongly in his days, that it was impossible for men to go under the earth, because then they must fall into the sky; which he very sensibly refutes, by observing, that there is not either under or over, properly speaking, but that the earth is every-where alike invested with the firmament. He takes occasion from thence to tell the reader how a figure may be drawn on paper, which will represent this to the eye, by describing a lesser and a larger circle, and drawing lines from their common center through the circumferences of both. These, says he, will shew the relation between the parts of the earth to the correspondent parts of heaven, and how a degree may be measured upon the surface of the earth; and from thence how the periphery and diameter may be determined. He was not therefore, certainly, a weak or unlearned man, though, by trusting to hearsay, and transcribing from what antient authors had written, he appears to have been very credulous (6).

(5) See the Preface to Mandeville's Voyages and Travels, in the authentic edition cited in the text.

(6) Maur-

and did him good service^a. It must be acknowledged, that, even after so very great a blow given to the *Turkish* power by this conqueror, the *Ottomans* soon recovered themselves, and made a great impression upon *Europe*, some parts of which were also invaded and subdued by the *Tartars*; yet, notwithstanding this, it may be affirmed, that about this time that spirit sprung up of opposing the *Mohammedans* by land and sea, which soon after drove them out of *Spain*, gave a check to their conquests in the north^b, and has kept their power at a stay in some places ever since; to which nothing has contributed so much as destroying that strength they were forming, and indeed had in part formed, through the maritime provinces and islands of *India*.

The Portu-
guese under
the reign of
John I. began
in earnest to
make discoveries.

As from the several means before-mentioned, as well as other lesser incidents, of which we have not room to take notice, there was a general report spread over *Europe* of the great riches of the east, so it created an inclination in several princes and states to try whether some method might not be found for corresponding with them by sea. Amongst these there was none thought so seriously of raising a naval force, and employing it for augmenting his revenues, and extending his dominions, as King *John I. of Portugal*^c. He was a prince whom his courage and conduct had placed upon the throne, being the natural son of the monarch he succeeded; but, notwithstanding this flaw in his title, and some others in his government (as what prince is there without them?) he had as many great qualities as any person in his rank at that time, which made him beloved by his subjects, and respected by his neighbours. His assuming the crown had involved him at once in a civil and foreign war; out of which being extricated by the assistance of *John of Gaunt*, Duke of *Lancaster*, whose daughter *Philippa* he married, and by whom he had eight children, he was desirous of employing the brave men and busy spirits, naturally produced in such stirring times, in such a manner as to hinder their disturbing that tranquillity which had been so lately restored to his dominions^d. He contrived, therefore, several expeditions for discoveries; in one of which the island of *Madeira* was again found, which had long before been visited by *Edward Macham*, an *Englishman*, who had fled thither with his mistress; and she dying there, he built a little chapel over her grave, which proved at once a monument to the lady, and of his discovery, as the *Portuguese* writers unanimously allow (E). This, which happened in 1419, and the finding *Puerto Santo* two years before, encouraged Captain *Xunex* to double *Cape Bojador*, which had never been attempted before. King *John* also transported a great army into *Africa*, where he made himself master of the fortrels of *Ceuta* in a few days, and projected greater things, the execution of which, however, he left to his successor^e.

Succinct cha-
racters of the
five princes his
sons, who pro-
moted these
discoveries.

As Providence had been pleased to bless this great and wise prince with five sons, he neglected nothing that might improve this blessing in respect to their education. We have said that he had formed great designs, and he had hopes that his sons might live to execute them with as much success as he had shewn prudence in contriving them. His eldest son *Edward*, whom, after the *English* custom, he caused to be styled Prince of *Portugal*, he took the pains of instructing himself in the arts of government, and particularly in those maxims which he thought most conducive to the welfare of his dominions. His second son *Pedro* had at once very quick parts and a very solid understanding, which enabled him, under the eye of his father, to master most branches of learning while he was very young; and, for his farther im-

(E) The time when this discovery was made is not a little uncertain. According to one writer, it must have been about 1344; but, according to others, later. The substance of the relation, than which nothing can be better attested, is this: *Edward Macham*, on board an *English* ship bound to *Spain*, with a lady he had stolen, was by a storm driven to sea, and carried to the island of *Madeira*, then desert, and overgrown with wood. He landed with his mistress, who was much indisposed, and some few other persons, providing for her with as much conveniency as he could, in which those who were with him assisted; but, while they were thus employed, the ship put to sea, and left them. How long they remained upon this island is uncertain; but, the lady dying, *Macham*, having interred her body in a homely chapel, which he had raised to the honour of the holy *Jesus*, erected a monument to her memory, on which he inscribed their names, and these particulars of their story. After this, he and his companions cut

down a large tree, which they hollowed into a kind of canoe; and, embarking on board it, reached with much difficulty the opposite coast of *Africa*, where they were seized by the natives, and presented to their king, who sent them as a present to the king of *Castile*. This affair made so great a noise, that it occasioned the fitting out of those vessels by which the *Canaries* were discovered, as some say, in 1395; but, as others relate, in 1405 (7). However, those discoverers met not with the island where *Macham* had been, which was found again, as we have mentioned in the text, in 1419, by *John Gonzales Zarco* and *Tristram Vaz Teixeira*, who, from its being overgrown with wood, gave it the name of *Madeira*, which the *Spaniards* write *Madera*; and, meeting with the chapel and tomb before mentioned, they bestowed upon the bay, on the side of which it stood, the name of *Machico*, in honour of the original discoverer of this island (8).

(-) *Galvano's Discoveries translated by Hakluyt*, p. 2.

(?) *J. de Barros, Decad. i. lib. i. cap. 3.*

a provement, the king sent him with an equipage, suitable to his quality, to visit several parts of *Europe*; after which, he made a tour into *Asia* and *Africa*^w. It may be inferred from hence, that his father relied chiefly upon him in reference to the discoveries and foreign conquests he had projected; but that young prince, being obliged to turn his thoughts early to civil affairs, contented himself with giving all the lights derived from experience and learning to his younger brother Don *Henry*, of whom we shall speak more at large hereafter; and shall here therefore only observe, that, from his very infancy, he was addicted to the study of the mathematics, took great delight in conversing with men of letters, but more especially such as understood cosmography and astronomy, which were his favourite studies^x. He had a penetrating genius; and, with that, a temper calm and sedate; an extreme passion for the glory of his country, without any mixture of ambition, unless we bestow that name upon his earnest desire to do good, agreeable to the *French* motto he took, *Talent de bienfaire*, which he caused to be inscribed under the arms of *Portugal*, on the crosses and forts erected in the places discovered at his expence. He was master of the order of Christ; and kept his court at *Sagres*, at a small distance from Cape *St. Vincent*, in the kingdom of *Algarve*^y. Don *John*, the fourth son, was master of the order of *St. James*. Don *Ferdinand*, the youngest, was master of the order of *Avis*, which had been his father's first title; and, after his decease, was styled the *Martyr*, upon account of his dying a prisoner among the *Moors*.

PRINCE *Edward* succeeded his father in the throne of *Portugal*. In the year 1443, he undertook, in the second year of his reign, an expedition against *Tangier*, which proved unsuccessful, and where his brother Don *Ferdinand* was taken prisoner, for whose ransom the *Moors* demanded the fortress of *Ceuta*; which the king being unwilling to part with, that unfortunate prince spent the remainder of his days in captivity. King *Edward* did not reign long, deceasing *September* the ninth 1438, leaving behind two sons, both very young^z. The eldest of these, Don *Alonzo*, succeeding to the crown, his uncle Don *Pedro* was declared regent, yet not without great opposition; which obliged him, though naturally inclined to study, and the love of discoveries, to devolve all cares of this sort upon his brother Don *Henry* Duke of *Viseo*; to whom, however, while in power, he gave all the assistance he could^b. It is the more necessary to make this observation, because, in the former reign, the enterprises of that worthy person were looked upon with a jealous, or at least an envious eye. It was suggested to king *Edward*, that the affairs of the *Portuguese* nation did not by any means admit the hazarding ships and men in expeditions of a very uncertain nature, and the very success of which would be naturally productive of new and greater enterprises, altogether improper, since the country was already exhausted by the unfortunate attempt upon *Africa*; for advising of which this prince was also blamed^c. But, after the accession of his nephew Don *Alonzo*, he was freed from these restraints, and suffered to employ his own revenues according to his own mind. Yet the domestic troubles which ensued very much impeded his progress; for, when Don *Alonzo* came to take the reins of government into his own hands, he in a very short time quarrelled with his uncle Don *Pedro*; and, upon this, a civil war broke out, in which that great and gallant prince, who had distinguished himself both by his sword and by his pen, was killed in the field^d, to the great regret of those who sincerely wished the welfare of *Portugal*, and who now discerned that it was much better to employ high and restless spirits in expeditions for the service of their country, than to afford them opportunities of disturbing its peace. This leads us to the proper business of the chapter, which requires us to recapitulate, in their natural and chronological order, the several discoveries by his order within this period, and the progress made after these quarrels were composed^e (F).

(F) As we have mentioned in the text, that the Infant Don *Pedro* was a great traveller, and that he willingly gave his brother all the assistance in his power towards furthering his discoveries, it may not be amiss to mention here a very remarkable instance of it. That prince, after passing through *England*, *France*, and *Germany*, went to the Holy Land; and, on his return to *Europe*, visited *Rome*, and made a tour to *Venice*, where he is said to have procured a very extraordinary map of the world, in which not only the Cape de *Buena Esperanza* was particularly delineated under the name of the

Front of Africa, but also the straits of *Magellan*, called therein *the Dragon's Tail*, which, though very positively asserted, and that by some who pretend to have seen it (9), seems to be a fact very doubtful, or, to speak plainly, very improbable. Yet it is not at all impossible that the Infant Don *Pedro* might meet with some very useful informations at *Venice*, and better charts too than were common in *Portugal*, of which his brother the Duke of *Viseo* might make use, and from whence it is very likely this story might take rise.

Discoveries of
the Infant Don
Henry recapit-
ulated for
forty years.

THIS worthy and excellent prince, the duke of *Viseo*, was endowed with all the qualities that distinguish heroes. He had shewn his courage in the wars against the *Moors*; but he thought the proper object of valour was, the facing those dangers that hinder such designs as may be beneficial to the human species. He resolved, therefore, in order to gratify his passion for discoveries, to make himself master of the *Canaries*, then in the hands of *Maciot de Bethancourt*, who held them from the king of *Castile*; and who, for a consideration, made them over to prince *Henry* about the year 1406^f. He sent *Ferdinand de Castro* to take possession of them; and, conceiving that they might be of use in the discovery of the coasts of *Africa*, which were then very little known, he began about the year 1410 to fit out ships, admitting *Spaniards*, and others who were skilled in navigation, into his service for that purpose. The limits of the south-west part of *Africa*, at that time known to the *Portuguese*, was a cape running out from the foot of mount *Atlas*, the proper name of which was *Cbaunor*, but called by the seamen *Cape Non*, situated in the latitude (as it was then esteemed) of 28° 10' north; and these vessels proceeded beyond that, along the coast, to *Cape Bojadore*, in twenty-six degrees north latitude, but they had not the courage to double it. In 1418 *Tristan Vaz* discovered the island of *Porto Santo*; and gave it that name, because he first saw it on the feast of *All Saints*. The next year the *Portuguese* discovered the island of *Madeira*, which, as we have observed, received its name from its being covered with wood. In 1439 a *Portuguese* captain doubled *Cape Bojadore*, which some think *Ptolemy* called *Cape Canarea*. The next year they sailed as high as *Cape Blanco*, in the latitude of twenty degrees, so that they discovered about eight degrees in the first forty years^g.

An account of
the discoveries
made by the
Portuguese in
the next forty
years.

IN 1446 *Nuno Tristan* doubled *Cape Verd* in the latitude of 14° 40'. In 1448, in the spring, *Don Gonzalo Vallo* sailed to the *Açores*, or *The Hawk Islands*, from the word *Açor*, which in the *Spanish* language signifies a hawk. They were at that time uninhabited, and were settled by this commander, who did not however visit the islands of *Florez* and *Corvo*, which, being discovered and planted by *Flemings*, were from thence called the *Flemish Islands*^h. In the year 1449 the islands of *Cape Verd* were discovered for the infant *Don Henry*. The first of these was called the island of *May*, because they came thither on *May-day*; and at the same time they bestowed the names of *St. James* and *St. Philip* on two of those islands, the rest not being visited till the year 1460ⁱ. The progress made by the Infant *Don Henry* gave great satisfaction to the princes that possessed the crown of *Portugal*, insomuch that king *Alphonso* the fourth, or rather the Infant *Don Pedro*, who governed the kingdom during his minority, granted him the islands of *Porto Santo* and *Madeira*. The Infant, however, according to the custom of those times, was desirous to obtain the sanction of the holy see; and, for that reason, sent *Don Ferdinand Lopes d'Azvedo*, his ambassador, to Pope *Martin* the fifth; who, as the concession was honourable to the chair of *St. Peter*, bestowed on the crown of *Portugal* all that should be discovered on that side, as far as the *Indies*. This bull was dated in 1444, and was confirmed by his successors *Eugenius IV.* *Nicholas V.* and *Sixtus IV.* Prince *Henry*, who began as well as laid the plan of these discoveries, lived to see them pushed as far as *Cape Sierra Leona*, within eight degrees of the line; and, being far advanced in years, deceased *A. D.* 1463^k. In 1471 *Pedro d'Escover* discovered the island of *St. Thomas*, and *Princes Island*; and, on the first day of the next year, another island on the same coast, which he called *Anno Bueno*, now called corruptly *Annobon*. In 1484 *Diego Cam* discovered the kingdom of *Congo*; and, having heard of a Christian monarch who reigned in *Ethiopia*, he magnified his power so much on his return, that *John* the second took a resolution to send by land two persons he could trust, to gain certain intelligence of this prince, whom he judged to be *Presbyter John*, and to acquire at the same time the most satisfactory knowledge they could of the state of the *Indies*; but they returned without performing much, and the king found himself obliged to make a new choice^l (G).

Covillan and
Payva's tra-
vels by land
into the Indies
and Ethiopia.

THE persons charged with this commission, *May 7, 1487*, were *Pedro de Covillan* and *Alphonso de Payva*, who had strict orders to reduce into writing whatever they judged worthy of notice, more especially the situation of places, and the navigation of the coast of *Ethiopia*, which it was hoped might be made the means of passing by a new route to the *Indies*^m.

^m J. DE BARROS,

Decad. i. l. iii. c. 5.

(G) Some *Portuguese* writers say, that these two gentlemen went no farther than *Jerusalem*, being assured there, that it would prove a thing impracticable for them to travel through the eastern countries without be-

ing perfectly well acquainted with the *Arabic* tongue; and that this was the true reason of their return, that the king might lose no time in finding others properly qualified in that respect (10).

(10) P. Laftan Histoire des Conquetes des Portugais, vol. i. p. 62.

- a These gentlemen, who spoke *Arabic* perfectly, went together to *Alexandria*, and from thence to *Cairo*, from which city they proceeded to the famous port of *Aden* in *Arabia*, where, by conversing with traders of all nations, and from all parts of the *Indies*, they learned many things of great consequence, towards yielding the king a just report of their commission. Here they resolved, while one made a tour through the *Indies*, the other should go to the emperor of *Ethiopia*. Accordingly *Pedro de Covillan* went to the *Indies*; and, having made a very exact map of the coasts of that country, he crossed the *Arabian* sea to *Africa*, and, after having visited most of the principal ports there, came to *Sofala*, fully persuaded, as well from the reason of the thing, as from the concurring opinions of the seamen he conversed with, that a short and easy passage might be found round the continent of *Africa* into the *Indies* ^a.
- b He made the best of his way to *Cairo*, very well pleased with what he had already learned, as expecting there to meet his companion; but being informed, on his arrival, that the unfortunate *Alphonso de Payva* had been murdered on the road to *Ethiopia*, he was somewhat at a loss; but, after mature consideration, he resolved to acquaint the king by letter with the discoveries he had made, and to continue his journey into *Ethiopia*, that, at his return to *Portugal*, he might be able to satisfy the king in every respect ^b. He executed this journey at the beginning with the same good fortune that he did the former; and was perfectly well received by *Alexander*, at that time emperor of *Abyssinia*, who was extremely well pleased with the offers made him, and promised to send *Pedro de Covillan* back again with letters to the king his master; but, the emperor dying suddenly, his successor *Nabu* treated our *Portuguese* not only with coldness and disrespect, but with the greatest cruelty, refusing him leave to return home, and keeping him at his court as a prisoner for many years, so that in *Portugal* they concluded him dead, though he lived afterwards to recover his liberty ^c (H).

But, while this new method of inquiring by travels over land was pursued, the other plainer method of pushing gradually, though slowly, the discoveries made along the coast, was not neglected. For the same *John* the second employed *Bartolomew Diaz*, a person remarkable for prudence, and skill in navigation, as well as for invincible courage, to proceed along the south coast of *Africa*; which accordingly he did in the year 1486, when, arriving in sight of a high cape, he met with very bad weather, and lost the company of his victualling-bark; upon which his crew mutinied, complaining that it was too much to endure at once the hardships of the sea and of famine. But Captain *Diaz*, representing to them that the former was not to be escaped by going back, and that the only means they had of preventing the latter, was, to proceed till they came to some place where they could get refreshments, he prevailed upon them to double this cape, and to sail a good way beyond it, to a place where he erected a pillar of stone; and, having obtained a small supply, he returned, and in his passage homewards met with his bark, in which, of nine men that he left, three only survived, and, of these, *Ferdinand Colazzo* died with joy at the first sight of his captain ^d. He continued his voyage safely to *Lisbon*, where he arrived in *December* 1487, sixteen months and seven days after his setting out, having discovered in that time above 1000 miles along the coast. He gave the king his master a full account of all that had happened; and insisted particularly on the difficulty with which he had doubled that stupendous promontory, which he thought fit to call *Cabo Tormentoso*, that is, *The Tempestuous Cape*: but the king, who, from the lights he had received from *Covillan*'s letters, was enabled to form a right judgment of the importance of this discovery, styled it *CABO DEL BUENO ESPERANZA*, or, *The Cape of Good Hope*, which name it hath ever since retained; for he saw clearly, from the agreement between these accounts, that the passage was open, and that there wanted but one voyage more to finish what they had so much desired, viz. the finding a direct passage by sea to the *East Indies* ^e. But, while king *John* meditated this great design, and busied himself in contriving the means of executing it in such a manner, as might be most honourable to himself, and advantageous for

(H) While these gentlemen were thus employed, the king sent two *Jews* into the *Indies*, from whom he received a distinct account of the prodigious commerce carried on in the island of *Ormuz*; of the route of the caravans that went from *Balsora* to *Alppo*, with the nature, the quantity, and the value, of the merchandize, that one year with another was this way conveyed; which account was very pleasing to the king, who sent

them back with orders to meet Don *Pedro de Covillan*, who received from them the king's direction to repair to *Ethiopia*. He is reported to have been the first *Portuguese* that entered the *Indies*; and it was from his journal, sent by the *Jews*, that the king his master was fully persuaded his endeavours would be attended with success. This Don *Pedro* remained a kind of prisoner in *Ethiopia* to the year 1520 (11).

his subjects, the great Ruler of all things disposed of him otherwise, by calling him out of this life* (I).

* EMANUEL DE FARIA Y SOUSA Epitome de las Historias Portuguesas, lib. iv. cap. 8. MARRAS Hist. Indica, P. i. lib. i. cap. 20. P. LAFITAU Histoire des Conquetes des Portugais, vol. i. p. 95.

(I) As this monarch made the discovery of the *Indies* the great business of his life, so we may easily conceive, that he must have been chagrined to the last degree by the arrival of *Columbus*, March the 4th, 1493, in the port of *Lisbon*, after having discovered *America*, which discovery he had proposed to this prince, and, through the ill offices of some who envied him, had his offers refused. He was so piqued at this, that when the king sent for him, and desired a relation of his voyage, he intermixed such severe reflections on the usage he had

received, as provoked some of the courtiers to tell the king, he deserved to be assassinated; which proposition he not only rejected with horror, but treated *Columbus* with great civility, and ordered all the *Indians* he had on board to be cloathed in scarlet, at his expence (12). At the time of his demise, the discovery, upon which he had so much set his heart, was considered as a thing certain and practicable; but was not, however, accomplished till the succeeding reign (13).

(13) Emanuel de Faria y Sousa Epi-

S E C T. II.

The voyage of Vasques de Gama to the coast of Malabar; the disputes and wars with the Samorin; and the progress of the Portuguese affairs, to the sending over the first viceroy.

Arguments to persuade king Emanuel to persist in prosecuting discoveries.

THIS wise and good king, *John* the second, who, for his virtues, was surnamed the *Perfect Prince*, dying October 25, 1495, without lawful issue, left the crown to Don *Emanuel*, the son of Don *Ferdinand*, duke of *Viseo*, to whom of right it belonged. This prince succeeded in the flower of his age, being about twenty-seven, and possessed most of those qualities worthy of a monarch. He had great parts, much penetration, and an excellent judgment; yet so diffident of his own abilities, that, foreseeing the execution of his predecessor's projects would be attended with larger expences than hitherto they had been, he declined prosecuting them, without the advice of his council, before whom he laid all the informations that either himself or king *John* had received. The *Portuguese* statesmen were divided in their opinions; for some pressed the king to tread in the footsteps of his ancestors, and to complete with glory what they had begun; while others as vehemently opposed his pursuit of this design; neither did each party fail of advancing very plausible arguments in maintenance of their proposal. Such as were desirous that this new navigation might be attempted, observed, "That the trade to the *Indies* had been the source of power and riches to every empire that had been possessed of it: that Providence seemed to have thrown it into the hands of their nation in such a manner, that it would not only be disadvantageous, but dishonourable, to refuse it: that all difficulties were in a manner already overcome; so that there remained scarce any thing, but going to take possession of those fine countries, and that vast wealth, which, though all the world thirsted after, none but themselves knew how to reach: that the engrossing so rich a trade to *Portugal* would balance their small extent of territory, and enable the king's subjects to make as great a figure as the inhabitants of kingdoms much more potent in appearance: that, in fine, there were as many dangers to be apprehended from abandoning this design, as benefits to be expected by pursuing it; since, in all probability, their ambitious neighbours the *Spaniards* would undertake, and accomplish this great work, the wealth derived from which would enable them to execute with ease whatever they might be prompted to by their boundless ambition."

Other reasons for discontinuing them, as prejudicial to Portugal.

On the other side, it was alleged, "That there were many things more apparently necessary to the kingdom, than such long, such expensive, and such uncertain expeditions; since there were several large tracts of land, and particularly that spacious plain between the *Ebro* and the *Tagus*, not properly cultivated, the improvement of which would free them from the necessity of depending for their daily bread upon strangers: that their country was but thinly peopled; at least in proportion to the numbers it might be able to maintain, if, instead of maritime expeditions, they turned their thoughts towards making the most of what was in their power; so that it was very unreasonable to consume numbers of men, that might be immediately useful to their country, for the sake of distant, and perhaps fallacious, expectations: that all discoveries and conquests hitherto had furnished only a few

* EMANUEL DE FARIA Y SOUSA Epitome de las Historias Portuguesas, lib. iv. cap. 9.

"negroes,

- a “ negroes, elephants teeth, strange birds, and other curiosities ; in procuring which, they had
 “ suffered many shipwrecks, and run the hazard of many more : that, for a century together,
 “ they had been amused with these golden dreams, and therefore it was high time to awake from
 “ this delusion ; that the kings his predecessors had been at vast expences, to very little purpose,
 “ in pursuit of the like designs ; and that this ought to render him not only the more cautious in
 “ following their example, but oblige him also to consider the dangerous consequences of run-
 “ ning an exhausted nation into disbursements she was unable to bear : that besides, the success
 “ of the undertaking might bring such demands upon the crown of *Portugal*, as would greatly
 “ exceed her force ; so that, perhaps, her interests at home might come to be sacrificed to those
 “ abroad.” Don *Emanuel*, having maturely considered what had been offered on both sides,
 b resolved to select to much of either opinion, as might conduce most to his own reputation, the
 completing his predecessor's scheme, and the welfare of his subjects (K).

- It was in consequence of this resolution, that, in the spring of the second year, he ordered A. D. 1494
 four ships to be equipped ; three of which were armed vessels, with some pieces of cannon on board, and the fourth a small store-ship. We may be sure that these vessels were not very great, ^{Valques de}
 since, in the whole, there were on board but 160 soldiers and seamen. The person chosen to ^{Gama pre-}
 command was Don *Vasquez*, or *Vasca da Gama*, a man of very high quality, who possessed ^{ceeds, by the}
 all the talents necessary for such an employment *. On the 9th of *July* he embarked on board ^{Cape of Good}
 the *Gabriel*, which was the admiral, of the burthen of 120 tons, and the same day put to sea. ^{Hope, to the}
 On the 3d of *August* he left the island of *St. Augustine*. On the 20th of *November* he doubled ^{Indies.}
 c the *Cape of Good Hope*. In the beginning of the month of *January* he put into a port of
Ethiopia. And on the 1st of *March* he entered that of *Mozambique* ; where the scurvy de-
 stroyed many of his people, and where they were in great danger of being put to death as
 soon as it was known they were Christians. His artillery, however, preserved him ; and from
 thence he continued his voyage to *Mombaza* ; and there he met likewise with perfidious deal-
 ing. He sailed from thence to *Melinda* ; the king of which country received him with civility,
 and promised to send an ambassador to king *Emanuel*, when they returned into *Portugal*. Don
Vasquez, in obedience to his instructions, sailed from thence for the coast of *Malabar* ; and,
 arriving at *Calicut*, first heard of a puissant monarch in those parts, styled the *Samorin*. There
 he met, very unexpectedly, with an extraordinary act of friendship ; for, on his officers first
 d going on shore, they were met by a moor of *Tunis*, whose name was *Monzaida*, who knew them
 by their dress to be *Portuguese* ; and tho', as well on the score of his country as his religion, it was
 natural for him to hate them, yet he very kindly offered them his service, and sincerely ful-
 filled all that he had promised. He acquainted the *Samorin*, that a powerful and warlike na-
 tion were come from the farthest parts of the earth to seek his friendship, and to trade with
 his subjects. This representation had its effects ; *Gama* was allowed to anchor in that port,
 and also admitted to an audience (L), in which he was treated with kindness and respect †.

- But things did not remain long in this posture ; for the *Mohammedans*, who were settled in ^{Difference}
 the dominions of this prince, foreseeing their own commerce must be destroyed by the coming ^{with the Sa-}
 of the *Portuguese*, took incredible pains to misrepresent them as an ambitious and cruel people, ^{morin, which}
 who meant nothing less than to depose the *Samorin*, and to conquer his country ; which stories ^{obliges Don}
 e had such an effect on the *Indian* monarch, that he began to lay snares for the destruction of ^{Valques to}
Gama and his people. Don *Vasquez* had very early intelligence of his designs, and therefore
 hastened on board his ships, and quitted the coast. He wrote, however, a letter to the *Sa-*

 las Historias Portuguesas, lib. iv. cap. 9. OSOR. de Reb. Eman. lib. i. * P. LAFITAU Histoire des
 Conquetes des Portugais, vol. i. p. 112.

(K) There are three very remarkable particulars mentioned with regard to this prince's coming to the throne, and accomplishing happily what had been so ardently wished by his predecessor. In the first place, he was bred up and adopted by the Infant Don *Henry*, who seemed to consider him as the heir of whatever should result from his endeavours and inquiries. The second, that king *John* commanded him, while a boy, to add a globe to his arms, which was afterwards looked upon as a preface of the *Indies* being found under his auspice. And lastly, he came to the throne very unexpectedly, Don *Alphonso*, son to king *John* the second, being killed by a fall from his horse, in the flower of his age, *Joze* 12, 14, 1 (14).

(L) The *Portuguese*, not without good reason, were very suspicious of this monarch's faith, and therefore unanimously dissuaded their general from trusting his person in his hands. Don *Vasquez* gave, upon this occasion, a noble testimony of true courage, and, at the same time, of public spirit. He made his brother *Paul* general in his absence, with this express direction, that if any mischief befel him, he should not either attempt to deliver or revenge him, but immediately put to sea, and return to *Portugal* ; charging him to tell the king, that he died his faithful servant, happy in having performed his orders, and discovered the *Indies* for *Portugal* (15). But Providence protecting him, he lived to carry that news himself.

(14) Emanuel de Faria y Sousa Epitome de las Historias Portuguesas, lib. iv. cap. 9. Maffei Hist. Indica, P. i. lib. i. cap. 21. P. Lafitau Histoire des Conquetes des Portugais, vol. i. p. 93. (15) J. de Barros, Decad. i. lib. iv. cap. 7.

morin; in which he complained of this breach of faith, justified himself from the imputations a before-mentioned, and advised the *Samorin* to return to his former sentiments. The *Samorin* wrote him a polite answer; in which he laid the blame on his ministers, and the *Mohammedans*, promising to punish the guilty, assuring him, his nation should meet with no reason to complain; and, to these compliments, added a respectful letter to the king of *Portugal*^b, in which he accepted the propositions made him on his majesty's behalf, and promised a free trade to his subjects, without prejudice, however, to his former allies (M). Don *Vasquez*, having received the letters, proceeded to the island of *Angediva*, at the distance of fifty leagues from *Calicut*; where having repaired his vessels, and refreshed his people, he sailed thence for *Europe*. In his passage, he took care to put into *Melinda*, where he was received, as before, with great friendship; and the king, according to his promise, sent with him an ambassador to *Portugal*^c. He proceeded then to the island of *Zanguebar*; but, finding by the way his crew much diminished, he burnt the *Saint Raphael*, which was commanded by his brother *Paul Gama*, and took the men on board his own ship. From *Zanguebar* he sailed to *Mozambique*, where he took in a supply of fresh provisions. On the 20th of *March* following he doubled the *Cape of Good Hope*; proceeded from thence to the *Terceras*; and, in the month of *September* 1499, arrived safe at *Belem*; having spent two years and ten months in his voyage, and having lost, by sickness and fatigue, 100 men, and amongst them his brother^d. The success of this voyage put an end to all disputes; all ranks of people were loud in their commendations of the noble person who had achieved this enterprise; but it was observed, those were loudest in their applause, who, before his departure, had treated this discovery as a vision; and the plain reason was, that, considering it as a thing of expence, their love of money made them against it, and now, on its succeeding, the hopes of profit carried them with greater violence the other way^e (N).

The second fleet sent to the Indies, under the command of Don Pedro de Capral.

THE council of *Portugal* being unanimous, the king was solicited not to lose time, or spare expence, in seconding his good fortune, and reaping the benefits of that discovery, of which his royal predecessors had only a prospect. The fleet for this second expedition was composed of thirteen sail, some of which were large ships^f. Don *Pedro Alvarez de Capral* was appointed general and commander in chief, and carried with him 1500 regular troops. In the month of *March*, experience having shewn That was the properest season of the year for visiting the *Indies*, he sailed from *Lisbon*. In his passage, keeping out to sea, in order to avoid the storms that had been met with in doubling the cape, he found himself near an unknown continent, opposite to that of *Africa*, and, as it made a very pleasant appearance, he judged it requisite to go on shore, and take possession, on the behalf of the king his master, which country he called *The Land of the Holy Cross*, but it has been since known by the name of *Brazil*; and thus the *Portuguese* first set foot on the continent of *America*^g. This discovery seemed of such consequence to Don *Pedro*, that he thought fit to send *Gaspar Lamidos* back to *Portugal* with the good news, putting one of the natives of the new-found country on board; and having left likewise twenty condemned persons, who were sent with him for such

^f MAFFÆI Hist. Indica, P. i. lib. i. cap. 29. ^g GALVANO's Discoveries. PURCHAS's Pilgrims, vol. i. p. 29. EDEN's Hist. of Travel. ^h J. DE BARROS, Decad. i. lib. iv. cap. 11. ⁱ MAFFÆI Hist. (M) It was to this *Moor* that Don *Vasquez* owed his own safety, and the *Portuguese* the possession of the *Indies*; for the *Mohammedans* laid before the *Samorin* all the consequences that would attend the coming of the Christians into the *Indies*; and shewed him, that the only method to prevent it was to cut off these strangers to a man, and burn their ships: to which, if a fair opportunity had offered, it is thought he was well enough inclined; but the *Moor* gave Don *Vasquez* intelligence of all, from a spirit of honour and generosity, taking, at the same time, a resolution of sharing his fortune, and accordingly returned with him to *Portugal*; where he became a Christian, lived with honour, and died in peace (16).

(N) Don *Vasquez da Gama*, as soon as he arrived at *Lisbon*, went to spend a week in devotion at the hermitage of our Lady, built by the Infant Don *Henry*, and where he had offered up his prayers to God, for the success of his voyage, at the time of his departure. Thither the king sent several persons of distinction, to compliment him in his name; after which, he made his public entry into *Lisbon*, with all the pomp and cere-

mony of a sovereign prince, illuminations, bonfires, and every other testimony of public joy, being expressed, on his return. Besides these honourable marks of favour, the king granted him more solid evidences of his gratitude and esteem, by augmenting his coat of arms with part of those of *Portugal*, declared him admiral of the *Indies*, added to that a perpetual rent charge of a thousand crowns out of his exchequer, with a permission to invest 200,000 cruzadoes in every cargo sent to the *Indies*; which produced upwards of 200,000 pounds of our money in return; and some time afterwards he created him Count *de Vidigal* (17). To perpetuate the memory of this great event, and to do honour to the original promoter of it, the king converted the little hermitage of the Infant Don *Henry* into a most magnificent church, to which he added a convent of *Jeronymites*, endowed with great revenues, and gave it the title of *Estrella m.*, or, as the *Portuguese* pronounce it, *Belem*, which has been since the burial place of the kings of *Portugal*, placing a most noble statue of the Infant Don *Henry* over the great gate of the church (18).

(16) Maffæi Hist. Indica, P. i. lib. i. cap. 29. (17) Id. m. lib. ii. cap. 11. (18) P. Leffau Hist. toire des Conquestes des Portugais, vol. i. p. 154.

- ^a desperate services, in *Brazil*, prosecuted his voyage^c. In a short time after he left *Brazil* he was surprised by a most dreadful storm, in which he lost many of his people, and one of his ships, on board which was *Bartholomew Diaz*, who first doubled the *Cape of Good Hope*, and who, by this accident, perished with the rest. The general, notwithstanding, continued his voyage to *Mozambique*, where he arrived, with no more than six sail, and those but in a poor condition. The inhabitants, remembering the disputes they had with his predecessor, received him with respect, and furnished him with whatever he demanded. He proceeded from thence to *Quiloa*, and then continued his route to *Melinda*, where he set on shore the ambassador of that prince, whom *Vasques da Gama* brought over. He proceeded from thence, with a fair gale of wind, to the *Angedive Islands*, where he refreshed, and refitted^f.
- ^b THE *Samorin*, having intelligence of his arrival, sent to compliment him thereupon, and to invite him to *Calicut*; which he accepted, provided he had hostages for security. Those he demanded were the *Catual*, or commissioner of the customs, and some other of the *Samorin's* ministers; at which that prince hesitated at first, but at length consented. On his landing, he was admitted to an audience of the emperor; at which *Capral*, who was naturally vain, made a display of his magnificence. The *Samorin*, to demonstrate the sincerity of his professions, made him a present of a house, by a deed of gift, ingrossed in letters of gold; he permitted him also to set up the standard of *Portugal*, to appoint a factor, or consul, for his nation, and to open magazines for commerce; but all this fair shew of reciprocal friendship soon came to nothing. The *Portuguese* historians acknowledge, that it happened through the imprudence of their factor *Correa*, who, on some slight information, acquainted *Capral*, that the *Samorin* intended somewhat foul. The *Portuguese* general, upon this, began to seize ships, and to commit other acts of hostility. Upon which the inhabitants, as might be expected, attacked the *Portuguese* factory; forced the gates, pillaged and burnt the house, and, of sixty people that were in it, murdered fifty, the rest saving themselves, with great difficulty, on board their ships^g (O). The *Portuguese* general took a severe revenge, by burning ten vessels, richly laden, in the port, making slaves of their crews, and beating down a great many houses. After which, he sailed for *Cochin*, which lies thirty leagues from *Calicut*. On the throne of *Cochin*, at that time, sat a prince worthy of renown, *Trimumpara*, who, having reasons to be offended with the *Samorin*, received Don *Pedro* very kindly, and concluded a treaty with him, into which the kings of *Coulam* and *Cananor* were afterwards admitted^h. For *Capral*, taking great state upon him, did not immediately listen to this proposal, but offered to carry their ambassadors into *Portugal*; assuring them, that his majesty would send them speedy and powerful assistance against the *Samorin*. They accepted this offer; and the general, having taken on board a rich cargo, paid a visit to the king of *Cananor*; and, having received the ambassadors of all the three princes on board, in the month of *January* sailed for *Europe*. In his passage home, one of his ships ran ashore on the coast of *Melinda*, when, to prevent the *Mohammedans* from making any advantage, he first nailed his cannon, and then set the ship on fire; notwithstanding which, the king of *Monbaza* found means to weigh the artillery, and to render them serviceable, to the great prejudice of the Christians. The *Portuguese* general, continuing his voyage, doubled the cape, without any great difficulty, and arrived safely at *Lisbon* on the 23d of *July* 1501. He brought home with him a large cargo, the ambassadors of three princes, and a pompous account of the great exploits he had performed against the *Samorin*ⁱ. All which, however, did not procure him a very favourable reception, from the great loss he had sustained in this voyage, and the number of gallant men who had perished in it, not to be replaced by all the wealth of the *Indies*, at least in the sentiments of the king his master, to whom his subjects gave the title of *Great*; and, indeed, no monarch of theirs deserved it so well, or, perhaps, any monarch of any other nation better (P).

^j J. DE BARROS,

(O) The *Moors* were at this time masters of the best part of the commerce in the dominions of the *Samorin*; for the management of which, they had two officers residing in his capital, called *Shaubanders*, one of which had the inspection of the caravans, and all the trade carried on by land, as the other had of the marine. The *Portuguese* general appointed *Anar de Correa* to be the consul, or merchant general, of his nation, to whom both the *Shaubanders* addressed themselves, the former with the fairest, and the latter with the foulest intentions

possible. As bad men make the best flatterers, so he soon wrought himself so much into *Correa's* favour, that, by filling his head with groundless suspicions, he induced him to commit various acts of insolence and violence, and at the same time privately irritated the people, and put them upon attacking and plundering the *Portuguese* warehouses, where they murdered *Correa* and fifty more; which produced those flagrant acts of revenge that are mentioned in the text (19).

(P) What is said in the text regards the personal qua-

(19) J. de Barros, *Decad. i. lib. v. cap. 5.*

A third squadron sent thither under Don Juan Calleca, who does remarkable service.

THE foresight of this fortunate king was so great, that, before the return of *Capral*, he had sent a small squadron to the *Indies*, of four sail, under the command of Don *Juan Calleca*, who very happily repaired the mischiefs that had been done by the *Samorin*, and prevented his attempting greater, by defeating a fleet of eighty sail, of which he destroyed ten; and, by giving the king of *Cochin* such assurances of continual protection, as kept him firm to his alliance^k. This vigilance and moderation procured him the universal esteem and affection of such of the *Indian* princes as had already negotiated with the *Portuguese*; and enabled him to provide, in a short time, a valuable cargo, with which he returned to *Portugal*. In his homeward passage, he touched at the island of *St. Helena*, and was so much pleased with it, that he procured an order from the king, that his fleets, for the future, should likewise touch there for refreshment^l. It cannot be supposed, that the returns he brought from the *Indies* were of greater value in themselves than those of the former fleets; but, in proportion to the force of his squadron, and to the expence with which his expedition was attended, they made a much superior figure. To this we may attribute that wonderful ardour with which all ranks and degrees of people embraced the *Indian* commerce, that began now to draw a vast number of foreign vessels to *Lisbon*, and to excite such a desire in strangers, as well as natives, to embark in this lucrative trade, that, when king *Emanuel* declared his resolution of sending a fleet of twenty sail of large ships^m, he found himself in a condition to accomplish it, as soon as the season would permit. Which is so clear a proof of the amazing consequences that attend new discoveries, and that opinion which it is at all times natural for mankind to have of difficult enterprizes, when they are once attended with success, that it ought to make a strong impression upon all statesmen, and more especially upon such as direct the affairs of maritime powers, where the very reputation of opening any new passage is capable of producing advantages, of which no conception could have been formed, before the event which produced them. But our business is history, and not reflections; yet sometimes they rise so strongly, that an author, who has any attention to what he writes, or affection for those to whom he writes, can hardly forbear them.

The second voyage of Don Vasquez da Gama, and his exploits in the Indies.

THE two last expeditions shewed plainly, that the choice of a commander in chief was a point of more importance than even the strength of a fleet: when therefore this formidable armament was ready, the king desired *Vasquez da Gama* to undertake a second voyage to the *Indies*, which, believing the service of the public ought to take place of that satisfaction which, as a private man, he tasted in repose, that true hero, without any difficulty, accepted. At the proper season of the year the Count *de Videguara* sailed from *Lisbon*; and, arriving at *Guiloa*, he forced the king to become tributary to his master, and to promise an annual tribute of 2000 crowns of gold. He sailed from thence to *Cananor*, where he landed the ambassador, made rich presents to the king, renewed the alliance, and then sailed for *Cochin*. Soon after his arrival there he received a deputation from the Christians of *India*, or, as they are generally called, Christians of *St. Thomas*, to whom he promised assistance, and that he would leave, as he did, a squadron behind him to protect themⁿ. The *Samorin* all this time neglected nothing that could be contrived or executed to destroy his enemies. He laboured to engage *Trimumpara* to betray Don *Vasquez*; but that prince answered, that the *Portuguese* had behaved towards him with great generosity; and that, while they continued to do so, he would never abandon them. The *Samorin*, finding these measures ineffectual, declared, by assembling a fleet of 29 sail, that he was resolved to attack Don *Vasquez*, when ready to return with his fleet laden, and in a condition least able to oppose him; which he accordingly did. Don *Vasquez* suffered them to come as near as they pleased; and then engaging two of their largest ships, the seamen and soldiers, after a short resistance, in which they lost 300 men, jumped overboard; which struck such a terror into their companions, that they bore away in the utmost confusion. In the two ships taken were found immense riches, besides gold and silver plate, to a great value; all which being brought on board the admiral, the ships were set on fire^o. Don *Vas-*

^k J. DE BARROS, Decad. i. lib. v. cap. 10. ^l MAFFÆI Hist. Indica, P. i. lib. ii. cap. 6. ^m EMANUEL DE FARIA Y SOUSA Epitome de las Historias Portuguesas, lib. iv. cap. 9. MAFFÆI Hist. lities and royal endowments of the *Portuguese* monarch; but it may not be amiss to acquaint the reader, that these were not the only motives which procured him that title; for, in reality, he had a very fair prospect of having the most extensive dominions of any prince of his time. He had espoused the Infanta of *Spain*, and had by her a son; so that he was considered as the presumptive heir of their Catholic Majesties *Ferdinand* and

Isabella; which fair hopes, though afterwards they were disappointed, set him very high in the sentiments of strangers, as well as his own people; so that none accused him of vanity, when he added to the plain and modest titles of his predecessors, lord (20) of the navigation, conquest, and commerce, of *Africa*, *Arabia*, *Persia*, and the *Indies*.

(20) Emanuel de Faria y Sousa Epitome de las Historias Portuguesas, lib. iv. cap. 10.

a *quez* proceeded, after his victory, to *Cananor*, conferred with the king on the measures necessary to be taken in his absence ; and then, leaving six large ships, under the command of *Vincent Sodrez*, sailed for *Mozambique* ; where having taken in necessary refreshments, he continued his voyage, without any unlucky accident, to *Lisbon* ; where he was received with the utmost joy, and the tribute of the king of *Guiloa*, in a silver basin, was carried in triumph before him, at his public entry ^p (Q).

THE *Samorin* did not suffer this opportunity to be lost ; but, as soon as the *Portuguese* fleet left the *Indies*, marched, at the head of 50,000 men, against the king of *Cochin*, whose subjects were unwilling to fight in this quarrel, and therefore besought their sovereign to make his peace, by giving up the strangers ; but *Trimumpara* acted on other principles, and acted with the utmost firmness and dignity. At this critical season *Vincent Sodrez* arrived ; to whom the king of *Cochin* applied himself for relief, and desired he would land a part of his forces, to assist him in this extremity ^q. This *Portuguese* officer, if we may trust the historians of his own country, was a very brave man, and understood his business perfectly ; but he loved money ; and had found an easy way of acquiring it, by plundering the *Mohammedan* traders, and was loth to leave it. He therefore pretended, that, by his instructions, he was to act only by sea ; on this pretence, therefore, he would not consent to land so much as a single man ^r. This amazed the good old king, and disoblged the *Portuguese* at *Cochin* to the last degree ; but *Sodrez*, out of pain about their resentments, sailed for the *Red Sea*, in order to make prizes ; where his own ship was lost, and he and his brother drowned (R). The *Samorin*, during his absence, marched with his army into the territories of *Cochin* ; where, the king being betrayed, a pass was opened that led to his capital, by which the *Samorin* imagined he had him intirely at his mercy. As soon as *Trimumpara* was informed of this unlucky accident, his first care was for the safety of the *Portuguese* ; in order to which, he directed that they should be sent to the island of *Viapan*, over-against *Cochin*. This island was consecrated to the mysteries of the *Indian* religion, and had therefore been hitherto accounted inviolable, in all the disputes between monarchs of that faith ; but it was also a place of strength, not only in some measure inaccessible by nature, but from its being rendered quite so by the assistance of art ; and in this island there were considerable magazines, and a competent garison of good troops. The *Samorin* carrying all before him, a great part of *Trimumpara's* subjects deserted their master, and submitted to that tyrant ; by which the king of *Cochin* found himself at last obliged to follow the *Portuguese*, and take shelter in the same place ^s. The governor of *Viapan* remained firm to his master's interest, and thereby preserved him from the rage of his enemy ; for the *Samorin*, having burnt the town of *Cochin*, attacked the island of *Viapan* several times, but was as often repulsed with loss, and at last obliged to abandon his design, and to return into his own dominions ; the winter-season coming on, in which it is impossible for an *Indian* army to keep the field. He left, however, a considerable garison in *Cochin*, and ordered several forts to be erected, resolving to return thither again in the spring, and perfect his scheme of expelling the Christians ^t.

BUT, before that season of the year returned which would permit an *Indian* army to act, a new fleet, well manned, arrived from *Portugal*, under the command of *Don Francisco Albuquerque*, a man of a long head, and a stout heart ; and he, having very luckily joined that squadron which the commander in chief had left upon the coast, found no great difficulties in disappointing all the *Samorin's* schemes, or, after that was done, in executing his own ; for in the *Indies*, as well as every-where else, whoever is absolute master upon the sea may prescribe

The Samorin invades Cochin with a great army, and drives Trimumpara to great distress.

Don Francisco Albuquerque arrives in the Indies, and restores the king of Cochin.

^t MAFFÆI Hist. Ind. ubi sup.

(Q) Among the precious spoils that adorned the triumph of the admirate, there was a famous idol of gold, taken on board one of the *Indian* ships. It weighed sixty pounds ; the pupils of the eyes were emeralds, perfectly fine ; and on the breast there was a ruby, of the size of a chesnut, upon which the jewellers knew not how to set a value. Besides this, there was a mantle overlaid with the finest pearls the *Persian* gulf had ever produced. In the management of this solemnity, all flowed from the king ; for the admiral of the *Indies* heightened the merit of his services by an unaffected modesty, and that generous repugnance which he shewed in receiving the rewards that were due to them, saying, upon all occasions, that the success of his endeavours was to be ascribed wholly to God, and that all the honours he had received flowed from the bounty of his prince (21).

(R) There is no character more rudely treated than that of this officer, by all the *Portuguese* writers, by which it plainly appears, that avarice is not the vice of their nation, but it was the ruling passion of this man in the highest degree. He was driven ashore upon the islands of *Curia* and *Muria*, from which danger the *Arabians* on the neighbouring coast rescued him, but took care to be well paid for it ; they told him, at the same time, that he would do well to quit those seas, in which ships were often exposed to such violent gusts from the north, as were absolutely irresistible. Four of his captains quitted him upon this, and retired to the island of *Angedive* : himself and his brother perished, through their obstinacy, with those immense treasures they had acquired by rapine, while their good ally was left in so great distress (22).

(21) P. LAFITAU Histoire des Conquetes des Portugais, vol. i. p. 196, 197. lib. ii. cap. 5.

(22) MAFFÆI Hist. Indica, P. i.

laws on land also, as we shall see this *Portuguese* general did. He drove out the garrison which the *Samorin* had left in *Cochin*, and, having demolished their forts, brought the king back to his capital^a. As this gave the *Portuguese* admiral an irresistible interest over the monarch of *Cochin*, he took occasion, from thence, to desire liberty of erecting a place of strength, for the security of his countrymen, that they might not be exposed to such dangers as they had gone through for the future. The proposal was, without difficulty, accepted; and the king of *Cochin* not only gave him leave to build a fort, but to build it where he thought fit^b. In consequence of this, *Francisco Albuquerque* made choice of an eminence, commanding both the town and the royal fort; and as the king, to facilitate it, allowed him to cut down the fine palm-trees that were planted round his palace, he quickly finished the fortresses, in the best manner such materials would permit. He likewise built a chapel for the performance of divine service. And thus, as the *Portuguese* writers themselves express it, their nation^c became possessed of the dominion, as well in spirituals as temporals, of the *Indies* (S). Don *Francisco* pushed these ambitious projects, and, under pretence of reducing such as had rebelled against the king of *Cochin*, made himself master of their countries, pillaged all their towns and villages at pleasure, and committed even greater devastations than the *Samorin*, during the last invasion^d.

Upon which the *Samorin* concludes a treaty of peace with him and the *Portuguese*.

THE poor *Indians* were amazed; it was impossible for them not to abhor these strangers, who treated them with such insolence and barbarity; but, at the same time, they knew not where to fly for refuge, except to the clemency of their sovereign, who, like the true father of his people, forgot their disobedience to him, and, by his intercession, procured them some indulgence from the *Portuguese*. The *Samorin* entered, about this time, into a private negotiation for peace, which was quickly concluded, but with great secrecy^e. All the articles of it were highly favourable to the crown of *Portugal*, and the consequences might have been highly advantageous to its subjects; but they were now become so insolent, that they broke the peace as soon as it was concluded; and when the *Samorin* complained, *Francisco Albuquerque* heard his ambassador very coldly, and, to shew his contempt for his master, did not so much as vouchsafe to give him an answer. It was impossible for so great a monarch to sit down tamely under such usage; and therefore he began to make, though with as much secrecy as possible, all the preparations in his power, to take revenge. *Trimumpara* had intelligence of this, with which he acquainted the *Portuguese* general, and desired him to delay his return to *Europe*; to which *Alphonso Albuquerque*, the nephew, would have consented, but Don *Francisco* absolutely refused. All he could be brought to was, to leave *Edward Pacheco*, with three ships and 150 men, to assist the king of *Cochin*^f. The reason of this stubbornness, was his having made a vast fortune in the *Indies*; which, however, proved fatal to him, and those about him; for, in their passage home, meeting with bad weather, and the ship being crowded with rich goods, they went all together to the bottom^g (T).

Trimumpara's kingdom gallantly defended by *Edward Pacheco*, and a handful of *Portuguese*.

THE war broke out in the kingdom of *Cochin*, as soon as the *Portuguese* failed; the people of the country behaved as they had done before, that is, they either ran away, or deserted; but *Pacheco* defended the king with great courage and generosity, till, by the arrival of fresh forces from *Europe*, and repeated victories gained over *Samorin*, the peace of that part of the world was intirely restored. After seeing this fully established, *Pacheco* returned home, with a very moderate fortune, but with ample testimonials, not only of his courage and con-

(S) It is very remarkable, that *Vasques de Gama* endeavoured to fix the *Portuguese* dominion in *Asia* on the voluntary attachment of the natives; and that it was owing to his modesty and uprightness, that *Trimumpara* conceived so high an opinion of that nation, which he had afterwards occasion enough to repent (23). It is, however, very doubtful, whether this humour of building forts, and making themselves lords of all the places where they came, was so advantageous to the *Portuguese*, as the other method would have been, as the reader will see in the sequel of this chapter.

(T) It is necessary to observe, that *Francisco* and *Alphonso Albuquerque* were cousins; that the former was the elder, and had the command at this time; so that the latter, with whom he rarely advised, could not pre-

vent those acts of haughtiness and violence which had so bad an effect. Yet it is, on all hands, agreed, that this *Francisco Albuquerque* was, in other respects, a very gallant man, and a good officer; and it is recorded, as a singular stroke of his policy, that when he found the good old king of *Cochin* shut up in an island, and in the lowest condition imaginable, he not only paid him the highest respect, but took 10,000 pieces of gold out of the cash intrusted to his care, and made that monarch believe it was a present sent him by his brother of *Portugal*; which made such an impression, as nothing could remove; and some have remarked thereupon, that, with this small sum, well timed, and given with a good grace, he purchased the *Indies* (24).

duct,

- a dust, of his zeal for the honour of his country, and of the ample services rendered to its allies, but also of his equity and justice, which procured him a very extraordinary reception in *Portugal*; where the king ordered one of the most eloquent prelates of that age to write the history of this war, and to do justice to that disinterestedness with which *Pacheco* had behaved. The king drew from him many lights towards carrying into execution a very great design which he had been for some time meditating, the driving the *Mohammedans* entirely out of the *Indies*. This, without doubt, was very noble and heroic, very consistent with his character as a Christian hero, and like to be attended with beneficial consequences to his people; but at the same time it did not seem in any degree so practicable as it was glorious. After much deliberation, however, it appeared to him in another light.
- b *Emanuel* had been informed that there were three great ports in the east, in which the *Mohammedans* were established, and from whence they carried on all their commerce to the most distant parts of the *Indies*. These ports were, *Aden*, in *Arabia*; *Ormuz*, in an island of the same name; and *Malacca*, near the straits of *Sincapour*. As their strength was by this means divided, *Don Emanuel* judged it not impossible to make himself master of all these places in their turns; and, with this view, he began to fit out a stronger fleet than hitherto he had sent to the *Indies*^d. His notions were well founded; and we shall see, that by degrees, and more especially by a due distribution of his designs, this wise and fortunate prince actually accomplished all the vast things that he desired.

S E C T. III.

Various fortunes of the Portuguese, from the regular foundation of their empire in the Indies, to the death of their successful statesman and renowned captain, the Great ALBUQUERQUE.

- c **T**HERE happened in the mean time a new scene of affairs in the east, where the Bra-
mins, who were about the *Samorin*, shewed themselves able politicians, by giving him the very best advice his affairs would admit. They observed that the Christians and *Mohammedans* were equally his enemies; and therefore the wisest thing he could do, was, to call in one to combat the other; that, thus wasting their forces, they might be so reduced, and he become a match for both. He, in pursuance of their advice, demanded succours from the Sultan of the *Mamelucs*, who were at that time in possession of *Egypt*; the news of which alarmed all the Christians in the *Indies*, and occasioned their sending immediate advice to *Portugal*. This obliged king *Emanuel* to dispatch his fleet sooner than he intended, and with smaller force, though even then very considerable, consisting of thirteen large ships and six carvels, with a large body of soldiers on board^e. He made choice of *Don Francis Almeyda* Count d'*Abrantes* to command it, who had served king *Ferdinand* of *Castile* with great reputation, and gave him first the title of vice-king and governor-general of the *Indies*; assigned him guards for his person, a certain number of chaplains, and whatever else could be thought necessary to give an air of grandeur to his office. On the 25th of *March* 1505 the fleet sailed from the river of *Lisbon*, and on the 11th of *April* following reached the islands of *Cape Verd*; from whence stretching too far to the south, in hopes of doubling the cape with greater ease, the fleet ran so far south, that the seamen had many of them their fingers frozen; but, varying their course a point or two to the east, they at length arrived safely at *Guiloa*, where *Aurabam*, the tyrant of that country, refusing any longer to pay tribute, the viceroy drove him out, and settled *Mohammed Anconin* in his place, raising a fort there, to keep the people in subjection^f.

By the advice of the Bramins the Samorin resolves to call in the aid of the Mamelucs against the Christians.

THENCE he proceeded to *Mombaza*, a small city in an island, well fortified with two citadels, furnished with some small pieces of cannon, which encouraged the king to refuse *Almeyda* entrance; which he soon forced, by beating their forts to the ground, and afterwards took the city by storm, and made slaves of a great part of the inhabitants. He next continued his voyage to the *Angedive Islands*, which are five in number, not far from *Goa*, where, according to his instructions, he built a fort; proceeding then to *Cananor*, where, with the consent of the king, he likewise built a fort, and put a strong garrison into it^g. On his arrival at *Kochin*, he found *Trimumpara*, worn out with years, had resigned the crown to his sister's

The proceedings of Don Francis Almeyda, the first Portuguese viceroy in the Indies.

^g P. LAFITAU Histoire des Conquetes des Portugais, vol. i. p. 277.

younger son *Noubeador*, rejecting the elder because he had deserted him on the last invasion. This occasioned great troubles; but the viceroy put an end to them, and, as a vassal to *Portugal*, fixed *Noubeador* firmly on his uncle's throne. He was a vain and a proud man; but understood the interests of his country, and pursued them. While the Count *d'Abrantes* was in possession of the government, the great island of *Madagascar* was discovered; which received the name of *St. Lawrence*, because first seen on the day consecrated to that saint. Don *Lorenzo Almeyda*, the son of the viceroy, first surveyed the *Mallice Islands*, and then discovered the great island of *Ceylon*, the chief monarch of which he compelled to submit to the protection of *Portugal*. After his return from this expedition, he joined the *Portuguese* fleet, which was to be employed against *Calicut*, the viceroy being determined to fix the security of the *Portuguese* empire in the destruction of that power. Don *Lorenzo d'Almeyda* behaved very gallantly in a great fight at sea, which gave a mortal blow to the naval strength of the *Samorin*; but in that action this gallant young officer lost his life, nor could his body be found. The viceroy gave upon this occasion a very extraordinary testimony of his heroic courage; for, when he was informed of the victory, and of the loss of his son, he contented himself with saying, *All men must die, and Lorenzo could not die better than in the service of his country*^b.

His unfortunate death, in his return from the Indies to the port of Lisbon.

A DESIRE of revenging his son's death, and reducing the whole coast of *Malabar* under the power of the *Portuguese*, were the designs that intirely occupied the mind of the viceroy, in which he might have been greatly assisted by Don *Alphonso Albuquerque*, who was now returned into the *Indies*, and had performed some great exploits; but the jealousy of the viceroy was such, that he not only declined his assistance, but even carried his resentment so high as to confine him in the citadel of *Cananor*, because he knew the time of his government was nearly expired, and the king intended Don *Alphonso* should succeed him (V). But, before he quitted his command, he had the satisfaction of engaging the whole power of the *Mohamedans* at sea, and of gaining a complete victory; by which in a great measure the force of that formidable league was broken, from which the *Samorin* was in hopes of compelling the *Portuguese* to abandon the conquests they had made in the *Indies*. The arrival of the marshal of *Portugal* with a great fleet, and three thousand land-forces on board, put an end to the disputes between the viceroy and Don *Alphonso Albuquerque*; the marshal acquainting the former, that it was the king's express pleasure he should resign his charge, and return home; and that the latter should succeed him, tho' with the title only of general and commander in chief of the *Portuguese* forces in the *Indies*^k. The viceroy accordingly, having resigned the administration, embarked the great riches he had acquired; and, leaving *Cochin*, continued his voyage to *Europe*, which however was fatal to him, through his own imprudence. For, landing upon the coast of *Africa*

(V) In the text we have endeavoured to represent, as briefly as possible, the capital exploits by which the *Portuguese* founded their empire in the *East Indies*; and, in the notes, we propose to add such explanatory circumstances as may render them perfectly clear to the reader; but as to the history at large, and the gallant exploits of particular officers, they are not to be expected, as not falling within the compass of our design. At present it is necessary to acquaint the reader, that *Alphonso d'Albuquerque* sailed from *Lisbon* in 1506 with *Tristan d'Acugna*, having private instructions to take upon him the government of the *Indies*, when the time of the viceroy should expire. He seems to have been intrusted with his master's great secret in its full extent; and with great bravery and diligence assisted his general in destroying the fortresses which the *Moors* had erected on the coasts of *Africa*, to facilitate and protect their commerce in the *Indies*; neither was he less active in the taking their ships; after which services he proceeded with the general to the coast of *Malabar*, and joined the viceroy (25). He then sailed again for the coasts of *Arabia*, in order to ruin the trade of the *Moors*, in which he was very successful; but, disdaining an employment that had so much the air of a pirate, and knowing how desirous the king his master was to add *Ormuz* to his conquests, he came before that island *September* the 25th, 1507; where, meeting with very indifferent usage from the young king's guardian, he attacked, defeated, and burnt, a numerous fleet that was in the port, destroyed

all the ships and small vessels that were built or building, and forced the king of *Ormuz* to become tributary to Don *Emanuel*, and to consent that he should erect a fort. His guardian and prime minister, however, found means, by distributing money, to corrupt some of the officers, and to excite numbers of the soldiers and seamen to mutiny, under pretence that they were employed as labourers at a fort, when they might be making themselves rich by cruising upon the *Moors*. While things were in this disorder, the war was renewed; and the *Portuguese* obliged to abandon their half-built fort, and the island; yet Don *Alphonso* persisted in his design, and resolved to famish the people of *Ormuz*, if they did not renew the treaty, and perform what they had promised; and this he had certainly effected, if three discontented captains had not basely quitted their posts, and sailed for the coast of *Malabar* (26). To justify themselves, they took all the pains they could to irritate the viceroy against Don *Alphonso*; in which they succeeded so well, that he wrote to the governor of *Ormuz*, desiring his friendship, and, disapproving all that had been done against him, promised to procure him ample satisfaction from the court of *Portugal*. In this ill humour he was when Don *Alphonso* arrived, whom he treated with great coldness, refused his company in the expedition he was about to undertake; and, at his return, caused him to be arrested, and sent prisoner to *Cananor*, where he remained for three months, and in that space was very indifferently treated (27).

fitau Histoire des Conquetes des Portugais, vol. i. p. 418, 419.

a with an intent to procure some fresh provisions, his attendants some-way provoked the barbarous inhabitants, so that a fray ensued; and the viceroy, rashly interposing sword in hand in support of his domestics, was unfortunately run through the body by one of the natives with a lance, the end of which had been hardened by burning it in the fire^l. A strange and deplorable death for so great a man; though it must be confessed, that this whole transaction is otherwise reported by some writers, either from better memoirs, or out of tenderness for his memory, in respect to which one circumstance is very remarkable, that, when the news of his death reached the court of *Spain*, *Ferdinand* and *Isabella* went into mourning for him^m (X).

As soon as *Alphonso de Albuquerque* was invested with the government, the marshal of *Portugal* represented to him, that it was impossible to execute the schemes formed by himself, or the court of *Portugal*, without previously reducing *Calicut*, and thereby putting an end to a power which had already given them so much, and was continually threatening fresh troubles. Don *Alphonso* entered readily into this advice; and made the necessary dispositions for the service immediately, attacking the place by land and sea with such fury, that he quickly made himself master of the town, which he burnt; and of the fortrefs, which he demolished. The marshal in the mean time attacked the royal palace, which he likewise carried, after an obstinate resistance; but, finding an immense booty therein, his soldiers fell to plundering, of which the *Indians* taking advantage, surrounded, and cut them all to pieces, being so embarrassed with their plunder, that they were unable to defend themselves. The general, perceiving the danger they were in, advanced, as soon as he was able, to their assistance; but, receiving two dangerous wounds in his passage, was not able to come up time enough to save them; and, in renewing the attack, was so unlucky to be crushed under a large stone that fell from an adjacent building, by which he was so terribly bruised, that his soldiers with much difficulty carried him on board his ship, and made the best retreat they could, after losing in the action four-score men killed, and three hundred wounded, besides the great marshal, who fell a martyr to his own impatience, and the ambition of becoming master of the emperor's palace without any assistanceⁿ.

As soon as *Albuquerque* was tolerably recovered, he formed a design upon *Ormuz*; and, for that purpose, assembled a fleet, and a body of troops, amongst which were two thousand veteran *Portuguese*, that had served some time in the *Indies*; but, on the point of sailing, he altered his scheme, and resolved to attack *Goa*, a large and rich city, in the island of *Ticuarin*, with one of the best ports in the *Indies*. This island, which is about nine or ten leagues in circumference, was esteemed from its situation the most important post on the coast of *Malabar*, it belonging to the king of *Decan*; and the person who commanded for him there was one *Idalcan*, a *Moor* by birth, and a man of great courage and experience. He took all imaginable care to put the place into a good posture of defence; notwithstanding which, the whole island was reduced, and the city of *Goa* taken by storm, the *Portuguese* being assisted by a fleet and army from the king of *Onor*, under the command of *Timoia* his general^o. Don *Alphonso Albuquerque* made his public entry into *Gou* on the 17th of *February* 1510, with great magnificence; and, having settled every thing there in the best order, appointed his nephew *Antonio de Norogna* governor of the city; but *Gaspar de Payva*, director of the commerce, and *Timoia*, had the charge of the revenues, which amounted to eighty-two thousand pieces of gold, or crusadoes, *per annum*. This conquest was not long maintained; for *Idalcan* returned with such a force as enabled him to recover the place; and the new governor *Antonio de Norogna* was slain in the dispute, which however served only to increase the desire of *Albuquerque* to raise the credit of his nation, by securing a country and city of such consequence^p (Y). This, after a war of long continuance,

(X) At the time that the viceroy quitted his government to Don *Alphonso Albuquerque*, he went immediately on board his ship, as being unwilling to trust himself in the hands of a person he had used so ill; and, at his return to *Portugal*, he saw with great pleasure abundance of officers embark with him out of spite to *Albuquerque*, under whom they pretended they disdained to serve; tho' in fact, not knowing that he was intended to command after the departure of the viceroy, they had provoked him to such a degree, as, judging of his heart by their own, they conceived he could never forgive. It was these officers who gave the viceroy that fatal advice which proved his ruin; in which the standard of *Portu-*

gal was taken by the negroes, and eleven of these captains lost their lives in a dispute which would have done them no honour if they had been conquerors (28).

(Y) The history of this enterprise on *Goa* would make a small volume of itself; and demonstrate, that the high praises bestowed upon *Albuquerque*, by his countrymen, were not founded in partiality, but truth. He undertook it with the consent of his officers, which he procured by shewing many concurring circumstances that seemed to assure them of victory, all owing to precautions which himself had taken without their knowledge. He made himself master of the place with ease, though the strongest, the best garrisoned, and at that juncture the

(28) P. Lafitau Histoire des Conquetes des Portugais, vol. i. p. 431, 432.

continuance, he accomplished; and this city became afterwards, viz. in 1559, the seat of the governor, and the see of an archbishop and primate, of the *Indies*, which lofty titles it still continues to bear.

Proceeds next to Malacca; and, after a vigorous resistance, becomes master of the place.

THE conquest of *Goa*, though in itself of vast importance, was far from satisfying the ambition of *Albuquerque*, whose mind was continually occupied with the desire of extending the power of his prince, and his own reputation. It was with this view that he sailed with a great fleet to the road of *Malacca*, where he demanded the *Portuguese* prisoners the king of that place had in his hands. The *Indian* monarch put him off with fair words and promises; and the general, being afraid that he might put the prisoners to death, bore with this treatment for some time; but at last was so provoked, that he made an attempt on the place, and actually set it on fire; upon which the king of *Malacca* immediately sent all the prisoners, and offered to make peace with the *Portuguese* upon their own terms. Those prescribed by *Albuquerque* were pretty high; for he demanded leave to build a fort where he thought fit, reparation of all damages done to the *Portuguese*, and a sum of money equivalent for the expence of this expedition. The *Indian* monarch absolutely refused to yield them; and thereupon hostilities recommenced on both sides, which ended in *Albuquerque's* attacking the city of *Malacca* by sea and land with great fury; and, after an obstinate resistance, it was taken by storm, and given to the pillage of the *Portuguese* soldiers; and we may judge of the riches of the place by the clear fifth which was reserved for the king, and which was bought on the spot by the merchants for two hundred thousand pieces of gold^a.

Obliged to take extraordinary precautions for the preservation of the city.

THE general immediately caused a fort to be erected for the security of the place; and, putting a good garrison into it, he gave the command thereof to *Rodriguez Patalino*: he raised one *Utikut*, an *Indian* lord, who, by deserting the king of *Malacca*, had been very useful to him, to the post of supreme magistrate of the *Indians* and *Mohammedans*; and, having received the compliments of several *Indian* princes upon his victory, he prepared to return to *Goa*. Before he quitted the place, a conspiracy was discovered, in which *Utikut* was principally concerned, who thought to have made himself master of the place. As his letters were intercepted, the proof against him was clear; and the general ordered him and his son to be executed, notwithstanding his great age, and an offer made him of an hundred thousand pieces of gold to spare their lives^c (Z). After this, and staying there near a year, he left an experienced officer com-

^c Purchas Pilgrims, vol. i. p. 33.

most important, place in the *Indies*. He was driven out of it as much by the seditious practices of his own officers, as the superior force of the enemy. He wintered in the port in spite of all their endeavours to the contrary, and when only those on board his own ship could be depended upon. He gave an instance of his firmness, even in that situation, of which there is scarce an example in history: A *Portuguese* gentleman of distinction debauched one of the *Moorish* ladies under the general's protection, for which he was condemned to be hanged. The whole fleet mutinied to preserve him; and deputed two of the most seditious captains to know by what authority he proceeded to such an act of severity. Don *Alphonso* civilly invited them on board his ship; and told them, he would convince them that he had not exceeded his power. As soon as they quitted their boat, and came to him on the deck, he said, *I do it by the same authority that I do this*; and ordered them to be put in irons till they had seen the execution performed; which frightened the whole fleet into obedience. Disliked by many, deserted by some, and obeyed thro' fear by most, he persisted in his design; and, when he attacked *Goa*, told his officers it was for the king's service, for the honour of the nation, and for the security of themselves; adding, *I desire to be followed only by those who have a just sense of these motives* (29). The soldiers and seamen giving a shout of applause, the officers found themselves obliged to do their duty; and, to efface the memory of past transactions, did it effectually, and made themselves masters of the place. The prodigious importance of *Goa* was not discerned by the *Portuguese* till after it was in their possession; and then they readily confessed, that *Albuquerque* acted from very wise principles in pushing things so far as he did, to obtain a settle-

ment the most advantageous by its situation in the midst of the *Malabar* coast, the most defensible from its natural strength, and the most commodious from its safe and capacious port. Besides, this conquest was so much the more valuable, as it was obtained chiefly at the expence of the *Moors*, who intended to have made it a place of arms for facilitating their great design of driving the Christians out of the *Indies* (30).

(Z) The first attempt to fix a settlement at *Malacca* was made by *Diego Lopez de Sequeira*, who, by orders of the viceroy *Almeida*, sailed thither, towards the close of the year 1509, with a squadron of five sail. At that time *Malacca* was one of the richest places in the *Indies*, having in it several merchants able to fit out three or four ships with cargoes at their own expence; and was the centre of the commerce between the spice islands, and also between *China* and the rest of the *Indies*. At first *Sequeira* was well received by the king, whose name was *Mahmut*; but at length, thro' the insinuations of the *Moors*, he attempted a general massacre of the *Portuguese*, and was very near completing it. A great many he killed, some prisoners he took, and forced *Sequeira* to retire in so weak a condition, that he was obliged to sink one of his ships, that he might have men enough to navigate the other four, two of which he sent with the news of his misfortune to the general, and with the other two he sailed for *Portugal*. It was to revenge this insult, and to recover the *Portuguese*, that Don *Alphonso* sailed thither in the month of April 1511; and, finding no greater reason to rely upon the king than *Sequeira* had done, he boldly attacked, and with infinite difficulty achieved the conquest of, that important place, which opened a correspondence with the islands of *Sonda*, and with the empire of *China* (31).

(29) J. de Barros, Decad. 2. l. x.
(31) Purchas Pilgrims, vol. 1. p. 32.

(30) Guyon Histoire de l'Inde Orientale, vol. i. p. 385, 386.

a mander at *Malacca*, with a sufficient number of ships and men, and sailed for the coast of *Malabar*; but, in his passage, met with such a storm as destroyed the greatest part of his fleet, with all the riches on board; and it was with very great difficulty that the general himself escaped, and with his shattered vessels returned to the port of *Cochin* ¹.

AFTER remaining a small space of time there, and putting things in the best order, Don *Alphonso* returned to *Goa*, where affairs were in some confusion; but he soon restored them, and humbled all the *Indians* in his neighbourhood to such a degree, that the *Samorin* himself sent embassadors to desire peace; and to offer his consent to build a fort at *Calicut*, in what place he thought fit. The emperor of *Ethiopia* also sent an ambassador to *Goa*, and from thence to *Portugal*; and so strong was the terror of the *Portuguese* arms now become, that *Idalcán*, and

b the princes that had given the greatest opposition to their settlement, were glad to atone for their indiscretion by offering to accept such terms as Don *Alphonso* thought fit to prescribe. Such a splendid scene of prosperity would certainly have turned the head of a man of less abilities than the great *Albuquerque*, to whose capacity the *Portuguese* were more indebted for their conquests than to the armies and fleets which he commanded ². He loved the antient frugality of his country, and did not suffer himself to be at all corrupted by the power or wealth that he possessed; and indeed he made no use of either, but for the service of the crown.

WHEN he observed it was the disposition of the *Indians* to measure every thing by outward pomp, he seemed to give into their notions; and affected upon public days prodigious magnificence in even the minutest things; yet, in the midst of all this, he relaxed nothing of his former severity, but lived, in the midst of public splendor, as coarsely, in respect to his person, as any private man. In exacting the dues of the crown he was somewhat severe; but with regard to his private fortune, he took so little care of it, that, except his public appointments, he had scarce any thing he could call his own. His officers were his children; and he took as much pains in teaching them their duty, as an affectionate parent does in the education of his sons. He overlooked miscarriages; but punished treachery, or neglect of duty, with inexorable severity. He was extremely ready to reward; and all his discourse at his table, was of the great actions performed by his officers; while he was not barely silent as to his own; but would not even permit others to commend them. It was a saying frequent in his mouth, that he was afraid of nothing but flattery; and it was observed, that he never preferred any who attempted to gain his favour that way. This we may consider as very singular in his character, for we rarely find great men inaccessible on this side; but at the same time we may regard it as a principal cause of his being so well served, since merit was the sole means of gaining his good graces; and flatterers, who are always false and unworthy creatures, stood excluded during his administration. It has been well observed by some of the *Portuguese* historians, that the vanity of *Almeyda* made him affect the state of a prince, when the power of the *Portuguese* was but indifferently established; whereas the modesty of *Albuquerque* was most conspicuous when his victories had left him nothing to fear, and when the greatest princes of the east sent their embassadors to intreat his friendship ³. Yet, with all these shining qualities, this hero wanted not his faults: his ambition was boundless; and, carried away by an extravagant desire of extending the dominions of the crown of *Portugal*, he little regarded whether the measures he took for that purpose were just, or not. In his private life, he was a man of the strictest honour; in his public character, truth will not permit us to say so much. The remaining part of his history will sufficiently demonstrate the impartiality of this remark (A).

HE made himself master of *Goa* without any other pretence, than that it was necessary to the crown. He seized *Malacca* for the same reason; and meditated the conquest of *Ormuz* from the like motive, which he accomplished in the following manner. He had formerly,

¹ P. LAFITAU Histoire des Conquetes des Portugais, vol. ii. p. 160. l. v. c. 3.

² J. DE BARROS, Decad. ii. l. x. c. 5.

³ MAFFÆI Hist. Indica, P. i.

(A) It has been alleged, in defence of this great man's character, that he found the scheme of *Vasquez de Gama* absolutely impracticable; and that there was no possibility of preserving the trade, but by becoming master of the *Indies*. Allowing this to be true, it will justify him as a politician beyond question; but the point is, to know how far either he, or the king his master, had any right to impose a yoke upon the necks of those nations, with whom having had formerly no correspondence, they could not pretend to have been injured; and who, in fighting against them in their present circumstances, acted only in their own defence. Be this as it will, his

justice and equity, independent of his ambition, were such as those who envied him, amongst his countrymen, could not deny; and all the inhabitants of the *Indies*, tho' of different religions, freely acknowledged while living, and gave a most extravagant proof of the sense they had of it after his decease; for, whenever they were oppressed or ill treated by his successors, they went and made prayers, and left offerings, upon his tomb, invoking the spirit of the great *Albuquerque* to protect them from those injuries, to which they were never exposed while it dwelt in his body (32).

(32) P. Lafitau Histoire des Conquetes des Portugais, vol. ii. p. 253.

that is, before he was declared general of the *Indies*, as we have shewn, attempted to raise a citadel there, without being able to effect his design; but the power of the *Portuguese* being so much increased, that all the commerce of the east depended upon them, the king of *Ormuz* had been obliged to become tributary, because his city and subjects depended upon trade. The name of the king of *Ormuz* at this time was *Torun Shâh*, a young prince of no great abilities, and of a weak and timorous spirit. In the beginning of his reign he was entirely governed by an old minister whose name was *Noradin*, a man of immense cunning, but of no enterprising genius; and who, to support himself, and secure the administration to his family, brought three of his nephews to court, and gave them great posts in the government and in the army. *Hamed*, the youngest of these, in a short time, by his intrigues, gained such a share of power, that neither the king nor his uncle had any more than a shadow of authority left.

His last enter-
prise on Or-
muz.

Don *Alphonso Albuquerque*, being informed of this, assembled an army; and gave out, that his design was to attack *Aden*; but, when at sea, he sailed directly to the coasts of *Persia*, and appeared before *Ormuz* when he was least expected. He demanded that the citadel should be immediately put into his hands, *Portuguese* factories settled in the place, and that the king should acknowledge himself dependent on the crown of *Portugal*. *Torun Shâh* judging it better to be the vassal of a sovereign prince than the slave of his own minister, exerted his authority to lessen his own dignity, admitted the general into the citadel, assigned the *Portuguese* some of the best houses in the town for their factory, and ordered their flag to be displayed upon the palace. *Hamed* could not help discovering his impatience at a change so sudden and unexpected; to prevent the effects of which, he formed some designs against the general's life; of which Don *Alphonso* was no sooner informed, than he gave orders to some of his soldiers to dispatch him; which they without ceremony performed. If the general had stopped here, it had been well enough; but his projects were not of a nature to be bounded by any thing but the absolute possession of what he aimed at; and therefore under a pretence that a fleet was coming from *Egypt* to make a descent upon the island, he demanded all the artillery of the place, which he said was necessary for preserving it from the enemy. *Torun Shâh* assembled his council; who declared they knew nothing of any such design, and that they thought it very imprudent to comply with the general's desire. The cowardice of the king got the better of the good sense of his ministers; the artillery was put on board, which the general would never restore; but, having made *Pedro d' Albuquerque* governor of the citadel, seized fifteen of the princes of the blood, with their wives and children, and carried them away with him to *Goa*, that he might have hostages for their good behaviour. And thus, for the present, *Ormuz* was subjected to the *Portuguese*; by which another part of Don *Emanuel's* great scheme was happily effected, if indeed that can be said with propriety where justice and success are not united * (B).

Complimented
by the Shâh of
Persia, and
other Indian
princes, on this
conquest.

THE *Portuguese* general had the satisfaction, soon after this, of receiving an ambassador from the Shâh of *Persia*. That monarch could not but see with apprehensions so powerful a nation established so close to his own coast; but necessity taught him to dissemble; and, besides, he thought it better became a prince to put on an appearance of friendship than of fear. Don *Alphonso* penetrated the true motive of this embassy; and with very great sagacity managed it so, as to remove the jealousy of the *Persian*, and to convert a suspicious compliment into real confidence. He received the ambassadors very respectfully in public; in private very graciously: he expressed a great esteem for the person of the Shâh; and, in return for his presents, sent him a train of field-pieces, with some good engineers to manage them. The Shâh was equally surprised and pleased with this polite behaviour in the Christian general, who very wisely contrived by this measure to put it in the power of the *Persians* to act successfully against the *Turks*, who were the common enemies both of them and of the *Portuguese*. It is certain that Don *Alphonso d' Albuquerque* was one of the most formidable, as well as one of the most determined, enemies that nation ever had: he foresaw that they would be one day masters of *Egypt*; and he knew, that when they became so, they might, by wise management, secure the trade of the *Indies*. This he resolved to prevent; and, with that view, formed two

* MAFFÆI Hist. Indica, P. i. l. v. c. 7.

* GUYON Histoire des Indes Orientales, vol. i. p. 388, 389.

(B) In a former expedition, in the year 1513, Don *Alphonso* made an attempt upon the city of *Aden*, then in the power of an *Arabian* prince, well fortified, and with a garrison of nine thousand men under the command of an emir; in which design the general failed, not without considerable loss. It is generally acknowledged, that he might, notwithstanding, have reduced the city, if he had persisted with the same firmness that

he was wont to do; but he began to discover, that his own system was as impracticable as that of *Gama*; and that, if he had taken *Aden*, it would have required a greater garrison than his whole army; and therefore he chose to bend his forces against *Ormuz*, where he took such precautions as enabled him to keep it with a very small body of forces; which expedition happened in 1515, and was the last of his conquests (33).

^a schemes that he did not live to execute, but which, notwithstanding, will for ever do honour to his memory, and shew that his genius was as extensive as his ambition ^y.

THE first of these projects regarded the reviving the trade by the way of *Alexandria*, in ^{which he knew the} *Venetians* would have assisted the *Turks*, or any other barbarians whatever, ^{for their own sakes.} To prevent this, he insinuated to the emperor of *Ethiopia*, that, for his ^{own security against such bad neighbours,} the best step he could take would be to divert the ^{chanel of the Nile,} by cutting a passage for it into the *Arabian* sea before it reached *Egypt*. ^{If this design had been practicable,} it would have rendered the greatest part of *Egypt* uninhabitable, and made it at the same time impracticable to renew the old method of transporting *East India* commodities from the *Red Sea* to *Alexandria*, which was the principal point he had ^{in view.} His second project was, to transport three hundred horse from the island of *Ormuz*, to the opposite coast of *Arabia*, which is but seventeen leagues distant; and this party he thought sufficient to plunder the tomb of *Mohammed* at *Mecca*, which he conceived must have been attended with advantageous consequences, and more especially must have struck the *Mohammedans* in the east with terror and amazement, and so have diverted that concourse of people thither, which in some measure supports the commerce of *Arabia*, and consequently would have promoted in a great degree his other design of rescuing the trade of the east out of the hands of the *Turks*, and other *Mohammedan* nations ^z. In a very little time after the ^{return of Don Alphonso to Goa,} he was seized with a distemper which in a few days brought him to his end, at the age of sixty-three. He was called by the *Mohammedans*, *Albuquerque* ^c *Malandy*, because he was born at *Melinda* in *Africa*, which in all the eastern tongues is called *Malanda*; by the *Portuguese* he was styled, and that very justly, *Albuquerque the G R E A T*. He was the ablest statesman, and by far the most consummate general, they ever had in the *Indies*, and left their affairs in the best situation; and yet he performed all the great actions of his life with a very inconsiderable force. For, with thirty ships he took *Calicut*; with twenty-one he became master of *Goa*; with twenty-three he surprised *Malacca*; and had no more than twenty-two in his expedition against *Ormuz*. The death of this excellent commander, though at so great an age, proved a considerable disadvantage to the *Portuguese* affairs; and would have been a much greater, if his successor had not been at that time at *Cochin* with a squadron of ten sail, with which he was just arrived from *Portugal* ^a. This general *Albuquerque* left all the settlements in the *Indies* in perfect peace, and in admirable order, with such a body of regular troops, as were capable, not only of maintaining what was acquired, but also of adding such conquests as the king or his successors should judge necessary. His funeral was performed with great solemnity; and his body interred in a chapel dedicated to the Blessed Virgin, he had built at *Goa*, and which was much enlarged by his son *Alphonso Albuquerque*, who lived to the age of fourscore, and wrote a large book of memoirs, in which he recorded his father's actions ^b (C).

(C) This truly great man, who had done such wonders for the crown of *Portugal*, and who had the honour to serve one of the wisest and best princes that ever sat upon a throne, had notwithstanding the misfortune to die in disgrace. His ambition, his austerity, and his strict regard to justice, raised him abundance of enemies. Most of these were returned into *Portugal*, where they were continually filling the king's ears with insinuations to his prejudice, as if he had his own interest more at heart than the king's; to which, however, no credit was given, till unluckily Don *Alphonso*, suspecting that *Goa* might be less carefully preserved than the importance of the place merited, demanded it, with the title of a duchy, as a reward for his services; and this did what his enemies could never have done, viz. inspired

the king with jealousy, and a resolution of putting his affairs into other hands. Don *Alphonso* received the news when he lay upon his death-bed; and is said to have expressed himself in these words: "How! *Suarez* governor of the *Indies*! *Vasconcellos*, and *Diego Pereira*, whom I transmitted to *Portugal* as criminals, preferred! I incurred the hatred of men by my love for the king, and am disgraced by him through his prepossession for other men. To the grave, unhappy old man, it is time thou wert there: to the grave!" He wrote a letter to the king, in favour of his son, who was a natural child; very short, and concluding with these words: "I say nothing of the *Indies*; they will speak for themselves, and for me." He died December 16th, 1515, in the sixty-third year of his age (34).

S E C T. IV.

The succession of the Portuguese viceroys; and a succinct view of their respective administrations, to the government of Don Constantine Bragança, under whom their empire arrived at the summit of its grandeur.

Lopez Suarez de Albergaria succeeds in the government, not to the fortune of Albuquerque. **T**HE successor of Don *Alphonso Albuquerque* was *Lopez Suarez de Albergaria*, who without delay entered upon the administration of affairs. He was a person of great candour and integrity; and those virtues are said to have rendered him but little qualified for his office. He made the necessary dispositions for preserving and supporting his countrymen in the posts of which he found them possessed. He likewise dispatched a fleet to *China*, which was in truth the wisest act of his government^c; but he was not over-forward in seizing new countries, or in forming designs to the prejudice of his neighbours. Upon receiving intelligence that the sultan of *Egypt* had fitted out a great fleet in the *Red Sea*, he sailed thither with the whole *Portuguese* naval force, which was very far superior to any thing that had been seen in those parts. Fortune seemed to favour him extremely at his entrance upon his government; for the people of *Aden*, finding their forces much diminished, and the fortifications of their city in a great measure ruined, were so apprehensive of being attacked by him, that they sent deputies to offer their submission. He received them kindly, accepted of refreshments; and, relying upon the professions they made, took no care either to erect a fort, or send a garrison, to secure the place: of which neglect the people soon took advantage; fell to repairing their walls with great diligence; and in a little time put themselves into such a posture of defence, as enabled them to make him sensible of his oversight, by despising the orders he afterwards sent them; which made him repent of his credulity, and discern the bad effects of his want of diligence when it was too late^d. He shewed the same want of spirit in opposing the progress of the *Turks*, who in a short space of time made themselves masters of *Egypt*, and began to make themselves formidable as well in the *Persian* as in the *Arabian* gulf; so that it became daily more and more visible, that, notwithstanding his great virtue, and strict regard to justice, he was by no means fit for the dignity to which he was raised; and in all probability the affairs of the *Portuguese* in the *Indies* had suffered still more through his ill conduct, if *Diego Sequeria* had not arrived from *Portugal*, and taken upon him the command^e.

Don Diego Sequeira enters on the administration with better success.

Dec. 15, 1521.

THE new viceroy landed at *Malacca*, and settled every thing in those parts to the benefit and satisfaction of the *Portuguese*. He afterwards turned his arms against the *Mohammedans*; and reduced the king of *Baharen*, an island in the *Persian* gulf, who had revolted from the king of *Ormuz*, who was a vassal to the crown of *Portugal*; which, as it was a very wise and well conducted enterprise, contributed not a little to spread the reputation, and extend the power, of the *Portuguese*. He miscarried, however, in some attempts upon *Diu*; and began to be sensible, that the carrying on of continual wars, in order to prosecute the great design of driving the *Mohammedans* out of *India*, had much weakened the force of his countrymen, and thereby rendered it very difficult for them to support that vast empire which they had obtained. His three years being expired, he was succeeded by Don *Duart Menezes*; who quickly found himself involved in a variety of contests, against which he struggled with great patience and fortitude, and with some diversity of fortune^f. In the first year of his government died *Emanuel the Great*, king of *Portugal*, who had happily acquired, prudently kept, and by dint of his admirable policy extended, the influence of his crown over a great part of *Asia* and *Africa*. His great secret in government, by which, through his whole reign, he was continually acquiring victories, without any remarkable check or reverse of fortune, was this: he never trusted to chance or expedients. His revenues were very large, which he managed with great frugality: he wasted nothing upon favourites or pleasures; he rewarded merit to the full, and commonly beyond the expectation of its possessor; he sent out new fleets every season, and never suffered the least relaxation in his naval or military discipline: he very easily pardoned mistakes, but never fraud; and punished treachery with the utmost severity^g.

John III. sends forces into the Indies.

He was succeeded by his son *John* the third, who, being desirous to pursue his father's maxims, immediately sent a reinforcement of ships and men into the *East Indies*, by which *Menezes* was enabled to prosecute his designs in all parts of the *Indies*, which, so long as the government remained in his hands, he successfully performed. The next year *Vasquez de Gama* Count *de Videguira* was appointed viceroy of the *Indies*; but, as he was in a very advanced age, it being improbable he should live so long as the usual term of three years, a com-

and ordered that the present viceroy *Lopez* should pay to Don *Pedro* twenty thousand crowns, as the profits of his two years government; and made a regulation for the future, that, on the opening of these billets of substitution, absence should not prejudice in any degree, provided the person named was between *Cape Cori* and *Diu*, which, taking in the best part of the *Indian*, rendered it impossible that any such accident should fall out, as that which had occasioned all this confusion. But, as Don *Lopez Vaz de Sampayo* had, in other respects, behaved well, it was judged expedient to leave him in the possession of the government, more especially since he was obliged to part with all the money he had hitherto acquired in it.^a

Don Lopez
Sampayo con-
firmed in the
government
by the king
his majesty.

As soon as the king's orders arrived in the *Indies*, Don *Lopez* executed them with all imaginable punctuality, reconciled himself to the friends of Don *Pedro Mascarenhas*, and behaved in every other circumstance as became a worthy man and a good subject. He had a strong desire to blot out, by his great services, all memory of former mistakes; and therefore, having intelligence of a great fleet of one hundred and thirty sail, bound to *Mecca*, with spices, he attacked them in their passage, dispersed and destroyed a great part, and took the rest. He likewise reduced a formidable pirate, who had taken possession of a place called *Perca*; and had amassed so much wealth, that, when the booty came to be divided amongst the *Portuguese* soldiers, every private man had a thousand dollars for his share.^b He gained not long after another victory over the *Indians* and *Mohammedans*; and then returned to *Goa*, where, knowing that his term was near expiring, he made all the preparations requisite for the reception of his successor, and omitted nothing that was in his power towards putting all things into the best posture possible. His success in this respect was equal to his zeal; so that the best historians agree, that, at the time he delivered up his charge, their affairs in the *Indies* were, in all respects, in the most flourishing condition that they had ever been from the time of the first expedition of *Vasquez de Gama*; for the royal palace, the cathedral, the convent, and the great hospital at *Goa*, were completed; all the fortresses upon the coasts and in the islands in thorough repair; every governor at his post; every garrison complete, the magazines well furnished; and, to crown all, the fleet the most numerous, and in the best order, that had been ever seen, consisting, in the whole, of one hundred and thirty sail, of which fourteen were large men of war, six royal frigates, eight light armed vessels, six brigantines, and one hundred and two feluccas; and, before he laid down his command, he issued from the royal treasury three hundred thousand crowns in gold, by which all the arrears to the fleet and army were intirely discharged. Such was the situation of things when Don *Lopez* quitted his office.^c (D).

Nunho da
Cunha, gen-
eral of the In-
dies, and his
successors, to
the death of
Don Juan de
Castro.

His successor was *Nunho da Cunha*, who, setting out from *Portugal* with a commission to be general, accompanied by his brother *Simon de Cunha*, who was constituted admiral of the *Indies*; and in his way thither, attempting to put in at *Mombaza*, in order to pass the winter there, was refused entrance by the king, but forced a passage into the port; and, making himself master of the town, gave the plunder to the mariners, and set it on fire. Sailing from thence early in the spring, he proceeded to *India*; where he was no sooner arrived, in 1529, than he resolved to make himself master of the town and fortress of *Diu*, situate in an island of the same name, near the entrance of the gulph of *Cambaya*; to which purpose, repairing thither with the fleet, upon his appearance off the place, he received an ambassador from *Badur* king of *Cambaya*, with offers of yielding the fortress into his hands; which being accordingly performed, it was committed to the custody of *Anthony Silveira*, to the great satisfaction of the *Portuguese*, who had long desired it.^d Not long after, the king of *Cambaya*, at the instigation of the *Turks*, who were very desirous of getting *Diu* into their hands, made an attempt to dispossess the *Portuguese*, and recover the place; but was unfortunate in the undertaking; he with his *Turkish* auxiliaries being intirely routed, most of his fleet sunk, and himself mortally wounded in the engagement.

(D) This governor was certainly a man of great parts, and one who had the interest of the crown and nation of *Portugal* very much at heart; but the manner in which he arrived at the dignity of general of the *Indies* had created him abundance of enemies, who, under various pretences, traversed his designs, and hindered him from acquiring that reputation which otherwise would have attended his indefatigable endeavours. He was more cautious of engaging in wars than most of his predecessors; but, when he found himself attacked, or under an absolute necessity of attacking, he

did his duty with courage and spirit, and would have pushed his success farther, if the officers who served under him had not, out of envy, restrained him. In reference to the civil government, which was more in his power, he did remarkable service to his nation, by regulating the functions of inferior officers in such a manner as to prevent disputes; and, by employing such as were most capable, and had served longest in the *Indies* (35); and yet he was imprisoned by his successor, and suffered very much after he returned to *Portugal*.

(35) P. Lafitau Histoire des Conquetes des Portugais, tom. iii. p. 207.

- a Soon after this, *Solyman*, Bashaw of *Cairo*, came to besiege it with a fleet of sixty-two galleys, six galleons, and other smaller vessels, having on board four thousand janissaries, sixteen thousand other soldiers, besides gunners, seamen, and pilots; and, immediately on their arrival before the town, were joined by eighty sail of ships of *Cambaya*, and some land troops belonging to the young king *Mohammed*. The *Turkish* bashaw, landing his forces, battered the fortresses with sixty pieces of cannon; but the governor, with great bravery, sustained this attack till the arrival of *Garcias de Noronha*, the new viceroy, from *Goa*, to his assistance; who, by a stratagem, which was no more than putting out four large lanterns from every ship in his fleet, so terrified the *Turks*, that they raised the siege in the utmost confusion, leaving behind them their tents, ammunition, artillery, and above a thousand wounded men, besides the like number that were foraging; all which fell into the hands of the *Portuguese*.^a Afterwards *Mohammed* submitted to the crown of *Portugal*; and *Johi da Castro*, who succeeded *Alphonso de Sosa*, who followed *Stephen Gama*, the successor of *Noronha*, as viceroy, in whose time the *Cambayans* and *Turks* made another attempt on *Diu*, but with the like success, Don *Johi da Castro* routing them both by sea and land with a very great slaughter; after which, he added several works to the place, and raised a new citadel in a more advantageous situation, and composed of much better materials, than the former; which secured it for a considerable time. This worthy person did not, however, long survive; though he had the satisfaction, a little before his death, of receiving a very kind letter from the king his master, together with a commission which continued him in his office three years more, an augmentation of his salary, and a present of ten thousand pieces of gold.^b (E).

A. D. 1542.

- c Upon consulting the billets relative to the order of succession, the first name that appeared was that of Don *Pedro de Mascarenhas*; but, he being already sailed for the coast of *Portugal*, there was a necessity of opening the next billet, in which was found the name of Don *Garcias de Sa*, an old officer of the crown, universally esteemed and admired. He entered upon his administration by completing whatever remained unfinished of the wise and great plan formed by his predecessor; and, though he lived but a single year, he added fourteen stout ships to the fleet of *Portugal*, and performed many other services that were very useful to succeeding governors. Don *George Caprol* was next called to the command; and, soon after, found himself engaged in a war with the *Samorin*, whom he quickly reduced to the necessity of demanding peace; and had performed greater things, if Don *Alphonso Norognes* had not arrived with the title of general of the *Indies* from *Portugal*, which put an end to his commission.^c It was during the government of this general that the *Turks* attacked *Ormuz*, and were very near becoming masters of that fortress; but at length the siege was raised. Some other disasters happened during his administration, which lasted about four years; and, at the end of this space, he was succeeded by Don *Pedro de Mascarenhas*, who died in a year after he was settled in his new dignity. His place was supplied by Don *Pedro Barreto*, who found himself engaged in perpetual wars with the *Indians* and *Mohammedans*, against whom he acted with courage and success, till he was relieved by Don *Constantine de Braganza*, brother to the duke of the same name, the first viceroy of the *Indies*, appointed by the regency after the death of King *John*, and one of the wisest and worthiest men intrusted with that great office; and under his government, every thing prospered in such a manner, that the *Portuguese* persuaded themselves their empire would be as lasting in the *Indies* as it was glorious and extensive; but they were quickly convinced of their mistake, and that there is nothing so fleeting and transitory as human prosperity.

The government devolved on Don *Garcias de Sa*, who discharged it with honour.

^c MAFFEI Hist. Indica, P. ii. l. xvi. c. 5.

(E) It is a point of justice due to these viceroys and governors, to acknowledge, that, by their courage and vigilance, they defeated all the attempts of the *Turkish* emperors to establish a naval power in the *Indies*, notwithstanding the measures they took for that purpose were well contrived, the fleets they employed powerful, and the forces on board them numerous, it was by their conduct in this respect that not only the *Portuguese* were maintained in their empire, but that the power of the Christians was established in these parts; for if the *Turks* had ever prevailed so far as to have made them-

selves masters of *Diu*, and a few fortresses on the coast of *Malabar*, they must have carried all before them; for the *Moors* would have every-where revolted in their favour; and zeal for religion concurring with their temporal interests, they would never have desisted till they had brought things into their former situation, or, it may be, would have invaded *Europe* in their turns with that naval force which they had raised in the *Indies* (36). But the wise dispositions of Providence prevented this, by granting these repeated victories of the *Portuguese*.

(36) *Baldæus History of Malabar*, c. 12.

S E C T. V.

A concise representation of the nature of the Portuguese dominion in India, and a more particular account of their great governments of Mozambique and Ormuz.

The great empire erected by the Portuguese in the space of sixty years.

IN the space of about threescore years they had raised such an empire in the east, as to those who are competent judges will appear truly wonderful; their power extended on one side as far as the utmost limits of the coast of *Persia*, and their influence over all the *Persian* gulph; some of the smaller princes in *Arabia* were their tributaries, some their allies, and all lived under the greatest awe and apprehension of them. On the other side of *Arabia* they had an intercourse with, and an influence over, the emperor of *Ethiopia*, or of the *Abyssines*; so that they might be truly said to command from sea to sea. Along the coast of *India* and the frontiers of *Persia* they were in possession of almost all the ports and islands that were of any consequence, such as *Diu*, *Daman*, *Chaul*, &c. They possessed the whole coast of *Malabar*, from *Cape Ramoz* to *Cape Commorin*; they were masters also of the coast of *Coromandel*, of the gulph of *Bengal*, of the city, fortress, and peninsula, of *Malacca*; the potent island of *Ceylon* was tributary to them, so were the islands of *Sonda*; the *Moluccas* also held intirely under their obedience; and, which were points of felicity in some measure peculiar to the selves, they obtained a settlement in the empire of *China*, and a free trade with the inhabitants of *Japan* (F).

A scheme of the adventures and successes which gave the Portuguese empire its raising, its extent, and its fall.

WE have shewn from what small beginnings this vast empire was raised; we have given a succinct account of those brave men, by whose conduct and courage such mighty things were achieved; and though we have studied conciseness as much as possible, yet we have stated in a clear and chronological order the principal events that happened till the *Portuguese* empire in the *Indies* rose to its greatest height. Should we continue this method down to our own times, it would draw this history into a vast extent^a, without contributing much to that end which is the object of our labours; we will therefore vary a little from the plan hitherto pursued, and endeavour to represent to the reader, with as much brevity and perspicuity as is possible, the nature of the *Portuguese* dominion in the *Indies* while in its vigour, the consequences of it to the crown of *Portugal* within that period, the true causes of its gradual and almost total total declension; add to which, that no part of this subject, which can be of real utility, may remain untouched, we will mention in their natural order the principal fortresses and colonies erected or established by that nation in these parts, and point out the time and means by which they have fallen into other hands; lastly, we will describe the city of *Goa*, and the district round it; and give the reader a competent view of the poor remains of that prodigious power, the rise and progress of which has been hitherto our subject.

Account of the various attempts made by the Portuguese to extend their empire, and of the various nations they conquered.

WE hope, by this manner of digesting the copious materials that are in our power, we shall effectually avoid all tedious and unnecessary repetitions; since, with respect to the *Portuguese*, what chiefly requires our notice, is, the real sources of their decay, and the precise times in which they were dispossessed of their settlements; for, as to the more interesting particulars of such transactions, they belong properly to the succeeding sections, in which we are to relate the progress of other nations in the *East Indies*; which being in a great measure at the expence of the *Portuguese*, it was a thing incumbent upon us to prevent relating the same facts over and over. But, as impartiality is also a point of the highest consequence, we shall carefully consult the *Portuguese* historians in that part of our work likewise, that the reader may see things in a fair and true light, and not as they are commonly represented by those who have the honour of some particular nation at heart, and therefore study to give a fair colour to all their enterprises, as if the progress of power was the progress likewise of virtue and justice; whereas in reality it will be frequently found the very reverse, except in regard to the dispo-

^a GUYON Histoire des Indes Orientales, vol. i. p. 393.
Portugais, vol. iv. p. 350.

^w P. LAFITAU Histoire des Conquetes des

(F) It was this prodigious extent of their dominions, the absolute command they had over the natives, and the distribution they made of the different kinds of commerce through *India*, that enabled the *Portuguese* to accumulate such immense wealth, and to make such prodigious returns to *Portugal*. But in their extensive dominions, and in the dispositions for maintaining them, the seeds of their dissolution lay hidden: for, by acquiring estates in the *Indies*, which descended to their

posterity, the *Portuguese* grew effeminate, and, with none of the virtues, and very little of the courage, of their ancestors, behaved with a degree of arrogance unknown to better times. In *Portugal*, again, they measured the prosperity of the *Indies* by the profits they produced; and troubled not themselves what character any officer bore, but what fortune he brought home with him from thence (37).

a fitions of Providence, that frequently makes use of the same vices and passions in one set of men, to punish those acts of violence and rapine that have been committed by others *.

The supreme power, while the *Portuguese* remained masters of the *Indies*, was vested in a single person, assisted by a council; though, as we have already seen, that person was honoured with different titles, being sometimes styled general, sometimes governor, but usually viceroy, of the *Indies*; an honour seldom conferred but upon persons of the highest rank for birth and quality, as well as abilities; and to the honour of this nation it must be acknowledged, that braver, wiser, or better men, are seldom to be met with in history, than amongst those who have enjoyed this high station. The power of the viceroy was in a great measure unlimited; but, to balance this, the time of his administration was but short, rarely exceeding the term of three years. The military affairs were in his hands without restriction; and though there was frequently an admiral of the *Indies*, yet he acted altogether under the viceroy's orders. In civil concerns, the tribunal of the viceroy established at *Goa* judged in the last instance, and without appeal; but, in matters criminal, the viceroy could not put any gentleman of *Portugal* to death (and every person in the king's service is so esteemed) without the king's knowledge †.

For the support of his dignity, the viceroy had large appointments, which enabled him to live in the utmost magnificence and splendor; so much the more requisite, as he really commanded many kings, who, as vassals to the crown of *Portugal*, paid him a ready and strict obedience; it was in order to secure this, that in many of their capitals, and in other the most convenient places in their dominions, forts were erected, and garrisons maintained; by which, to speak plainly, their power was so much limited, that they could do nothing prejudicial to the interests of the *Portuguese*, or to what they were pleased to consider and call their interest. In their ports the *Portuguese* had their factories, and the intire management of the trade, setting the price at their pleasure upon the goods and manufactures of the country, and claiming a right of pre-emption; by which not the *Mohammedans* only, but even the native *Indians*, were in a great measure excluded from commerce. By this means immense and inexpressible riches in gold, precious stones, spices, perfumes, rare woods, drugs, and all kind of piece goods, were carried in annual fleets from their establishments on the coasts of *Malabar* and *Coromandel*, in the gulph of *Bengal*, in the kingdoms of *Cambaya*, *Decan*, *Malacca*, *Patana*, *Siam*, &c. the islands of *Ceylon*, *Sumatra*, *Java*, *Borneo*, the *Moluccas*, *China*, and *Japan*, into *Portugal*, whither all the nations of *Europe* resorted, to purchase them in such quantities, and upon such terms, as they were pleased to afford them. We need not therefore at all wonder how so small a kingdom should be able to furnish such prodigious navies, or send such numbers of people into these distant countries, since the desire of sharing in their wealth and prosperity drew continual accessions of people into their territories, both in *Europe* and in the *Indies* ‡ (G).

It was a high point of policy to establish an universal liberty of conscience at *Goa*, and this notwithstanding the inquisition was also established there, but without any power over those who had not entered into the bosom of the catholic church. This drew thither merchants and traders of all nations and religions, and kept up for many years a prodigious circulation from all parts; so that private persons became immensely rich, and consequently could afford to pay liberally for the protection they received from their governors. It was in those early days, when all the riches of the *Indies* were in a great measure at the disposal of this single nation, that the vast importance of this commerce appeared in its full light; and it is from the particulars set down by authors who lived within this period, and who delivered no more than what fell within the compass of their own observation, that we discern how such incredible fortunes were amassed in those times, when, beyond all question, there were much larger

Orientales, vol. i. p. 393.

† Treatise of the Portugal Indies, containing the
GUYON Histoire des Indes

(G) The *Portuguese* did not imitate the *Venetians* in their management of this commerce, by transporting the produce of the *Indies* into different parts of *Europe*; but, on the contrary, sold them to such as resorted to the port of *Lisbon*, as the great market of the *Indian* commodities. By this means many traders settled, in quality of agents or factors, amongst them; numbers of seamen entered in their outward-bound *India* fleets; shipcarpenters, and other artificers, finding money more plenty there than in their own countries, settled, and followed

their respective trades (38). The children of all these people became natural *Portuguese*; and, tempted by the advantages promised them in the *Indies*, sailed thither every year; and, finding it no difficult matter to meet with a wife and a settlement, most of them remained there; and by these canals, while in a flourishing condition, their garrisons were maintained, and the squadrons they fitted out supplied with mariners and soldiers.

(38) Sir William Monson's Naval Tracts, in the third volume of Churchill's Voyages.

quantities of intrinsic riches brought into *Europe* than there have been at any time since^a. For it is a point extremely worthy our consideration, that the trade between *Europe* and the *Indies*, while in the possession of the *Portuguese*, was managed in quite another way than it now is; and though we cannot enter very distinctly into the nature of their exports, yet of this we are very sure, that they did not send thither large quantities of silver; but that the gold, jewels, and spices, they brought home, were in part the revenues arising from countries under their subjection, and in some measure the produce of the goods and manufactures they transported; but with this great circumstance of advantage, that they set the price upon the goods they sold, as well as upon the goods they bought; and we may be sure, that, in doing this, they considered their own profit sufficiently; so that whatever the balance might be between *Portugal* and other countries, we may rest satisfied, that at this time it was highly in favour of *Europe*, whatever it has been since^b.

The concerns of the Portuguese in the Indies decline from the death of John III.

A. D. 1572.

THE minority which followed on the death of King *John* the Third of *Portugal* was very detrimental to the affairs of that kingdom in *Europe*, and still more so in the *East Indies*, where the viceroys were no longer obeyed with the usual cheerfulness and punctuality; but, on the contrary, every governor began in some measure to set up for himself, and to endeavour to raise a vast fortune within the short space of time allotted to his administration. This occasioned plots, insurrections, and wars, with many of the *Indian* princes; in consequence of which, *Goa* and *Chaul* were besieged, one six months, and the other nine, by almost the whole force of the *Indies*^c. Don *Sebastian*, king of *Portugal*, being informed of this, was very desirous of going in person to the relief of those places, and was with great difficulty dissuaded. It might, perhaps, have been as well, if he had been suffered to take that step, since, to divert him from it, it was found necessary to engage him in that fatal expedition to *Africa*, which produced the destruction of himself, and of his subjects. The *Portuguese* in the *Indies* defended themselves, however, with so much bravery and resolution, that they preserved both those fortresses, and forced their enemies to rise from before them, with very great loss. But this was the last great effort of their strength, by which also it was exceedingly weakened, and from thence the declension of their power has been generally and very justly dated. But, as their empire rose by degrees; as the foundations of it had been laid very deep; as their establishments were numerous, and some of them very strong; and as a long course of prosperity had drawn multitudes of people into those parts of the world, and consequently into their service; so it may be well supposed, that such a structure could not fall at once, but must sink and crumble by degrees; and that as there were many fortunate circumstances which contributed to the happy progress of their power, so there must have been likewise a strong concurrence of different causes, to bring on a total declension of their affairs, the principal of which, we shall endeavour, by the assistance of the best authors, to discover, and describe^d.

occasioned by the relaxation of discipline, corruption of manners, and grasping beyond their power

THE misfortune of *Portugal* being united to the kingdom of *Spain*, after the death of Cardinal *Henry*, uncle to King *Sebastian*, gave a terrible blow to their force in the *Indies*, by the introduction of those changes which naturally follow such a revolution in government, by the neglect which quickly ensued, of sending the usual supplies, and keeping up the royal fleet at *Goa*, and the several squadrons stationed upon the coasts of the different countries in their possession; and, above all, by that general relaxation of discipline, which quickly ensued (H)^e. Another cause was, the general corruption of manners, which immense wealth, absolute power, and excessive luxury, introduced amongst all ranks and degrees of people in the *Indies*; so that the sincere piety, the generous courage, and indefatigable spirit and diligence, which made the original conquerors appear more than men, evaporated intirely; insomuch that their successors became indolent, debauched, and effeminate, to a degree which we should rather the reader would conceive, than expect us to describe. We may add to this, that their boundless thirst of dominion prompted them to make so many settlements, and some of these at so great

^e GUYON Histoire des Indes Orientales, vol. iii. p. 36—39.

(H) This great change happened in the *Indies* in 1581, where Don *Louis d'Ataïda* was viceroy, but worn out with age, infirmities, and care, breathed his last, before any step was taken for acknowledging a new prince, by which the government devolved upon Don *Ferdinand Teles de Menezes*, who, in hopes of making his court to his new master, caused *Philip* the second to be proclaimed and acknowledged through the whole extent of his government. As it was impossible for King *Philip* to foresee this, he had taken care to send Don

Francisco Mascarenhas with the title of viceroy, supposing that he would have found Don *Louis d'Ataïda* alive, and in possession of the government, whom he created count of *Santarem*, that he might the more readily yield his place to the new viceroy. But Don *Francisco*, finding the old man dead, and all things previously settled, as well as the king could desire, dispossessed the nobleman, who had taken all this pains, with the prospect of a reward, which he never received (39).

(39) P. Lafitau Histoire des Conquetes des Portugais, vol. i. p. 383, 384.

a a distance, that their force, though great in itself, if it could have been, as occasion required, collected together, was, by this ill management, so extenuated, as to become incapable of making a vigorous defence, more especially when attacked in several places at the same time^f.

By the ill usage they gave the natives, by that restless impetuosity with which they laboured to find an entrance into every country, and by that obstinacy with which they persisted in driving out the *Moors*, *Arabs*, and *Negroes*, where-ever they were able, they raised a general and implacable spirit of hatred against them, throughout the whole *Indies*; which causes, taken together, without doubt would have been strong enough to have weakened and reduced them in time, if the last and more immediate source of their destruction had not broke out as it did. This was the coming of the *Dutch* into the *Indies*, after *Philip* the second had, by an edict^g, forbid their trading in the ports of *Portugal*; by which he flattered himself, that he should have reduced the *United Provinces*, and by which, on the contrary, he gave them the empire of the *Indies*: for, being themselves hardy and necessitous, having all things to hope, and nothing to lose, and having to do with a people divided in their councils, depraved in their manners, and detested by their subjects and neighbours, they soon found means of fixing themselves in some distant islands; from whence, by continual accession of new comers from the *Low Countries*, partly by force of arms, partly by their intrigues, but chiefly by taking advantage of the errors committed by the *Portuguese*, they supplanted them every-where, and effectually stripped them of their dominions, in far less time than they acquired them.

We are now to speak more particularly of the places heretofore possessed by the *Portuguese*, when their empire was at its height in the *Indies*; in order to shew precisely the true extent of their power, the real value of their possessions, the nature of the commerce they carried on, the length of time they remained in possession; and the period in which, as well as the nation to whom, most of these places have been lost: in reading which account, if the reader will take to his assistance the map, and consider the nature of the places as he goes along, we may promise him, without fear of disappointing his expectations, a more distinct, clearer, and fuller view of the *Portuguese Indies*, than is to be met with in any single treatise, notwithstanding that there have been many large volumes published upon this subject. It will, however, be requisite to inform him previously, that, during the flourishing state of the *Portuguese* dominion in *Asia*, the viceroy had five governments in his disposition, which, with respect to their value and importance, were ranged in the following order (I). First, that of *Mozambique*, on the coast of *Africa*; next, that of *Malacca*, upon the peninsula of the same name; the third was that of the citadel and island of *Ormuz*, in the *Persian* gulf; the town and fortress of *Muscat*, on the opposite coast of *Arabia*, was the fourth government; and that of the island of *Ceylon* the fifth. Besides these, there were many others of less consequence, and yet very considerable, of which we shall speak in their proper places^h. It is true, that as *Mozambique* lies on the coast of *Africa*, we might dispense with it here, and refer the description to another part of this work; but, inasmuch as it was always reputed a part of the *Indies*, as the commerce of it was, and still is, of the highest consequence to the *Portuguese*, and as it yet remains in their possession, we think it necessary, for the sake of perspicuity, to begin there-with, and then to proceed to the *Persian* gulf, and the coast of *Arabia*; and from thence regularly, in the order in which places lie, we pass quite through to the *Moluccas*, the town and fortress of *Macao* in *China*, and the possessions which the *Portuguese* formerly had in *Japan*.

The island of *Mozambique*, in the latitude of fifteen degrees south, half a mile from the continent, contains about three quarters of a league in length, a quarter in breadth, the whole compass not exceeding a league and a half, with a white shore. It extends south and north, along the main land; between which, and this isle and fort, appears the bay, serving for a convenient haven, land-locked from all winds, being very large, and carrying eight or ten fathom water; within a stone's-throw of which, the ships ride at anchor. The fortress which the *Portuguese* erected here is a regular square, well fortified with four strong bastions, and by much the most defensible place that ever was in their possession on the coast of *Africa*. It is very certain that the whole island is well inhabited, but it is not easy to say how those habitations are disposed; for some writers speak of cities, as if there had been two; others reduce

^f EMANUEL DE FARIA Y SOUSA Epitome de las Historias Portuguesas, lib. v. c. vi. ^g Conquista de las Islas Malucas, por el Licenciado BARTOLOME LEON DE ARGENSOLA, lib. vii. ^h Les Etats, Empires, et Principautez, du Monde, p. 234.

(I) This division is to be understood of the better part of the time during which these great dominions were in the possession of the crown of *Portugal*, since they were sometimes thrown into another form, and the whole *Indies* divided into three provinces, with a little dependence upon each other. The crown being frequently apprehensive of the viceroy's having too great a power (40); which apprehensions never ceased, till

experience taught them, that he had too little; and that the great *Albuquerque* formed a true notion of the proper government of the *Indies*, who advised, that every governor should be called to a strict account, when his term expired, and be allowed to act as he thought proper so long as his authority remained; since otherwise he could do but little, and ought not therefore to be accountable for much.

(40) *Voyages des Indes Orientales*, par M. Carre, vol. ii. p. 92, 93, 94.

these to villages ; but the best accounts say, that houses are very thick over the whole island, a of which some are strong and well-built, others mean and contemptible¹. The inhabitants are of different nations and religions, some forty or fifty families of *Portuguese*, without the fort, a much larger number of *Mestizes*, some hundreds of *Arabian* families that are *Mohammedans*, and a great many natives of the continent, of whose religion we have no distinct account, in all, to the number of between three and four thousand². This island was reduced to the obedience of the crown of *Portugal* at the entrance of the sixteenth century, and belongs to it still (K).

Attempts by the
Dutch unsuccessful.

1604.
1605.

THE *Dutch* have made several attempts upon it, particularly two ; the last time they attempted it they besieged the fortress thirty-two days, and were at length forced to retire, but carried off a prodigious booty³. The climate is very hot and moist, consequently very un- b wholesome, except to the natives, or such as have been long settled there. The jurisdiction of the governor extends very far along the coasts, to *Sofala* on one side, and to *Melinda* on the other. The islands of *Querimba* belong likewise to the *Portuguese*, in which the houses are built with stone, and so well secured, that they may pass for forts. There is also a *Portuguese* town upon the river, which falls into the port from the continent, at the distance of ten days rowing and sailing, though they come from thence in five ; and to this town the *European* and *Indian* merchandize is carried, and from thence distributed through the countries that lie behind it, some at the distance of three or four months journey⁴. In former times it was a common thing for the *Portuguese* governor to raise a fortune, in three years, of half a million of crowns. A very sensible and very ingenious writer assures us, that, when he was c at *Goa*, the governor of *Mozambique*, who was just returned thither, brought with him to the value of two hundred thousand crowns in ambergris, besides many other rich and valuable commodities. The *Portuguese* fleet sails from *Mozambique* for *Goa* annually, in the month of *August*, and returns thither in *April*⁵.

Of the nature
of the com-
merce of *Mozambique*, its
amount, and
importance.

THE commerce carried on here consists in gold of two sorts, that dug out of the mines, and dust gathered out of the rivers ; in silver, brought from the mines ; in the finest ebony, of which they have whole forests ; in ivory, which is excellent, and of which they have great quantities ; in slaves, that are esteemed the best in the *East Indies* ; in cattle, fowl, palm wine, fruits, and roots. The *European* and *Indian* commodities sent hither are *Spanish* and *Canary* d wines, oil, silks, linens, cottons, coral, shells, and toys ; these, as we before observed, are transported up the river *Senna*, and from thence through the continent. The bulk of their riches comes from the mines of *Sofala*, which are esteemed to hold more gold than any in the world, since, if the accounts of the negroes may be depended upon, they have produced, for a long series of years past, to the value of a million and a half sterling annually, of which the *Portuguese* had formerly by far the greatest part, and in which they have still a very considerable share ; so that, without the support of this commerce, that of *Goa* would have long ago come to nothing. We have therefore no reason to doubt, that, in times of their greatest prosperity, when the *Portuguese* were masters of *Quiloa*, *Mombaza*, and other places, and had a very great force upon all these coasts, they must have drawn from thence prodigious advantages ; and even now they are in possession of all the *European* trade driven thither, which cannot but be e of very great value, though much inferior to what it was⁶.

The situation,
produce, and
high consequence,
of the
island of
Ormuz.

THE island of *Ormuz*, together with the city and fortress erected thereon, had been long famous in the east, and not altogether unknown to the *Europeans*, before the *Portuguese* penetrated the *Indies*. This island lies in the mouth of the *Persian* gulf, at the distance of five miles, or thereabouts, from the opposite continent. It is of no great extent, those who have described it most accurately allowing it not more than seven miles in circumference. It is, strictly speaking, no better than a rock of salt, the very dust of the country within land being very white and pure, as well as very pungent to the taste. Springs there are none ; and when

¹ DAPPER Description de l'Afrique, p. 398. Les Etats, Empires, et Principautez, du Monde. P. LAFITAU Histoire des Conquetes des Portugais, tom. i. p. 110. ² PURCHAS's Pilgrims, vol. i. p. 278. ³ Recueil des Voyages qui ont servi à l'Etablissement de la Compagnie des Indes Orientales, tom. vi. p. 335. ⁴ DAPPER Description de l'Afrique, p. 401. ⁵ Les Etats, Empires, et Principautez, du Monde, p. 207, 208. ⁶ Dictionnaire Universel de Commerce, tom. ii. col. 675, 676, 677.

(K) At the time the *Portuguese* came into the *Indies*, this was one of the principal posts in the possession of the *Moors*, who were likewise masters of *Quiloa*, and some other places, by which they flattered themselves they should be able to secure the trade of the *Indies* ; which was the true cause why they left no method untried to betray and destroy *Vasquez da Gama* in his first

voyage. On the other hand, experience having convinced the *Portuguese*, that it was impossible to depend upon these people ; and that the possession of these places was of great consequence to them, they attempted, and accomplished, the reduction of them, and have kept them ever since (41).

(41) P. Lafitau Histoire des Conquetes des Portugais, vol. i. p. 110—165. Les Etats, Empires, et Principautez, du Monde, p. 207. Ramusio, vol. ii. f. 107.

- a some writers mention small lakes of fresh water therein, we are to understand no more than cavities filled with rain, which, however, falls but seldom in that climate, and, when it does, in great quantities, accompanied also with violent tempests. This island was not only inhabited, but had also a good city, and a strong fortress, in which the sultans, or kings of *Ormuz*, resided, who had likewise some dominions, though not of any large extent, upon the continent of *Persia*. It was from its commodious situation that it became the greatest mart in the east, to which shipping repaired from all parts of the *Indies*, from the coasts of *Africa*, *Egypt*, and *Arabia*, besides a regular trade carried on by caravans cross the country. This made the sultans of *Ormuz* rich and respected, if not great and potent monarchs; and, at proper seasons of the year, there was a prodigious resort of merchants from all countries, besides factors, that resided constantly there; particularly the *Venetians*, who drove a great trade in jewels transported from thence to *Bassora*, and so by caravans to *Aleppo*, or to *Suez* by sea; then over land by the *Nile*, to *Alexandria*, where they were delivered to the merchants to whom they were consigned (L).

- It was the known wealth, and prodigious commerce, of this place, which excited the ambitious *Portuguese* to attempt the conquest of it, which, how they achieved, we have already shewn. As it was not for their interest, they did not deprive the sultan either of his title or of his dominions, but were content he should retain the one, and pay a tribute for the other. They were, however, the absolute masters of the town and citadel. The former stood upon the sea-coast, and consisted of about three thousand houses. The settled inhabitants were, for the most part, *Arabians*, *Mohammedans*, and subjects to the sultan; a few *Indians*, who were pagans; and about one hundred families of *Jews*; so that, in all, they were computed at forty thousand souls¹. The *Portuguese* residing there built very stately houses, gilding all the bars of their doors and windows, and often boasting, that, instead of lead and iron, they would substitute silver and gold. The materials with which they were built were no other than the solid salt, which makes, if the expression may be allowed, the soil of the island very durable in that climate, and not unpleasant to the eye. The streets were strait and narrow, and the houses lofty, the better to shade them from the sun. On the roofs they had flight apartments of wood, where they lay in the summer-time, and a kind of ventilators, built of pumice-stone, for the sake of lightness, by the help of which they admitted fresh air into all the apartments below. Their best rooms were beneath the surface of the street, in which they had baths and fresh water, for themselves, their wives and children, to lie in during the summer heats, more excessive here than in any other part of the known world, the opposite continent only excepted. The *Portuguese* built also a most stately church, dedicated to the Blessed Virgin, which served not only for devotion, but for their recreation likewise, of which walking in the cool and shady cloisters was the chief².

- The fortress, or citadel, built on a point of land extending towards the *Persian* coast, was regular, beautiful, and very strong, furnished, by degrees, with no less than three hundred pieces of cannon. The sultan had his palace in a fine plain, with some pavilions and pleasure-houses near it, and among them a small tuft of palm-trees. The island has two harbours, one on the east, the other on the west side, but neither of them very commodious; so that all ships of a larger burden than six hundred ton were obliged to lie in the bay, at the distance of half a mile from the shore. Between the harbours, and, as it were, in the center of the island, there rises a mountain, and, on the summit of that, another smaller and steeper; the lower is composed of salt and sulphur, the upper of salt alone, so pure, that, at a distance, it looks like a great hill covered with snow. Upon this mountain there are still discernible the ruins of certain towers, in one of which the sultans of *Ormuz* kept their brethren, after they had deprived them of their sight, where they were well attended, and sumptuously entertained³. The *Portuguese* had likewise a fortress upon the opposite coast, for the sake of protecting their barks, and other small vessels, the sea being so shallow between the

¹ HAKLUYT'S Voyages, p. 215. Les Etats, Empires, et Principautez, du Monde, p. 209. ² HAKLUYT'S Voyages, vol. i. p. 47. TAVERNIER, THEVENOT, &c. ³ Travels of FERDINAND MENDIZ PINTO, cap. 4. TAVERNIER, THEVENOT, &c. ⁴ RAMUSIO, tom. i. fol. 187. 292. 338. 388. TAVERNIER, THEVENOT, &c.

(L) We have a chronicle of these kings of *Ormuz*, by which it appears, that their dominions were seated originally upon the continent; and that when the island, for the sake of trade, became inhabited, and, in process of time, grew rich, these princes made it the seat of their residence, bringing also part of the *Arabian* coast under their obedience. Thus they grew powerful and rich, but, at the same time much envied.

However, if they had been monarchs of great abilities, or had been well served, they might certainly have maintained themselves in a state of independency; but luxury, civil dissensions, and breach of faith, brought them so low, that, at the very same time that they paid tribute to the king of *Persia*, they were subjects and vassals to the crown of *Portugal* (42).

(42) Voyages de Jean Baptiste Tavernier, premiere partie, cap. 23.

continent and island, as not to admit of ships. The shore all round is covered with a black shining sand, very heavy, and of a surprising lustre. The natives, in the summer-time more especially, in the mornings and evenings, run into the sea, up to their necks; but this the *Europeans* could not do, because it made their skin peel, which obliged them to have recourse to the baths in their vaults, which have been before-mentioned¹.

The wealth, magnificence, and luxury, of the natives, and of the Portuguese, in Ormuz. It has been very justly observed, that the wealth, the splendour, and concourse of people, not only rendered *Ormuz* the wonder of the world, while in its flourishing condition, but afforded a perpetual memorial of the almost omnipotent power of commerce, in respect to sublunary things; for here, at the trading seasons, which lasted from *January* to *March*, and during the months of *September* and *October*, there was not barely an intercourse between multitudes of busy people, some of whom came, as it were, from the very ends of the earth, to reap the benefit of these conferences, but mirth and pleasure also entertained their votaries here. The salt dust of the streets was concealed and kept down by neat mats and rich carpets; the beams of the noon-day sun were excluded by canvas awnings raised over the tops of the houses. The rooms next the streets were adorned with *Indian* cabinets, and piles of the finest porcelain, intermixed with odoriferous dwarf-trees and shrubs set in gilded vases, elegantly adorned with figures. Camels laden with water were at the corners of every street; the richest wines of *Persia*, the most costly perfumes, and the greatest delicacies of the east, were here poured forth with profusion. And so long as it lasted, which was sometimes for six weeks, it looked like a magic scene, diversified with the most opposite appearances; cunning and gravity having the dominion in the exchange; an air of officious politeness appearing every-where in the shops; a kind of haughty and supercilious decorum amongst the *Portuguese* officers, civil and military; an air of wonder and delight amongst the common spectators, and that of transport and joy in the public places; where rope-dancers, mountebanks, jugglers, dancers, and fortune-tellers, displayed their several talents for delusion and deceit. Such, in spite of the frowns of nature, could human industry, directed by art, and supported by trade, render this despicable rock of salt, which remains now as desert and uninviting, as it was then captivating in the eyes of those multitudes who came in the train of avarice, luxury, and curiosity².

What prodigious sums were raised by the governors of this place, in their short period of power. It is easy to conceive, from this description, that the post of governor of *Ormuz* must have been exceedingly lucrative, more especially in later times, when the governors laid it down as a capital maxim, that the principal business they had to do there, was to enrich themselves. To answer this purpose, they took large sums out of the customs paid by all the shipping that entered the port or road of *Ormuz*; they imposed likewise high duties upon the pearl fishery at the island of *Babaren*; the barks from the coast of *Arabia* and *Persia*, though freighted only with necessaries, paid mighty sums every year, from the great consumption of all things made, as well by strangers as inhabitants. The governor claimed a privilege of sending his own vessels to *Goa*, *Cbaul*, *Bengala*, and *Muscat*; and, that his profit upon their cargoes might be the more considerable, the market was not open to private merchants, till the governor had purchased a lading for his ships³. It is said, there was no such article as this in the governor's instructions; but it was one of those precedents which, being once boldly set, was ever after faithfully copied. Add to all this, the exclusive power of selling horses throughout the bounds of his jurisdiction, which must have come to a great sum, since they were generally valued at four or five thousand crowns a-piece. The caravans from *Aleppo* set out twice a year, in the months of *April* and *September*, for *Bassora*, with a vast number of camels, escorted by janisaries, and from thence themselves and their merchandize were easily transported by sea to *Ormuz*. These caravans consisted of from two or three to five or six thousand persons, and the wealth they brought was prodigious. On the other hand, the regular trade from *Malacca*, private ships from all parts of the *Indies*, and the caravans that passed through the provinces of *Persia*, brought likewise the richest and most valuable commodities, in vast quantities; neither could any of these be bought or sold, but the governor of *Ormuz*, and his dependents, would be gainers by them, more or less, as well as their owners. One would have thought, that the value of this place being so thoroughly understood, and the security of it being so well provided for, there should have been but little fear of its being lost; more especially at a time when their own power was so very great; and that of their enemies, reckoned singly, very inconsiderable⁴ (M).

BUT

(M) The last king of *Ormuz*, whose name was *Mah-Spain*, not long before the destruction of the island, in which he gave him a very full and fair account of those errors

- a But the insolence of prosperity made all the precautions taken in those times, when prudence and public spirit prevailed, altogether fruitless. The famous *Persian* monarch Shâh *Abbas* had long meditated the conquest of this important place; but, for want of a naval force, found it altogether impracticable. The *Portuguese*, now under the dominion of *Spain*, supplied him with a fleet, by their indiscretion, which all the power of his monarchy could not have raised, or his policy obtained. In short, they quarrelled with, and insulted, the *English*, who were become lately considerable in the *Indies*. They entered into a treaty with the *Persian*, from certain motives, and upon certain terms, of which an account will be given in a subsequent section, furnished a squadron of nine sail, with which they blocked up, and battered, the city and castle, and landed an army of three thousand *Persians* on the island.
- b The besieged had a great strength, and a good fleet, but all was very ill managed. The city surrendered soon, some writers suggest, through treachery, but it seems to have been rather through indiscretion and folly. The fleet was, for the most part, burnt and destroyed. After all, the citadel made a good defence, and might have been preserved, if the governor had not been obstinate, in refusing to let the sea through the peninsula which joined the point of land upon which the fortrefs stood, to the island, because it was an expedient that did not occur first to himself. In fine, after about two months dispute, the garrison of that important place capitulated with the *English*. And thus, after remaining in their hands almost one hundred and twenty years, *Ormuz* was lost by the *Portuguese* ^(N).
- c It was computed, that, exclusive of jewels and rich merchandize, the plunder and ready money amounted to above two millions. The articles of the capitulation were but ill observed, the *Persian* executing his treaty but indifferently; so that the *English* were far from having their full share of the booty; and what they had did them very little good, most, if not all of it, perishing at sea. The *Portuguese* made an attempt for the recovery of *Ormuz*, in which they might have been successful, if the viceroy at *Goa* had not, through want of capacity, indolence, or a pique to the officer who commanded in that expedition, failed as much in his duty as the governor of *Ormuz* had done. After it once fell into the hands of the *Persians*, the place was quickly ruined, and the trade transferred to *Bander Abassi*, or *Gambron*. In process of time, the *Dutch*, coming into these seas, carried off the materials of the city, under pretence of taking in ballast, which turned to very good account, till at length it was forbid by the *Persians*, when it was too late. A garrison was kept in the citadel for some time; but, by degrees, that is likewise fallen into ruin, the island utterly deserted; and scarce the smallest remains are now left, to vindicate the records of history, or to prove, that this was once a place of such mighty consequence, and the capital magazine of the whole east ^a.

The Persians, in conjunction with the English, attacked the island by sea and land.

A. D. 1622. What immense riches were acquired by the plunder of this celebrated emporium.

^a PURCHAS'S Pilgrims, vol. ii. p. 1787. Voyages de JEAN BAPTISTE TAVERNIER, premiere partie, c. 23.

errors in government, which were like to bring upon his subjects, as well as those of the king of *Spain*, total destruction. In that epistle, he observes, that the pride of his officers increased in proportion as they lost their power: that, in former times, a governor was very well content, if he carried away thirty thousand crusadoes at the conclusion of his term; whereas two hundred thousand would scarce satisfy them at that time; and, to obtain this money, they made use of the king's ships and men to carry on their commerce as merchants, by which the island was left without defence (43). This letter, when *Ormuz* was taken by the *Persians*, fell into the hands of the *English*, and plainly shews, that this unfortunate prince deserved a better fate.

(N) It appears from their own relations, that it was

partly fear, and partly a desire of sharing in the plunder, that induced the *English* to engage themselves in this business; and though the *Persians* could have done nothing without them, yet they were but very indifferently treated, while they did every thing for them: and were at last no great gainers, by an enterprise that changed the whole face of affairs in those parts, and put the *Persian* monarchs in possession of all they could desire, at the same time that it gave such a blow to the power of the *Portuguese*, as they could never recover, distressing them as much on this side, as they were distressed on the other by the *Dutch*; with this difference, that the latter kept what they got, whereas the former gave all to the *Persians*, and remained themselves at their mercy (44).

(44) See Mr. Monsieux's large Account of the taking of *Ormuz*.

S E C T. VI.

The same subject continued, with an account of their settlements at Mascat, Diu, Damman, Chaoul, Onor, Cananor, Calicut, Cranganor, and Choulan; their disappointment at the Maldives; their lucrative fishery at Tutocorin; and their establishments at Negapatan, Meliapour, and Malacca.

An account of the Portuguese establishment at Mascat; and in what manner it fell into their power.

THE next government in the *Portuguese Indies*, was that of *Mascat*, as some write it, ^a but as we generally spell it, *Muskat*, a very famous town in *Arabia the Happy*. It is situated between the capes of *Raz-al-Gate* and *Moccaton*, in twenty-three degrees thirty minutes north latitude, exactly under the tropic of *Capricorn*, about three miles in its circumference, built at the bottom of a small bay, encompassed with high rocky mountains, and guarded with a strong wall. Besides, it is fortified with five or six castles and batteries, and lies very convenient for trade, on account of its excellent harbour. Before the *Portuguese* arrived in the *Indies*, there was a great resort of merchants hither; and the town, though not so large and well-built, was one of the most considerable upon the coast, and was subject, or at least tributary, to the kings of *Ormuz*, who had a custom-house and proper officers there, who had the charge of receiving the duties arising from the pearl-fishery on the coast ^b of the island of *Babaran*, which were estimated at half a million of ducats. The great *Albuquerque* summoned, and obliged this place to submit, in the year 1507; but a body of two thousand *Arabs*, getting into the town, immediately raised an insurrection, in spite of all the care the governor could take to keep them quiet; upon which a bloody and obstinate action ensued, ending in a complete victory gained by the *Portuguese* ^c. The governor lost his life in this dispute; but *Albuquerque* did all imaginable justice to his innocence, and protected his family in their possessions. The grandeur of *Ormuz* caused some decay in the trade of this place; for which ample amends was made, after the destruction of that city, when the port of *Muskat* became the prime mart of this part of the world, and thereby produced very great advantages to the crown of *Portugal*, exclusive of the prodigious private fortunes made by the governors ^c, and other officers, while they remained in possession (O).

Improvements made by them; and how they were dispossessed by the natives.

It is very certain, that, during that space, the city of *Muskat* was very much improved; for, besides regular fortifications, they erected a stately church, a noble college, and many other public structures, as well as very fine stone houses, in which the principal merchants resided, and those who, by the management of public affairs, had acquired wherewithal to live at their ease. In process of time, however, they began to treat the natives so ill, and to put their commerce under so many difficulties, that at length, despairing of redress any other way, they had recourse to arms; and though it is on all hands allowed, that the subjects of *Portugal* defended themselves very gallantly, yet in the end they were reduced to such extremities, as to be glad to embark themselves and their best effects on board their ships in the port, with which ^d they retired to their other settlements. This was about the year 1648: but the war did not end here; they made frequent attempts to recover a place of such importance, sometimes by force, sometimes by negotiation, but without effect. It is true, that for many years they disturbed the trade of this place: but that too became disadvantageous in the end; for by degrees it made the *Arabians* expert seamen, excellent in the use of fire-arms, and raised them a considerable maritime force. The sovereign of this country is at present master of all the coast from *Raz-al-Gate* to *Al-katiff*, which is an extent of five hundred miles. His capital is *Nazura*, and *Muskat* is intrusted to the care of a governor, who has very extensive powers ^d.

As this is at present by much the most considerable port for trade in this part of the world, it may not be amiss to dwell upon some farther particulars. The climate is excessive hot in summer, which was formerly held not a little strange, on account of its lying at the ex-

^d Les Etats, Empires, et Principautés, du Monde,

(O) As the disinterestedness and public spirit of the first *Portuguese* conquerors had raised their empire to a surprising height, in a short space of time; so, when once their governors came to have no regard for the public, but to be entirely influenced by their private views, every thing fell into confusion; and those who were before terrified at the thoughts of offending them,

began to contrive and accomplish their ruin with equal facility; and as their governors rarely thought it incumbent upon them to hazard any thing in support of each other, their places fell by degrees, till at last they became detpicable, even in the eyes of those nations to whom they had been once so terrible (45).

a tremity of the torrid zone; but modern philosophers are no longer at a loss for the true causes of this excessive heat, or under any difficulty in conceiving that it may, and indeed must, be hotter under the tropics than under the line itself. The mountains, that lie at the back of the city, are bare and barren; but the vallies are fresh and fruitful, notwithstanding that it does not rain above twice or thrice in as many years; but the dew, which falls in the night, supplies the herbs with moisture, and the fruits with the richest juices. They have oranges, lemons, grapes, apricots, and peaches, in abundance; but what they value much more than any of these, and therefore cultivate vast orchards of them, are dates, exquisite in taste, and of which they have such plenty, that they export many cargoes every year. Roots they have and herbs in great quantities, and in the highest perfection: neither do they want cattle, fowl, b or fish. In a word, it is a fine and fertile country, considered distinctly; but, in comparison of the rest of *Arabia*, it is a perfect paradise; and, if we were to give intire credit to modern travellers, we should go near to add, that it is inhabited by angels^c

THE people indeed have embraced the religion of *Mohammed*; but have not only cancelled whatever seems to favour of sensuality in the *Khoran*, but have also refined upon the morality contained therein to such a degree, that Christian writers, and those too of different nations, describe them as the most uncorrupt, and at the same time the most polite, people in the east. They not only refrain from wine and spirits, but from coffee and tea, as liquors drank to delight the palate rather than to answer the necessities of nature, for which plain water or sherbet is, in their opinions, sufficient. The same temperance is observed in eating, and in c every thing else; and, with respect to lewdness and debauchery, they are not punished, because they are not known. Robberies are never heard of; and their policy is so exact, that never any necessity is felt capable of exciting men to steal. Their heads are always so cool, that strangers deal with them without trouble. They do strict justice, without severity; and, where men's misfortunes make charity a virtue, it has no other measure than that of their need. These are qualities that attract reverence and affection, and at the same time establish confidence, which is the very soul of trade. All mercantile transactions are carried on in the day-time; no bargain can be made, no boat can go on shore, after sun-set. These circumstances may appear incredible; but they are supported by good authorities, neither have they been contradicted^f.

d THE island of *Diu* lies at the entrance of the gulph of *Cambaya*, in the latitude of twenty-two degrees twenty minutes, and at the distance of two hundred leagues from *Cape Commorin*. We shall, in this place, give only a short description of the country, the city, and the fortress; for, as it is still in the hands of the *Portuguese*, it will be more particularly insisted upon at the end of the chapter. The island, or rather peninsula, upon which the city stands, is about a league in length, and about a quarter of a league in breadth^e. The city is but small, yet well-built, and thoroughly fortified, exclusive of the three forts raised for its defence, two of which are very strong, and the third is held impregnable. When the *Portuguese* empire was in its prosperity, and before *Cambaya* and *Surat* were grown into reputation, it was a place of very great trade, and the port always full of ships; and, notwithstanding it has been long in a state e of gradual decay, it still holds up its head; and tho' the merchants that reside there are fewer in number, and do not make quite so great a figure as they did, yet they are still in a tolerable condition, and, knowing how much their security depends upon the strength of the garrison, and the good condition of the works, they very chearfully contribute to the pay of the one, and to the support of the other. The narrow district that lies without, supplies them tolerably with provisions, which they are so wise as to sell very cheap to the crews of such ships as put in here for refreshments, and have by that means preserved several branches of commerce that would have been otherwise lost. They have, for the most part, likewise a good correspondence with the people of *Guzurat*; who, finding their magazines and shops well supplied with *European* goods, and lying as it were just at their doors, commonly prefer this to f more distant markets^b. For these, and for some other reasons which will appear in their proper place, *Diu* is looked upon as one of the most important fortresses yet remaining to the crown of *Portugal* in the *Indies*, at the entrance of which it lies, and of which there are some writers who styie it the key. This is certain, that some very good judges of the commerce in this part of the world have considered the place we are now describing as the fittest for a general mart, and capable, if in the hands of an enterprising power, of being raised to as high a degree of riches and magnificence as *Ormuz* was in times pastⁱ (P).

THE

(P) It appears from hence of how great consequence a and thoroughly supplied, might be towards carrying on very few fortresses, well situated, in a good condition, the commerce of the *Indies*, without the trouble, &c. Mod. Hist. Vol. IV.

Authors of all countries have highly commended the inhabitants of the city of Mascat.

A description of the island and fortress of Diu, with some account of the great importance of that post.

1559.

The fortress of
Daman de-
scribed, which
still remains to
the Portu-
guese.

THE first place on the continent of the *Indies* called the peninsula without the *Ganges*,^a belonging to the *Portuguese*, is *Daman*, situated on a peninsula at the mouth of the gulph of *Cambaya*, in the latitude of twenty-one degrees, at an equal distance between *Surat* and *Bassaim*. The *Portuguese* became masters of it early, and fortified it regularly^b. The city is large, and was formerly very populous: the port is but indifferent; but the citadel is reputed one of the best fortresses in the *Indies*. There is still some trade carried on here, more especially in corn and rice. Some old families are rich; and, the place having remained so long in the hands of the *Portuguese*, they have never wanted a sufficient force to defend it when attacked, which is the reason that it remains in their hands at this time^c. When the famous emperor of the *Indies*, *Aurengezebe*, came before it with an army of forty thousand men, he flattered himself with the hopes of driving the *Europeans* out of his dominions; but this siege made him^d intirely alter his notions. It was defended by an old officer, who had under him three of his sons, and a garrison of eight hundred men. The *Mogul*, having made some progress with his artillery, determined to make a general assault on a *Sunday* morning about break of day. The governor had intelligence of this, and resolved to save him the labour: about half an hour after midnight he made a sally, with six hundred men, upon the strongest post in the *Indian* army, where all the elephants were kept: he began with throwing in a vast quantity of different kinds of fireworks, and immediately after ordered the drums to beat, and the trumpets to sound. The elephants, frightened with the noise and the light, broke loose, and turned upon their own army. The confusion this began was increased by the *Portuguese*, of whom two hundred were horse, and did great execution. In short, the *Mogul*, having lost half his men, and all his artillery, retired with much precipitation; and made it thenceforward one of his maxims not to attack *Europeans* any more^e. Not far from hence lay *Bombay*, one of the best ports they had; which being given to the *English*, as part of the marriage-portion of the infanta *Catharine*, there is no necessity of our dwelling upon it longer here.

Account of the
fortress of
Chaoul, and
its importance
to the crown
of Portugal.

THE city of *Chaoul* stands in the latitude of eighteen degrees thirty minutes: it is very well situated, and has a very spacious port or bay, the entrance of which, however, is a little difficult. The *Portuguese* took it in 1507, and improved it prodigiously. About it lies a *Moorish* town, the inhabitants of which are dependent on the *Portuguese* government^a. There are more rich merchants left here than in any place that yet owns obedience to the crown of *Portugal*. A great many, and those very excellent silk manufactures are made here, and a considerable trade carried on in spices. Some ships annually resort hither from *Cbina*; and that spirit of diligence and industry, for which the *Portuguese* were formerly remarkable, still subsists here. There are several villages under its jurisdiction; and, the adjacent country being extremely fruitful, their farms and plantations turn to a very good account, as they supply all the neighbouring settlements, and part of the *Mogul's* dominions, with horses, black cattle, grain, and fruits^b. We shall speak of *Goa* at the very close of this chapter, when we come to represent the present state of the affairs of the *Portuguese* in this part of the world.

The kingdom
and fortress of
Onor reduced,
lost, yet still
inhabited by
the Portu-
guese.

ONOR, in the latitude of thirteen degrees thirty minutes, was the capital of a kingdom when the *Portuguese* came into those parts, who first owned the prince of it for their ally, and afterwards made him their subject. They built a good fort there to maintain their power, and to secure the pepper-trade, what is found there being reputed the best in the *Indies*^c. This fortress being very strong, made the *Portuguese* more careless about it than they ought to have been, which induced the natives of the country, at the persuasion and with the assistance of the *Dutch*, to attack and make themselves masters of it, by which they were enabled to shake off the yoke, and have been free ever since. There are, however, a great number of *Portuguese* inhabitants who still live there in peace and safety; and, if they are not extremely rich, they are at least quiet and content^d.

pence, or danger of extensive conquests. The great *Albuquerque* judged this to be the most effectual method of preserving the *Indies*, believing that six or seven strong places, besides *Goa*, which he meant should be their capital settlement, would have maintained their power in the east, without exhausting *Portugal* of people, or rendering their dominions so extensive as to make a strict and regular government a thing impracticable. Amongst other events that have rendered this place famous, may be reckoned the surprisal of it by the *Muskat Arabs* in

1670, who entered it in the night, through the carelessness of the *Portuguese*, and plundered it without mercy; the governor of the citadel keeping close within his fortress, receiving all who fled thither, but gave the enemy no disturbance. This rendered them secure and negligent; which the governor expected, and thereupon proclaimed liberty to all the slaves who would fall upon them, by which they were driven out of the town, with the loss of upwards of a thousand men (46).

(46) Hamilton's Account of the *East Indies*, vol. i, p. 140.

- a CANANOR, of which so much has been already said, is at this day a large and populous city, inhabited chiefly by *Mohammedans*, who carry on a very considerable trade. We have shewn how the *Portuguese* came to erect a very strong fortress here, by which they became intire masters of the commerce; and, if it had been as well fortified towards the land as it was towards the sea, it had still remained, in all probability, in their power; but the *Dutch*, with the assistance of the natives, attacked it, and, after the garrison had made a good defence, granted them an honourable capitulation^r. The rice of this country is in great esteem; and, besides this, they have sugar, pepper, ginger, and other rich commodities; so that it is computed not less than two hundred sail of ships arrive annually in the port, which is now open to all the *European* nations that have settlements in the *Indies*. ^{Strength, trade, and importance of the city of Cananor, and present state of that place. 1663.}
- b CALICUT was the capital of the *Samorin*, or emperor of *Malabar*, and, as we have shewn, the first port visited by the *Portuguese*, when, by doubling the *Cape of Good Hope*, they opened a direct passage by sea to the *Indies*. Here, after long wars, in which many thousands of people were consumed, they erected a strong fort^s, and were absolute masters of the trade till about the beginning of the last century, when the *Dutch* began to interfere with them, and made a league with the *Samorin*, whom they assisted in his wars against the *Portuguese*, and enabled him more than once to distress them exceedingly; notwithstanding which, they defended themselves so gallantly, that their enemies were not able to reduce them by force: but what violence could not effect, was quickly brought about by dissensions amongst themselves, which threw their affairs into such confusion, that at length they blew up their fort, and abandoned the place to the natives. It still remains a place of great trade, the *French*, *English*, *Dutch*, and *Danes* having factories there; and the *bazar*, or market-place, is esteemed the finest in that part of the world^t. Pepper, fine cottons, salt-petre, sweet-scented woods, and rice, are the chief commodities. The sand of the river, which falls into the port, is mixed with grains of very fine gold; and the poorer inhabitants obtain a subsistence by washing them out, which is very hard labour^u. If we give credit to the Christian writers of all nations, the *Samorins* are a race of as deceitful and perfidious princes as ever the world produced; and it is possible that their historians do not give a better character of the Christians with whom they have had any concerns. ^{Calicut abandoned by the Portuguese, a place of great trade, and still in the hands of the Samorin.}
- c CRANGANOR, the capital of a small kingdom of the same name, was a place where the *Portuguese* had a very strong fort, which obliged the natives to remove their town to some distance. That belonging to the *Portuguese* was one of the fairest and finest places in the *Indies*, and the chief residence of the Christians of *St. Thomas*. The *Portuguese* settled here very early, and continued in absolute possession, to the great grief of the natives^v, till their fort was attacked and taken by the *Dutch*, who granted the garrison a good capitulation, and transported them to *Portugal*. The kingdom of *Cochin* was in the like condition, that is, had two capitals, one belonging to the *Portuguese*, and the other to the natives. The former, we have shewn, was the first place they had in the *Indies*; and the people, whether better used, or longer acquainted with the *Portuguese*, remained always faithful to them. This place, after a good defence, was taken by the *Dutch*, who found it a large well-built city, and many public structures in it, some of which are now wholly ruined^x (Q). ^{The past and present condition of the fortresses and districts of Cranganor and Cochin. 1504.}
- e CHOULAN is the capital of the last and the least kingdom on the coast of *Malabar*, its whole extent being fifteen leagues. It was divided into the upper and lower towns, the former belonging to the natives, and the latter to the *Portuguese*; and a very fine place it was, in which they had several monasteries, seven handsome churches, a noble exchange, and a stately castle built of free stone, in which the *Portuguese* governor resided. The port was spacious, and safe for small vessels, which drew very great trade to the place, rendering it extremely populous, and many of its inhabitants rich^y. The *Dutch* made themselves once masters of it, and could not keep it; for the people surprised their garrison, cut their throats, and restored it to the *Portuguese*; from whom it was again taken, after a long and bloody siege; since which it is much decayed, and many marks of its former magnificence reduced to ruins^z. ^{Account of the fortress and country of Choulán, the last of any consequence on the coast of Malabar. 1661.}

^z BALDÆUS

(Q) At Cranganor there was antiently a republic of Jews, who, from records in their own possession, engraven upon copper-plates, pretended to prove they were part of the tribe of *Manasseh*. They were once populous, powerful, and masters of the country; but the last accounts of them represent them as few, weak, and necessitous: however, they have a synagogue, and

adhere very strictly to the law of *Moses*. The *Portuguese* city of *Cochin* was built on the side of the river, three leagues distant from the sea, but at present it is not above one hundred yards from it. So pleasant and so plentiful a place it was in the time of their prosperity, that it was a common proverb, *China* is the best place to get, and *Cochin* to spend, money in (48).

(48) Hamilton's Account of the East Indies, vol. i. p. 323, 324.

This is the last place of any great consequence between the river *Indus* and *Cape Commorin*, which is the point that terminates the peninsula that was formerly in the hands of the *Portuguese*; of whom it may be truly said, that, if they had built fewer and larger fortresses, and had been as studious to repress luxury as they were to reduce the natives, they might have retained much longer that empire, the acquisition of which does so much honour both to their courage and conduct.

The Portuguese never settled in the *Indies* without being acquainted with them, since the most northern of these islands lie but fifty leagues from *Cape Commorin*. They extend from eight degrees of north latitude to four degrees of south in length, consequently near two hundred leagues; but they are not above thirty or thirty-five leagues in breadth in any part of the *Archipelago*. Within this space are contained a prodigious number of islands; so that, even in the time of *Ptolemy*, that is, in the second century, there were accounted upwards of thirteen hundred: but the inhabitants maintain, that a small part of them only were then known; for their sovereign takes the title of sultan of the *Maldives*, king of thirteen provinces, and twelve thousand isles^b. There is in this, without doubt, a mixture of that pomp and ostentation which are so common in the east; but there are unquestionably many more than the ancients knew under this monarch's dominion. Admiral *Suarez* discovered them in 1507; and he made an alliance with their king, which was confirmed by *Sequeira*, who demanded leave to build a fort upon the isle of *Male*, the largest of them; and the chief city of the same name is the capital of their monarchy, which is antient, rich and powerful^c. *John Gomez*, who was sent thither for this purpose, met with a favourable reception, and, by dint of presents, prevailed upon the king to agree to his demand. He built this fort of wood, there not being either stone or lime in the island. It was extremely well situated, and commanded the port; so that it might have been of great service to the *Portuguese*, if he had behaved as became him; but no sooner was the fort finished, than, presuming on the terror of the *Portuguese* name, he began to lord it over all the strangers that traded thither, though his garrison consisted but of seventeen men; which occasioned a conspiracy of the *Mohammedans* against him, who attacked him when he expected it least, and cut off him and all his people to a man, levelling the fort with the ground. The *Portuguese* were never afterwards able to obtain any establishment in the *Maldives*, which is the reason that several of their authors treat them as pitiful places, and their inhabitants as a base and barbarous people, contrary however to truth and experience^d (R).

An account of the celebrated pearl fishery at Tutocorin, opposite to Ceylon.

BEFORE we can speak with propriety of the noble island of *Ceylon*, it will be requisite to say somewhat of the advantages drawn by the *Portuguese* from their being lords of the sea between that island and the coast of the continent; but we must desire the reader to observe, that, in what we deliver upon this subject, we confine ourselves intirely to that period in which it belonged to this nation, things being very much altered since the property, or, as they are pleased to style it, the protection of these seas fell into the hands of the *Dutch*. At the time the *Portuguese* were masters in these parts, the taking of oysters in this streight (having the coasts of the kingdom of *Madura* on the north, and the islands lying between *Ceylon* and the main on the south) was styled, by way of excellence, THE FISHERY, and very deservedly; for though some prefer the pearls taken near the island of *Baharan* in the *Persian* gulph, and those likewise found on the coast of *China* at *Huinan*, yet it might be very easily proved, from the comparison of the annual amount of those fisheries within this period, that they were very seldom superior to this of which we are speaking^e. It was one of the wisest points in the *Portuguese* policy, that tho' they were really in full possession of this beneficial commerce, yet they chose to dissemble it, and took all imaginable precautions in order to make the natives

^a Voyage aux Indes par MANDELSLO, p. 284. PTOLEMAE Geogr. lib. viii. ^b GUYON Histoire des Indes, vol. ii. p. 187. ^c P. LAFFITAU Histoire des Conquistes des Portugais, tom. ii. p. 297. ^d MARTINI Hist. Indica, P. i. lib. vii. cap. 7. ^e Histoire natur. des Indes de JOSEPH ACOSTA, l. iv. c. 15.

(R) It will be proper to acquaint the reader with two things relative to these islands, which are singular in their kind: the first is, that the *Dutch*, who now carry on, in a great measure, the commerce of these islands, find it extremely profitable, as purchasing at a very low price, and almost in what quantities they please, the finest cowries in the world, which pass for ready money in some nations, particularly on the coast of *Guinea* (49). The other is, that the cocos of the *Maldives*, of which so many useful manufactures are made, and of which such high commendations are to be met with in several authors (50), as if it grew no-where in such perfection

as in these islands, is, in reality, a different species of that fruit, which does not grow but in the *Maldives*; yet the nuts are not eatable, as is commonly reported, but medicinal, and in that respect highly esteemed, more especially in the cure of fevers and of poisons. A modern writer describes it thus, from his own knowledge: "Of that tree (says he) they build vessels of twenty or thirty tons; their hulls, masts, sails, rigging, anchors, cables, provisions, and firing, are all from this useful tree. It also affords them oil for their kitchen and lamps, sugar, and candied sweetmeats, and a pretty strong cloth" (51).

(49) *Dictionnaire Universel de Commerce*, tom. ii. col. 849. (50) *Hamilton's Account of the East Indies*, vol. i. p. 349.

(51) From a MS. Memoir of Mr. Gardin.

a believe that they were perfectly free, and that their interposition was not so much the effect of authority as of good will ; it was for this reason that they never pretended to erect any fort either at *Tutucorin*, or at *Calipatnam*, two towns upon the continent, from whence most of the fishers and their barks came, and that they suffered the antient customs to take place ^f.

THE season of the fishery was the latter end of *April*, or the beginning of *May*, sometimes sooner, sometimes later, according to the weather. The direction of it was left intirely to the sovereign of the country, called the *Naik* ; and the *Portuguese*, in quality of the protectors of the sea, sent two frigates to defend the fishing-vessels from the *Malabar* and *Maldiva* pirates. The time which this pearl-fishing lasted was about a fortnight, of the beginning of which the *Naik* gave public notice ; and, the day being come, there repaired to the place assigned several
b thousands of people of all sexes and ages, and an indefinite number of fishing-vessels, and divers from five or six hundred to a thousand or more. Upon a signal given, the boats put to sea ; and, having chose their proper stations, the divers plunged, and brought up the oysters in little baskets upon their heads ; with which the boats being sufficiently laden, they were carried on shore, where the people who remained there for that purpose buried them in the sand, till, by the heat of the sun, the fish was corrupted and consumed, and the pearls easily taken out. The whole product of the first day's fishery belonged to the *Naik* ; and, after that, what was caught every day was separated, and particularly distinguished, but went to the common profit. The whole number of people employed at sea and on shore, amounted frequently to fifty or sixty thousand souls ; and the pavilions and tents set up for their accom-
c modation, made a fine appearance at a distance. When the pearls were extracted, cleansed, and dried, they passed them through a kind of sieves, by which their sizes were distinguished. When all was over, the *Naik* appointed a time and place for the public market ; in consequence of which there was a kind of fair, that commonly lasted from the close of *June* till the beginning of *September*. The smallest, which are what we call seed-pearl, was sold by weight ; and all the rest according to their respective sizes and beauty, from a few shillings up to ten or twenty pounds, and sometimes more, apiece ; but there were few buyers, except the *Portuguese* merchants, who, bringing ready money, had good bargains, and thus all parties were pleased ^g. The *Portuguese* assumed the protection of this fishery very soon after they settled in the *Indies*, and held it till the year 1658, when, in consequence of their losses in *Ceylon*, and
d elsewhere, it fell into the hands of the *Dutch*, who have remained in possession of it ever since ^h (S).

WE come next to that beautiful island which lies beyond the *Maldives*, and to the south of *Cape Commorin*, the name of which, differently written by modern writers, is *Ceylon*, *Ceilan*, or *Ceylon*, called by the inhabitants *Lamca*, which in their language signifies the terrestrial paradise, or holy land, a name given by its first king *Vijiah Rajah*, who is supposed to have flourished five hundred years before Christ ⁱ. It was afterwards called *Ilanara*, or *Tranate*, which is as much as to say the insular kingdom ; it was also called *Hibenaro*, or the fertile island ; and *Tenarism*, or the country of delight. The *Arabians* call it *Serendib*, or rather *Serendive* ^k. It is by many held to be the largest, and is beyond controversy one of the richest
e and finest islands in the world. The *Portuguese* settled here in 1506, under the conduct of *Lawrence Almeyda*, who erected a column with an inscription, testifying that he took possession of that country on behalf of *Emanuel* king of *Portugal*, because it had no master ; though at the very same time he treated with the emperor of *Ceylon*, and promised him the protection of

(S) The *Dutch* have changed this method, as we are informed by a person very well acquainted with their affairs ; the course into which they have put it is, in few words, this : The camp is sometimes held on the coast of *Madura*, upon the continent ; sometimes on the island of *Manar*, which is in the hands of the *Dutch*, who, notwithstanding, follow the example of the *Portuguese*, and lay claim to no higher title than that of protectors of the fishery, in which quality their commissary is ever in the camp, as well as the *Naik*, or sovereign of the country, who is also the *Rajah* of *Tanjour*. The oysters caught every day are put up in tons or barrels, of which, when a certain number are full, they put them up to sale by way of auction ; and the merchants bid according as they have an opinion of the year, that is, of

the state of the oysters for the season ; but the middle price is between thirty or forty shillings sterling per cask. When a merchant has bought such a lot as this, he carries it to his quarters ; and, after a certain number of days, he proceeds to opening the oysters, but always in the air, for the stench is so great as to be almost insupportable. They open them over tubs, into which they pour what comes out of the oyster, as also the muddy water that remains in the cask ; next they draw it out into cullenders of several sizes, and at length perhaps they find four or five shillings worth of pearls, sometimes to the value of ten or twelve pounds ; so that it is a perfect lottery, by which some few becoming rich, it betrays numbers into beggary (52).

(52) From a MS. Memoir of Mr. Garcia.

his monarch, in consideration of two thousand five hundred quintals of fine cinnamon, as an annual tribute¹. In 1520 they built a fort here, and began to settle; and afterwards assumed an absolute power over a great part of the island, under colour of the emperor's will, who made the *Portuguese* heirs of his dominions. The trade they carried on was very considerable; and the commodities they drew from hence were long pepper, fine cotton, ivory, silk, tobacco, ebony, musk, chrystal, salt-petre, sulphur, lead, iron, steel, copper, besides the three capital articles of cinnamon, all kinds of precious stones except diamonds, and elephants. As soon as the *Dutch* came into the *Indies*, they formed designs of making themselves masters of so valuable a place^m. They made their first descent in the year 1602, and carried on sometimes open wars, sometimes secret contrivances, against the *Portuguese*, till, in the space of about fifty-five years, they absolutely drove or wained them out of *Ceylon*, making themselves masters of *Colombo* and *Negombo*, which were the principal places in the island, and of the strong fortress of *Punto Gallo*, which commands the best haven in *Ceylon*. The *Portuguese* held their establishments here for about a hundred and fifty years, under sixteen captain generals, from Don Pedro Lopez de Sousa, who was the first, down to Don Antonio d' Amaral y Menezes, who was the lastⁿ. Those best acquainted with the history of the *Indies* in general, and of this island in particular, agree that it was lost, after so long a possession, through the covetousness and pride of the governors, and the luxury, laziness, and cowardice, of the soldiers; which they charge on the inactive administration in *Europe*, that took no care to look into the management of so considerable a settlement, and which brought in so large a revenue to the crown of *Portugal*, till it was too late^o; a circumstance, surely, that ought to be remembered and considered by every maritime power, and such more particularly as have important colonies, and those at a great distance.

The state of
Negapatan at
the time it
was possessed
by the *Portu-
guese*, and
ever since.

THE first place of note that occurs on the coast of *Coromandel*, that relates to our subject, is *Negapatan*, that is, in the language of the natives, the *City of Serpents*, so called not only because the country behind it is very full of serpents, but likewise on account of a kind of religious respect that is paid them by the natives, who look upon it as a sort of impiety to kill them^p. At the time of the *Portuguese* coming into the *Indies*, this was very little better than a straggling village, or at most but an open town; but they, quickly perceiving the uses that might be made of it, and more especially how conducive it would be to the security of their trade in the gulph of *Bengal*, not only erected walls, but improved it in other respects to such a degree, that it became a fair and beautiful city, adorned with several fine churches, and a fine college belonging to the *Jesuits*^q. They held it till they lost the island of *Ceylon*; and it became then a place of such consequence to the *Dutch*, that they practised upon the king, or prince of *Tanjour*, to abandon his old allies the *Portuguese*, and by his assistance became masters of it^r. The *Portuguese* knew the value of it too well to part with it easily, or to forget the loss of it soon; and therefore they made a great effort to recover it; in which they succeeded; but did not keep it long, for the *Dutch* were now grown so strong in the *Indies*, and had dispossessed the *Portuguese* of so many places, that it was impossible for them to relieve it when besieged; which was the reason that the *Dutch* became masters of it again, and have continued so ever since^s. It is at this time a place of very great trade, though the port is not extraordinary; and almost all the different nations in the *Indies*, *Moors*, *Indians*, *Armenians*, &c. are settled and trade under the protection of the fort (T).

Meliapour, or
St. Thomas,
is commonly
looked on as the
same city, how
adorned and
how decayed.

MELIAPOUR, which lies ten miles to the north of the *English* settlement at *Fort St. George*; was of old the capital of the kingdom of *Coromandel*; and partly on its ruins, partly in its neighbourhood, the *Portuguese* erected the stately city of *St. Thomas*, or, as it is commonly called, *St. Thome*, which is the reason that, notwithstanding some travellers distinguish between the *Indian* and the *Christian* city, yet most writers consider them as the same place; which, if it be an error,

^r HAMILTON's Account of the East Indies, vol. i. c. 28.

(T) This town belonged originally, at least so high as we are able to trace it, to the *Naik*, who has been mentioned before; but it may not be amiss to observe, that this is the title of his office, because it lets us into a very curious circumstance, that one could hardly expect to meet with in the *Indies*, as agreeing precisely with the constitution of the *German* empire. All the countries adjacent belonged in times past to a powerful prince, who

was styled the emperor of *Bisnagar*, who distributed the provinces amongst the principal persons of his household. Of this the *Naik*, or cup bearer, was one; and, in right of that office, was governor of *Tanjour*, where he set up for himself, and became an independent prince, as well as the king of *Golconda*, and others, who, like him, were originally domestics of this emperor (53).

(53) Voyage de Jean Baptiste Tavernier, tom. iii. l. i. c. 10. Lettres édifiantes, tom. xv. p. 135.

- a is however not very inexcusable¹. It was, and indeed still is, inhabited by weavers and dyers, and noted for making the best coloured stuffs in *India*, which they transport to *Malacca*, *Java*, the *Molucca Islands*, *Siam*, *Pegu*, &c. The excellency and durability of the dye is attributed to the peculiar quality of the water which arises out of springs in white sandy ground, without any clay. Some think *Meliapour* to be *Ptolemy's Mapoura*². It was desolate at the coming of the *Portuguese*, who rebuilt it in 1545; after which it increased to that degree in buildings and inhabitants, that in a few years it was one of the finest cities in the *Indies*. It is fortified with a stone wall and several bastions, and has above three hundred towns and villages under its jurisdiction. When it was in the hands of the *Portuguese*, it was first subject to the see of *Cochin*, and afterwards made a bishoprick under the archbishop of *Goa*. They
- b had several churches, where the *Mahometans* and pagans were instructed and baptized, besides others, with two monasteries and a college of *Jesuits* here, where the *Portuguese* and *Malabar* children were instructed. Next to the college was a very large parish, inhabited by none but converts³. There is also the famous church of *St. Thomas the Apostle*, who, the *Portuguese* say, was buried here, and pretend to shew his sepulchre on the top of a neighbouring mountain, over which they have built a small chapel, that is seen off at sea. Near the college, upon a pretty high hill, there is another chapel, which they pretend was the apostle's dormitory; and they have adorned that part, where he used to say his prayers, with gilt iron steps. They likewise shew a stone cross, which they pretend fell from heaven in the apostle's time, and have covered it with an arch. The wood of this chapel is looked on as a precious relic; so that
- c pilgrims frequently carry away little bits of it, and set them in gold⁴. The city had seven gates, and was very strong from its situation, being covered by the sea on one side, and by a chain of mountains on the other; yet the *Moors* took it, after a long siege, and are still in possession; the road is very safe from *April* to *September*, when the south and south-west winds blow; but not in the other season, when ships of any considerable burthen are obliged to retire into some of the adjacent ports⁵ (U).

1661.

- It appears from their own histories, that even in the time of their highest prosperity the *Portuguese* contented themselves with these settlements on the coast of *Coromandel*, though their trade in those parts was of very great importance; but then they took great care to keep these places in a good state of defence, and maintained in each of them a very numerous garrison for their preservation, restraining the rest of the coast by their squadrons continually cruising in the bay of *Bengal*. On the opposite side of that gulph the *Portuguese* had once very great power in the kingdom of *Pegu*, in consequence of their assisting the king against his neighbour of *Siam*, who had invaded his territories; and would very probably have made him his tributary, if a small body of *Portuguese* had not come to his assistance, by whom he was enabled not only to defend himself against his enemy, but even to carry the war into his own country. It is easy to discern what advantages might have accrued to the *Portuguese* from this favourable turn, if they had known how to improve it; but we learn from a late author, that what might have turned so much to their benefit, proved, by their own ill management, the cause of their ruin, and that in a short space of time⁶. The king of *Pegu*, it seems, was so sensible of the service they had done him in driving the king of *Siam* out of his country, that in pure gratitude he made one Signior *Thomas Pereyra*, who commanded the *Portuguese* in the war, generalissimo of all his forces; which preferment made the *Portuguese* so insolent, that in a few years they became detestable and intolerable to all ranks and degrees of persons in *Pegu*. Both kings grew tired of war, but were too proud to make advances towards peace; so that for many years they had skirmishes, though not set battles; and where-ever the *Portuguese* went, they had victory to attend them. The king of *Pegu*, to have his forces nearer the borders of *Siam*, settled his court at *Martavan*; and kept the *Portuguese* near him, to be ready upon all occasions, either to repel or assault, as opportunity served; and *Thomas Pereyra* was the great favourite at court, having his elephants of state, and a guard of his own countrymen to attend him. One day coming from court in state on an elephant, he happened to hear music in a burgher's house, whose daughter, a beautiful virgin, had been married that morning to a young

(U) We shall have occasion to mention this place more than once. It was by the assistance of the *Dutch* reduced by the king of *Golconda*, from whom it was taken by the *French*, who kept it for some time; and then the same *Indian* prince, by the assistance of his allies, re-

covered it, and remained in possession till he lost his dominions to the *Mogul*, under whom it now remains. The reason of its decay is the vicinity of *Madras*, or *Fort St. George*, which some writers affirm was built, at least in part, out of its ruins (54).

man in the neighbourhood. The general went to the house, wished them joy, and desired to see the bride. The parents took the general's visit for a great honour done them, and brought their daughter to his elephant's side. He, smitten with her beauty, ordered his guards to seize her, and carry her to his house. His orders were too readily obeyed; and the poor bridegroom, not able to bear his loss, cut his throat. The disconsolate parents rent their clothes, and went weeping through the streets to the king's palace, imploring their countrymen's assistance to avenge them on the insolent *Portuguese*. Crouds of people came to hear and see the tragedy, till their numbers grew so great, and their noise so loud, that it reached the king's ears, who sent to know the cause of the tumult. The messenger, returning, acquainted the king of what had been transacted; and he sent them word, that he would punish the criminal, and accordingly sent for his general: but he made an excuse, that he was so much out of order, that he could not wait on his majesty; which answer so provoked the king, that he ordered the whole nation to take up arms, and to make a general massacre of the *Portuguese* in city and country. The king's orders were put in execution so speedily, that in a few hours all the *Portuguese* were destroyed; and the guilty criminal, being taken alive, and made fast by the heels to an elephant's feet, was dragged through the streets till there was not either skin or flesh left to cover his bones; which spectacle appeased the enraged populace. Three *Portuguese* only were saved, who, being accidentally in the suburb next the river, hid themselves till night favoured their escape in a small boat; in which they coasted along the shore, feeding on what the woods and rocks afforded them; and at length arrived at *Malacca*, with the dismal account of this melancholy transaction. This event, however memorable, would scarce have deserved a place in this history, if it did not afford us such a picture of the disposition of this nation, as sufficiently accounts for the loss of that power which they had acquired with so much industry and labour.

The great commerce carried on in the kingdom of Siam by the *Portuguese*, in their prosperity.

THE empire of *Siam* lies next to *Pegu*, and is a country of vast extent, the monarch of which was too powerful for the *Portuguese* to think of making any conquests in his dominions; and therefore they chose to live with him upon good terms, for the sake of the brisk trade carried on thro' his territories, which for that purpose are extremely well situated, having on one side the kingdoms of *Layos*, *Camboyda*, and *Cochin-China*, and on the other the countries bordering on the gulph of *Bengal*^a. Besides, there annually resorted thither a fleet of merchant ships from *China*, laden with all the rich goods of that empire. The *Portuguese* continued to hold a fair correspondence with this monarch and his subjects, as long as their power subsisted in the *Indies*; but by degrees the *Dutch* have long since in a great measure excluded them from their influence here; and have wrought themselves so effectually into the confidence of these kings, that they have granted them an exclusive privilege of purchasing all the tin in their dominions, which is a branch of commerce of prodigious importance^b; yet the *Portuguese* are not wholly ejected, though their trade is little or nothing now, in comparison of what it was. In the other principalities of this peninsula, they had also great influence, as well as a general correspondence with the people, as appears from the mixture of *Portuguese* words in their respective languages^c, and the remains of such as are descended from them, which are yet visible in these parts, though not at all revered or esteemed, but, on the contrary, treated with manifest scorn and contempt (X).

Malacca exceedingly improved, as well as strongly fortified, by the same nation.

AT the time the *Portuguese* first came into the *Indian* seas, the great peninsula of *Malacca* was subject to the king of *Johore*; and by what means the viceroys of the crown of *Portugal* were led to attack and make themselves masters of that city, has been already shewn. After it came into their hands, it changed its condition; and, though it was then a place of no small account, in a very short time became much more famous all over *India* and *Europe*. lying almost in the centre of trade, brought thither by shipping from the rich kingdoms of *Japan*, *China*, *Formosa*, *Luconia*, *Tonquin*, *Cochin-China*, *Cambodia*, and *Siam*; besides what *Johore* produced, and *Sumatra*, *Java*, *Borneo*, *Macassar*, *Banda*, *Amboyna*, and *Ternate*,

^a Voyage aux Indes, par MANDELSLO, p. 304. 331.
^c HAMILTON'S Account of the East Indies, vol. ii. c. 38.

^b TAVERNIER, tom. iv. l. viii. c. 18.

(X) The present condition of the *Portuguese*, in almost all the different countries of the *Indies*, is truly deplorable, since they live in a very mean and wretched condition, though, generally speaking, protected both by the *Indian* and *Mohammedan* princes, in whose territories they are settled; which, whether it arises from their having been so long resident in the *Indies*, or whether the conformity of their manners recommends them more than other *Europeans*, we pretend not to decide. This, however, is very apparent, that they shew nothing of

the spirit of their ancestors, are not at all solicitous about settlements, forts, or factories; but content themselves with what they can get either by working at some manufacture, carrying on a pedling kind of trade, or serving in some inferior station, or as common soldiers in the *English*, *Dutch*, or *French* fortresses, or in the court of some *Indian* prince. But then, in these, the blood is much debased and corrupted, and there is nothing left of the *Portuguese* but the name (55).

a islands that abound in the most valuable commodities^d. After *Goa* and *Ormuz*, this was by very far the richest city in the *Indies*, and a great market for all the different commodities that these countries produced. It was the seat of a bishop; and the cathedral church, dedicated to *St. Paul*, was extremely fine. They had, besides, five other parish-churches, and a noble college for the *Jesuits*, together with a seminary, in which all new converts to the faith were instructed. The whole was encompassed with a strong stone wall, regularly fortified with bastions, the place extremely well peopled, and the garrison numerous and well supplied, because the *Portuguese* considered it as the eastern frontier of their dominions (Y), which therefore could not be kept too secure^e.

b In 1605 the *Dutch* attacked and destroyed a fleet of *Portuguese* here, consisting of thirty-four sail, on board of which were three thousand men; but they, notwithstanding this, were not able to take the place. The next year the king of *Johore* invested it with an army of sixty thousand men, in revenge of what the *Portuguese* had done against him three years before, when they took and destroyed his capital. However, he also was obliged to raise the siege with great loss^f. But the *Dutch*, well knowing the importance of the place, and the vast advantages accruing to the *Portuguese* from its situation and commerce, the former affording them an opportunity of levying ten *per cent.* upon all vessels passing through the *Streights of Malacca*, and the latter producing annually a large revenue; they attacked it in the year 1640, so vigorously, that they became masters of it, after a siege of six months^g. The walls and fortifications they preserved, as also the church of *St. Paul*; but most of the other churches they have destroyed, and the great hospital they have turned into a warehouse. The language spoken here, is esteemed the most copious and polite in the *Indies*, and therefore serves as a kind of general tongue through all the islands and provinces lying farther to the east^h. In the kingdom of *Cambodia*, or *Camboya*, the *Portuguese* have still a considerable trade, and they are likewise well received in *Tonquin*; but what little commerce they now carry on, serves rather to keep them from starving in the *Indies* than to enrich, or to enable them to make any returns to *Europe*, with which they have in truth little or no connection, and about which, consequently, they cannot have much concernⁱ.

(Y) It was, as the reader has been informed, reduced by the great *Albuquerque* in 1510, who, before he returned to the seat of his government, as general of the *Indies*, found himself obliged to put to death the *Rajah Utemutis*, to whose assistance he was in a great measure indebted for this important conquest. His affairs likewise made it requisite for him to raise *Ninachetu*, a man ennobled by his virtues, though not by birth, to the post of *Bandurc*, or chief of the *Indians*, which he had well deserved; but it being represented to *Albuquerque*, that the *Indian* princes could not brook being obliged to submit to one they esteemed so much their inferior, he very unadvisedly, at least very unjustly, engaged to take an opportunity of removing him; in which he kept his word, when he sent *George Albuquerque* thither to succeed *Ruy de Britto* in 1514, the new governor raising the king of *Campar* to the dignity of *Bandura* in his room. *Ninachetu* caused a pile of precious and sweet-scented woods to be erected in one of the most spacious

places in the city; and, having ascended it, made a moving speech to the people, in which he repeated the services that had acquired him his employment, the fidelity with which he had executed it, and the baseness of that ingratitude from which he lost it; and then causing fire to be set to that pile of wood, died with all that magnanimity for which the *Indians* are so famous (56). His successor, the king of *Campar*, was a man of no less virtue and honour; but, being falsely accused to *George Albuquerque*, he, without due examination, caused him to be publicly put to death upon a scaffold as a traitor. These acts of injustice and inhumanity excited such a spirit of resentment and aversion to the *Portuguese* in all the neighbouring nations, that *Malacca* stood more exposed, as well to secret conspiracies as open hostilities, than any other part of the *Portuguese* territories in the *Indies*, of which we shall have occasion to say something more hereafter (57).

S E C T. VII.

Methodical detail of their concerns in respect to Sumatra, Java, Borneo, Celebes, or Macassar, Moluccas, and New Guiney, with a detection of the false policy and tyrannical usage of the natives, by which they rendered themselves odious, and opened a way for the Dutch to subvert their power, and raise a new, though not a milder, government on their ruins.

The Portuguese, by making a few settlements on the coast, secured the commerce of Sumatra.

THE island of *Sumatra*, which extends itself north-west and south-east, fronting the peninsula of *Malacca*, is divided by the equinoctial into nearly two equal parts, extending to six degrees of latitude north and south. It is about two hundred and fifty leagues in length, sixty in breadth, and five hundred in circumference. The *Portuguese* came thither first under the command of *Don Diego Lopez de Segura*^a. They found the country very rich and fruitful, and under the dominion of several petty princes, who were continually at war with each other. One would have imagined that this must have afforded them an opportunity of subjecting it intirely, as they had done other parts of the *Indies*; but it happened otherwise; for the people, by their continual disputes among themselves, were become so well acquainted with the art of war, that they could make no great impressions; but contented themselves with a few settlements on the coast, by which they were enabled to carry on a very lucrative trade with the inhabitants, not only in sulphur, rice, ginger, pepper, camphire, cassia, sandal, and other rich woods and drugs, but also in fine tin, iron, copper, silver, gold, and diamonds. The crown of *Portugal* had frequent disputes with the princes in possession of dominions within the compass of this island, and sometimes gained considerable advantages over them; but were never able to subdue them, or reduce any of their principalities under their power, which however they attempted more than once. They would likewise have been very well pleased to have erected here, as well as in other places, some convenient citadel or fortress, which by degrees would have given them an opportunity of controuling the natives. But this they could never obtain; nor had they any kind of fort or strong place there, as appears from a state of the revenues of the *Portuguese* settlements in the *Indies*, compiled and published by *Don Edward de Menezes*, who was viceroy there in the year 1584^b. The *Dutch* infested this island from the close of the sixteenth century; and soon after, as their power increased, began, as usual, to exclude all other nations; but the inhabitants soon shook off their yoke, and are still in a great measure free (Z). It is for this reason, probably, that almost all our *European* nations concur in treating these people as the most cruel, barbarous, and perfidious, in the *Indies*, without ever considering that these very epithets may be justly retorted upon such as endeavour to deprive them of their liberties and their possessions, without the least colour of right. But to wave reflections, as improper in this place, let us proceed to the other great islands, and say somewhat of their state and condition during the dominion of the *Portuguese* in these parts. a b c d

The Portuguese engaged in frequent wars with the sovereign of Bantam, in the island of Java.

THE noble island of *Java* was known and visited by the *Portuguese* about the beginning of the sixteenth century, chiefly on account of the trouble given them by the pirates fitted out from *Bantam*, or, as they call it, *Bintam*, and other places in the same island; which induced *Don Pedro Mascarenhas*, to attack *Bantam*, which he took and plundered, though *George*

^a MAFFEI Hist. Indica, P. i. l. iv. c. 4. CASTENEDA.

^b PURCHAS'S Pilgrims, vol. ii. p. 1532.

(Z) One of the best *Portuguese* historians, in describing the island of *Sumatra*, tells us, that it abounds in tin, iron, glass, sulphur, as well as gold, and with a certain gum, which, he assures us, has received the name of camphire from persons who were ignorant in the *Arabic* tongue (58). It is however more than probable that he was misinformed by those who helped him to this criticism; for the camphire of *Sumatra* is looked upon as the very finest in the *Indies*, and, as the ingenious and accurate Mr. *Lockyer* assures us from his own knowledge, is worth half a crown an ounce upon the spot. He acquaints us likewise with another particular both singular and curious, that the camphire of *Sumatra* bears a great

price in *China*, where they make use of it as kind of leaven, mixing it with their own, which is a coarser kind, to which they think it gives odour and spirit. The worst of it is, that there is but a very small quantity of this camphire, which would be otherwise a mighty valuable commodity (59). The same *Portuguese* author has another observation, which deserves both notice and credit: he thinks that the island of *Sumatra*, and not the peninsula of *Malacca*, was the country known to the ancients, by the name of the *Golden Chersonese*; which is so much the more probable, as this island abounds with gold, whereas there is none about the country of *Malacca* (60).

(59) Account of the Trade in India, p. 41.

(60) Maffei

- a *Albuquerque* had attempted it in vain^a. *Java Major* lies south-east from the peninsula of *Malacca*, having *Sumatra* lying before it, from whence it is separated by a narrow passage, now so famous in the world by the name of the *Streights of Sonda*. Authors vary as to its dimensions, but the most moderate allow it nine hundred miles in circuit. The air is generally esteemed more wholesome than in any of the isles before-mentioned, the country exceeding fruitful, and the coast abounding with good ports. The *Javanese* pretend, that they are descended from the pure and unimixed race of the old inhabitants of *Cbina*, who retired thither when their country was over-run by the *Tartars*; and on this they very much value themselves: but, before the *Portuguese* came, they had not only mixed with other neighbouring nations, but were also become *Mohammedans*^b. The island at that time was cantoned out among a number of little princes, some more, some less powerful, but most of them masters of some force by sea. The *Portuguese* generals saw plainly enough, that they had not strength sufficient to keep this large island; and therefore contented themselves with making a new king of *Bantam* when they had taken it, and accepted from him an annual tribute^c.

- PANARUCAN, a small city, the capital of a little principality of the same name, and withal a commodious port, owed much to their protection; and was raised to be one of the principal marts of the whole country, where they not only dealt in rice, pepper, and other commodities of the island, but also in gold, precious stones, and spices, brought from other places, and more especially from the adjacent islands. But since the *Dutch* became masters of *Batavia*, and the emperor of *Materan* and the king of *Bantam* have divided the island between them, this place is become a fishing-village, and all its trade is intirely lost. It may be with truth affirmed, whatever some travellers may insinuate to the contrary, that the inhabitants of these islands in general, and of this in particular, are fallen much below the state in which the *Europeans* found them. No *Javanese* monarch can now, as they did then, equip a fleet of thirty sail of large ships; the admiral so strongly, though so clumsily built, as to be absolutely cannon proof. All the princes together are not now able to expel the *Dutch*; whereas a petty king, or even a queen, in those days, could furnish a force sufficient to besiege *Malacca*, when the best fortrefs in the *Indies*, both by land and sea; and not to besiege it only, but to reduce it to great extremities^d (A). We shall have occasion to treat this matter more at large when we come to speak of the present masters of this island, who have thought fit to fix here the magnificent capital of their extensive and potent empire.

- It was above thirty years after the *Portuguese* arrived in the *Indies*, before they were acquainted with any thing more than the name of the island of *Borneo*, and its situation, by reason of their frequently passing by its coasts. About that time captain *Edward Conil*, had orders to examine it more narrowly; and, being once acquainted with the worth of the country, they made frequent voyages thither. This island, which is almost of a circular figure, lies, at least part of it, under the equator, being about five hundred leagues in circumference, and abounding with the richest commodities; the hills sprinkled with gold, and the finest diamonds in *India* found in its rivers, washed down probably from the hills by the torrents that pour from their lofty summits. They found the coasts inhabited by *Malayan Moors*, who certainly had established themselves there by conquest; but the original inhabitants still remain in the mountains, and are styled *Beajus*, which in the *Malayan* tongue signifies a wild man; and the *Moors* use the very same word for the larger sort of apes, that are common enough also in this country; as if they meant to signify that the one had as little of humanity about them as the

Before the Europeans came into the Indies, the inhabitants of these islands more considerable than since.

How the Portuguese came to correspond with the inhabitants of the island of Borneo.

^d P. LAFITAU Histoire des Conquetes des Portugais, tom. iv. p. 11.

(A) In the year 1547, as the *Portuguese* historians themselves relate, the king of *Achern*, in the island of *Sumatra*, sent a fleet of seventy ships of war to attack *Malacca*, with a great body of land-forces on board; which fleet was so suddenly and so secretly brought together, that they entered the port, and began to debark their men, about two in the morning, on the 18th of *October*, before the inhabitants had the least intelligence; and, though they were repulsed, yet they burnt all the ships in the haven, which were but eight, and, of these, five were very richly laden. The *Portuguese* were so much struck with their good fortune upon this occasion, that they ascribe it to a miracle wrought by the prayers of *St. Francis Xavier*, who was then in the city (61). The same monarch, in 1570, entered into a league with the Grand Signior, the *Shah of Persia*, and other *Mohammedan* princes, in order to drive the *Portuguese* out of

the *Indies*; and was the most active in the whole confederacy, equipping, notwithstanding his repeated losses, four numerous fleets; with the last of which he came before *Malacca* in person, in 1575, when he had infallibly taken the place, which he blocked up by sea, and besieged by land, if he had not taken the silence of their guns (owing to the want of powder, and the great confusion in their streets, which proceeded purely from consternation and despair) for the marks of some secret design, and the tokens of those great stratagems in war, for which this nation had been formerly famous; on which he suddenly retired, when the place would have submitted almost upon any terms. It is very certain, that all the princes of the *Archipelago* together, are not in a condition to wrest this fortrefs out of the hands of the *Dutch*; and it is their sense of this that makes them quiet (62).

(61) P. Lafitau Histoire des Conquetes des Portugais, tom. iv. p. 19, 20, 21. p. 295. 337. 357. 367.

(62) Idem ibid.

other; which, however, is far from being true. The *Moors* are governed by several kings, ^a the chief of which are those of *Banjar Masseen*; of *Succaton*, in one of whose rivers there are found excellent diamonds; of *Borneo*, and others.

Some account
of the *Beajus*,
or reputed
savages, who
dwell in that
island.

THE *Beajus* have no kings, but many little chiefs. Those that are subject to the king of *Manjar*, or border upon him, pay a tribute; but such as live farther up the country, and in places inaccessible to the *Moors*, are absolutely independent, and live according to their own customs. The *Beajus* are generally very superstitious, and much addicted to augury. They do not adore idols; but their sacrifices of sweet wood and perfumes are offered to one God, who they believe rewards the just in heaven, and punishes the wicked in hell. They marry but one wife; and look upon any breach of conjugal faith, either in the man or in the woman, as so heinous an offence, that every one contrives the death of the person transgressing, either by ^b themselves or their friends; and therefore the women are very modest and reserved, especially the maidens, who are not seen by their husbands till the wedding-day. These people are naturally honest, industrious, and have a brotherly affection for each other. They have a notion of property, which yet does not render them covetous. They sow, and cultivate their lands; but, in the time of harvest, each reaps so much as will serve his family, and the rest belongs to the whole tribe in common, by which method they provide against necessity and disputes (B). The coasts of the island were, and are, chiefly inhabited by *Moors*, with whom the *Portuguese* traded to great advantage, when they found it not so easy to conquer them; and entered into an alliance with the king of *Borneo*, which was very advantageous to both parties.

1530.

What inter-
course there
was between
the *Portu-
guese* and the
people of *Cele-
bes* or *Ma-
cassar*.

ABOUT the same time that they came to have a correspondence with the people of the last-mentioned island, they became acquainted likewise with *Celebes* and its inhabitants, some say by accident, others by the shipwreck of some of their vessels; but it is generally agreed, that their knowledge was but superficial, till one of their governors of the *Moluccas*, *Antonio Galvano*, sent two of the natives, whom he had converted to Christianity, back to their own country, where they brought numbers to embrace the gospel, and established a good understanding between the people in general and the *Portuguese*. The great island of *Celebes* is divided from *Borneo*, by the *Streights of Macassar*. *Argensola*, and other authors, tell us the natives are of a white complexion, and that they were formerly much given to piracy: they give us too a remarkable plan of the antient form of government in this country; which seems to ^d confirm, that there had been great revolutions in these parts, before they were discovered by the *Europeans*. What they say on this subject, reduced into a narrow compass, amounts to this: that there were originally seven kingdoms or principalities in this island, the princes of which met together, and chose a monarch, who had a limited power in its nature, but, so far as it went, extended over the whole island; and whom, in case of tyranny, or exceeding that regulated power, they who elected him deposed (C). The discovery of so considerable a country, was looked upon by the *Portuguese* as a matter of great consequence; and measures were taken to secure the affections of the inhabitants, whom it was not found easy to conquer; but, on the other hand, capable of being obliged, or rendered useful as their allies.

The motives on
which the lat-
ter disliked,
and resolved to

THESE people were much braver, and had much better heads, than most of the *Indians*; ^e and therefore, after a little conversation with the *Europeans*, they began to discern that there was no sense or meaning in their own religion, which in substance was this. Their priests told

Discoveries.

^d P. LAFITAU *Histoire des Conquetes des*
He gives us this account himself, in his book intituled *Discoveries*.

^e MAFFEI *Hist. Indica*, P. ii. l. x. c. 11. ^w GALVANO'S

(B) What is said in the text is thought the best, and there is reason to believe that it is the only authentic account that was ever given of these people. The *French* author above cited, transcribed it from one whom he blames for not mentioning his authority. We thought it requisite, therefore, to insert this note, to remove that difficulty. This account was originally extracted from the papers of an *Italian* missionary, one Father Antonio Ventimiglia, who was sent to *Borneo* on board a *Portuguese* ship from *Macao*, converted numbers of these people to Christianity, and died there about the year 1691. The *Portuguese*, from the city beforementioned, had for some years a considerable trade with the *Moors*, on the coasts of that island, and at their request settled a factory there, which in the end the *Moors* surprized, plundered, and put most of the people to the sword (63).

(C) It would be no difficult thing, if this were a pro-

per place, to prove, that, notwithstanding what is said of the barbarity of these people, there is scarce any form of government with which we are acquainted, that did not subsist in the *Indies* when the *Portuguese* came thither; and yet, whoever is well acquainted with this history, cannot but be sensible that things were then declining among the natives, though they are much more declined since. We may see from the foregoing note, that there is no trusting absolutely to the accounts given of nations that are separated, and as it were hidden, from the rest of the world. The *Moors* describe the *Beajus*'s as little better than beasts upon two legs; whereas the *Italian* missionary, who lived and died with them, and had no interest in either concealing or dissembling the truth, affirms them to have been both better and wiser men than the *Moors* themselves.

a them, that the heavens were eternal; and the sun and moon a god and goddess, from whose influence all things proceeded: that they had once a quarrel, and the sun striking the moon, she thereupon miscarried of this world; with abundance of stories of the like nature. They taught them likewise the transmigration of souls; and that it was unlawful to kill any living creature to eat, except swine and birds, because the former were too nasty, and the latter too little for any human soul to dwell in. But they advised them to sacrifice their cattle to the sun and moon; and, if they had none of these, they sometimes made free with their children. No wonder, therefore, that they were glad to get rid of such a religion, and of such practices, which with much unanimity they did, and became deists at once. But, not satisfied with this, they determined to send at the same time to *Malacca* and to *Acbin*, to desire from the one, d Christian priests, and from the other, doctors of the *Mohammedan* law, resolving to embrace that religion, the teachers of which came first among them *.

THE *Portuguese* have hitherto been esteemed zealous enough for their religion; but it seems that Don *Ruy Perera*, who was then governor of *Malacca*, was a little deficient in his concern for the faith, since he made a great and very unnecessary delay in sending the priests that were desired. On the other hand, the queen of *Acbin*, being a furious *Mohammedan*, no sooner received an account of this disposition in the island of *Celebes*, than she dispatched a vessel full of doctors of the law, who established their religion effectually among the inhabitants. Some time after came the Christian priests, and inveighed bitterly against the law of *Mohammed*, but to no purpose; the people of *Celebes* had made their choice, and there was no bringing them to c alter it ′. One of the kings of this island, indeed, who had before embraced Christianity, persisted in the faith, and most of his subjects were converted to it; but still the bulk of the people of *Celebes* continued *Mohammedans*, and are so to this day, and the warmest zealots for their religion of any in the *Indies*. But this difference in religion did not hinder them from living on very good terms with the *Portuguese*, who established a better trade there than in any other part of the *Indies*; for, finding few rich commodities, and but little opportunity of encroaching on the liberties of the nation, they were glad to treat them as a free people; and the situation of the country being extremely happy for that purpose, made it very soon, in respect to the adjacent islands, the centre of commerce ′.

THE great island of *Borneo*, abounding in gold, diamonds, pepper, and other rich commodities, lying but one day's sail from thence; *Ambogna*, and the *Spice Islands*, not above d three or four; the kingdoms of *Siam*, *Camboyda*, *Cochin China*, and *Tonquin*, the empire of *China*, and the *Philippine Islands*, none of them above three hundred leagues; we need not wonder, therefore, that the port of *Jampodan*, the best and most capacious in all that part of the world, should be constantly full of ships; and the great towns on the coast become places of prodigious trade, when it was so much the interest of the *Portuguese* to promote it. The people themselves were in every respect capable of managing it, being very industrious, and at least as well skilled in navigation as any of their neighbours; and though they had not, as has been observed, very rich commodities, except gold, and that in no great quantities; yet they had wherewithal to purchase of the greatest value, since their rice is esteemed the best in the e *Indies*, as their cotton is allowed to be the finest; with those they traded to the *Moluccas*, and from thence brought such vast quantities of spices, that they drove a very considerable trade in them with their neighbours and the *Europeans* ′ (D).

THIS island is sometimes called *Celebes*, and at others *Macassar*; and the reason is, because the former, which lies in the north-west part of the island, and the latter, which takes up all the south, were the principal kingdoms of the island; and especially the last, the monarchs of which were very powerful, and frequently masters of the best part of the island. Their subjects, the boldest and bravest of all *Indians*, are likewise remarkable for having a consummate knowledge in poisons, which are some of them of so deadly a nature, that the very touch or smell of them is instantly and infallibly mortal. The men make use of them to tinge f the heads of their arrows, or rather darts, which they blow through hollow trunks, and that with such force and dexterity, that they will hit a small mark at the distance of four-

(D) It has been before observed, that the *Mores* were come into these parts but a very little time before the *Portuguese* reached them; and there seems good ground to believe, that at this time the island of *Celebes* was the center of commerce for all the nations of the *Indies*,

that traded in spices, on account of its ports, the mercantile genius of the people, and the great abundance of necessaries there, which were wanting in the *Spice Islands* themselves, and consequently rendered them less fit for the reception of strangers (64).

(64) Recueil des Voyages qui ont servi à l'Etablissement de la Compagnie des Indes Orientales, tom. ix. p. 165.

score yards^b. They dip also the points of their daggers in the same poisonous drugs, and the very scratch of either dart or dagger kills without remedy. The women likewise make use of these poisons to gratify their revenge; for, as they are allowed to be extremely constant in their affection themselves, so they have very quick resentment in cases of infidelity, especially in regard to *Europeans*, who frequently cohabit with them, and sometimes marry them^c. As they were the allies, not the subjects, of the *Portuguese*, so they were much more attached to that nation than any other *Indians*, and gave a very hospitable reception to such as, on the ruin of their colonies, fled thither for protection; and this was one great reason that the *Dutch* made such a point of reducing the king of *Macassar*; which they did, after a long war, in 1667, and prescribed to him very hard terms, particularly these; that he should deliver up to them the harbour of *Jampadan*; next to turn all the *Portuguese* out of his dominions; and, lastly, to renounce all commerce with the *Spice Islands*, without which his conquerors could not have monopolized them, and kept him in servile subjection^d.

When they first visited the Moluccas, and what gave rise to Magellan's discontent.

THE *Moluccas* or *Spice Islands* were not discovered by the *Portuguese* till the year 1511, and then as it were by chance. *Francis Serrano*, *Diego d'Abreu*, and *Ferdinand Magellan*, being sent to make discoveries, were separated by a storm; the first penetrated as far as *Ternate*; the two latter discovered only the island of *Amboyna*, and afterwards that of *Panda*. They spent about eight years in these discoveries, which cost *Serrano* his life in his return. *Antonio de Brito* succeeded *Serrano* in the government; and built a fort at *Ternate*, under colour of protecting the king of that island, who was an infant, but in reality with an intention to establish the power of the *Portuguese* over the king, and his subjects likewise^e. In the mean time *Ferdinand Magellan*, having had very exact intelligence, from his friend *Francis Serrano*, of the situation of these rich islands, and knowing also what an immense fortune he had got within the space of a few years, while he resided at *Ternate*, resolved to return to *Portugal*, in order to obtain, if possible, the reward which he thought due to his services; and, if that was refused him, to withdraw into *Spain*, and suggest to the Emperor *Charles V.* that he had a better right to the *Moluccas* than the crown of *Portugal*, according to the pope's bull for settling that point (E). His suit was rejected at *Lisbon*, with circumstances that gave a man of *Magellan's* spirit great distaste; he therefore applied himself with diligence to the execution of the latter part of his project, and succeeded in it, even against the will of the emperor, whose council went warmly into the proposal; in consequence of which, *Ferdinand Magellan* sailed with a squadron, for the discovery of a new route to the *Moluccas*, September the twenty-first, 1519, from the port of *St. Lucar* in *Spain*. In that expedition, of which we shall have occasion to speak more at large hereafter, he did indeed discover by that streight, which has ever since borne his name, a new passage to the *Moluccas*, thro' the *South Seas*, and came very near, though he was treacherously killed before he could reach them. The court of *Portugal* was very well apprised of his intention; and had sent proper intelligence of it to the *Indies*, with instructions to the viceroy how to conduct himself upon that occasion. But let us now return to the *Spice Islands*, and to that strange turn of affairs which happened there.

A specimen of that kind of behaviour by which the Portuguese lost the Indies.

HENRY *Garcias*, who succeeded *Antonio Brito*, was at that time governor of the *Moluccas*; and he, finding all things extremely embarrassed by the war which his predecessor had made against the king of *Tydor* with very little advantage, thought fit, on his first coming to his government, to make peace with *Almansor*, who was then king of that island, on condition that he should restore the artillery and prisoners he had taken from the *Portuguese*, which in the space of six months he undertook to do: but the face of affairs in those parts altering soon after, *Garcias* repented his having made the peace, and resolved to renew the war; believing, that if he could reduce this island, it would very much extend the *Portu-*

^e ARGENSOLA

(E) We shall give the reader, in the next chapter, a large account of this gentleman's expedition in the service of the crown of *Spain*; but it will be proper to observe here, that such as represent his merit in the service of the crown of *Portugal* as either very small or very dubious, do him much wrong. He was in great esteem with Don *Alphonso d'Albuquerque*, and in 1510 saved the crews of two *Portuguese* vessels that were wrecked near *Angedive* (65). He was soon after very instrumental in saving the *Portuguese* army at the siege of *Goa*; and it was owing to him that *Diego de Sequiera*,

and part of his squadron, escaped, when that treacherous attempt was made upon them at *Malacca*. He served again under general *Albuquerque* at the taking of that city, from whence he sailed with that general's commission, to discover the *Spice Islands*. He might therefore with good reason expect that the court of *Portugal* should have granted his request, which was only a small augmentation of his pay, and that not from any motive of avarice, but, as it was in those days esteemed a singular mark of honour (66).

(65) *Maffei Hist. Indica*, P. i. l. iv. c. 6.

(66) *P. Lafitan Histoire des Conquetes des Portugais*, vol. ii. p. 37.
gueuse

- a *guese* power, and raise his reputation^f. To furnish himself, therefore, with some pretence for breaking with the king of *Tybor*, he, before the time limited in the treaty was expired, sent to demand the cannon and prisoners. To which *Almanzor* modestly replied, that he would have delivered them up when the peace was made, if it had been in his power; but that, having lent the cannon to a prince who was his neighbour, it required sometime to get them back. He had so little suspicion, however, of the governor's bad design, that, being at this time very much indisposed, he requested *Garfias* to send him a physician, whose advice he might use for his recovery^g. The governor accordingly sent him one, under whose direction the king having put himself without the least reserve, was by him most basely poisoned. Immediately after that monarch's death, *Garfias* sent again to demand the cannon
- b and prisoners; and because the people desired a delay till the king's funeral was performed, he, who foresaw that, having all things ready, made a descent upon the island, attacked the capital, took and plundered it, and treated the people with the utmost inhumanity.

THE viceroy of *Goa*, being informed of this, sent him a successor. As this villainous action was done without the least provocation, in a time of full peace, and when there was not the least intention on the side of the natives to renew the war against the *Portuguese*, it caused among the people of that island, and of the rest of the *Moluccas*, an implacable hatred against them; soon after which, the squadron of *Charles V.* arriving there, was welcomed by the people of *Tybor* with all the marks of kindness, on account of the *Spaniards* bearing an equal enmity with them to the *Portuguese*; and, being received into their port, they raised works for the defence of it, in case of an attack from the enemy. The *Spaniards*, who, after *Magellan's* death, were under the command of *Igniqueza*, alleged, that the *Moluccas* belonged of right to them, as being first discovered by *Magellan*, with a commission from the king of *Spain*; and that the dispute, having been submitted to arbitration, was determined in their favour. On the other hand, the *Portuguese*, under the command of *Henriquez Garfias* said, that the unjust sentence of the *Castilian* arbitration had been reversed by the judges in *Portugal*; and that those islands had been discovered ten years before the voyage of *Magellan*, in the *Spanish* service, by *Anthony Abreu*, who was sent out to make discoveries by *Alphonso Albuquerque*, in whose company was *Magellan* himself before he had deserted the service of his country^h.

- d THUS they disputed with words for a while, but soon after came to blows, the people of *Ternate* taking part with the *Portuguese*, and those of *Tybor* and *Gilolo* with the *Spaniards*. The latter struck the first stroke by besieging the *Portuguese* fortress in *Ternate*, where at the first attack they took one of the enemy's ships; and now the *Spaniards* and *Portuguese* had gone near to have atoned for the mischiefs they had done to the *Indians*, by the destruction of each other, but that the emperor, being engaged in very expensive wars in *Europe*, neglected so remote an acquisition, and, for a certain sum of money, yielded up his right in the *Moluccas* to the king of *Portugal*ⁱ. This was looked upon at that time as very indifferent policy, and as the effects of his not being properly informed, as to the advantages that might have been derived to him in *Europe*, by the prudent management of his affairs in *Asia*,
- e and this because his thoughts were entirely bent on the vain hopes of raising an universal monarchy by force of arms; whereas the *Portuguese* contented themselves with pushing their conquests in the *Indies*, and employed the riches they derived from thence to secure themselves against their ambitious neighbours in *Europe*^k (F).

AN attempt to prosecute the history of these islands, while under the dominion, or rather tyranny, of the *Portuguese*, would oblige us to enter into a long detail of robberies, murders, and treasons, on one hand, and of insurrections, leagues, and obstinate wars, on the other; for as their own writers acknowledge, the *Portuguese* behaved toward these people in the most barbarous and perfidious manner, robbed them without remorse, murdered them without mercy, swore alliances they never meant to keep, poisoned some kings, assassinated others, deluded and betrayed all. There is already a history, in which these shocking facts are set forth to public view; and many histories, in which various arts are practised to hide and

^k HERRERA Hist. de las Indias Occidental. Decad. ii.

(F) The *Spaniards* speak very highly, and that with great justice, of the wisdom and policy of this monarch; which makes it so much the more astonishing that he could never be brought to have any tolerable notion of the advantages arising from colonies, and the vast benefits accruing to *Spain* from the discovery and conquest of the new world; yet this was a matter of fact, as appears plainly not only from his mortgaging his right to the *Moluccas* (67), but from his cold treatment of the famous *Ferdinand Cortes*, his granting away a whole province in *America* to the inhabitants of the city of *Augsburgh*, and many other instances.

(67) *Herrera Hist. de las Indias Occidental, Decad. iii. l. iv. c. 5.*

disguise them (G). Let us, then, be as short as we can; and endeavour, by a succinct description of these isles, to shew their importance¹.

A succinct
view of the
Moluccas
strictly con-
sidered, and par-
ticularly of
Ternate.

THESE valuable islands consist, strictly speaking, of no more than five; from whence it is said they received their name, in the original language of the inhabitants. They are not out of sight of each other, and lie all of them within the compass of twenty-five leagues. They are famous for producing several sorts of valuable spices, but especially nutmegs and cloves, and are under the dominion of three kings. Their coasts are rendered very dangerous by sands and shelves. They were formerly subject to the *Chinese*, fell next under the *Javanese*, were in process of time subdued by the *Malayans*; and the *Mohammedans* had begun to settle in them, and convert the inhabitants to their religion, but a very little while before they were discovered by the *Portuguese*^m. Ternate is eight leagues in compass; the land high; and they have good water, little provisions, and few cattle except goats. Their chief riches consist in cloves; they have extraordinary parrots, which exceed in beauty those of the *West Indies*; and many birds of paradiseⁿ. They have also almonds, and coarse tobacco. During their wars with the *Portuguese* they burnt all their clove-trees, retired to the mountains and deserts, and forbade selling any thing to that nation on pain of death; which reduced them to great extremity. Though they burnt the cloves out of despair, and to extirpate them, their ashes so enriched the soil, that it produced cloves in greater abundance than ever in a few years. The king of this island was the most powerful of all, and boasted of a divine extraction, which the silly people firmly believed. He was sovereign over twenty-two islands that lay in the great *Archipelago*, between *Mindanao* on the north, those of *Bina* and *Corea* on the south, and the *terra firma* of *Papao*s, or *New Guiney*, on the east; and had his tribute in gold, amber, and birds of paradise, from those countries. He styled himself emperor of the *Archipelago*, in which were many colonies of Christians; but most were destroyed, or apostatised, by the persecution above-mentioned^o. According to a particular account of the forces which every island could raise, the whole amounted to upwards of one hundred thousand, besides multitudes of slaves. Many of these islands had their particular kings; but all subject to him of *Ternate*, and served under him, to revenge the death of King *Aerio*, who was treacherously murdered by the *Portuguese* (H). This great king's name was *Cachil Babu*, *Aerio*'s third son. He allowed the *Dutch* to trade here; in 1599 entered into a strict friendship with them, and they assisted him to shake off the yoke of the *Spaniards* and *Portuguese*^p.

A short de-
scription of
Tydor.

TYDOR is larger than *Ternate*; is also a particular kingdom, and produces the same fruits: it lies a little south-east from *Ternate*, near the line. The *Spaniards* assisted the inhabitants against those of *Ternate* at first; but engaged in a war with them at last, and treated them barbarously, till expelled by the league above-mentioned. The *Dutch* attacked the

(G) The history referred to in the text is that of a very ingenious *Spanish* clergyman, *Bartholomew Leonardo de Argensola*, who was employed by the president and council of the *Indies*, to write the history of the conquest of these islands, in the reign of *Philip* the third, of which the reader will find a succinct detail in the succeeding chapter. His work is very curious and entertaining, and at the same time very authentic and impartial: he wrote from excellent memoirs; and was under no temptation to conceal the truth, the desire of doing which, as a very able *French* historian (68) has observed, had put the *Portuguese* authors under the necessity of writing confusedly, and of contradicting each other, upon this subject. It is necessary to observe, that the *French* translation of this work, printed in three volumes in *Holland*, contains not only the original work, but a supplement, in which is comprehended the history of the *Dutch* conquest of these islands; and it is for this reason that we cite only that volume, because it is in reality an original, and in every respect a very curious piece (69).

(H) This Sultan *Aerio* was one of the best friends the *Portuguese* ever had, for which they rewarded him strangely. *Lopez de Mezquita*, who was appointed governor of the *Moluccas* in 1570, seized and sent him pri-

soner to *Goa*, on pretence of his having connived at his son's ordering several *Portuguese* to be put to death for ravishing the daughter of one of his subjects, though in fact this order did not take effect: and the king would nevertheless have punished his son, if the *Portuguese* had not hindered him (70). When this innocent but unfortunate prince arrived at *Malacca*, he met with letters from the viceroy, desiring him to return to his kingdom, assuring him, that he was very well satisfied with his conduct; that he would take an opportunity of punishing the governor, but in the mean time desired he would be reconciled to him (71). The king accordingly went back: *Lopez de Mezquita* pretended to make the utmost submissions to him; the king, on his side, forgave him very sincerely. Five days after, under pretence of being sick, he invited him to a conference in the fort; where, after a gallant and glorious defence, he was most basely and barbarously murdered (72). It was upon this that his son Sultan *Babu* formed a general confederacy with the princes of the neighbouring islands, for expelling or exterminating the *Portuguese*; which produced a war so bloody and destructive, that both parties were in a manner ruined by it.

a *Spaniards* here in 1607, and afterwards without success; but at last became masters of their fort, by the assistance of the king of *Ternate*, after an obstinate defence, and were kindly received by the king of that island, who allowed them to settle factories here. The capital is of the same name, and has an harbour dry at low-water, and defended by a chain of narrow rocks, over which the tide rises from three to six feet. The town is very strong by nature, and capable of being made impregnable^a.

MOTIR, *Motil*, or *Timor*, lies between *Tybor* and *Machian*. It was laid waste during their intestine wars; but the *Dutch* built a fort at the north end of it, which encouraged the inhabitants to return from *Gilolo*; and, continuing firm to the *Dutch*, the *Spaniards* durst not attack it^b. *Machian* lies directly under the line, south from *Motir*. The *Dutch* took it from the *Spaniards* in 1609, and built three forts here. It is seven leagues in compass, and has several little towns; the inhabitants were then esteemed about nine thousand: it was antiently reckoned the fruitfulest of the *Moluccas*, and produced the best cloves; the inhabitants were also esteemed more industrious than their neighbours. *Bachian*, the last of the proper *Moluccas*, lies south from *Machian*, and was a distinct kingdom. The country is in a great measure wild and desert; where cultivated, it abounds with sago, fruits, and many other sorts of provisions. It was formerly very potent, and had the best cloves in the *Moluccas*; but was ruined by the idleness of the inhabitants. They had an alliance with the *Portuguese* and *Spaniards*, who established garrisons there; but were dispossessed by the *Dutch* in 1610, who built other forts, and obtained a liberty to trade without paying customs. The isle of *Labova* lies so near it, that they frequently go by the same name, though each had their particular king. The latter is very pleasant, and abounds in cloves^c.

We must be obliged to speak of these islands again in the next chapter, and still particularly more when we enter into the history of the *Dutch* proceedings in the *Indies*. At present our design is, to represent the condition they were in at the time the *Portuguese* lost their dominion, which lasted very near a century; during which period they, by oppressions and wars, depopulated these countries so much, and drove the inhabitants to so many and such strange acts of despair, that they left them the very reverse of what they found them; and the remains of the people so strongly prejudiced against the Christian faith, that they bound the *Dutch* by treaty, on their first coming among them, not to disturb them in their religion. In times of peace, and when the *Portuguese* were in full possession of all these islands, they produced an annual profit of nutmegs and cloves, of near half a million sterling, which one would have thought might have gratified even the most boundless avarice. It is true, that, after their possession was interrupted by the *Spaniards*, this commerce began to decline; but it was almost always in their power to have revived and restored it, if they could have been content to have treated the poor people with any degree of mildness and indulgence^d (I).

We have before observed, that, in the neighbourhood of these islands, there are many others, some larger, some smaller, but all of them bigger than the *Moluccas*, which owe their renown not to their size, or to their fertility in other respects, but to their being the countries to which nature had made a kind of exclusive grant of the richest spices, which

(I) The monopolizing the spice-trade was one great object of the *Portuguese* councils, and which by degrees they had in a good measure effected; so that if they would have been contented to have treated the monarchs of these small islands with a reasonable degree of respect; had made true converts of their subjects to the Christian religion, by living like good Christians themselves, as well in point of morals as of ceremonies; and had taken care to furnish them with provisions upon moderate terms; they might have secured their nutmegs, mace, and cloves, without the inhabitants conceiving themselves in the least injured; and, with part of these, they might have driven such a trade in *China* and the *Indies*, as would have enabled them to have sent twice or thrice the value of the spices to *Europe* (73): whereas by harassing, abusing, and oppressing, the common people, encouraging feuds and quarrels among the nobility, and insulting, imprisoning, exiling, depopulating, and mur-

dering, princes at their pleasure, they drove whole nations into downright madness, depopulated great countries, and found themselves under many difficulties to maintain forts and garrisons, where their own ill management rendered them necessary, and in process of time extinguished that profit, for the gaining of which they had been erected (74). Yet so strong a sense the *Portuguese* always retained of the importance of the spice trade, that when they became subjects of the crown of *Spain*, and the preservation of those islands depended wholly upon succours from the *Philippines*, the commerce in spices was reserved to them (75), because as they represented to the court of *Madrid*, it was impossible for them to carry on their trade in the *Indies* without it, which, as we shall see in the next chapter, was such a burden upon the *Spaniards* as they were scarcely able to bear (76).

(76) *Argensola*

Conquista de las Islas Malucas, l. ii.

whether more favourable or fatal to them, it appears, from their conduct, the natives themselves knew not how to determine. The island of *Bouro* was formerly subject to the king of *Ternate*. It is not very considerable; but, while in the hands of the *Portuguese*, more so than at present; yet the island they chiefly depended upon was that of *Great Timor*, so called, because it was much larger than the other of the same name, and was extremely fruitful; so that from thence they supplied most of the *Moluccas* with provisions^a. West from thence lies the island of *Solor*, in which was a strong fortress, wherein the *Portuguese* garrison held out a siege of two months against the *Dutch* fleet and army; and, when they surrendered, marched out near one thousand men^w. There are, besides these, many other islands, which commonly, since the *Dutch* conquests, are styled the *Moluccas*, because they lie near them, and are considered only as they serve to maintain the garrisons which are destined to protect them; yet it has been reported, that, notwithstanding the vast importance of these islands, there were countries at no great distance from them, which deserved some degree of notice, as abounding in gold and precious stones, and not altogether deficient in spices. It is the more requisite to speak of these countries in this place, because, though they were but half discovered by the *Portuguese*, yet, for all the world knows to the contrary, that discovery has not been so much as prosecuted, much less perfected, by the *Dutch*. On the contrary, we have been given to understand, that some mistake has happened in this business; that these countries are poor, barren, miserable places; and those who inhabit them a race of brutal, stupid, and starving people. This possibly may be so; however, as it has been otherwise reported, and as these countries lie upon the very line that divides the known from the unknown parts of the world, and may be as easily reached by the *South Seas* as by the way of the *Cape of Good Hope*, a few particulars from the histories of the *Portuguese* may not be either unpleasant or unuseful, more especially if the spirit of discovery should at any time hereafter animate the bosoms of our countrymen (K).

Particular WHILE *Antonio Galvano* commanded at *Ternate*, there was a famous pirate, who, with a *Portuguese* squadron of paraoes, did a great deal of mischief on the coast of the land of *Papoas*, which is that country since called *New Guiney*, and, at last, began to threaten the subjects of *Portugal* in the *Moluccas*. To repress the violences committed by this rover, the governor fitted out some barks sent him by the king of *Tydor*, and having manned them with a few *Portuguese*, and the auxiliaries from the neighbouring islands, he sent them, under the direction of *Ferdinand Vinagrez*, a priest, in quest of this pirate; with whom they came up, and, after a smart engagement, in which he and his brother were both killed, destroyed some, and dispersed the rest of his squadron. After obtaining this victory, he was sent to the country of *Papoas*, where he was kindly received by several princes, and converted them and their subjects to the Christian faith; which was so great a satisfaction to the worthy governor, that he instituted a kind of seminary, in which he bred abundance of young men brought from all these countries, d

(K) The country of *New Guiney*, which, some writers tell us, is a country having an extent of two, others of three (77), and some of four, hundred leagues of coast (78), with the islands that lie near it, has been known to the *Europeans* above two hundred years; but were never thoroughly discovered or described (79). It is affirmed, that the first who saw them was *Alvaro de Saavedra*, in the month of *May* 1529, as he was endeavouring to return to *New Spain* from the *Moluccas* (80). The natives of those islands call the inhabitants of this country *Papuas*, that is, *Blacks*. The *Spaniards*, conforming rather to the sound than the sense, called them *los Papuos*; but knew very little about them. In 1545, they were visited by some *Spaniards* who had been at the *Philippines*, who were inclined to think themselves the first discoverers, as knowing nothing of the expedition of *Saavedra* (81). But, as we have remarked in the text, they were long before that time known, and some of them became subject to the king of *Ternate*. According to the accounts given by the *Indians*, those who inhabited the continent had gold, spices, and other valuable commodities; but the inhabitants of the islands were poor and miserable (82). *Schouten* and *Le Maire* coasted this country in 1616, where they found all things agree-

ing with the description given by *Saavedra*; but they saw no great signs of wealth, only in some of the islands they found *China* ware, which, they concluded, was either brought thither by the *Chinese*, or by some *European* nation trading to *China* (83). Captain *Dampier*, in 1699, coming hither purely to make discoveries, gave the name of *New Britain* to a large island which he discovered. He met with abundance of ill-favoured, weak-sighted blacks, who, in his judgment, live mostly upon raw fish, and were poor and wretched in an extreme degree (84). Commodore *Roggeveen* examined many of the islands, and passed along the coast of the continent, in 1722. The best, indeed the only account we have of this voyage, says, that the islands were pleasant, fruitful, and populous; and that the continent had the appearance of being a fertile and well-wooded country; adding, that the free burghesses, or *Dutch* inhabitants of the *Moluccas*, were reported to carry on a valuable trade there, by exchanging small pieces of iron for large nutmegs (85). Thus the reader sees, in a narrow compass, what a slender knowledge has been hitherto attained of the southern *terra incognita*, which posterity, perhaps, may find to be as valuable as *America* or the *Indies*.

- a instructing them himself in the Christian religion, and in those sorts of literature that were at that time studied in *Portugal*, in all which Don *Antonio* was extremely well versed. By his wife and gentle government, his reputation spread, and attracted multitudes of Christians expelled by *Mohammedan* princes, throughout the whole extent of the *Indies*, to him in the *Moluccas*, where he was so intirely beloved by all the princes of those islands, that they joined in a representation to the king of *Portugal*, that *Antonio Galvano* might be continued in his government for life; but, before this representation was well framed, the governor of the *Indies* sent *George Castro* to succeed him; which, in the space of a few years, produced such a change in affairs on this side, that their historians have declined giving us an account of them ^x.
- b It was the removal of this worthy man which hindered all the southern continent from being thoroughly known; for, by his wife government, he established a new face in that part of the world, of which the *Portuguese* never had any idea; and if he had remained there but a few years, would have done more towards the conversion of those nations than ever could be effected by an army of missionaries. But what he was not permitted to achieve by his actions, he has sketched forth in his writings; so that from them we learn this great southern continent was, in his time, well inhabited; and though these inhabitants might, in some parts of it, be absolute barbarians, yet in others they were as much civilized as their neighbours, and had not only the use of vessels, but some kind of naval force, of which, according to later relations, there is not now the least remains ^y. We are assured, that a great part of the people at least inhabiting these countries, were *Caffres*, or *Negroes*, which is also the meaning of the word *Papuas* or *Papoes*, that is, people of a jet shining black, with thick, curled, woolly hair; but it is admitted there were other nations very different from these, as well in their manners as in their complexions, some, particularly, that were very fair, with large, weak, blue eyes, which hindered them from seeing well by day-light, but, in the night, they were very brisk and active, resembling those, to whom the name of moon-eyed *Indians* hath been given in *America*. How either of these people came there, or whether they were the antient inhabitants, is a point we want both leisure and abilities to discuss; and therefore we shall content ourselves with saying, that the *Chinese* vessels often visited these coasts, more especially before the coming of the *Portuguese*; and that the produce of these islands, in general, were equally acceptable in all parts of the *Indies*, more especially at the two great marts of *Malacca* and *Ormuz*, and in the ports of *China* that were then open to strangers; which leads us to speak next of the intercourse of the *Portuguese* with the inhabitants of that famous empire, to which, of all the *European* nations, they were the first that found a direct passage by sea, from whence, as from their other discoveries, they derived very solid advantages, as well as very high reputation ^z.

^z WAFER'S

S E C T. VIII.

A trade, well settled in China, very unluckily, and almost irreparably, lost. Their intercourses and happy establishment in Japan; and a very concise account of the causes and manner of their expulsion. Fruitless and fatal attempts to revive their correspondence with the inhabitants of those islands.

- e **T**HE viceroy *Lopes Suarez*, successor to the famous Don *Alphonso d' Albuquerque*, was the first who thought of establishing any commerce with *China*, and, in the year 1517, sent, under *Ferdinand Andrada*, a squadron of eight ships laden with merchandize, and *Thomas Perera*, who had the character of ambassador from *Emanuel* king of *Portugal*. On their arrival at the mouth of the river *Canton*, the *Portuguese* ships were stopped, and only two suffered to proceed up the river, on board one of which was the ambassador, and the *Portuguese* commodore *Andrada*, who was a man of strict honour; so that he soon gained on the *Chinese*, notwithstanding their natural aversion to strangers. By his civility and polite behaviour he drew them to trade, and then, by his exactness and probity, brought them to have a great confidence in him; but what had the greatest effect, and might have established the commerce of the *Portuguese*, to the exclusion of all other nations, was his giving notice, a little before his departure, that at such a time he should sail, and that if any had demands either upon him or any who belonged to him, they might apply, and receive satisfaction. This was a thing new to the *Chinese*, but so agreeable, that they made him high professions of friendship, and assured him, that they would willingly trade with his nation, in hopes of meeting with the like usage. But so fair a prospect did not long continue, and, for all this,
- f

the first had also very near proved the last voyage of the *Portuguese* thither^a. The captains^a of the ships that were left at the mouth of the river were the occasion of this; for they landed, and fell into trade with the natives, but, presuming on their power in the *Indies*, treated the *Chinese* in the same manner they had done other people, that is to say, brought on shore several pieces of cannon, and then took what goods they pleased at what rates they thought fit, committing many other insolences, ravishing women, and trading with pirates for such as they had taken prisoners, of whom they made slaves. The viceroy of the province quickly assembled a great naval force, with which he surrounded the *Portuguese* squadron, and had infallibly taken every ship, if a storm had not risen, which scattered the *Chinese* fleet, and gave the *Portuguese* an opportunity of returning to *Malacca*, with more profit than honour^b. As for the ambassador *Thomas Perera*, he, tho' perfectly innocent, proved the victim of this bad behaviour; for the *Chinese* court, being acquainted with what had passed, not only refused him audience, but sent him back to *Canton* in chains, where he was put into the common prison, with the vilest criminals, and there lived in misery for several years, till, worn out with hardships, he expired in such wretched circumstances, that he did not leave wherewith to bury him^c (L).

When this commerce was resumed, the Portuguese kept sent an annual fleet to a settlement at Macao, which they still keep.

It was many years before the *Chinese* would admit the *Portuguese* to any trade with them; but, at last, consented they should send some ships to the island of *Sanban*, where they were allowed to erect tents on shore for a very small space of time, in which they disposed of their merchandize. At length, towards the close of the sixteenth century, a favourable opportunity offered, not only for restoring their commerce, but of procuring an establishment in *China*; which is what no other nation ever had to boast. A certain pirate, whose name was *Tchang-si-lao*, committed prodigious ravages upon the coasts, and, having at last acquired a great force, made himself master of the little island of *Macao*, and from thence not only blocked up the port of *Canton*, but also besieged the city. The mandarins, in this distress, had recourse to the *Portuguese*, whose ships were then at the island of *Sanban*. They readily offered them their assistance, and not only forced *Tchang-si-lao* to raise the siege, but pursued him to *Macao*, and there killed him. The viceroy having made a faithful report to the emperor of this extraordinary service, that prince, out of pure gratitude, published an edict^d, by which he granted the *Portuguese* this island, with the power of making a settlement there; which they joyfully accepted, though but a small, inconvenient place, and built a good town, fortified after the *European* manner, and furnished in time with near two hundred pieces of cannon. One would imagine, that this must excite the jealousy of the *Chinese*, justly esteemed the most suspicious people in the world; but they provided so effectually for their own security, that all the force of the *Portuguese* is intirely at their devotion; because they have not a day's provision, but what they receive from the *Chinese*, and are so surrounded by their forces, that it is impossible for them to undertake any thing to the prejudice of their empire^e. The possession of this place has been, notwithstanding, extremely beneficial to that nation; for from thence they carried on, for many years, a most beneficial commerce with *Japan*, by which *Macao* became one of the richest and most considerable places in the *Indies*; and many of the nobility of *Portugal*, who had enjoyed very high offices, chose to settle there, where they lived in great splendor, and, at the same time, acquired vast estates by trade; so that the permission of living at *Macao* was a reward for past services, and the contriving

^e Tour du Monde, par GEMELLI CARRETTI, liv. iv. ch. 1.

(L) It is very remarkable, that the officers, who conducted these expeditions after a manner so very different, and with success answerable to that difference, were brothers. *Ferdinand Andrada*, who carried the ambassador up to *Canton*, from whence he went by land to *Peking*, remained in *China* near a year, and, in that time, his own behaviour was so correct, his discipline so exact, and the submission paid to his orders so ready, and so great, that the *Chinese* concluded the *Portuguese* to be, beyond comparison, the wisest and most potent nation with whom they had ever any correspondence (86); yet *Ferdinand Andrada* did his own and his nation's business very well, that is, he carried home a valuable cargo, and made his own and his officers fortunes; which recommended him to king *Emanuel*, who was then living, and who was never weary of hearing the

stories he told him of *China* (87). *Simon Andrada*, who was to have brought back the ambassador, effaced all the impressions that his brother's right behaviour had made, prejudiced the *Chinese* against the people of *Portugal* to the last degree, whom they esteemed to be no better than pirates and free-booters; so that he returned to *Malacca* with great loss of men, an inconsiderable cargo, and a perfect bankrupt in point of reputation (88). There is some doubt as to the name of the ambassador; for though the author we have cited calls him *Pereyra*, yet most other authors tell us his name was *Thomas Perez*. It is possible the error might arise from hence, that there was also one *Pereyra*, who remained long a prisoner in *China*, and who wrote a large account of that empire, extant in our own as well as in other languages (89).

a many such rewards, without any expence to the crown, was the great policy of the *Portuguese* viceroys ^f (M).

We have an account, from a modern author, of an early settlement that the *Portuguese* had in *China*, at a place which he calls the *Limpoa*, which, perhaps, ought to be wrote *Liampo*; ^{A modern author reports the ruin of their settlements at Liampo.} but of this there are no traces to be found in the *Portuguese* writers. As he received his intelligence from the *Chinese*, it may not be improper to take notice of that history, which has very probably some foundation. This settlement, he says, grew to be of very great consequence, and the *Portuguese* who inhabited there became immensely rich, and, in consequence of this, outrageously insolent, as well as excessively debauched. Amongst other excesses of which they were guilty, that which provoked the *Chinese* most, was their carrying off girls when they were extremely young, by force, and, when they had kept them as long as they thought fit, and were grown tired of them, they sent them back to their parents. All applications for redress having failed, the people at length determined to have recourse to a vigorous resistance against such shocking acts of violence; and taking advantage of one of these troops of virgin-hunters, they surrounded and cut them off to a man. The *Portuguese*, upon this, complained in their turn; which brought the affair before a higher tribunal, where the *Chinese* having fully justified themselves, from the necessity they were under to repel force by force in their own defence, the matter came at last to the knowledge of the emperor, who immediately ordered a strict inquisition to be made into the conduct of these strangers; which brought such a horrid scene of iniquity and violence to light, as produced a decree, ^c that they should immediately quit his dominions; with which they were obliged to comply, but were allowed to carry off their effects. And thus, says our author, ended the most opulent colony at that time in the world ^e.

As he ascribes the wealth of this settlement, in a great measure, to their trade with *Japan*, it is not easy to reconcile this fact to the relations of the *Portuguese*, who unanimously fix the center of that commerce at *Macao*, and with great reason, as we shall shew hereafter. We shall also have occasion, at the close of this chapter, to give a description of the present state of this city, which still belongs to the crown of *Portugal*, and, though very inconsiderable now in comparison of what it was, is yet, on many accounts, a place of importance. But it is now high time to proceed to the utmost limits of the *Portuguese* discoveries in the east, and ^d to speak of the manner in which they found an entrance to *Japan*; of which though they were not the first *Europeans* that had any knowledge (for, as we have shewn, those islands had been visited, and in some measure described, by the famous *Venetian* traveller *Marco Polo*, long before), yet they were certainly the first who had any establishment in the country, or commerce with the inhabitants, which turned to prodigious advantage for them, and in possession of which they might have still continued, but for their insolence and indiscretion, and the great address of the *Dutch*, by whom they were absolutely supplanted ^h.

THERE is not any passage relating to the subject of this chapter more curious, or more extraordinary, than what refers to the islands of *Japan*, which, about the same time, were visited by two different companies of adventurers; and though, in the account we have received of both discoveries, very little notice is taken of dates, yet, from the comparison of facts, it is pretty evident, that those, of whom we shall first speak, arrived in that country some time in the month of *May*, *A. D.* 1542 ⁱ. *Ferdinand Mendez Pinto* tells us himself, that being in company with two of his countrymen, *Diego Zimoto* and *Christopher Borello*, at *Macao*, they endeavoured to get a passage by sea into some other parts of the *Indies*, and found it very difficult. At last a *Chinese* pirate offered his service, promising to carry them to the islands of *Lequios*, of which, it seems, the *Portuguese* had already some knowledge. They pass under

(M) It is very difficult to discover either the manner or the time in which the *Portuguese* were reconciled to the people of *China*; the best account we have been able to meet with is that of a *Dominican* friar, dedicated to *Sebastian* king of *Portugal*; in which he says, that, upon the quarrel mentioned in the former note, the *Chinese* called these people, to shew their hatred of them, *men of the devil*. But, however, they began to trade with them again, by stealth, at *Liampo*; and at length, near forty years afterwards, through the good conduct of *Lionel Sousa*, they were received again at *Canton*, and a better name bestowed upon them, which was that of *people from another coast* (90). It is not very certain either when or

how they came to have the island of *Macao* bestowed upon them; the most probable account is, that, about the year 1585, it was assigned them as a place to winter in, in case they could expel the pirates that were in possession of it; and upon this that account is grounded, which, from modern historians, we have given in the text; for, if the thing had been of such public notoriety, the date of that grant would have been with more certainty recorded. In the old *Chinese* maps this place is called *Amacoa*, that is, the *harbour of Ama*, from an idol of that name, to which a temple was erected near the port (91).

(90) Gaspar du Cruz Hist. Sinens. lib. v.

(91) That Chinese Map was published by Purchas, in vol. iii. p. 411.

different names, for some writers call them the islands of *Lequios*, others the islands of *Rinku*.^a They lie between twenty six and thirty degrees of north latitude ; having the island of *Formosa* on the south-west ; the continent of *China* on the west ; the islands of *Japan* on the north ; and the ocean on the east ; on which side they seem to have no land nearer to them than *America*. The *Japanese* report, that they are the most fertile countries in the world ; and that the inhabitants are the easiest, happiest, and best-conditioned of the human race. They are subject to the prince of *Saxuma*, who is one of the principal lords of the empire of *Japan*. The *Chinese* were formerly masters of them ; and even at present there is still some commerce between them and the *Phillipines*. But our adventurers being at sea, the weather proved so bad, and the ship so leaky, that there was an absolute necessity of putting into some port to refit. The captain bore away, therefore, for a certain harbour in the island of *Japan*, which^b was that of *Niaygima*, in the island of *Tanuximaa*, where they safely arrived. This, undoubtedly, is what other authors call *Tacuxima*, belonging to the kingdom of *Firando*.

Their situation according to him.

It lies in the latitude of thirty-one degrees north, at a very small distance from the great island of *Ximo*, which is the second in size of those three islands, known in *Europe* under the common name of *Japan* ; which, as we have shewn, is not the name of a particular country, but of a large archipelago of islands, the most considerable of which is *Nippon*. Before they entered the port, two barks came from the shore, to know who they were, and what they wanted ? The captain answered, that they were come from *China* ; that his intention was to trade, if they might obtain permission. To which the principal person answered, that the lord of the island was called *Nautaquim* ; and that, if they paid the port-duties, they might^c have leave to trade. The *Chinese* captain complied ; and the patron of the barks, with great civility, conducted him immediately into the harbour^k.

A succinct account of his adventures in those islands, and his manner of leaving them.

ABOUT two hours after, the lord of the island came, accompanied by several persons of distinction, and some merchants. At the sight of the three *Portuguese* he was astonished, and demanded who these strangers were, and of what nation ? The captain answered, that they came from a great city called *Malacca* ; and that they were of a certain kingdom in *Europe* called *Portugal*. At these words *Nautaquim* appeared still more surprised ; and at last, turning to those who were about him, he said, “ Let me die if I don’t believe these are the *Chinchi-* “ *gogis*, of whom we read, in our old books, that they fly upon the waters, and make them- “ selves masters of every rich country of which they hear. We shall think ourselves very^d “ happy, if they are content to be our allies.” He then made no difficulty of going on board the *Chinese* vessel, with some of the people about him, and asked the *Portuguese* abundance of questions, whom he invited to visit him on shore, promising to entertain them kindly. They went, and carried him a present, which was graciously received ; and *Nautaquim* entered into a long conversation about their country, and particularly insisted on these three points, which, he said, he had been told by the *Chinese* and *Lequians* in his country : first, that *Portugal* was bigger than *China*, and richer : that the king of *Portugal* had conquered the best part of the world : and that he had better than two thousand houses full of gold and silver. *Pinto* owns, that he did not stick exactly to truth in his answers ; but contrived such as were likely to keep up the high opinion that *Nautaquim* had conceived of their monarch. All the time^e they staid they were treated with the utmost civility, being permitted to see every thing they desired, and go where they would. This great lord was the nephew and the son-in-law of the king of *Bango*, one of the greatest monarchs in *Japan*, who, upon having an account of the arrival of these strangers, was very desirous of seeing them ; and, at his request, accordingly *Nautaquim* sent *Pinto* to him ; and some adventures, which happened at his court, recommended the *Portuguese* so strongly to the king’s favour, that he made him several considerable presents, besides a sum of ready money to the amount of about a thousand pounds ; and, not without difficulty, permitted him to embark again on board the same ship which brought him, in which he went back to *China*, and from thence returned to the *Indies*¹ (N).

¹ Voyages and Adventures of FERDINAND

(N) The character of this writer has suffered not a little, in the general opinion of the world, from that humour, common to his nation, of embellishing all he relates in such a manner as to create astonishment, by which he has incurred the just punishment of disbelief ; yet some very able judges, upon a strict perusal and close examination of his work, have found, that there are in it not only many curious and useful things, but that also, in reference to the transactions in which he was himself concerned, he is a very exact and candid writer.

For instance, with respect to this expedition, he tells us very honestly, that there were eight of them, all natives of *Portugal*, who, after suffering infinite hardships, travelled cross the empire of *China*, to the island of *Sanchean*, and from thence to another port, which is held to be *Macao*, where they found several vessels, on board of which they might have embarked for the *Indies* (92). “ But whereas, says he, it is the quality of us *Portuguese* to abound in our own sense of things, and to be “ exceeding obstinate, there arose amongst us eight such

“ a

- a We come now to the other adventurers, and their story will lie in a very narrow compass. How they were discovered also by other Portuguese voyagers; and how the famous Xavier came to be esteemed the apostle of this numerous and potent nation.
- In this year, 1542, there came three other subjects of the crown of *Portugal* into this country; their names were *Antonio Mota*, *Francisco Zeimoto*, and *Antonio Pexota*, who, in a voyage from the island of *Macassar* to *China*, were thrown upon these islands, and exceedingly well received. Amongst others, they entered into a close acquaintance with one *Angero*, a man of a good family, and a considerable fortune, but exceedingly troubled in mind, on account of some irregularities committed in his youth, who heard them, with pleasure, discourse of the truths of the Christian religion. About two years after, *Alvarez Vaz*, a *Portuguese* merchant, came into the same country, and became intimate with the same person, whom he persuaded to go to the *Portuguese* settlements, in order to be consoled by the holy discourses of the famous *Francis Xavier*; to which at length he yielded, and having received baptism at *Goa* in the year 1548, he the next year accompanied father *Xavier*, and two other jesuits, in their voyage to *Japan*; where they immediately entered upon their mission, by the progress of which this country was made so thoroughly known to the *Portuguese*, that, if *Mendez Pinto* had not recorded his own voyage thither, it is very possible we had never heard any thing at all of it, but that he afterwards visited *Japan* in company with father *Xavier*; and, after the decease of that industrious jesuit, whom the papists esteem the apostle of the *Indies*, he went thither again as ambassador from the viceroy of the *Indies* to the king of *Bango* in 1556; so that there seem to be no just grounds for calling in question any thing that he has written. The conversion of multitudes to the Christian faith through the whole extent of this great empire, contributed not a little to support the *Portuguese* trade, which was managed with much facility, and to a vast profit; for the *Portuguese*, being established in *China*, carried from thence vast quantities of silk into *Japan*, where, as all ranks of people affect to be cloathed in it, there followed a prodigious consumption, which enriched the *Portuguese* merchants very soon to a high degree; though it is scarcely credible, that, as some *Dutch* writers report, they have sometimes carried home in one small ship an hundred tons of goldⁿ. But this prodigious success proved the cause of their being at last deprived of this lucrative commerce.
- It is not consistent with our design to enter here into a long and particular relation of the several facts which drew upon them, from the government of *Japan*, that fatal prohibition; we shall only report in general terms, and in as few words as possible, the principal causes of this exclusion. The vast wealth they had acquired, corrupting the manners of the *Portuguese*, made them less cautious than they ought to have been in their behaviour towards the *Japone*; infomuch that, instead of the moderation, sobriety, and exact conduct, which they at first pursued, they grew proud, insolent, and dissolute. This prompted them to change the places where they were wont to trade, and to prefer such ports as were in the dominions of infidel princes to such as were in the territories of those *Japone* lords that had embraced the Christian religion, that they might live as they thought fit, and without being under the controul of the missionaries, who took all the pains they could to oblige their countrymen to advance the credit of the Christian religion by the regularity of their lives^o. These errors had two very bad consequences; for, first, they disgusted such princes as had embraced the faith; and, secondly, they hardened the infidels in their aversion to it. But it was not only the corruption of the *Portuguese* merchants, officers, and seamen, that gave offence to the people of this empire; the intrigues of the missionaries themselves contributed to it as much, or more, by exciting the jealousy of the emperor; for where-ever they had converted any of the princes of *Japan*, they were continually at court, and, instead of minding what was the proper business of the church, engaged perpetually in affairs of state, making the direction of consciences much less their care than the direction of councils; by which they became the authors of many troubles, and afforded a handle to their enemies of charging them with many more; so that the emperor of *Japan* began at last to surmise, that there was more of hypocrisy than sanctity in their hearts; and that they were endeavouring, under colour of saving mens souls, to establish a new government in that country^p, at the expence of his.
- f THESE jealousies, which certainly were not altogether without foundation, were extremely increased by two circumstances: the first was, the haughtiness and ill conduct of such as were sent ambassadors thither, especially after the union of the crowns of *Spain* and *Portugal*; for Careless or unaccountably blind to several pregnant

 “ people.” After this, he proceeds to relate the facts
 briefly mentioned in the text, and for which it was ne-
 cessary to cite his testimony, and, as far as justice will
 allow, to vindicate his sincerity.

instances of the designs of the Japonese. those ministers were wont to boast of the vast power of the catholic king, and of the mighty extent of his dominions, of which they affected to convince the *Japonese*, by shewing the maps of the *East* and *West Indies*; and the imprudence of one of these ambassadors is said to have carried him so far, as, being asked, “How his master had acquired such vast territories at so great a distance from his hereditary dominions?” he answered, “By sending missionaries first to convert a part of the inhabitants to Christianity, and then sending troops to assist the new converts in shaking off the yoke of infidel princes.” The other circumstance was, the coming of *Dutch* ships upon the coast of *Japan*; for these people, applying themselves intirely to commerce, and submitting, for the sake thereof, to whatever terms were prescribed by the *Japonese*, gained such a degree of confidence with their princes, that it procured implicit credit for their representations as to the ambitious designs of the *Spaniards* and *Portuguese*. These remarks will give the reader an easy key to the political contrivances for first restraining the *Portuguese* trade to a particular port, and then shutting them up as it were in a prison during their stay in that empire. But notwithstanding these and many other previous signs which the *Portuguese* had of the approaching rupture with the *Japonese*, yet were they so far from taking such steps as in common prudence they ought to have done for avoiding so great a mischief, that, on the contrary, they became daily worse and worse, till the storm came upon them with such a force as was not to be resisted ^a (O).

Attempt made by the Portuguese at Macao to renew their correspondence with these islands.

THIS irremissible edict was given in 1639; and, not long after, two large ships, richly laden from *Macao*, came to an anchor in the road of *Nagasaki*; on which it was instantly notified to the commodore, that the emperor of *Japan* had totally prohibited all commerce with the *Portuguese*, for these reasons: first, because, notwithstanding several cautions given them, they had continued to bring over missionaries into his country; secondly, that they had supplied those that were already there with provisions and other necessaries; and, thirdly, that there were just reasons to suspect they had some knowledge of, and concern in, the late rebellion of the Christians in *Arima*. They had also a copy of the emperor’s edict, which they were directed to make public at *Macao*, and to inform the inhabitants of that city, that these were the last ships that should ever be permitted to anchor in any port of *Japan*; and that, if ever they came thither again, they should be treated as enemies, and put to death without mercy. On their return, the whole place was struck with consternation, being convinced that the loss of this trade would prove the ruin of their city; to prevent which, they resolved to employ a solemn embassy to justify their conduct, and, if possible, to engage the emperor to recall this edict, or at least to qualify it, that they might, on certain terms, have leave to send some ships thither. The difficulty was to find any who would charge themselves with so dangerous a commission; but at last the following persons offered to run the hazard, *viz.* Don *Lewis Paez Pacheco*, who had served, with honour, as commander of the armies in the *Indies*, and who was now seventy-eight years of age, Don *Roderic Sanchez de Paredes*, Don *Gonzalez Montayro de Carvailho*, and Don *Simon Faz de Pavia*, all men of distinction, and moved by nothing but the desire of justifying their countrymen, and rendering service to their country ^b.

The treatment of that embassy by the Japonese.

ON the ninth of *July* 1640, the ship that carried them arrived in the road of *Nagasaki*: they sent an account to the *Japonese* governors of the nature of their commission. The ship was immediately seized; and the ambassadors, and all who belonged to them, except eight negro seamen, were imprisoned in the island of *Kisma*, till the emperor’s pleasure should be known. On the return of the courier, they were sent for before the magistrates, who treated them as criminals, demanding what it was that could induce them, after so fair warning as was given them, to return, in direct breach of the emperor’s edict? They pleaded, that they were not at all within the meaning of that law, because the emperor forbade thereby any attempt to trade, which was not their business, having no commodities of any sort on board their ship, ^c

^b Histoire de Japon, par le P. CHARLEVOIX, tom. ii. p. 413.

(O) There are very different accounts of the expulsion of the *Portuguese* from *Japan*, which it would be improper, in this work, for us to state and examine. What is said in the text, appears to us, from a comparison of the best relations, to be as near the truth as possible. Certain it is that the *Dutch* were in no small danger of suffering for being Christians, as well as the *Portuguese*; nor is there any doubt that the government of *Japan* knew them to be so, and even told them plainly, that what they represented as important and distinguishing differences between their religion and that of the *Portuguese*, seemed to be of little consequence to the ministry of *Japan*; and therefore they insisted upon their

demolishing immediately those edifices, upon which they had inscribed the year of the Lord, and to forbear all the public exercises of their religion, that the subjects of the emperor might not have daily before their eyes what might revive their notions of Christianity (93); which is a convincing proof, that the *Japonese* government was persuaded, that, in respect to their own people, they could not be good subjects and good Christians at the same time; which certainly could never have entered their minds, if the *Japonese* converts had acted in a manner suitable to the principles of the gospel, than which none were ever so fully calculated for promoting the interests of civil society.

(93) *Recueil de Voyages au de Nord*, tom. iii. p. 246.

a but coming thither with the characters of ambassadors, which had been always, and by all nations, esteemed sacred. They were told, that this would not serve their turns; that they had incurred the penalty of the edict; upon which they were instantly bound, and conducted back to prison.

THE next day the ambassadors, and all their attendants, to the number of seventy-four, *Miserable issue of that unfortunate negotiation, by which a period was put to their hopes, so long as they continued subjects to the crown of Spain.* Portuguese, Spaniards, Chinese, Canarins, and Indians, were carried before the magistrates, who then told them, his imperial majesty had commanded they should all suffer death, except thirteen; which sentence was executed the same evening. The next morning, before it was light, the governor sent for the thirteen that were spared; and, having asked them whether they had seen their ship burnt, inquired of them, whether they would faithfully report at *Macao* what they were commanded by the emperor to say on his behalf? Being answered in the affirmative, he proceeded thus: "You are then to inform your fellow-citizens, that henceforth the subjects of *Japan* will not receive either money, merchandize, or presents from them any more: you see we have burnt the very cloaths of those who were executed yesterday. Let your people use any of ours, that fall into your hands, in the same manner: we consent to it; and desire you would think of us no more than if there were not such a nation as the *Japonefe* in the world. This is what we had to say to you." The poor wretches, having listened to this sad tale, promised to deliver the message. They then conducted them to the place where the heads were fixed upon poles in three rows, the four ambassadors first, the *Europeans* next, and the strangers last. They likewise shewed them a great iron chest, in which were the bodies of the persons executed, and a long inscription, ending with these words: "All this is set forth as a memorial of what is past, and as an advertisement for the time to come. Henceforward, so long as the sun shall shine upon the earth, let not any Christian be so hardy as to set his foot in *Japan*: and be it known to all the world, that if king *Philip* in person, the god of the Christians, or the great *Xeca*, one of the first deities of *Japan*, shall presume to break this ordinance, he shall pay for it with his head." They then gave these poor people an old vessel to return in to *Macao*; which they chose rather than to be put on board any of the five *Dutch* ships that were then on the coast, and offered to carry them to that port (P).

WHEN Don Juan, Duke of *Bragança*, mounted the throne of *Portugal*, and assumed the title of *John* the fourth, he, in the year 1646, thought fit to make another attempt in favour of the city of *Macao*, and sent Don *Gonzalo Segueyra* as his ambassador to the most puissant emperor of *Japan*, to inform him, that *Portugal* no longer continued subject to the crown of *Spain*, which as it was the principal occasion of the nation's being prohibited all commerce with the *Japonefe*, he hoped that a good intelligence might now be restored between the citizens of *Macao* and the subjects of his imperial majesty. The ambassador was very civilly received, and an express sent to court with the news of his arrival. About a month afterwards came back a courier with the emperor's answer, which was, that his request could not be granted; but that he, and all who belonged to him, had free liberty to depart.^d *Upon the accession of the duke of Bragança to the crown of Portugal, new enterprises undertaken.*

IN 1685, another favourable opportunity offered, which the *Portuguese* did not fail to embrace. A *Japonefe* vessel, driven by a storm from their own coasts, was forced to take shelter in the port of *Macao*, where those who were on board it met with a very kind reception; and, having been entertained at the public expence till they were recovered from the hardships they endured at sea, were then put on board one of the best vessels belonging to the port of *Macao*, and sent back to their own country. On their coming to an anchor in the road of *Nangazaki*, and sending the *Japonefe* on shore, they received a message from the magistrates, that they were obliged to them for this kind and generous behaviour; but that, for the future, they would advise them not to give themselves the trouble of sending home any more of their people, since it would not answer their ends.^e We may from hence collect of how great consequence this commerce was, and how very sensible the *Portuguese* were of the sad effects that must inevitably attend the loss of it; and indeed their foresight has been justified by the event, since their trade, their force, and their reputation in the *Indies*, have all been gradually declining ever since.^f *Another promising opportunity engages them to make a new attempt without success.*

(P) As a further precaution, these unfortunate people judged it requisite to desire a passport from the *Japonefe* government, in order to protect them from *Dutch* privateers; which was readily granted, and by the help of which they returned safely to *Macao*; where when the

inhabitants had fully considered their report, they, with a courage and spirit becoming their nation, celebrated with joy the constancy of those Christian martyrs, who had thus perished for their religion and their country (94).

S E C T. IX.

Present low and distressed state of the small remains of the Portuguese territories in the Indies; remarks on the causes of a declension no less strange than the sudden rise and vast extent of their empire; reasons why their situation, sunk as it is, ought not to be considered as irretrievable.

A short description of the city of Goa, the capital of the Portuguese empire in Asia.

WE have now conducted the history of the rise and progress of the Portuguese power in the Indies to its close; and there remains nothing more than to give the reader a just and distinct idea of the possessions which the crown of Portugal still retains in these parts. In order to this, it is necessary that we should begin with the island and city of Goa, which yet continues, as it always was, the capital of their dominions (Q). We have shewn before how it came into their hands through the courage and conduct of the famous *Alphonso d' Albuquerque*, in 1508, from whom it was again recovered by the natives, and with much difficulty reconquered about two years afterwards, when, from the consideration of its convenient situation, the great excellence of its port, and the fertility of the adjacent islands, it was very wisely resolved to make it the seat of government¹. The island of *Goa*, as it is now called, or, as it was styled antiently, *Ticuarin*, is situated in the latitude of fifteen degrees forty minutes north, and is about twenty-seven miles in compass. The river *Mandova*, which is almost as much respected by the *Indians* as the *Ganges*, divides it from the continent, and at the distance of about six miles falls into the sea. The rainy season continues here from *June* till *September* or *October*; and the land-floods bring down such quantities of mud and sand as stop up the haven, and impede the navigation. During this time the weather is very hot after sun-rise, when the rains cease; yet before the rains begin, that is, in the months of *April* and *May*, the weather is still more sultry; but from *October* to *March* it is very moderate².

The convenience, strength, and other advantages, of the haven and quays.

In the best descriptions we have of these countries, the port of *Goa* is represented as one of the fairest in the *Indies*, and for this it stands in some measure obliged to nature; but, to do them justice, the *Portuguese* have spared no pains to heighten and improve those advantages, as well as to fortify it with many castles and towers, furnished with abundance of very good cannon; for, at the entrance on the left, upon the point of the island of *Bardes*, is a strong fort called *Aguada*, with large outworks, and guns level with the water. On the top of the hill, near the chanel, is a long wall planted with cannon; and opposite to it the castle called *Nossa Senhora del Cabo*, or, *Our Lady of the Cape*, built in the island of *Goa*. Two miles within the chanel, above the island of *Bardes*, is another castle called *dos Roys*, or, *the King's*, well fortified with cannon, and level also with the water. Here the new viceroy takes possession at his arrival. Near this fort is a monastery of *Franciscans*; and opposite to it, within cannon-shot, is the fort of *Gaspar Dias*, but two miles distant from that of *the King's*. Beyond these castles the chanel grows narrower, sometimes to one, sometimes to two miles; and its banks, planted with the best fruits and finest trees *India* affords, yield the fairest prospect imaginable. Besides, there are beautiful country-houses called *quinta's*, and abundance of pleasant dwellings of the country people³.

The situation, and beautiful prospect over the country adjacent.

THIS delightful scene holds for eight miles quite up to *Goa*. Half-way, upon the right side, is a palace called *Passo de Dangi*, where formerly the viceroys resided; but at present it serves as a barrack for the garrison. There begins a strong broad wall, two miles in length, for a foot-path when the country is overflowed; and a great deal of salt is gathered thereabouts. Opposite to this wall or dyke is a hill, on which the jesuits have their house for

³ PIETRO DELLA VALLE

(Q) The reader will not, perhaps, be displeased to learn the state of this place before the *Portuguese* came into the *Indies*, which will also render this description more perspicuous. In the language of the country, the word *Ticuarin* signifies thirty, and alluded to the number of villages that were upon the island. They were mostly inhabited by *Moors*, who became proprietors of these islands by a very singular accident: the great king or emperor of *Bijnagar*, being engaged in a war with the monarch of *Decan*, was so excessively enraged that the *Moors* should furnish the people of *Decan* with horses, that he ordered the king of *Onor*, then his tributary, to destroy all the *Moors* in his dominions. This he actually

attempted, and cut off great numbers: the rest retired into the island of *Ticuarin*, and built the town of *Goa*; which is to be understood not of the old, but of the new town, that was improved and fortified afterwards by the *Portuguese*. This event happened *Anno Domini* 1479; and these refugees made choice of *Hoffein* for their king, whom the *Portuguese* stiled *Mrlikehocem*. When he died, his son *Idalcan* succeeded, who was dispossessed of it by *Albuquerque*, and who maintained a long war in hopes of recovering it; but was at length forced to content himself with the territories that he still preserved upon the continent (95).

(95) *John de Barros, Decad. 1. l. viii, Decad. ii. l. v. c. 1.*

- a novices^b. The viceroy has his palace, called *la Palçoereira*, on the same chanel, and so has the archbishop. Here begins the city; and so far ships can come up, after discharging some part of their lading. This chanel, that makes so noble a port, runs many miles up the country, dividing it into several fruitful islands and peninsulas, which not only plentifully furnish the city with necessaries, but delight the palate with rich fruit, afford a curious prospect, and yield much profit to the gentry, to whom for the most part they belong. Adjoining to this port is the haven of *Murmugon*, formed by the other chanel, that runs between the island of *Goa* and peninsula of *Salsete*, and supplies a safe retreat to the ships that come from *Portugal* and other parts, when they are shut out of the port by the sands the river *Mandova* brings down, when swollen by the first rains of *June*, the passage not being open till *October*. This
- b port of *Murmugon* is defended by the castle of the same name, seated in the island of *Salsete*, in which there is a good garrison, and the fortifications are well supplied with cannon^c.

- At the south entrance into the chanel, a little beyond the forts on the right hand, are seen the remains of *Old Goa*; and from thence to the new city there is a commodious road, elegantly adorned with trees for fruit and shade, and the country for several miles embellished with pleasant country-houses, to which belong neat gardens. What is still styled the new city carries evident marks of decay; for though the walls are kept in good repair, and are everywhere well supplied with cannon, yet taking in, as they do, a compass of twelve miles, they serve to shew what the city once was in comparison of what it now is. In the time of its prosperity, there was nothing could be compared with it in the *Indies*; and very few cities in *Europe* were either larger or better built. The public structures still remain, and bear incontestable evidence of its former grandeur. The cathedral is very large, supported by twelve beautiful columns; and the archbishop's throne is very stately^d. His palace is also very magnificent, tho' that prelate usually resides in the country. The viceroy's palace is also a noble building, and has many large and commodious apartments. The house of the holy office, or palace of the inquisition, is spacious, and the apartments belonging to the inquisitor-general very richly furnished. The power of that formidable ecclesiastic is very terrible, and extends to persons of all ranks, the viceroy, the archbishop, and his vicar, who is always a bishop, only excepted. There are churches and monasteries enough for a much larger place. The jesuits alone have no less than five houses, and it is said, that their revenues equal those of the crown of *Portugal*; but then it is to be remembered, all the wealth that is still remaining lies in the hands of the church^e. The houses were formerly the best in *India*, and, being so still, make a tolerable figure: the number of inhabitants is said to be, in all, about twenty thousand; of these the native *Portuguese* are a very small number; the *Mestizos* are more numerous. The *Canarins*, or natives, are as black as jet, but have long black hair, and many of them fine features: multitudes of negro slaves, and pagans of different nations, make up the rest of the people. It is generally agreed, that the men are, for the most part, proud, indolent, jealous, revengeful, and indigent: the women lazy, lascivious, and as well skilled in poisoning as any in the world; so much are they degenerated from what they were in former times. It might be suspected that these accounts were fictitious, or at least exaggerated, if writers of different nations did not so exactly agree in them, and if the present state of things did not too plainly prove, that they are founded in truth, and that the continued progress of corruption has debased them from what they once were into the state in which they are now represented^f.

- ALL that remains under the *Portuguese* dominion, from the *Cape of Good Hope* in *Africa* to the city of *Macao* in *China*, is now governed by a viceroy or captain-general, who resides at *Goa*. There are six, and sometimes eight *desembargadores*, or judges, that attend the governor, and compose a sovereign court or council, who all of them wear a gown down to their heels, over a cassock of the same length: the gown is made with wide sleeves, reaching half-way their arms. They use gollilas and huge perukes, after the *French* fashion^g. The chief court that these gownsmen sit in is called *relacaon*, in which justice is administered in civil and criminal cases, their power extending over all the officers of the crown; in which court also are tried appeals brought from all parts of their dominions. The viceroy, as chief of this court, sits under a canopy; the judges on benches placed on the floor. The council *de facada* is a court of exchequer, where one of the gownsmen sits, as the viceroy's deputy. Thus the pomp and splendor of this government is still kept up, tho' the extent of it is so much lessened, and the power and credit of it in a manner quite decayed^h. There are still as many subordinate governments as ever, that is, in title, for otherwise they are of no great consequence;

^b TAVERNIER, LE BRUN, &c. MANDELSLO, TAVERNIER, DELLON. ^d GEMELLI CARRERI Tour du Monde, liv. iii. cap. vi. and yet those on whom they are bestowed have the rank and title of generals. There is, for instance, a general of the gulph of *Ormuz*, who has four ships under his command; a general of the north, who commands the small towns on the coast of *Malabar*; a general of *Salsete*, who has the inspection of a territory of about fifteen miles; a general of *China*, who is, properly speaking, governor of *Macao*, and is a mere vassal to the *Chinese*. There is another general in the islands of *Timor* and *Solor*, to whom, however, the *Portuguese* there scarce pay any obedience, and who lives in a miserable fort, the guns of which are in no condition for service. There is, besides all these, a general of *Goa*, who takes care of the chanel between the islands, and restrains smugglers, unless they are under the protection of his superiors¹.

A concise deduction of the several steps by which the inhabitants have been corrupted.

BUT as it is a true observation, that men never grow superlatively wicked all at once, so it must be allowed, that dissolution of manners, as well as declension in power, came on gradually here: for, while *Portugal* remained annexed to *Spain*, viceroys and governors were sent over from very different motives, sometimes to remove them out of the way, sometimes through their interest at court, and sometimes as a reward for their condescension in points prejudicial to the interests of their native country. Such men, as might be well expected, behaved still worse abroad than they did at home, minding nothing but aggrandizing and enriching themselves by every method they could invent. The bad examples of the governors had a terrible effect on the subordinate officers; so that pride, vanity, luxury, and a pompous display of wealth, attained by the basest means, took place of that virtue and public spirit, which enabled their ancestors to lay the foundation of so large an empire, with a very inconsiderable part of the power which was in the possession of those who lost it. Their clergy followed the example of the laity; and instead of promoting, as at the beginning, the conversion of the natives to the Christian faith from the religious view of saving their souls, prosecuted that work from the meaner motive of making them subservient to their purposes, and enabling them to acquire vast riches. This corruption proceeded so far by degrees, that not only many of the jesuits at *Goa* engaged in trade, contrary to the rules of their order, and their duty as missionaries, but descended so low as to disguise themselves in the habits of *faquirs*, or *Mohammedan* monks, that they might have an opportunity of visiting the diamond mines, and purchasing stones there of an extraordinary value, in which they have been detected, and openly punished².

The keeping a multitude of idle and dissolute slaves the main instrument of their ruin.

BUT what contributed to corrupt the inhabitants of the *Portuguese* settlements was, the little care taken to prevent their leaving all things to the direction of their negro slaves, and their intermarrying with the people of the country; practices which have been, and ever will be, fatal to all establishments: because it not only effeminates the minds of all such as fall into this way of living, but also makes them lose all regard for their country, and inclines them to take such dirty measures as are most likely to preserve them in the enjoyment of such servile pleasures. The *Portuguese* at *Goa* have been, for more than a century past, so much addicted to this sensual kind of life, that, provided they might enjoy their fine houses in the city, and their country palaces in its neighbourhood, they gave themselves no pain about what happened elsewhere, or how much progress the *Dutch* made in subduing their distant settlements. The natural consequence was, that when such settlements were lost, those who were driven from their habitations, instead of repairing to *Goa*, and taking arms in the king's service for the recovery of these dominions, went into the territories of some *Indian* prince, and there, for a pitiful subsistence, entered into his pay, or accepted of some low office in his court; so that while the fleets and armies of *Portugal* grew contemptible for want of soldiers and seamen, there were thousands of that nation scattered all over the *Indies*, disgracing their country by the ignominious manner of their getting their bread, when, by a proper behaviour, they might have restored the affairs of their prince, as well as their own fortunes. But when men once forget the dignity of their nature to such a degree, as to place their supreme happiness in sensual delights, nothing just or prudent, great or good, is to be expected from them; and their minds being already enslaved to their lusts, their bodies soon become the properties of those who will bestow those gratifications they so eagerly desire¹ (R).

² BALDÆUS Description of the Coasts of Malabar and
¹ MANDELSLO, TAVERNIER, BALDÆUS, GUYON, BOUCHET.

(R) We have, in a book written by a modern author of our own country, such an account of this place, as sets it in the most despicable light that can be, and this chiefly penned from his own observation and experience (96). He assures us, that there cannot be a more perfect contrast than that between the past and present state of this capital, and the country about it. He stood on a little hill near the city, and from thence counted fourscore convents and monasteries, to which there were said to belong not fewer than thirty thousand ecclesiastics

of different orders, nations, and complexions, who are not ashamed to live out of the labours of the laity, when they are scarce in a condition to subsist themselves, and when they are so far from giving the least umbrage to their Christian neighbours, that the *English* and *Dutch* consider the circumstances of their necessity with the utmost compassion, tho', at the same time, they look upon their ill-placed haughtiness, and irreclaimable idleness, with an eye of contempt.

(96) *Hamilton's New Account of the East Indies*, vol. i. p. 254.

- a THE territories that immediately depend on the viceroy of *Goa* are, first, the island upon which that city stands, and in which there are about thirty villages; the peninsula of *Salzete*, which is about sixty miles in compass; there are reckoned in it no less than fifty villages, and as many thousand inhabitants. The peninsula of *Bardes* is about forty-five miles round, and it is computed that there are twenty-eight villages in it: the *Anchedives* are a cluster of five islands, at some distance, of no great extent, and not so well peopled. All these places are not of much consequence, farther than they supply the city of *Goa* plentifully with provisions, which some penetrating people think is no great advantage; for, vast quantities of rice coming to market, and slaves being contented with a dish of this food at noon, and another at night, this encourages every housekeeper to entertain a number of unnecessary attendants.
- b fewer than having fewer than six, and some thirty or forty^m (S). If these poor creatures, who are chiefly negroes, were employed in any useful labour, it were well enough; but carrying a *palanquin*, or supporting their master's umbrella, is the chief of their services: and thus poverty and pride accompany each other, and this to such a degree, that the women of *Goa* are carried in state a begging; and while the *palanquin*, with its mistress, rests at the door, a black boy enters with the lady's compliments, more especially to strangers, containing a succinct account of her distresses, and an intimation that some relief would not be disagreeableⁿ. But let us now pass over to the continent, and just mention the towns and fortresses that are under the direction of the general of the north, which are not many, none of them very healthy, and seated at such a distance from each other, as to correspond chiefly by sea: we will name them in their order, according to their respective distances from the metropolis of *Goa*, to which they are much inferior in every respect; yet, if we may trust the most experienced travellers, they are not so much declined from what they were, at least in appearance, as that famous city^o.

What the territories are which depend immediately on the viceroy of *Goa*, and their importance.

- THE first of these is *Chaoul*, which is not seated, as many writers say, on the sea-shore, but in a plain, at the distance of six miles from the coast. It stands, however, upon a beautiful river, which at high water is deep enough to bring ships of considerable burdens to the city-walls. It is covered towards the sea by a large mountain, on the top of which there is a strong fortress which commands the town, and protects the port, a little difficult at the entrance, but, within, one of the safest and most commodious in the *Indies*. The walls of the town are in tolerable good repair, and well supplied with cannon^p. We have before mentioned *Daman*, which lies at some distance from *Chaoul*, on a river of the same name. There was formerly another city of the like denomination on the other side of the river, but nearer the sea, which is now fallen to decay, consisting only of huts, and mud-walled houses, inhabited by *Moors* and gentiles. As for the city of *New Daman*, it is beautiful, and well fortified; there are in it a great number of monasteries and churches, but the want of a good port, for even the smallest vessels can come up but once a day, and such as are of any burden but twice a year, that is, when there are spring tides, is a great disadvantage to it^q. However, as the climate is temperate, the soil not despicable, and some spirit still left in the people, which encourages them to carry on an inland trade, and enables them to provide for a good garrison, it is very probable the *Portuguese* may keep this city as long as they retain any footing in the *Indies*^r. *Bacaim*, *Basaim*, or *Bazaim*, situated in the latitude of nineteen degrees north, was yielded to the viceroy *Nunes d'Acuna* so early as 1535, and was a place of great consideration; but as it was taken by the *Indian* princes some years ago, and there is some uncertainty whether it be yet recovered, it is not necessary that we should detain the reader with any particular description of it, and for this reason it was not mentioned before. One thing, however must be remembered, before we part with it, which is this, that it was the residence of the general of the north, who lived here with a degree of magnificence much more suitable to his title than to his power, or the circumstances

Of *Chaoul*, *Daman*, and the rest of the fortresses and ports under the general of the north.

(S) When it is said that the far greater part of the inhabitants of *Goa* have a black complexion, it does not imply that they are negroes, though, as we have told the reader, there are abundance of them likewise. But the *Canarins*, or natives of the country, are also a jet black, though their faces are perfectly well featured, and their hair long, and gracefully curled; these are most of them Christians; and such as are descended of the superior casts, that is, from the *Bramins* and the *Nairo's*, are a very shrewd, lively, and polite people; whereas those of the lower cast are as cunning, base,

and wicked fellows, as the world can produce (97). Amongst the former there are many priests, physicians, merchants, scriveners, and solicitors, who are as free, and some of them richer than the *Portuguese*; and yet are subject to one distinction that is exceedingly mortifying, which is, being obliged to go without shoes or stockings, let their circumstances be what they will. But, notwithstanding this, what little trade there is, and what money is to be got in the better sort of professions, is carried on and acquired by these barefooted people (98).

of the people under his government, by which those sums were squandered, which, properly employed, might have preserved the place^a.

A farther account of the port and fortresses of Diu, one of the most considerable in the Indies.

We promised to say something farther concerning *Diu*, which is justly styled the key of the *Indies*. The port is very good, and capable of holding large ships; for which reason, while the *Portuguese* had any fleets of consequence, they were commonly laid up there in the winter-season; and, while their power continued, the *Moors*, and other traders in those seas, were obliged to take out passports here, before they sailed to the east. It was to favour the trade of this city, that the *Portuguese* destroyed *Surat*; and in return, since that city has been rebuilt, and protected by the *Mogul*, it has, in conjunction with *Cambaya*, drawn away much of the trade of *Diu*^b. As this place, however, is very strong, and the fortresses, as experience shews, capable of a long defence, it bids fair for remaining some time longer to the crown of *Portugal*. There is no doubt that some trade is still maintained, and some ships fitted out from thence, but this is by the *Indian* merchants, and is in reality nothing in comparison of what might be expected from the situation and circumstances of the place, which, in the hands of any other nation, would soon become very considerable^c. Under its present masters it continues to subsist by what its inhabitants acquired in better times; but is visibly declining, and, like the rest of their places, sinking slowly under its own weight (T).

State of Portuguese trade, and remoter settlements in Solor and Timor.

At *Bisnagar*, and some other places in the *Indies*, they have factories, and a small proportion of trade. Thirty or forty years ago, there was hardly any city or country that had any tolerable degree of commerce, in which there were not found some of the descendants of these antient conquerors of the *Indies*; but it is otherwise now, or at least they are become much thinner^d. In the islands of *Timor* and *Solor*, which are very remote, and depended heretofore upon the government of the *Moluccas*, they have still some settlements in participation with the *Dutch*; and once in two or three years a ship is sent from *Goa*, to load with the product of those places, which is sandal-wood, a commodity much esteemed in *China*, wax in great quantities, and *Solor* stones, which are of the nature, and held not at all inferior either in virtue or value, to the best bezoar^e. Besides these, they have nothing except the little city and island of *Macao* in *China*, of which we have undertaken to give some farther account, in reference to the present state and condition of the place, than occurred in the historical detail;

(T) After *Goa*, this has been always esteemed the strongest place in the hands of the *Portuguese*, and is famous in history for two sieges that do the highest honour to the *Portuguese* nation, and therefore we will give the reader a short account of them. Sultan *Badur*, king of *Cambaya*, granted *Nugno d'Acugna*, then governor of the *Indies*, leave to build a citadel here in 1535; and he caused it to be raised, and put into a posture of defence, in forty-nine days (99). Soon after Sultan *Badur* changed his mind, and would have taken it from the *Portuguese*, but perished in the attempt (100). His successor Sultan *Mahmud* entered into his schemes, and called the *Turks* into the *Indies*; when *Solyman*, bashaw of *Cairo*, came with a potent fleet and a numerous army on board, to his assistance. Before his arrival, *Mahmud* had invested the fortresses of *Diu*, the outworks of which were not intirely finished. Don *Antonio Sylveira de Menezes* commanded in the place with a garrison of six hundred men. The *Turks* began to debark their forces September the 14th, 1538, opened their trenches regularly, carried on the siege in form with an army of twenty thousand men, and a prodigious train of artillery; neglecting nothing that could be done, either by skill or force, to become masters of the place: yet were at last obliged to raise the siege on the first of November, after losing, in the whole, three thousand men, and leaving behind them five hundred sick and wounded, together with most of their heavy cannon. The garrison too were quite exhausted, having no more than forty men left who were able to remain at their posts. The fame of this first siege of *Diu* was so great, that the *French* king, *Francis* the first,

sent a person expressly to *Lisbon*, to bring him the picture of the governor (101). The second siege of *Diu*, no less remarkable than the first, happened in the year 1546, when Don *Juan de Castro* was governor of the *Indies*; *Mahmud*, king of *Cambaya*, was there in person with a numerous army, and a great train of artillery. The place was defended by a very feeble garrison, under the command of Don *Juan de Mascarenhas*, who gallantly maintained it for many months, till he was succoured by the viceroy, whose son had been killed in the course of the siege. Don *Juan de Castro* attacked the *Moors* in their entrenchments; and, after an obstinate dispute, gained a complete victory, which put him in possession of the town of *Diu*, and of the whole island (102). But he found both the houses and the fortifications so terribly ruined, that there was a necessity of rebuilding the one, and of repairing the other; but this could not be done without money; there was none in the treasury; the credit of the government was gone, and no private person would be bound for it. In this distress the governor intended to have pawned the body of his deceased son, but that was not in a condition to be transported. At last he wrote a letter to the citizens of *Goa*, mentioning the sum he wanted; and sent them a lock of his beard, as a pledge for the re-payment. This had all the effect he could desire: the ladies of *Goa* raised the money, and sent it with the pledge; and not long after the viceroy took a very rich prize, that not only enabled him to discharge this debt, but to repair the citadel, and rebuild the town of *Diu* in such a manner, as to render it one of the finest fortresses in the *Indies* (103).

^a and this it is the more necessary to do, since, after the detriment suffered by the loss of the *Japan* trade, it is no easy matter to conceive how its inhabitants subsist.

In speaking of *Macao*, some writers represent it as standing on an island, and others on a *peninsula*. Both accounts are true; and it is this that renders them not easily understood. The mouth of the river of *Canton*, or rather the arm of the sea where that river falls into it, is full of a vast number of broken islands of different sizes; from one of the largest of these there runs out a peninsula in the shape of a man's arm bending, joined to the main land, as it were by a *isthmus* at the shoulder; which *isthmus* is so narrow, that there is a strong wall built across it; and therein a large gate, which is the boundary of the city's jurisdiction^y. This peninsula lies in the north latitude of twenty-two degrees twenty minutes, and is not above three miles in compass. The port is not large, but very secure; there is a fortress, which is pretty strong, and has a garrison in it, but not very considerable. The city is without a wall; and, with respect to the *Chinese*, it is for many reasons a place of no strength at all. The ground is very uneven, and yet the city is not ill built: the public edifices are spacious and neat, and the streets very well paved; which is no wonder, since there was a time when the inhabitants were able to have paved them with silver^z.

^b Of the *Portuguese*, their descendants and their slaves, there are about four thousand, and about fifteen or eighteen thousand *Chinese*. The former, with respect both to their civil and military government, are under the governor of *Macao*, appointed by the crown of *Portugal*, who, in his own fortress, is styled "his excellency the general of *China*." He is paid by the citizens, who allow him a crown a day for subsistence, and three thousand crowns at his departure. The *Chinese* are under a mandarin, without whose consent the *Portuguese* governor also can do nothing. All people here live by trade, and nobody pretends to be born above getting his bread; it cannot indeed be otherwise, for they have not as much ground as would serve to sow a handful of pease: the only distinction is this, the common people labour, go to sea, or keep shops; the better sort merchandize, let out money, or insure; some trade they carry on with the *European* ships when they are in the river of *Canton*, some more especially, in their absence, with the *Chinese*; but what turns to the best account is a kind of contraband commerce with the *Philippine Islands*, and, as some say, also with the inhabitants of *Hainan*, a great island on the coast of *China*, prodigiously rich in gold^a. Yet, what between the *Chinese* port-duties levied by an *Hoppo*, or collector of the customs, and the imposition of ten per cent. upon all merchandize in *Portuguese* bottoms, for the support of the government ecclesiastic and civil, there are hardly any can boast of being rich; and if they can live but tolerably, and that too in a place where every thing is cheap, they are, generally speaking, content^b (U).

In order to form a complete notion of the state of the *Portuguese* affairs in the *East Indies*, it is necessary to recollect what has been already said of the places which they still retain upon the coast of *Africa*, particularly *Mosambique* and *Sofala*. The gold obtained from thence is sent to *Goz* and to *Diu*, where it is coined into small pieces called *St. Thomas's*, not worth more than half a crown of our money; and it is observed, that this coin is of a worse touch, that is, of a baser alloy, than any other in the *Indies*, which is an infallible sign of a declining trade: for the *Sarajins*, which were formerly coined at *Ormuz* when in the *Portuguese* hands, were esteemed the best gold in the *Indies*, but they are now become extremely scarce; and the *St. Thomas's* are said to be coined in less quantities every year^c. Upon the whole, these possessions are said to produce so little to the king of *Portugal*, that it has been more than once debated whether it would not be for the interest of the crown to abandon them altogether, withdrawing their artillery and effects; and we are likewise told, that it is not any political, but purely a religious, motive that has hindered this measure from taking place, the priests having suggested, that in that case a multitude of souls would be lost to the church.

^c Voyage de JEAN BAPTISTE TAVERNIER, seconde partie, p. 614.

(U) We have before informed the reader how great a blow the loss of the commerce of *Japan* gave to this flourishing city; and here it may not be amiss to observe, because the fact is very little known, that what in a good measure completed their ruin was, their undertaking, and persisting for twenty years together in making war upon the inhabitants of *Timor*. Those people were Christians, and acknowledged the king of *Portugal* for their sovereign; but they were determined to live according to their own laws and customs, and not to admit of a

governor-general and prelate, which the *Portuguese* had a mind to impose upon them; and under the command of one *Gonzales Gomez*, they defended their liberties so gallantly, as to preserve them from the least infringement. This war, which began in 1688, had, as we have remarked, the most dismal effects upon the people of *Macao*, who, from a thousand substantial burghers, were reduced to about fifty, and, from having upwards of fifty sail of good ships, had not at the close of the war, above five (104).

An explanation of the manner in which the remaining commerce of GOA is carried on.

WE shall the less wonder at this, if we consider that such as are best acquainted with the *East India* trade assure us, that a single merchant might well carry on as great a commerce as subsists between *Lisbon* and *Goa*; but this requires some explanation. There are still a great many ships employed from *Goa*, *Diu*, and *Daman*, to the coasts of *Persia*, *Pegu*, *Manila*, and *Cbina*; but they are mostly on the account of *Indian* merchants, there being scarcely a *Portuguese* trader at *Goa*, able to furnish a cargo of the value of ten thousand crowns^d; and it is very much doubted whether, in the whole of their trade, they employ above two hundred thousand crowns; so that it is not at all strange, that, one year with another, there are not above two ships sent directly from *Goa* to *Lisbon*, and those not a fourth part so rich as when they annually sent twenty^e: yet a late regulation made at *Goa*, for the preservation and promoting of trade, is that which those, who understand this subject best, agree has gone near to complete its ruin^f. This is the establishment of an exclusive company, with the sole right to carry on the commerce of *Mosambique* and *Macao*; which company had taken upon itself the payment of the royal officers, who are also two-thirds concerned therein; by which such a blow has been given to the natural commerce of *Goa*, that the best part of the *Indian* merchants are now retired from thence. To say the truth, it was the great share the viceroys, governors, and other officers, always took in commerce, without contributing any thing thereto, except protecting the merchants from the violence committed by themselves on such as did not admit them to a share in their trade, that first injured the extensive commerce they enjoyed (X). But, though their power and commerce are so much declined, their pride is as great as ever; inasmuch that, as we have before observed, they refuse the natives of this country, who are called the *Canarians*, the privilege of wearing stockens, though they would willingly pay a large consideration for that indulgence; notwithstanding they employ them as physicians, lawyers, and merchants, by which many of them are so rich, that they keep a dozen or fourteen slaves, and are in much better circumstances than the *Portuguese* themselves^g. But, after all, what is not a little surprising, the revenues of the church have suffered but a small diminution by this change in the state, inasmuch that there is hardly a monastery which does not receive four or five thousand crowns out of the treasury; at the same time the soldiers starve and mutiny for want of pay; and this is so much the harder upon the government, because the reverend fathers know very well how to take care of themselves. It is not easy to know what becomes of the money these church-men raise^h; but it is very evident, that the wealth they possess, together with the establishment of the inquisition at *Goa*, is such a dead weight on the settlement, as must sooner or later destroy it, unless some speedy and effectual remedy be appliedⁱ (Y).

The most considerate people in Portugal are well apprised of the sad state of affairs here.

THE *Portuguese* themselves, that is, the wiser and more intelligent part of the nation, are extremely sensible of this; and have often represented to the court, that, instead of living in a continual state of war, as they have done for above a century past, with all the *Indian* princes on the opposite continent of *Malabar*, which, because the honour of the crown is interested therein, entails a prodigious expence, it would be better to cultivate a good understanding

(X) It is universally agreed, that the avidity of their governors was the principal cause of the miserable declension of their affairs, and this notwithstanding repeated orders from *Lisbon* for putting an end to such pernicious practices. The true reason why those orders never produced any great effect, was plainly this; that the governors, who broke through them, carried home fortunes sufficient to defeat all prosecutions; and, on the other hand, the parties injured were, by those very acts of injustice, disabled from taking the proper methods for redress. But if the court of *Portugal* had appointed from time to time men of probity, in quality of commissioners, sent them to make inquiries on the spot, and, in consequence of their discoveries, punished the offenders severely, and indemnified those who had suffered by them, out of their estates, the loss would have fallen upon a few wicked men; and the nation had preserved, by justice, that empire which the virtue of her citizens, such as her *Gama's*, *Albuquerque's*, and *Castro's*, had acquired.

(Y) It is not a little strange, that, amongst such a multitude of churchmen, there should not be some of parts and sagacity enough to see that persisting in this

method of living must be fatal to them as well as to the state, since they cannot but be sensible that the enemies of the one will never pay any respect to the other: besides, experience might convince them, that all the rich churches in *Malacca*, *Cochin*, and in the island of *Ceylon*, have been demolished and plundered; and this will sooner or later be the fate of those in other places. It would have been so long ago at *Goa*, if the Marquis de *Villa Verde*, when he was viceroy, had not recruited his army with the lustiest monks he could lay his hands upon, by whom the infidels were repulsed, and the city saved; notwithstanding which the viceroy was recalled, excommunicated, and underwent a great deal of trouble, though nobody pretended to deny the necessity which he pleaded as his excuse; a necessity so pressing, that a *Portuguese* woman of quality, understanding the danger the city was in from the enemy's having made themselves masters of an important post, put herself at the head of a handful of men, who, animated by her example, attacked, carried it, and cut twice their own number to pieces; for which generous exploit this heroine, who was living in 1705, enjoyed the title and the pay of a captain (105).

(105) Hamilton's New Account of the East Indies, vol. i. p. 254, 260.

- a with their neighbours, to employ a part of their church revenues for the support of the necessitous, and, by some indulgences to the natives, revive again that spirit of industry which is necessary to accumulate wealth in the *Indies* as well as elsewhere^k. But in a court where the king's confessor has always a very great influence, and sometimes is prime minister, though it may be wished, it can hardly be expected, that schemes of reformation should take effect where the churchmen are to bear the expence; and here there are none besides in any condition to bear it; whence some have ventured to foretell, that, by the end of the present century, this nation will not preserve a foot of land in that part of the world where they have already lost all their trade, and where the little power they have is in reality maintained at a very great expence to the crown; and this partly from a point of honour, and partly from a principle of religion, which, though reputable motives, yet at the bottom are not those by which, generally speaking, colonies are made to flourish^l.

But, after all, the state of the *Portuguese* affairs in *Asia* is capable of being considered in another and better light; since, however depressed their power may be, and how much soever the people may be degenerated from what they were, yet they have at this hour such establishments as would, if they were well managed, put them upon a better foot than any other *European* nation interested in that part of the world, the *Dutch* only excepted. They have but a few places left, it is true, and these scattered at a great distance one from another; but, notwithstanding this, those places are excellently situated for trade, and, by proper management, might be rendered highly beneficial to the crown of *Portugal*^m. If *Diu* and *Macao* were made free ports, and the power of the inquisition restrained in respect to such *European* strangers as should be inclined to settle in the *Portuguese* dominions, it would infallibly give a new turn to things; for interest, in that part of the world especially, is a sufficient invitation. All the trade in the *Indies*, carried on by the other *European* nations, is managed by exclusive companies; and, whether this be or be not expedient for the nations to whom those companies belong, this is very certain, that individuals are very far from finding their account in it; and if places so convenient, and so well situated, were open to them, and they had a free liberty of trading under the protection of the crown of *Portugal*, it would very soon appear that this protection, though it cost nothing, would produce much; and that flag, which is at present so little esteemed, would in a small space of time be the most respected of any in the *Indies*ⁿ.

d (Z). To some, no doubt, this project will appear very chimerical; but whoever reflects on the great struggle made in favour of the *Ostend* company; on the new establishments that have been made in the north of *Europe*; and on the scheme at present carrying into execution in the *Italian* dominions of the house of *Austria*^o; will very plainly perceive, that, if the ministry in *Portugal* were inclined to act upon these maxims, and would do it with vigour, they might bid much fairer to engage those adventurers, who have been the real authors, and are the only supporters, of these new contrivances, than any of their competitors; and the difference is so very great between having no establishments at all, and having as commodious as any in those parts ready settled and fortified; and the concurring favourable circumstances, in respect to the navigation, are so self-evident, that we may boldly pronounce, nothing but indolence, timidity, and bigotry, can prevent the undertaking such a design, and, when undertaken, carrying it into execution with far greater ease than their first establishments were made two hundred and fifty years ago; and, having made this remark, which is wholly new, and, we hope, not impertinent, we shall proceed to another part of our extensive subject.

^p We may now add the Prussian company established at *Embsen*.

(Z) The reader will observe, that, though freedom of conscience is allowed at *Goa* to infidels of every denomination, yet all *Europeans*, as Christians, are exposed to the terrors of that tribunal, of the severity of which in this city not protestants (106) only, but papists (107), have complained, and justified their complaints by in-

stances sufficient to make a reader of any humanity tremble: while, therefore, this court continues there, and extends its influence to the few places that are yet left to the *Portuguese*, it is impossible that commerce should revive, without which they must gradually sink into a total dissolution.

C H A P. V.

The history of the discoveries, settlements, conquests, disputes, and commerce of the Spaniards in the East Indies, from their first coming into those parts down to the present times.

S E C T. I.

An account of the motives to the search of a new passage to the East Indies by sea, of the disappointments that attended it, and of the celebrated expedition of Ferdinand Magellane, by which that long-sought passage was at length discovered.

The rise of the Spanish naval power under their Catholic Majesties Ferdinand and Isabella.

THE reputation which the Portuguese acquired by settling the *Canaries*, discovering the islands of *Madeira*, *Azores*, and along the coast of *Africa*, soon raised the jealousy, or at least the emulation, of their neighbours, and more especially the *Castilians*, naturally as high-spirited a nation as any in the world. They were at this time governed by King *Ferdinand* and Queen *Isabella*, who, by their marriage, united the kingdoms of *Spain* which descended to each of them by hereditary right; and, in consequence of that superiority of power which was the natural result of this union, they attacked the kingdom of *Granada*, the only region of which the *Moors* then remained possessed, and, after a bloody war, and a siege of the capital, which was of some length, added that fruitful territory to the rest of their dominions, by right of conquest^a. While their catholic majesties were employed in the siege of this city, the queen, after he had spent many years in attendance, thought fit to accept the propositions made by *Christopher Columbus*, a *Genoese*, for discovering certain rich countries, by sailing west from the coast of *Spain*; and, after taking possession of *Granada*, furnished him with the means of putting this design in execution; in consequence of which he embarked on *Friday, August* the third, 1492, the contract with him having been signed the seventeenth of *April* preceding^b (A).

Pope ALEXANDER VI. confirms their title to the discoveries made by Columbus.

UPON the return of this great man from his happy discovery, *Ferdinand* and *Isabella* thought fit to apply themselves, according to the custom and policy of those times, to the court of *Rome*, in order to have their title to these new-found countries, and such others as might be found, confirmed and secured^c. Upon this application, *Alexander* the sixth, who then possessed the papacy, consented to bestow on their catholic majesties the sovereign dominion of the *Indies*, with supreme jurisdiction over all that hemisphere; and accordingly, with the consent and approbation of the whole sacred college, the bull was passed in the usual form, on the second of *May* 1493, with all the same formalities, prerogatives, and powers, that had been before granted to the kings of *Portugal* in relation to the *East Indies*, *Guiney*, and part of *Afric*: and by another bull, of the third of *May* of the same

^c HERRERA Histor. de las Indias Occidental. Decad. i. lib. ii. cap. 4.

(A) This project of *Columbus* was out of comparison a greater and more noble design than any that had yet entered the thoughts of any of the Portuguese navigators. It was the result of much study, and founded in true science; for, instead of creeping along the shore, and doubling with equal danger and difficulty one cape after another, which had been their method, he boldly undertook, by a navigation through the open sea, to perform at once what they had been aiming at, by a course of painful endeavours, for so many years (1). To make so strange a notion, as this must at that time have been, in some measure intelligible, he drew a chart of the world, according to his own conception, supported by the authorities of *Strabo*, *Ptolemy*, *Pliny*, and *Isidorus*, from whence he undertook to demonstrate, that, by

steering west from *Spain*, he must necessarily arrive at the *Indies* as described by those authors (2). This chart his brother *Bartholomew Columbus* published at *London* in 1480; and though it was in many respects wide of truth, more especially in the distances, which, either misled by some authorities, or from a set purpose of representing the expedition very practicable, he made much smaller than they were afterwards found to be: yet, for all this, his scheme was perfectly well founded, and, to such as will contemplate it attentively, and without prejudice, must appear one of the greatest efforts of the human understanding; more especially when it is considered, that with no less prudence and fortitude he executed, than with skill and judgment he contrived, so vast a design (3).

(1) Vita dell' Ammiraglio D. Christoforo Colombo. l. i. c. 7.

(2) Herrera Histor. de las Indias Occidental. Decad. i.

(3) Hakluyt's Collection of Voyages, vol. iii. p. 2.

- a year, he granted them all the islands and continents already discovered, or that should be discovered, drawing a line from pole to pole at the distance of an hundred leagues to the westward of the islands *Azores* and those of *Cape Verde*; and that all that should be discovered beyond that line to the west or south, should appertain to the navigation and discovery of the kings of *Castile* and *Leon*, provided it were not in the possession of any Christian prince before *Christmas-day*; and that no person should pass over into those parts under penalties and censures^d. These bulls, which were intended to put an end to all disputes between the two crowns, were so far from having that effect, that they heightened the animosities between them; the king of *Portugal* representing to their catholic majesties, and to the court of *Rome*, that he was extremely wronged by this partition, insisting at first, that the new-discovered countries belonged to him, and threatening to send a fleet to support his claim^e.

By degrees, however, things were brought to a better temper by a negotiation; and at length it was agreed, that, to prevent disputes, which could not fail of being detrimental to both, commissioners should be appointed by the two crowns, in order to discuss this matter amicably, and settle it to their mutual satisfaction. Accordingly such commissioners were appointed by both parties, with full powers to adjust this difference, either by settling boundaries north and south, or from east to west, or such other limits either by sea or land as they should think fit. After many conferences, and upon hearing of several cosmographers, who were admitted into their assemblies, on the seventh of *June* 1493 they agreed, that the line for settling the boundaries should be drawn two hundred and seventy leagues farther than that mentioned in the pope's bull, from the islands of *Cabo Verde* westward; and that all beyond that meridian, westward, should belong to the kings of *Castile* and *Leon*, and all to the eastward should appertain to the navigation, conquest, and discovery, of the kings of *Portugal*; but that their catholic majesties might freely sail through those seas belonging to the king of *Portugal*, they holding on their direct course. Likewise, that whatsoever should be discovered before the twentieth day of the said month of *June*, within the first two hundred and fifty leagues of the said three hundred and seventy, should remain to the kings of *Portugal*; and whatsoever should be discovered within the other one hundred and twenty leagues should appertain to the kings of *Castile* for ever^f.

THESE conditions being drawn up before *Hernan de Alvarez de Toledo*, secretary to their catholic majesties, and *Stephen Baez*, secretary to the king of *Portugal*, their said catholic majesties signed them at *Arevalo* on the second of *July*, and the king of *Portugal* at *Ebora* on the twenty-seventh of *February* the next year^g. Though their catholic majesties, on the seventh of *May* that year, ordered the cosmographers, and others that were to draw the line, to meet, and to do the same within ten months, if required; it does not appear to have been performed, though it is certain their catholic majesties endeavoured it^h. The *Portuguese*, who at this time had discovered very little beyond the island of *San Tome*, or *St. Thomas*, under the equinoctial, that they might not be behind with their neighbours, exerted themselves so vigorously, that they soon after passed that cape now called *de Buena Esperança*, or *Cape of Good Hope*, and so entered into the possession of their *Indies*ⁱ (B).

Under this agreement things rested quietly enough for many years, till *Ferdinand de Magalhaens*, or, as we usually call him, *Magellan*, who had some share in the discovery of the *Moluccas* for the crown of *Portugal*, began to surmise, that possibly they were not within the term stipulated, and that therefore they might be claimed by the crown of *Spain* upon the foot of that agreement; on which he resolved to avail himself, in case he did not succeed in the pretensions (grounded upon his past services) which he had on the court of *Lisbon*; and, that he might be in the better condition to take whatever steps he thought necessary, he procured and obtained very ample memoirs from his friend *Francis Serrano*, who was the principal person

(B) The reader will from hence discern the truth of what has been so often suggested, that, notwithstanding the passage to the *West Indies* was first discovered, yet it was in reality discovered by seeking a passage to the *East Indies*. It was indeed impossible for *Columbus* to look for countries utterly unknown; but as he all along suggested, that he might very probably find islands hitherto unvisited in his passage, so his credit was perfectly saved by his first and future discoveries, which

proved the source of these disputes, all arising from a supposition, which afterwards appeared to be well founded, that a passage might be opened this way to the *East Indies*, as it actually was by *Magellan*, who took up the thread, which, being cut off by death, *Columbus* had let fall; so that his merit lay in distinguishing the true design of that great man, and in prosecuting it, as he did, with effect (4).

(4) *Herrera Histor. de las Indias Occidental*, Decad. ii. l. ii. c. 3.

concerned in that discovery^k. Upon his return to *Lisbon* from the *Indies*, he set forth his services by a memorial, and desired a small augmentation of his pay. What he asked was so very trivial, that it seems strange to some writers the court of *Portugal* should so peremptorily refuse his demand; more especially when he threatened to renounce the service, to abjure his country (which it seems was legal in those times), and seek employment elsewhere^l. But, in reality, it was not the gratification, to which the *Portuguese* ministers were so averse, as the thoughts of making such a precedent, the consequences of which they foresaw^m. Upon this he determined to put his other scheme in execution; and accordingly went away into *Castile*, carrying with him a planisphere drawn by *Peter Reynel*, by which, and the correspondence he had held with *Serrano*, he persuaded the emperor *Charles* the fifth, that the *Molucca Islands* belonged to him; and confirmed his opinion from testimonies, and the authority of *Ruy Faleyro*, a *Portuguese* astronomer, and much more from that of *Serrano*ⁿ.

The Spaniards strongly bent to maintain their pretensions, accept the proposals of Magellan.

WHEN this was known in *Portugal*, several methods were proposed for preventing the execution of this scheme; great offers were made to *Magellan*, and his companion *Faleyro*, to induce them to return, but without effect: some mention was made of assassinating them; but this was either not attempted, or did not succeed^o. There were, however, no pains spared to represent publicly at court, that the sending this man was a breach of treaties; and privately, that the thing would turn to no account, for that *Magellan* was a vain bragging boasting fellow, of little courage, and a shallow capacity. It is said the emperor was not much inclined to this adventure; but the *Spanish* council, who understood such affairs better, were of a different opinion. They thought the design practicable, and had a great opinion of him who proposed it; in which they were certainly right, for no man ever conducted an enterprize of that importance better. On the tenth of *August* 1510, *Magellan* sailed from *Seville* with a squadron of five vessels, two of which were of the burden of one hundred and thirty tons, two of ninety, and the least of sixty, having on board, in all, two hundred and thirty-four men, of whom about a fourth part were *Portuguese*^p. The points he had undertaken were two: first, to find certain islands within the limits assigned to *Spain*, from whence spices might be brought; and, secondly, to find a passage to and from those islands, without violating the rights of the *Portuguese*; which if he did, his imperial majesty stipulated, that he and *Ruy Faleyro* (who, falling mad, did not go the voyage) should have an exclusive trade thither for ten years, enjoy the title of *Adelantado*, and a twentieth part of the profits for ever^q.

A succinct account of Magellan's voyage, discoveries, and death.

THE squadron making some stay at the *Canaries*, a caraval overtook them with dispatches for *Magellan*, by which he was informed, that *John de Carthagena*, and several other officers, had declared, before their departure, that they meant not to obey him, of which at that time he took no notice. It was not long before he was convinced that these officers were in that disposition, for they began to question him about the course he steered. He told them "that was his affair: that they had nothing to do but to follow his flag by day, and his lights in the night, and he would answer for the rest." When they were advanced into the south latitude of thirty-five degrees, they complained of the cold, and other hardships. *Magellan* answered, "that it was indeed cold; but that *Norway* and *Iceland* lay in higher latitudes, where the weather was consequently colder; and yet those seas were navigated, and found tolerable." He wintered in port *St. Julian's*, where the mutiny broke out; which he quelled by his wonderful presence of mind, and by a discipline necessarily severe^r. He continued his voyage from thence into and quite through the streights which have since bore his name. As soon as he was in the south seas, he held a council, in which he declared, that there was no farther doubt of there being a passage this way to the *Moluccas*. *Stephen Gomez*, the ablest pilot in the fleet, confirmed what he had said; but gave his opinion, that it would be better for them to return, because they had still a wide ocean to pass. *Magellan* answered roundly, "that he meant to prosecute the voyage, if he eat the hides that were nailed round the bottom of the mast: that they should be exposed to as little hardship going forward as backward; and that if any presumed to speak of the length of the voyage, or the quantity of the provisions, he would cause them immediately to be put to death." However, *Gomez* soon after found means to carry back the ship of which he was pilot. *Magellan*, having still with him three ships out of the five that were under his command, pursued his voyage, though himself and his people were exposed to great difficulties, till he arrived at length at the island of *Zebu*, one of the *Philippines*, as they were afterwards called, and not far from the *Moluccas*^s. He was well received by the king, who, by his persuasion, was baptized, and promised obedience to the crown of *Spain*. The *Spaniards* were well entertained here, and recovered surprisingly; but *Magellan*, engaging rashly in an action against two *Indian* princes, on behalf of

- a the Christian king his friend, on the 27th of *April* 1521, was unfortunately slain¹. Other writers affirm that the Christian king betrayed and murdered him; but, however that matter might be, one of his ships, called the *VICTORY*, under the command of *Sebastian Cano*, returned safe to *Spain*, being the first vessel, at least so far as history informs us, that ever sailed round the globe² (C).

- We should not have dwelt so long upon the motives to this expedition, and the disputes which it occasioned, if it had not been to explain in what manner the *Spaniards*, notwithstanding the pope's bull, found a passage into the *East Indies*; which is certainly a very material point to our purpose, and therefore we shall pursue it so far as to shew how it ended with regard to the *Moluccas*, as these were the original cause of the quarrel³. *John* the second, who was at that time king of *Portugal*, knowing perfectly well the value of those islands of which he was in possession, and being very unwilling to have a war entailed upon him in that part of the world, with the only nation in *Europe*, of whose naval force he had reason to be apprehensive, caused privately some hints to be given to the emperor, that, upon a treaty of accommodation, he might possibly acquire a considerable sum of money⁴. This was after two treaties that had been set on foot for an amicable discussion of their titles, which, to say the truth, was no easy matter, since the *Spaniards* affirmed, that the *Portuguese* had forged charts; and the *Portuguese*, on their side, disputed the astronomical observations made by *Magellan* in his voyage; so that the commissioners appointed in 1525 and in 1526, separated, without coming to any conclusion⁵. But the insinuation before-mentioned ran so strongly in the head of a monarch whose ambition made him always necessitous, that, under pretence of the near relation between them, and his unwillingness to create uneasiness in their respective families, he resolved to drive as good a bargain with the king of *Portugal* as he could; and accordingly, *August* the twenty-second, 1529, he concluded an agreement, by which, in consideration of the sum of three hundred and fifty thousand ducats, to be paid him at several short times therein stipulated, he consented to mortgage his title, whatever it was, and to appoint commissioners for re-examining these affairs; with a proviso that he should not be at liberty to act, whatever their division might be, till he had repaid that sum⁶.

- THE *Spaniards*, who in those days were very free speakers, and did not apprehend their kings to be infallible or impeccable; were very angry with this agreement, in which, they said, the emperor had sacrificed their interests, in order to come at a sum of money he very much wanted to defray his coronation in *Italy*; yet, to shew that they meant something more than clamour, they offered an expedient, which, according to their notions, might reconcile his private and his public interests; which was, that the *Cortes*, or parliament of *Castile*, should pay the money advanced by the king of *Portugal*, for which the emperor should make them a grant of the *Moluccas* for six years, during which the staple for spices should be fixed at *Coruna*; and, after the expiration of that term, the emperor should be again at full liberty to dispose of that trade as he pleased. But his imperial majesty, either from particular reasons, or from a point of honour, because he knew the king of *Portugal* relied upon the treaty he had concluded, rejected the proposal, and ordered a fleet ready to sail to the *Moluccas* to be disarmed⁷.

(C) As there are various accounts of *Magellan's* voyage, some written by *Spanish*, some by *Portuguese*, and some by *Italian* authors, so they differ very much about the facts which they deliver; but as our business here is only to give a short and plain account of what regards the time and manner of his discovery, we did not think it necessary to enter into a long detail of these differences, which indeed are little or nothing to our purpose; for, whether he arrived first at one island, or at another in this *Archipelago*, is not of any great moment, since it is allowed on all hands, that he was the first *European* who visited them; and, by coming thither by another passage than that of the *Cape of Good Hope*, fully performed his contract with the crown of *Spain*, and

completed also the great design of *Columbus*, which was, reaching the *East Indies* by a west course; demonstrating the truth of that position, which he had laid down as the basis of his discoveries, that the globe was invested by the ocean, and that it was possible to sail round it (5). By this enterprise of *Magellan's* it appeared, that the line of demarcation was founded in reason, though the ambition of princes rendered it ineffectual, because it has been always found an easy thing, in such cases, to dispute about computations, each party having, or pretending to have, direct proofs that such islands or countries, as they desire to possess, are within the limits prescribed by treaties.

(5) *Essai sur la Marine, et sur la Commerce*, p. 8.

S E C T. II.

The settlement and conquest of the Philippine or Manila islands; the methods taken to fortify and secure them, and the dangers to which they were exposed on every side from open and avowed, as well as from secret and sinister enemies.

The islands now called the Philippines, how, by whom, and at what time, discovered.

THIS agreement deprived Spain of the *Moluccas* during the remainder of that and some part of the succeeding reign; but then, together with the rest of the dominions of Portugal in all parts of the world, they fell under the power of Philip the second,^b; yet, notwithstanding this sudden loss of what had been so lately found, the discovery of *Magellan* proved of very great consequence to the crown of Spain, not only as it opened a new passage to the *South Seas*, but as it made way for the subjecting a great number of rich islands to the crown of Spain, and might be attended with still farther advantages (D). *Ferdinand Magellan*, coming in sight of a small part of these islands on the day dedicated by the Church of Rome to the memory of St. *Lazarus*, called so many of them as he saw the *Archipelago de St. Lazaro*^c. It was so long after his discovery as the year 1543 before we hear of any Spanish squadron being sent thither; and then *Don Lopez de Villalobos* came thither, and took a view of some of the most considerable islands, giving them, as some say, the name of the *Philippines*, in honour of the Infant Don Philip, then prince of Spain^d; but others affirm, that they were not so called till the Adelantado Michael Lopez de Legaspi came in 1564, when King Philip was actually on the throne, in order to reduce them in earnest. He first subdued the island of *Zebu*, and others in its neighbourhood, which were then called the *Pintado's*, on account of their being inhabited by naked *Indians*, whose bodies were strangely painted. In doing this he spent no less than six years; and being then informed, that there were countries much better worth his arms, he in some measure abandoned those that had already submitted; and collected all his force, that he might undertake his new expedition with greater probability and certainty^e.

The reduction of Luzon, or Luzon, and the raising Manila to the rank of a metropolis.

WHEN he had placed a small garrison in *Zebu*, and made the best dispositions he could for the preservation of that and the adjacent islands, he embarked all his forces, and went over to possess himself *Luzon*, or, as it is pronounced, *Luzon*, one hundred and fifty leagues from *Zebu*. He fought the barbarians, who, after the first surprise caused by arms, ships, and countenances, differing from theirs, was over, defended themselves bravely. Legaspi ran into a bay four leagues over at the mouth, where is an island now called *Marivelez*. The bay runs thirty leagues up to the city of *Manila*, and is eight leagues over, lying north-west and south-east. The inhabitants of this city opposed him with more bravery than the *Pintadoes*, because they had cannon and a fort; but, as soon as they saw that taken by the *Spaniards*, they submitted. This was done so expeditiously, that the people from the country had not time to come in; and thus he entered *Manila*, which, from what follows, will appear to be a place strong by nature^f. At a point of it, which is shut in by the waters of the bay, a considerable river empties itself, which rises in the great lake called *Babi*, five leagues distant. This point, which at first is narrow and sharp, presently widens, because the sea-coast runs away to the south-south-east, and the river west, leaving a most spacious plain for the city, which is all encompassed with water, except that part which lies to the south-west. Legaspi then built it of wood, whereof there is great plenty in those parts. The roofs he covered or thatched

(D) The very best Spanish writers are very far from being distinct or explicit in settling the bounds of these *Archipelagi*, which amongst geographers occasions a good deal of confusion. To prevent this as far as we may, it will be best to treat this matter rationally and historically. It is most probable that *Magellan* intended to include in his *Archipelago* of St. *Lazarus* all the islands that he conceived to be on the Spanish side of the line of partition; and consequently this took in the *Ladrones* on one side, and the *Moluccas* on the other; but this name is now grown almost into disuse. The *Philippines* are now understood to be those islands in the Indian ocean belonging to the crown of Spain (6), and are divided into the *Greater* and *Lesser Philippines*, which will

be hereafter described, and the *New Philippines*, discovered about the beginning of the present century, and of which we have but very imperfect accounts. As for the *Ladrones*, or *Marian Islands*, they lie between the two continents of *Asia* and *America*, are under the dominion of the crown of Spain; and, from being very populous, are many of them become desert. These Spanish islands taken all together, are very numerous; some writers swell the account to eleven thousand (7); but that serves rather to confound than to explain things: our business lies only with such as are well known and inhabited; and these, in comparison of the rest, are but a very few, as the reader will be informed at large within the compass of this chapter.

(6) Relac. de las Islas Filipinas y Malucas, por Hernan de las Rios Coronel. in Sobrino's Spanish Dictionary.

(7) See the word *Philippinas*

a with the leaves of *Nipa*, which is like sedge, or sword-grass, and a sufficient fence against the rains; but combustible, and the occasion of great conflagrations, which have often happened. One would have imagined that in process of time, this inconvenience might have been removed; and very probably it had, if the inhabitants were not sensible, that, in freeing themselves from this, they should run into a greater; for, the country being very subject to earthquakes, strong and well built houses would frequently become the tombs of those who lived in them; and therefore to this time the upper stories are only built of wood, though they want not better materials^a.

b We have but indifferent memoirs of the history of the *Philippines*, even in the *Spanish* writers; neither would it be necessary, or even suitable to our purpose, if we were better supplied, to enter into a regular detail of affairs; and therefore we shall mention only some remarkable and less known passages, and then proceed to a description of the dominions of the crown of *Spain*, in this part of the world, the extent, importance, and commerce of which, are, generally speaking, but very imperfectly understood (E). The *Chinese* were formerly masters of all these islands, as their own historians relate; but finding their empire in danger of breaking to pieces by its bulk, they slighted these, and many other frontier provinces; upon this judicious maxim, that a smaller country, well peopled, and well cultivated, was better able to support its government, and receive the benefits of a wise and just administration, than a vast empire, the extremities of which, from their very situation, must be exposed to frequent and inevitable calamities^b. But, notwithstanding the island of *Luzon*, or *Luzon*, was no longer under the dominion of this nation, yet many thousands of *Chinese* were settled there, when *Legaspi* made himself master of the capital, most of which retired to their own country afterwards, but continued to keep up their trade, and, at the proper seasons of the year, came thither in vast fleets^c. The *Japanese* also pretended to have a claim upon this country^d; so that the *Spaniards* found themselves on every side surrounded by enemies; and, instead of meeting with any relief from King *Philip's* adding the territories of *Portugal* to their own, they found it a dead weight upon them, more burdensome, and more expensive, than all the difficulties they had to struggle with before, and which made these islands less considered by the *Spanish* government than formerly.

d It is very strange, that the *Spaniards* have never maintained any direct correspondence with *Luzon*, or the rest of the islands dependent upon it; but have constantly sent their governors, forces, and military stores, intended for the support of these islands, to *New Spain*. This, no doubt, is founded upon some maxim of policy, with which we are not acquainted; but it is evidently productive of many mischiefs, and is one great cause why so many rich and noble countries yield so little to the crown of *Spain*. Their welfare depends, and always did, on the good or bad qualities of those who are sent to govern it. The first who put it into such a state of defence, as freed them from all apprehensions of falling the victims of any sudden invasion, was *Gomez Perez de las Marinnas*, knight of the order of Saint *Jago*, or St. *James* the Apostle, a person of high reputation^e. He arrived at the *Philippines* in the year 1590, and brought with him his son Don *Lewis*, knight of the order of *Alcantara*.

e The new governor found *Manila* open, without any form of a city, and the inhabitants, in general, without the wealth necessary to improve it. Above two hundred thousand pieces of eight were wanting for this purpose, which he presently undertook; and though it seemed impracticable, yet he compassed the work, by several contrivances, without any damage to the public, or to private persons. He monopolized cards; laid penalties on excessive gaming; punished such as forestalled the markets, and victuallers, and other retailers, that were guilty of frauds. With these fines he built the walls of *Manila*, which are twelve

These islands formerly possessed by the Chinese, and claimed also by Japan.

Put into a good state of defence, by the wisdom of a public-spirited governor.

Don Gomez Perez de las Marinnas having adjusted domestic affairs, meditates greater things.

^c Relac de las Islas Filipinas y Malucas, por HERNAN DE LOS RIOS

^d PURCHAS'S Pilgrims, vol. iii. p. 283.

(E) It often happens, as a very judicious writer of our own nation observes, that the genius of a single minister, thoroughly attentive to the interest of a great monarchy, strikes out sudden advantages from things overlooked or neglected for whole ages before. This will, some time or other, be the case, with respect to the countries the *Spaniards* possess in the *East Indies*, hitherto little regarded by them, and therefore strangely slighted by most of those who have hitherto treated this subject. A late *French* author, who has given the world a very entertaining, and a very instructive history of the *Indies*, bestows but a page or two upon the *Philippines*, and has not so much as named the *Spaniards* amongst the nations car-

rying on a trade to the *East Indies* (8). Yet, when the reader has considered this section, we doubt not of his being of our opinion, that whenever the court of *Madrid* pays a serious regard to her national interests, she will find it no difficult thing to convince the world, that her dominions in *Asia* are in reality very considerable, and capable of such improvements, as may render them very little inferior in value to that vast empire which she possesses in *America*; since their appearing hitherto of so little importance has been intirely owing to the advantages that might be reaped from their being not thoroughly understood.

(8) *Guyon Histoire des Indes Orientales*, vol. ii. p. 231.

thousand eight hundred forty-nine geometrical feet in compass^m. He applied himself dili- a gently to this work, the inhabitants being willing to forward it, on the intreaties, and from this example, of their chief. The city had but one fort, and that ill-built, he erected another at the mouth of the river, calling it *Saint Iago*, and repaired the old one. He finished the cathedral, and built from the ground the church of *Saint Potenciana*, patroness of the island. Then he applied himself to casting heavy and small cannon; built gallies, to cruise and trade, on which depends the welfare of those countries; and, pursuant to what he had promised in *Spain*, bent his thoughts towards the reduction of *Ternate*, and all the *Moluccas*; reflected on the unfortunate expeditions of his predecessors, who attempted the conquest of that flourishing kingdom, and how he might punish those who tyrannized in it; which project of his, calculated chiefly to gratify the desires of the court of *Spain*, had b a very unfortunate catastrophe, notwithstanding all this nobleman's care and circum-spectionⁿ (F).

His unfor-
tunate expedi-
tion for the re-
covery of the
Moluccas, in
which he pe-
rished.

THIS governor, who had been hitherto admired and adored by the inhabitants, found himself, of a sudden, suspected and disliked. The people began to apprehend, by his pre- parations, that he had such an expedition in view, and this it was that lost him their confi- dence. He had therefore recourse to art; pretending sometimes, that he had intelligence of great designs formed by the *Chinese*; at others, that they were in danger from *Japan*; and, under colour of these false alarms, he increased his land forces, built a greater number of gal- lies, and provided every thing that he thought necessary, not only for the complete con- quest of the *Moluccas*, but for the maintaining and defending them against any enemies c whatever^o. When this formidable fleet came to put to sea, it was found that men were wanting to row the gallies; which obliged the governor to have recourse to the *Chinese*, and of these, partly by promises, partly by pay, he gained a great number; yet not enough for his purpose, and therefore at last, he had recourse to force. *October* the 17th, 1593, he sailed with his whole squadron, having on board about three thousand soldiers, exclusive of seamen, and such as rowed in the gallies. On board his own galley, there were two hundred and fifty *Chinese*, and fourscore *Spaniards*. The former rose, in a dark night, upon the latter, murdered them all, except two, and carried off the vessel^p. This put an end to the expedition, and, in that respect, was fortunate to the *Spaniards*; for his son, Don *Lewis*, returning to *Luzon*, was hardly settled in the government, before a numerous d *Chinese* fleet arrived, under the conduct of several mandarins. They gave but a very dark account of their business; but it quickly appeared, that, having intelligence of the expedition against the *Moluccas*, they apprehended the conquest of *Luzon* would be easy, as, if that ex- pedition had taken effect, no doubt it had proved; but perceiving the army and the fleet returned, and the people highly enraged at the treachery of their countrymen, they judged it best to withdraw^q.

The city of
Manila in the
utmost danger
of being de-
stroyed, by the
interruption of
the Chinese.

AFTER such an escape, one would imagine succeeding governors might have taken warning; but either their own ambition was so great, or the orders received from *Spain* so precise, that they went on in the same track, and were continually hazarding the *Philip- pines*, in hopes of recovering the *Moluccas* from the *Dutch*, so long as *Portugal* continued e annexed to the crown of *Spain*, neither were they free from the other inconveniency, pro- duced from the avarice and negligence of their governors, who, for the sake of the high duties they imposed on them, suffered too many of the *Chinese* to remain in the suburbs, notwithstanding the terrible consequences with which this piece of false policy has been attended^r. Thus in the time when Don *Pedro de Acuna* was governor, who had been extremely kind to these people, and was thought to be beloved by them, some mandarins came from *China*, under a very frivolous pretence, but in reality, to persuade their country- men to revolt, and to furnish them with arms, the governor being, at that time, intent upon

(F) The very best account we have of these islands, allowing for the time in which they were written, are the memorials transmitted to the *Spanish* court, some of which have been printed at *Mexico*. but are become ex- cessively scarce, and others are only to be found in manu- script, in the cabinets of the curious. So many of these as we could possibly obtain have been made use of, and are cited through the course of this chapter; but, it is highly probable, there are pieces of a fresher date, still

more curious, and of greater importance, that the *Spanish* ministers have not thought fit to divulge, for reasons of state, amongst which, perhaps, may be reckon- ed the concealing their own ignorance and negligence. It is, however, never too late to mend; and, from some books on the subject of trade, lately printed in that kingdom, there are good grounds to believe, that, be- fore the close of the current century, there will be great alterations in the *Spanish* politics in this respect.

a a new expedition'. On the feast of *St. Francis*, or rather the night preceding it, the *Chinese* attacked the city, with the utmost fury, putting to death, without mercy, all that came in their way. The rebellion was general, and the dispute lasted many days; but, at length, the *Japanese*, and other strangers, as well as natives of the island, coming in to the assistance of the *Spaniards*, the *Chinese* were reduced, or rather extirpated, there being killed, in less than three weeks, upwards of twenty-five thousand; and all the large suburb that they inhabited was burnt to the ground, and therein perished all sorts of rich goods, to an immense value'.

In a short time afterwards, came several mandarins from *China*, who expostulated roundly with the governor, about what had happened to their countrymen; affirming, that they were not the aggressors, but that they were attacked and murdered by the *Spaniards*, for the sake of plundering four hundred shops, and possessing themselves of the substance of eight thousand families; for which, in the name of the emperor of *China*, they demanded ample satisfaction, with threats of sending an army on board a thousand sail of vessels, in case what they demanded was refused". Don *Pedro* answered the ambassadors, that these were notorious falsehoods: that four or five thousand *Chinese*, indeed, died innocently, having no hand in the insurrection; but that they were killed by their countrymen: for that very reason, that he had spared as many as could be spared, and had sent them on board the galleys; but if they had a mind to carry them to *China*, they might: and that as to the money and effects of the deceased rebels, they were not plundered, but safely laid up, which might be restored to their heirs, if they could be found, or, otherwise, laid out in works of charity. These excuses were either accepted, or the loss was, in comparison of the profits by this trade, so little regarded, that, in the *April* following, the *Chinese* fleet was as numerous as ever, and the suburb was quickly filled again with inhabitants. A short time after this, one of the most powerful princes of *Japan* sent over an ambassador to Don *Pedro*, with rich presents, and instructions to demand some persons capable of building him ships, and casting cannon; which, as might have been expected, he refused, though with all the civility possible, and yet not without giving great offence".

The same governor Don *Pedro de Acuna*, had also the honour of achieving, what had been the ruin of his predecessors, the reduction of the *Moluccas*. He received his Catholic Majesty's command upon this subject, together with a considerable supply of vessels, troops, and military stores, from *New Spain*, in the year 1605; notwithstanding which, he very much apprehended the success of this undertaking; but being informed that the *Dutch* were entirely masters of those islands; that they had a considerable fleet, and were preparing to attack him in the *Philippines*, he quickly changed his sentiments*. These informations being laid before the principal persons, both of the clergy and laity, they became as eager, and as industrious, in promoting this enterprise, as they had been backward and dilatory upon all like occasions, in times past. In the beginning of *January*, 1606, Don *Pedro* sailed with a numerous fleet, having upwards of three thousand men on board, and a good train of artillery. He found the *Dutch* and the natives perfectly well agreed, and in a good condition to receive him; notwithstanding which, he attacked the island of *Ternate*, and, with the assistance of the king of *Tydoor*, reduced it, and, in a small space of time, the whole *Moluccas*. He carried back with him, amongst the prisoners taken in this expedition, the king of *Ternate*, his son, and twenty-four persons of the first distinction, with whom he entered in triumph, into the capital city of his government, on the tenth of *June*. But he had not much time to enjoy the pleasure this success gave him, since some base people, who envied and hated him, caused him to be poisoned, of which he died, *July* the 3d, 1606, to the great detriment of the *Spanish* nation' (G).

† ARGENSOLA Conquista de las Islas

(G) We have followed, in what is related in the text, the authorities of the best *Spanish* writers, who are unanimous in bestowing the highest praises upon Don *Pedro de Acuna*, and in celebrating the success that attended his enterprise. Yet the memoirs we have mentioned speak somewhat a different language; they say, that he was to blame in suffering the *Dutch* to remain in possession of *Amboyna*, were they soon fortified themselves so, as not to be driven out; and, receiving fresh supplies from *Holland*, quickly recovered all that he had taken from them. It is further alleged, that he failed

very much in his duty, in not leaving some galleys to protect the *Moluccas*, and hinder the *Dutch* from fortifying themselves at *Amboyna*, which they might have done, as those vessels draw but little water, and the *Dutch* fortifications were all upon the coast. As for the captive king of *Ternate*, he was very well used, so long as Don *Pedro* lived; but in the time of his successor, Don *Juan de Silva*, he was thrust into a close prison, and so little care taken of him, that his body suffered from the inclemency of the weather, and he would have absolutely starved for want of subsistence, if he had not procured

*Advantages
by which the
Dutch were
enabled to
drive out the
Spaniards.*

In the space, however, of a few years, things were in as bad a condition as ever; and this, notwithstanding all the efforts that could be made by the *Spanish* governor of the *Philippines*, at which the reader will not at all wonder, when he considers, that the people under this government undertook these expeditions unwillingly; that the *Portuguese* were very indifferent as to their success; that the *Dutch* had the advantage of numbers, and of being better and sooner supplied; and that, not knowing as yet what masters they would make, the natives, in general, were there firm and faithful allies. These frequent miscarriages begetting continual complaints and never-ceasing demands from the *Philippines*, it was debated in the councils of *Philip* the Third, as it had been in those of *Philip* the Second, whether it might not be for the advantage of the *Spanish* monarchy to quit the *Philippines* intirely, and leave them to be occupied by any other nation, or to return again into the hands of their old masters the *Chinese* (H).

*Arguments
urged in the
Spanish coun-
cil for aban-
doning the
Moluccas.*

AMONGST many reasons offered in support of this opinion, these were not the least persuasive: "That the *Philippines*, though noble countries themselves, and such as might well excite a desire in another *European* nation to become possessed of them, were, nevertheless, nothing, when compared to the vast dominions already in the possession of the crown of *Spain*; and therefore, instead of meanness of spirit, it would argue magnanimity in his Catholic Majesty, to take this resolution; that the dominions of the crown were already of such a vast extent, and so separated and divided, that the monarchy suffered from its own weight, and could recover no otherwise than by contracting its forces nearer to its centre; that, in respect to the *Philippines*, these arguments were the more conclusive, since, instead of contributing towards the general expence of government, they were a constant burden upon *New Spain*, swallowing up annually vast quantities of silver; which being exported to *China*, from whence it could never return, was in effect digging it at a great charge, then transporting it with no small one; and all this to throw it again into the mine; that the sparing these annual draughts, withdrawing the garrisons, and disposing properly of the forces, that were in the *Philippines*, might be of great consequence to the rest of his dominions; and that, finally, these were arguments agreeable to common sense, and founded in facts that could not be denied; whereas all that could be urged against them, was, in effect, no more than idle words, pompous sounds, and the language of men led away by vain notions of grandeur, which serve only to beggar private persons, and bring great states to ruin."

*Answers
given to these
reasons, which
occasioned lay-
ing that mo-
tion aside.*

To these motives, which were chiefly urged by the *Italians* and *Flemings*, there was far from being a general concurrence given, even before the sentiments of the king were known; for, the debate being intirely free, all spoke their opinions without reserve, that the king and his ministers might judge. The old *Spanish* counsellors answered, "that no conclusion could be drawn to the prejudice of any part of the *Spanish* monarchy, by comparing it with the whole, because at this rate every province might be attacked, and all by degrees, and the expediency of quitting them insisted upon; since, no doubt, whatever they threw away others would pick up; and that, if his majesty had a mind to try the experiment, he might do it with the jewels of his crown at a cheaper rate than with the dominions descending to him from his ancestors; that with respect to the wide compass of the king's dominions, it was true the sun never outwent them in his journey, and that the bounds of his territories and of the world were the same; but that, as these were acquired by the wisdom and power of his royal predecessors, so, with the exercise of like prudence, they might be kept; that it was not the distance of countries, but the dismal effects of

^z Justification de la Conservation y Comercio de las Islas Filipinas, à l'Illustrissimo y Reverendissimo Senor Don Juan de Palafox y Mendoza, del Consejo de su Majestad en el Real de las Indias, Obispo de la Puebla de los Angeles, por Don JUAN GRAU Y MONTFALCON, Procurador General de las Islas Filipinas, Agente del Principado de Cataluna, y Sindico de la Ciudad de Barcelona.

^a ARGENSOLA Conquista de las Islas Malucas, l. ii.

cured wherewith to keep him alive, by begging; which, our author says, was highly scandalous to his Catholic Majesty, considering, that the power of his monarch was once so formidable, as to strike terror through all the adjacent islands (9).

(H) If, from the time the *Philippines* were first settled, they had not been continually burdened with the protection of the *Moluccas*, and thereby engaged in a perpetual war with the *Dutch*, they would, in all probability, have been effectually planted, and the *Spanish* inhabitants, gradually increasing, would have applied themselves to making the most of the mines, and other natural riches,

with which they abound; but being continually diverted from their labours, and forced to be at a great expence in offensive and defensive wars, they were kept always poor, and always craving, which brought a very undeserved odium upon these islands, and furnished those pretences for exciting his Catholic Majesty to abandon them, of which the reader has a full account in the text; and from whence it will sufficiently appear, that it is much easier for ignorant and indolent ministers to misrepresent distant colonies, than by taking pains about them, to make them advantageous to their mother country (10).

(9) *Relac de las Islas Filipinas y Malucas, por Hernan de los Rios Coronel. Don Juan Grau y Montfalcon.*

(10) *Justification, &c. par*

- a “ weak administrations, that made empires seem too large; and that, if the king would
 “ contract his views at home, he might easily defend his dominions abroad: that, as to those
 “ large sums, sent annually from *New Spain* to the *Philippines*, it was an apparent charge,
 “ but might not be a real one, since the gold sent back was equal in value to the silver;
 “ and if this was more useful in the *Philippines*, and that better liked in *America*, there was
 “ no cause the king should throw away vast countries to prevent people exchanging a white
 “ metal for a yellow; but if there was a loss, it ought not to be ascribed to the *Philippines*,
 “ but to the extraordinary services which the crown had expected from the inhabitants; that
 “ whatever might be advanced to the prejudice of these settlements, they were discovered at
 “ the expence, and established by the labours, of the *Spanish* nation; and it was hard they
 b “ should be given away either to preserve what the *Portuguese* once possessed, and now
 “ despised, or to furnish money for a war in *Europe* which had already exhausted both the
 “ blood and treasure of *Spain*; and that these were not empty words, or flowers of rhetoric,
 “ but the antient maxims of the crown of *Castile*; maxims by which the glory of the king,
 “ and the interest of his subjects, might be maintained: whereas that strain of politics, which
 “ confined all to *Europe*, must be necessarily mean and poor, since it prompted the king to
 “ sink much below what he was, and to throw away the *Indies*, from the absurd hopes of
 “ compassing projects which he could not accomplish with all the wealth that they had brought
 “ him.” King *Philip* the Second added, and his son adhered to his father’s reasons, “ that
 “ he would not abandon the *Philippines*, because, since they came into his possession, there
 c “ had been half a million of souls converted to the Christian religion: that if the silver of
 “ *New Spain* was employed to protect those new converts, it could not be better bestowed:
 “ that to quit these provinces, was to abandon vast countries and many nations to idolatry;
 “ and that, after having wasted so many millions in opposing heresy, it would very ill
 “ become a Catholic prince to endeavour the making some small savings expence of
 “ Christianity”.

S E C T. III.

A particular account of the name, situation, extent, climate, produce, natural and civil history, of Luçon, the principal island among the Philippines; together with an exact detail of the government ecclesiastical and civil, and whatever else is any way remarkable as to the country or its inhabitants; from whence its great wealth and singular importance to the crown of Spain fully appear.

- d **A** *Spanish* historian, who has written largely upon this subject by the command of his Catholic Majesty, and from the very best memoirs, after applauding the judgment of the two kings, makes this remark, *That if the Philippines had been abandoned, the Moluccas had been certainly saved*. He did not foresee, that, if it had been so, the *Moluccas* as well as the *Philippines* would have been lost to the crown of *Spain*, and that therefore the wisdom of their Catholic Majesties has been fully justified by the event. It is true, that, since the separation of the crowns of *Portugal* and *Spain*, the governors of the *Philippines* have applied themselves more to the proper business of their charge, which however they have found sufficient to exercise their utmost abilities; insomuch that the best writers agree, that their power is not owned at all in the tenth part of the islands which compose that numerous
 e archipelago: and that not a twelfth part of the people have submitted to them, even in those islands of which they are possessed. Yet, all things considered, this may be well excused; for, having no direct communication with *Spain*, lying at such a vast distance from *Mexico*, on the viceroy of which the government of the *Philippines* depends, and having so many concerns of different kinds to exercise his thoughts, it is no ways strange that the person intrusted with the supreme power here is not able, though he holds the reigns of government a long time, to do much towards reforming the evils that have grown by degrees, or attempting any good in a place where of necessity many of his hours must be employed in providing for his own safety. The removing these obstacles, to his doing what ought to be done for the king’s service, is the business of the ministry.
 f **I**n order to justify what has been advanced, and to dispel that cloud of uncertainties which the differing opinions of various writers have thrown upon this subject, which in itself is infinitely more curious and entertaining; more useful and more instructive, and of far greater consequence, than is commonly imagined; we will first give as clear an account as may be of the principal island, its capital, and whatever else is remarkable therein; after which, we

An account of the method and intention of the remaining part of this chapter.

b DON JUAN GRAU Y MONTEALCON Justification, &c. * ARGENSOLA Conquista de las Islas Malucas, l. ii.
 c D. F. NAYARETTE Tratado historico de la monarchia de China.

will proceed to the government ecclesiastic and civil; and this will open the way to speak of the dependencies of this government, and of the many islands that are subject to, or dependent upon, it; we will then discuss the famous point of the annual ship that traverses the vast *Atlantic* ocean, from the port of *Manila* to that of *Acapulco*; and conclude with some remarks upon the commerce of the *Spanish East Indies*, and what grounds there are to suppose that it may gradually increase or decay; whence the reader may form a better judgement of the *Spanish East Indies* than could be easily made by the perusal of any book yet extant in our own or in any other language; since we may venture to affirm, that there is hardly any point of general history that has been so little considered as this, and we shall therefore esteem ourselves happy if we can bring the materials relating to it into any tolerable order (I).

The sense and etymology of the name of Luzon, or Luçon, the largest of these islands.

THE principal island of the whole archipelago is called *Luçon*, or *Luçon*, from the name imposed by its inhabitants, which is pronounced *Luçon*; the *Spaniards* call it *Manilla*, or, as it is generally written, *Manila*, from its capital. As for the etymology of its antient name, it stands thus: The people of this and of the adjacent islands lived chiefly upon rice, which they were accustomed to bruise before they either boiled or baked it; in order to this, they made use of wooden mortars about eight inches over, and sometimes they had two or three of these cut out of the same piece of wood, which they set before the doors, that so many persons might beat rice for the family together: such a mortar they called *Luzon*, and, in the plural number, *Luzones*; so that from this particular usage they derived the name, meaning to express thereby the island where the people bruise their corn in mortars*. As for the *Spanish* name *Manilla*, it signifies properly a bracelet, but is supposed to have been applied to this island from a notion, very indifferently founded, that it was antiently so called by *Ptolemy*†. As to its situation, it is remarkably happy, having the continent of *China* on the north, at the distance of about sixty leagues; the famous island of *Japan* to the north-east; the sea between them, of the breadth of two hundred and fifty leagues; on the east it has no other boundary than the ocean; to the south lie the rest of the islands of this great archipelago, the number of which, great and small, some affirm to be eleven hundred; on the west lie *Malacca*, *Patana*, *Siam*, *Camboja*, *Cochinchina*, and other provinces of *India*, the nearest at the distance of three hundred leagues‡ (K).

* GEMELLI CARERI *Tour du Monde*, l. iv. c. vi. mistake.

† Relac de las Islas Filipinas.

‡ CABRERA, lib. vii. cap. 8. p. 422. but certainly a

(I) We could have inserted a great many other particulars relating to these islands, of which there is hardly any notice taken by those who have hitherto described them; but the nature of this work, and the necessity of keeping within bounds, obliged us to be content with inserting only so much as might render our account of the present state of the *Philippines* clear and intelligible. The *Dutch* as might be naturally expected, before the conclusion of their peace with *Spain*, made several attempts upon this country, but without any greater success than taking sometimes rich prizes, and at others plundering towns and villages upon the coast by surprise (11). If the memorials we have so often mentioned had been regarded; if due care had been taken in the choice of governors; if they had been enabled to build and keep in pay a competent fleet of galleys, and had entered into an alliance with the king of *Macaſſur*, and some of the *Indian* monarchs on the continent, as the patriots in these islands proposed; and, above all, if they had excluded the *Chinese*, and suffered other nations to trade openly and freely at *Manila*; they had long ago made a much better figure than they do now: for though there is, and has been always a vast commerce carried on here, yet, being contraband and clandestine, it has never turned to the general benefit of the people, as it might have otherwise done, but has filled the coffers of their governors, and other persons in power, who, at their departure, found means to carry it from thence, though but very few have been so lucky as to get it safe home (12).

(K) It may not be amiss to put the reader in mind here, that the eleven hundred islands above mentioned refer to the *Philippines*, and not to the archipelago of *St. Lazarus*, which, as has been observed, is supposed to contain ten times as many; but however we do not make

ourselves accountable for either computation. It is not impossible, that, considering the received opinion of the island's resembling an arm, there may be some allusion thereto in giving the name of *Manila*, or a *Bracelet*, to the capital, as fancies of this kind are very confirmable to the *Spanish* genius. All the writers of voyages agree, that, from the port, this city has a most agreeable appearance; and that the better sort of the inhabitants live, as far as the climate will permit, in great plenty and magnificence; though in some respects this is not very acceptable to *Europeans*, who are apt to treat as idle and ridiculous every system of folly but their own. Yet some there are who affirm, that it is not the beauty of the town that induced the *Spaniards* to call it *the Bracelet*, but quite the contrary: that the *Indians* themselves called the spot of ground *Mainila*, that is, a *Morass*, which the *Spaniards* called *Manila*, preserving the sound as near as they could (13). In the same manner we are told, that the name which the *Spaniards* give to a *Chinese*, *Sangley*, is derived from a mistake made by themselves the first time the *Chinese* came among them; for, inquiring of each of them, as they met them, who they were, and whence they came, they constantly answered *Xang-lai*, which therefore they understood to be the name of their country, or of their profession; whereas the *Chinese* apprehended they asked them why they came thither, and therefore answered, *Xang-lai*, *We come to trade*. It is farther asserted, that the name of the island *Luzon* is taken from the *Chinese*, who call this country *Liu-zun* (14); but as those words are very differently written, and as we are not told the import of them in the *Chinese* language, it is not at all improbable that they derived this name from that of the natives, which, as we have shewn, signifies a kind of mortar.

(11) See some account of these in the next chapters.

(12) D. Juan Grau y Montfalcon *Justification*, &c.

(13) D. F. Navarrete *Tratados historicos de la monarchia de China*, lib. i. cap. 1.

(14) The *Chinese* in like

manner call *America*, in their own language, *Ya-me-li-kia*, which at first sight looks like another word, but in truth is the same, as well expressed as their orthography will permit.

- a THE middle of the island is in the latitude of fifteen degrees north, the east point in thirteen degrees thirty minutes, and the most northern point is in the latitude of nineteen degrees. The shape of it is said to resemble that of an arm bent, but it is very unequal in compass. The eastern point, running into the ocean, is not above a day's journey over; but in the northern part it is, where narrowest, between thirty and forty leagues from sea to sea. The whole length is about one hundred and sixty *Spanish* leagues, and the circumference is about three hundred and fifty, at the elbow of this arm, looking towards the south-east, a large river falls into the sea, and makes a noble bay thirty leagues in compass, to which the *Spaniards* have given the name of *Babia*, because the river runs out of the great lake *Babi*, which lies at the distance of about six leagues behind it^b. *In situation and extent*
- b THESE points are settled from the best authorities that could be procured, and more especially from a *Dutch* map, drawn at a time when they had some views upon these islands, and were for that reason most likely to be as accurate in their descriptions and draughts as possible. In respect to the longitude there are great variations, occasioned chiefly by the disputes which *Magellan* raised in order to justify his scheme. If the map before-mentioned may be depended upon, the middle of the island lies in the longitude of one hundred and thirteen degrees east from *London*; which however does not very well agree with *Magellan's* chart, according to which it should lie in the longitude of one hundred and sixty degrees from the famous line settled by the courts of *Castile* and *Portugal*, for the division of their discoveries^c. It is allowed, that this is not a matter now of any great importance, if we except the knowledge of the truth of things, which is always of importance; and with respect to which, those who read for information and instruction, and not merely from curiosity or amusement, will be always solicitous. *Magellan* asserted, that his charts were settled from astronomical observations; and, according to him, all the countries to the east of the peninsula of *Malacca* were within the bounds of *Spain*, upon which the title of the *Spaniards* to all that they possess in the *East Indies* is grounded, that is with regard to the crown of *Portugal*; for, as to the other princes, and states of *Europe*, they have as little to do with these treaties as with the pope's bull, to which no reverence can be expected but from princes in communion with the church of *Rome*; and from what has been said it appears, that even by them they have not been very scrupulously regarded; if they had, none of these disputes would have happened^d. *The longitude of this island from the Dutch charts, and from those of Magellan.*
- c As to the climate of *Manila*, it is, as might be expected, hot and moist; yet we are assured by a native of *Italy*, who was certainly the best judge, that the heat is not so violent there as in the dog-days at *Naples*^e. The moisture is occasioned by the vast abundance of waters of all sorts; wells, lakes, springs, rivulets, and great rivers; and the sun being in their zenith twice a year, that is in *May* and in *August*, it may be easily conceived that the vapours raised must be very copious and humid. One thing is held very extraordinary, that in stormy weather there is much lightning and rain, and that thunder is seldom heard till this is over. During the months of *June*, *July*, *August*, and part of *September*, the west and south winds blow, which they call *Vendavales*, bringing such rains and storms that the fields are all overflowed, and they are forced to have little boats to go from one place to another. From *October* till the middle of *December* the north wind prevails; and from that time till *May* the east and east-south-east, which winds are there called breezes. Thus there are two seasons in those seas, by the *Portuguese* called *Monzoens*, whence our word *Monsoons*, that is the breezes half the year, with a serene dry air; and the *Vendavales* the other half, wet and stormy^f. It is further to be observed, that in this climate no vermin breed upon *Europeans*, though they wear dirty shirts, whereas it is otherwise with the *Indians*. In this country the weather can never be said to be cold, for the cause before assigned, and because the days and nights are there always of an equal length; for which reason at *Manila* they never change the hour of dining, supping, doing, business, studying, or praying; or their cloaths, or wear cloth, but only against the rain^g. *The climate of Manila, its advantage, and disadvantages, and the age of the inhabitants.*
- d THE air, being here, as has been said, very hot and moist, is not wholesome, and hinders digestion, yet is worse for young men that come from *Europe* than for the old: Providence, however, has obviated this inconveniency in a very great degree, by furnishing the natives with provisions easy of digestion. They use no other bread but rice, but that not so nourishing as what we have in *Europe*. The great dews that fall in fair weather is one of the principal causes why hardly any season can be called wholesome; but as it is perceived that the higher grounds are the most healthy, so persons of distinction, and such as are wealthy, have their country houses in the mountains, to which they retire about the middle of *March*, and continue there to the end of *June*. As for the natives, without using many precautions, they live to fourscore or an hundred; but it is very rare to see an *European* above sixty,

^b GEMELLI CARERI Tour du Monde, lib. iv. c. 7. ⁱ Relac. de las Islas Filipinas y Malucas, par HERNANDEZ DE LOS RIOS CORONEL. ^k LUYTS Introduct. ad Geographiam, sect. iii. c. 13. ^l GEMELLI CARERI Tour du Monde, P. i. l. i. c. 10. ^m D. P. NAVARETTE Tratados Historicos de la Monarchie de China.

unless he came there * pretty much in years; and for this reason it has been thought that few persons of great quality have accepted this government (L.).

Fertility of the soil, its produce; and by destitute of corn, tho' very capable of bearing it.

THE soil is famous throughout the *Indies* for its fertility, and that to a degree, which, if we were to insist on it particularly, would appear incredible. One observation will make it sufficiently appear: rice, which elsewhere requires much cultivation, grows in every part of this island with little or no care at all, even on the tops of the highest mountains, without being watered; and this makes it so plentiful, that the *Indians* value gold so little as not to pick it up, tho' it lies almost every-where under their feet^p. Wheat is sometimes so scarce, as to be sold for ninety pieces of eight a bushel, because they have none but what is imported; yet the soil is very capable of bearing it, as appeared by an experiment that was made, when one bushel produced one hundred and thirty (M). As for rice, which is the corn of the country, it is of different kinds, some requiring four or five months between the sowing and harvest, and some is sown and reaped within the space of forty days^q. What has been said is barely to shew how excellent a country this is in itself, notwithstanding that some writers represent it as poor, because fewer *Spaniards* return rich from thence than from any of the countries subject to his catholic majesty; which, in fact, is partly owing to the pleasantness of the place, that attracts the affections of the people, and engages them to live there; and partly from the great difficulty of returning, the very expence of which amounts to a moderate fortune, requires a great deal of time, and forces a man to pass through some of the most unwholesome places upon earth, and that too at seasons none of the most favourable^r.

But exposed, with all these advantages, to many and great inconveniences.

IT must not, however, be concluded from hence, that, with all its fertility, *Manila* is not subject to great disadvantages; the very worst of these are earthquakes, to which no country is more subject, since they are here both frequent and terrible; and next to these may be reckoned their burning mountains, of which there are several, some that throw out flames still, others that were extinguished long ago, and several that have been but lately exhausted. Notwithstanding all this, the face of the island is far from being disfigured by them, or by the consequences of their explosions (N). On the contrary, there is no soil more pleasant or fruitful: the grass grows, the trees bud, blossom, and bear fruit at once, all the year round, and this as well on the mountains as in the gardens; and the old leaves seldom fall before the new ones come. For this reason the *Tinguiani*, that is, mountaineers, have no particular place of abode, but always live under the shelter of the trees, which serve them instead of houses, and furnish them with food; and when the fruit is eaten up, they remove where there is a fresh sort. The orange, lemon, and other *European* trees, bear twice a year: if they plant a sprig, in a year it becomes a tree, and bears fruit^s.

The richest fruits, spices, and drugs in the Indies, are in this island:

IT is not within our intention to describe at large the produce of this rich country, since that would require a small treatise. It will answer our purpose sufficiently to observe, that the richest fruits of the *West Indies*, as well as the *East*, grow plentifully, and some that are to be

^s D. F. NAVARETTE,

(L) This account deserves to be well considered; for though none of the writers we have met with have made the observation, yet it appears from their concurring relations, that there is a very apparent difference in stature and strength between the natives who inhabit the vallies, the sides of the mountains, and the tops of them. These last, who are absolutely free, are tall, active, and stout men; notwithstanding, as the reader will hereafter see, they fare worse, and are more exposed to the inclemencies of the weather, than any of the rest (15). There might be much said upon this subject; but the nature of this work requires, that we should satisfy ourselves with giving a short hint only, and leave the rest to the reader's own speculations.

(M) There is something so strange in this, that it looks like an absurdity; and it is for want of inquiring into points of this nature that the veracity of the best authors is frequently called in question. In the present case, the truth of the matter is this: if the *Indians*, subject to the *Spaniards*, sow corn, the governors often take it from them, for the king's use, at a low price, paid at a great distance of time, and often not at all, and therefore

they will not cultivate their ground; which affords a clear reason for scarcity being so frequently felt in this land of plenty (16).

(N) It is not at all difficult to distinguish the causes from whence these dismal effects proceed: the soil is every-where full of mineral sulphur; and the great heats having opened the body of the earth, when the rainy season comes on, the waters find an easy passage to these sulphureous veins; and, by the fermentation this occasions, earthquakes are produced, where the surface is solid and tight; and, where it is lighter and porous, the air insinuating itself, these heated vapours take fire, and are exploded with great violence, so long as the combustible materials last. It may not be amiss also to observe, that the great heat, and the situation of these countries, surrounded on every side by the ocean, and its abounding also with hills and woods, are the principal causes of its being so moist, as this moisture, joined with heat, is of its extraordinary fertility, as well as the soundness and solidity of the timber, which is excellent for all sorts of uses (17).

a found no-where else. They have forty different sorts of palm-trees, the most excellent cocoas, and the best cassia in such plenty, that they feed their hogs with its fruit. In the mountains they have wild cinnamon, wild nutmegs, and, some say, wild cloves also; ebony, sandal-wood, together with excellent timber for building and shipping. All kinds of cattle they have in the greatest abundance; so that a large fat ox does not cost above four pieces of eight. Civet-cats are very common here, and their civet highly valuable: amber is thrown upon their coasts, and frequently ambergris in prodigious quantities; sometimes there are pieces found of forty, fifty, and even sixty pounds weight. After this, it will be thought stooping very low to observe, that hardly any country yields more or better wax, which is made without any trouble to the inhabitants, farther than that of looking for it in the woods¹.

b LAST of all let us observe, that this country abounds with gold to a degree that can hardly be affirmed of any other, except the adjacent islands; for though in some provinces there is more, in others less, yet in every part of *Manila* gold is to be found on the tops of their mountains, washed out of the earth by the heavy rains; in the mould of their vallies, washed down thither by their rivulets; and in the sand and mud of their lakes, brooks, and rivers. When the *Spaniards* came first hither, the *Indians* were much more industrious in gathering this precious metal than they are at present, for the sake of the ornaments they made of it, about which they are now become very indifferent, because they are commonly taken from them; neither would they gather it all, if in some places they were not obliged to pay their tribute therein, and in nothing else². It is by this means that the *Spaniards* obtain about a thousand or fifteen hundred pounds weight every year, but without the use either of fire or quicksilver; whence it is easy to conceive what immense sums *Manila* would produce, if they could oblige its inhabitants to work as in *Chili* and *Peru*; but they have found by experience, that, in the sentiments of these people, death is much more eligible than such a slavery; and from hence it proceeds (as one of their own writers observes) that there is no part of the *Indies* into which these people have not fled for fear of it³.

WE will next speak of the people inhabiting this country when the *Spaniards* came hither. Upon the coast they found a nation of *Moors*, who called themselves *Tagalians*, or *Tagaleze*, who certainly came from *Malacca*, or perhaps more immediately from *Borneo*, whether driven by tempest, or of their own free choice, is more than can be determined. That they are really *Malayans* by descent, is evident from their colour, shape, habit, manners, and language. They are, for the most part, a modest, tractable, and well-disposed people⁴. In some provinces they found *Pintadoes*, that is, painted negroes; persons tall, straight, strong, active, and of an excellent disposition. Lastly, blacks, who lived in the mountains and thick woods, on whom the *Spaniards* have bestowed the name of *Negrillos*⁵, who are held to be the *aborigines* of the island, and are the most enthusiastic lovers of liberty in the world. Their sole principle is an abhorrence of submission; whence there is no government amongst them, and scarce any society: those who inhabit the foot of a mountain are mortal enemies to those who dwell at the top of it; and both are equally hated by those who live in the middle. When they kill a *Spaniard*⁶, they make a cup of his skull, and drink out of it: in other respects they are barbarous and brutal to the last degree. Neither is this character taken wholly from the *Spaniards*: for, before their time, the *Tagaleze* and the *Pintadoes* found them as incorrigible, and dealt with them no otherwise than by knocking them on the head⁷. In the mountains, near springs, and in caves pleasantly situated, live a nation called the *Ilayas*, or *Tingbianos*, whom some suppose to be descended from the *Japoneze*, as free as the *Negrillos*, but agreeing with them in no other respect; for they are very brave, and yet very courteous and humane. They live intirely upon the gifts of nature, and never sleep under any other shelter but that of the trees or a cave. They never hurt either *Spaniards* or *Indians*, unless they attempt to deprive them of their liberty; but they shew no mercy to the poor *Negrillos*, from a principle of self-defence⁸. It is generally believed, that, for these black people, they are the same that inhabit *New Guiney*, and several islands between that country and the *Philippines*. In saying this we say very little, but at the same time all that is to be said; for though it is now two hundred years, or more, since the *Europeans* had some knowledge of that country, yet are we still ignorant whether it be a continent or an island; whether under the power of one prince or of many; and whether the people are disposed to trade, or are of the same intractable humour with the *Negrillos* in the island of *Manila* (O).

(O) There is no doubt that the accounts, given by the missionaries, are to be read with great caution in many respects; but at the same time it must be allowed, that, if it were not for their relations, we could have no certainty

Of the provinces of Balayan, and that of Camarines, the cities, ports, produce, &c.

It is now necessary to speak of the provinces into which this island is divided: that of *Balayan* ^a is next the city of *Manila*, and extends along the coast, on the east side of the island, a little beyond the bay of *Batangas*. There were in it formerly gold mines; but they have been long since abandoned. It is inhabited by about two thousand five hundred tributary *Indians*, and abounds in cotton, rice, and palm-trees. This province is well cultivated; and the *Spaniards* have, generally speaking, their country-houses in it. Adjoining to this is the province of *Calilaya*, or *Tayabas*, which reaches to *Cape Bondo*, and up the country to *Mauban*, on the opposite coast of the island: it has more inhabitants, and is larger than the other. Next is the province of *Camarines*; in which are *Bondo*, *Passacao*, *Ibalon*, metropolis of the government of *Catanduanes*. *Bulan*, where the ship called *The Incarnation* was cast away returning from *New Spain* in 1649. *Sorsocon*, or *Bagatao*, where the king's ships are built; and *Albay*, ^b a large bay without the streights, where there is a high burning mountain seen at a great distance by the ships coming from *New Spain*: in this mountain there are some springs of hot water. Beyond *Albay*, eastward, is the cape of *Buyfaygay*; and then the island runs northward, leaving the isles of *Catanduanes* on the right hand. Coasting from thence westward, they meet the river *Bicor*, which flows from a lake, and runs by the city *Caceres*, founded by the second governor and proprietor of these islands, *Don Francis de Sande*. Here resides the bishop of *New Caceres*, under whom are the provinces of *Calilaya*, *Camarines*, and *Ifalon*.^c

Of the province of Paracale, and that of Cagayan.

Next to the province of *Camarines* is that of *Paracale*, where there are rich mines of gold, and other metals, and of excellent loadstones: in it dwell about seven thousand tributary *Indians*. The soil is good, and very level, producing cacao and palm-trees, from the last of which they ^c get much oil and wine. Three days journey from *Paracale*, along the coast, is another bay called *Mauban*, where the island winds, and makes as it were the bowing of the arm opposite to the elbow where *Manila* stands. Sometimes the ships coming from *New Spain* have left their money here, to be sent to *Manila*. Without this bay is the port of *Lampon*, like that of *Mauban*. From *Lampon* to *Cape Engano* the coast is inhabited by none but *Negrillos*, or barbarians. Here begins the province and district of *Cagayan*, which is the largest in the island, being eighty leagues in length, and forty in breadth. The metropolis of it is the city called *New Segovia*, founded by the governor *Don Gonzalo Ronquillo*, and in it the cathedral church. The city stands on the bank of the river of the same name, which runs almost across all the province. There resides the chief alcaide, with a garrison of *Spanish* foot. A stone fort was ^d built here, and other works made of gabions and wood, for a defence against the revolted *Indians*, called *Ilayas*, who live on the sides of high mountains, which divide the whole island. In this province the parishes belong to the *Dominicans*.^d

THE most northerly cape is that called *del Engano*, dangerous by reason of the northern winds, and great currents. Fifteen leagues from *New Segovia* eastward is *Cape Bojador*; and then doubling the cape, and coasting along from north to south twenty leagues, ends the province of *Cagayan*, and begins that of *Illocos*. The peaceable *Cagayans*, who pay tribute, are

^c Relac. de las Islas Filipinas, GEMELLI CARRERI.

^d D. F. NAVARETTE, GEMELLI CARRERI, LUYTS.

tainty at all as to the temper, inclination, and genius of the *Indians*. The *Spanish* historians treat the *Tagalese* as a rude, stupid race of people, and consequently fit to be made slaves. A very learned jesuit, who resided long in *Manila*, assures us, on the contrary, that they are not only an honest and tractable, but also a very sensible, courteous, and well-bred people (18). A *Franciscan*, who wrote some remarks upon the jesuit's book, differs with him a little upon this head of good breeding; more especially as that reverend person had chosen for an instance of it their speaking to those whom they address, not in the second, but in the third person; so that, instead of saying, *How dost thou do?* they say, *How does Mr. Such-a-one do?* naming the person to whom they speak. Upon this our critic makes these remarks: "I was a missionary amongst the *Tagalese*, whose language, tho' I have been from thence eighteen years, I have not forgot, I exercised the mission among them, heard thousands of confessions, and preached some hundreds of times. I do not say but several of them, and particularly the best sort, use that manner of speaking the author mentions, yet I cannot grant it to be universal: they use a thousand *thou's* and *thee's* to the fathers that assist them. They have learnt some

" some breeding of the *Spaniards* they converse with; " and therefore those about *Manila* are more civil than " the rest. Discoursing on this point upon a time with " some *Indians*, one of the chief of them then present " said, If the *Spaniards* had not come to our country, " we had been all mere brutes; the light of the Gos- " pel, religion and conversation, have made us men. " He spoke the truth, and shewed himself a man of sense " and reason; by which it appears the *Tagalese* are not " of themselves so courteous and well-bred as some will " make them" (19). One sees, that, in effect, this confirms rather than refutes what the jesuit had delivered; but in this point they both agree, that the *Tagalese* are much better Christians than their masters: that the men are just, charitable, and industrious; the women chaste, prudent, and remarkably modest; and both writers complain, that they are miserably oppressed and ill used: and in this, to say the truth, they affirm no more than their predecessors have ever done, representing continually to the crown of *Spain*, that, if they would treat these people not as slaves, but as subjects, they might be as powerful in the *Philippines* as they could wish; but that, it seems, is not the interest of persons in authority (20),

(18) P. Letona Relac. de las Islas Filipinas. Historia de la Compania de Jesus an las Islas Filipinas, por F. Colin, c. xiii. p. 37. (19) D. F. Navarette Tratados historicos de la Monarchie de China, l. vi. c. 32. (20) Relac. de las Islas Filipinas.

a about nine thousand, besides those that are not subdued. The whole province is fruitful; the men able of body, inclined to tillage and arms; and the women to several sorts of work in cotton. The mountains produce plenty of wax, there being such abundance not only in this province but through all the island, that wax is exceeding cheap, and all the poor burn it instead of oil. They make their candles after this manner: they leave a small hole at each end of a hollow stick for the wick to run through, and then stopping the bottom, fill it with wax at the top; and thus the candle is made in a moment of any size whatever, which when cold, they break the mould, and take it out. On the mountains there is abundance of brasil, ebony, and other sorts of wood of great value. In the woods store of wild beasts, as boars, but not so good as those in *Europe*, and deer, which they kill for their skins and horns, to
b sell to the *Chinese* ^c.

THE province of *Illocos* is the richest and best peopled in the island; its coast runs forty leagues. On the bank of the river *Bigan*, the governor *Guido de Laccazaris*, successor to the *Adelantado*, in the year 1574, built the city of *Fernandina*. Up the country, the province is not above eight leagues in breadth, being intersected by mountains and woods inhabited by the *Igolotti*, a tall warlike people, and by blacks not subdued: yet the extent of the whole country was viewed, when the army marched seven days, travelling three leagues a day thro' woods of wild nutmegs and pines, and at length came to the top of the mountain, where were the principal habitations of the *Igolotti*. They live there because of the rich gold mines in those parts, which they gather, and exchange with the inhabitants of *Illocos* and *Pangasinan*, for tobacco, rice, and other commodities. Besides gold, this province produces much rice and cotton, of which they make quilts and other furniture ^d.

ADJOINING to this is the province of *Pangasinan*, for about forty *Spanish* leagues along the coast: its breadth is about eight or nine leagues, and very like *Illocos*. The mountains and plains produce much brasil wood, by the *Indians* called *sibucan*, used in dyeing red and blue. The inland parts are full of wild *Indians*, who, like brutes, wander naked up and down the woods and mountains, only covering their privities with a leaf. They sow a little rice in their vallies; and what more they want they get in the conquered country, in exchange for small bits of gold they gather in the rivers. In the province of *Illocos* there are nine thousand that pay tribute, and seven thousand in that of *Pangasinan*. On the coast of this province is the port of *Bolinao* and *Playabonda*, famous in the *Philippine Islands* for the victory there obtained by the *Spaniards* over the *Dutch*. Next to this lies the province of *Pampanga*, where the diocese of *New Segovia* ends, and that of the archbishop of *Manila* begins. This province is large, and of great consequence; because the natives, being well instructed by the *Spaniards*, help to defend the island, and have stood by them upon all occasions, not only in *Manila*, but in *Ternate* and other provinces. Besides, the soil is very fruitful, particularly in rice; so that it furnishes *Manila*. It also yields timber for building of ships, the woods being on the bay, not far from the port of *Cavite*. It contains about eight thousand *Indians*, who pay tribute in rice. In the mountains of this province dwell the *Zambali* and *Negrillos*. These are always fighting among themselves, to defend their woods from their neighbours, and
e secure their game and pasture ^e (P).

THE

^c Relac. de las Islas Filipinas. ^f GEMELLI CARRERI Tour du Monde. P. iv. l. i. c. 7. ^e Relac. de las Islas Filipinas. NAVARETTE, GEMELLI CARRERI, LUYTS.

(P) We have, in the author last cited, in his correction of another writer, a very distinct and agreeable account of these nations, which, as it is but short, we will give the reader in his words (21): "F. Latona says he asserts, that within the archbishoprick of Manila there were certain heathen blacks, natives of the island unconquered, called *Zambales*, and very barbarous. But they deceived him who said they were the same as the *Zambales*; for these *Zambales* are mortal enemies to the blacks, and extremely dreaded by them. There are very good Christians among them. Their towns are on the skirts of the mountains, to hinder the blacks from coming at the towns of the *Indians*. For these, and other reasons, the *Zambales* are exempt from contributions and personal duty: they pay their taxes in unwrought silver, not in specie. The blacks have frizzled hair, like the *Cafres*; the *Zambales* have not. The blacks are not conquered; nor is it possible to subdue them, though one hundred thousand men were gathered together to that purpose: first, because the

" mountains are inaccessible, and so thick wooded, that, unless the shelter be destroyed, neither *Spaniards* nor *Indians* can advance a step, and the blacks run in and out at every hole, like hares: secondly, because they, standing behind the trees, with their arrows shoot as many as they please, without being seen, by reason their colour cannot be distinguished from that of the tree. If the *Indians* and *Zambales* go into the mountains, they have generally the worst, and therefore they endeavour to catch the blacks in open fields; but that is no easy matter. I knew them sometimes at peace, and sometimes at war, with the *Indians*: when they were at peace, whole troops of them would come down to the towns: we gave them tobacco, rags, and wine, which pleased them very much, and some of them helped the principal *Indians* in their tillage. We admired to see them so fat, tall, and strong: they eat nothing but wild mountain roots, some fruit, and raw flesh, without any clothing but their skin, or any other bed but the ground. Every one of them has his bow
" and

(21) D. F. Navarette *Tratados historicos de la Monarchie de China*, l. vi. c. 31.

Of the provinces of Bahi and Balacan.

THE province of *Bahi*, lying east of *Manila*, is no less important for building of ships. About the bay of this name, and in the neighbouring farms, grows the best fruit that is eaten in *Manila*, especially the *bonga* or *arecca*, and the *buyo*, which is the same as *bette*. This is an aromatic and delicate fruit; but it must be observed, that this of *Manila* exceeds all other; and the *Spaniards* from morning till night never cease chewing of it: the fruit this plant bears is called *taclove*. This province suffers very much by the continual labour the natives are put to in felling timber for building of ships, two hundred, and sometimes four hundred, being employed every month in this work on the mountains, or at the port of *Cavite*. The king allows them a piece of eight a month, and rice enough. The whole province contains six thousand tributary natives. The province of *Bulacan*, lying between *Panpanga* and *Tondo*, is small, its inhabitants *Tagalians*, and abounds in rice and palm-wine: the number that pay tribute three thousand. It remains to say something of a small province near the mouth of the chanel; because, though its metropolis be on the main land of *Manila*, yet the rest of it is made up of several islands, as *Catanduanes*, *Masbate*, and *Burias*. *Catanduanes* is thirty leagues in compass, ten in length, and its shape is almost a triangle. It is one of the first met with in the way to the islands, and so near the *embocadero*, or mouth of the chanel of *St Bernardin*, that some pilots, mistaking it, have lost their ships; for, believing they were entering the mouth of the streight, they found themselves among dangerous flats, which are all round the island a musket-shot from the shore. Its being exposed to the north wind makes it always stormy; for which reason there is no sailing thither but from the fifteenth of *June* to the middle of *September*^h.

Of the island of Catanduanes.

It abounds in rice, oil of palms, cocoas, honey, and wax. There are several rivers, dangerous to cross, in the chanel of which there is gold found, brought down from the mountains by floods, which have worn deep channels down their sides. The biggest of them is called *Catandangan*, and by the *Spaniards* *Catanduanes*, whence the island took its name. The chief employment of the natives is carrying wood, making very light boats, and carrying them to sell at *Mindora*, *Caleleya*, *Balayan*, and other places. They first make one very large, without any deck, and not nailed, but sewed together with *Indian* canes; and then others less and less, one with another, and thus they transport them an hundred leaguesⁱ. The people are warlike, and paint themselves like the *Bisayas*. They are excellent sailors; and, leaping into the water, turn a boat again in a moment that has been overset. For fear of such accidents, they carry their provisions in their hollow canes close stopped, and tied to the sides of the boats. Their habit is only a waistcoat, which reaches down to the knees. The women are of a masculine size, and apply themselves as much as the men to tillage or fishing. They are modestly clad in a coat or jerkin, after the manner of the *Bisayas*, and a long mantle. Their hair is tied on the crown of the head, making a knot like a rose. On their forehead they wear a plate of gold two fingers broad, lined with taffeta; in their ears three gold pendants, one in the place where the *European* women use it, the other two higher^k. On their ancles they have rings, which make a tinkling noise as they move. We are next, after thus making the tour of the whole island, to give a short description of its capital, which is also that of the *Philippines*, and the dominions of his catholic majesty in the *East Indies*; neither is it in any respect beneath that notion one would naturally form of a place honoured with those titles.

A description of the city of Manila, the capital of the island of Luzon, and the Philippines.

THE city of *Manila*, as has been already hinted, stands upon that point of land where the river that comes out of the lake runs into the sea, and whence *Ragia* the *Moor*, who had fortified himself with ramparts upheld by palm-trees, and furnished with small guns, was beaten by *Michael Lopez Legaspi* on the nineteenth of *June* 1571. In compass it is two miles, in length

^h Tour du Monde, par GEMELLI CARRERI.

ⁱ CORONEL, NAVARETTE, LUYTS.

^k NAVARETTE,

“ and arrows: the bow is as long as he that uses it;
 “ they make them of a palm-tree as hard as iron: the
 “ string is made of the barks of trees, so strong, that no-
 “ thing can exceed them. Besides these, they use ano-
 “ ther little iron weapon, broader than one's hand, a
 “ quarter of a yard long, the handle very fine, which,
 “ they said, was made of burnt oysters and snails: it
 “ looked like delicate marble. This weapon serves
 “ them when in close fight; and they will cut off a man's
 “ head at the mouth very dextrously. All the people
 “ along those mountains, as far as *New Segovia*, value
 “ a skull mightily to drink out of; so that he who has
 “ most skulls is the noblest among them; and they go
 “ out to cut off heads for this honour, without any other
 “ prospect. In some places they make use of the teeth
 “ out of those heads they cut off, stringing and making
 “ garlands of them, to wear on their heads: he that

“ has most is best looked upon. There are a great many
 “ of those people on the mountains of *Orion*, upon the
 “ bay of *Manila*; but they are peaceable. All the time
 “ I was there they never did the least hurt.” This pas-
 “ sage is very curious, and acquaints us with several parti-
 “ culars that occur no-where else. It shews us, that, in
 “ these islands, there are two distinct races of black people;
 “ one that are perfect negroes, and another that have long
 “ hair, like the *Camarins* in the neighbourhood of *Goa*;
 “ that these are naturally enemies to each other; that the
 “ former are fierce, and more barbarous than the latter; and
 “ that tho' one is more easily civilized, yet the other kind
 “ of people are far from irreclaimable, as most of the *Spa-
 nish* writers, and those who copy from them, commonly
 “ represent these miserable creatures, that they may justify
 “ their usage of them.

- a one third of a mile; the shape irregular, being narrow at both ends, and wide in the middle. It has six gates, which are called *Delos Almazanes*, or, *Of the magazines*; *Santo Domingo*, or *St. Dominic*, opening on that suburb; of *Parian*; of *Puerta Real*, or, *The royal gate*; of *St. Lucia*; and the *Postigo*, or, *The postern*. The wall, on the side next *Cavite*, is strengthened with five little towers, with iron guns; but on the angle next the land is a noble bastion, called *la Fundizion*, or, *The foundary*; and beyond it another not inferior to it, between which is *Puerta Real*, or the royal gate, well furnished with brass guns, and good outworks. Further is the gate of *Parian*, over which there is a battery of breast artillery. Proceeding still by the river side, the next is *St. Dominic's* bastion, as being near the monastery of the *Dominicans*; and thence you go on to the castle, which terminates the city, which, on the south, is washed by the sea, and on the north and east by the river, over which there are drawbridges to enter at the royal gate, and that of *Parian*. The palaces of *Manila*, though all of timber above the first floor, yet are beautiful from their handsome galleries. The streets are broad; but frequent earthquakes have spoiled their uniformity, several houses and palaces being overthrown, and little hope of rebuilding them¹.

MANILA contains about three thousand souls; but these of such different mixtures as to qualities and colour, that they are distinguished by several strange names. This has happened by the conjunction of *Spaniards*, *Indians*, *Chineses*, *Malabars*, *Blacks*, and others inhabiting that city, and islands depending on it, as is also fallen out in the *Portuguese* conquests in the *East Indies*, and the kingdoms of *Peru* and *Mexico* in *America*. Though *Manila* be so small, if we look only on the circumference of its walls, and the number of its inhabitants, yet it will appear large if we include its suburbs; for within a musket-shot of the gate of *Parian* is the habitation of the *Chinese* merchants called *Sangleys*, who, in several streets, have rich shops of silk, porcelain, and other commodities. Here are found such as exercise all arts and trades; so that whatever the citizens are worth runs through their hands, by the fault of the *Spaniards* and *Indians*, who apply themselves to nothing (Q). There are about three thousand of them in this suburb, and as many more throughout the islands; which is permitted them, if not as Christians, at least in hopes they may become such, though many are, or pretend to be, converted, for fear of being banished^m.

- d THERE were formerly forty thousand; but abundance of them were put to death in tumults they raised at several times, and particularly that on *St. Francis's* eve in 1603, as the reader has seen; and they were afterwards prohibited staying in the island by his catholic majesty. This order is very little observed; for there always remain behind hid many of those that come every year in forty or fifty *chiampans* loaded with commodities; the profit being very great at *Manila*, which they could not find in *China*, from the small price manufactures bear. The merchants or *sangleys* of *Parian* (R) are governed by an alcaide, to whom they allow a good salary, as they do to the king's solicitor their protector, to his steward, and other officers, besides all the duties and taxes to the king. They pay his majesty ten thousand pieces of eight a year for the privilege of playing at *metua* at their new year; and yet this permission is

¹ Relac. de las Islas Filipinas y Malucas, por HERNAN DE LOS RIOS CORONEL, NAVARETTE, GEMELLI CARRERI. ^m Relac. de las Islas Filipinas, GEMELLI CARRERI, LUYTS.

(Q) This arises from laziness in the *Spaniards*, and from poverty and diffidence in the *Indians*, who, as on the one hand they have very little to trade with, so, on the other, they are very much afraid of having that little taken from them; which would probably be the case, if they engaged themselves in traffick. As it is, their misery is their greatest protection, the reputation of indigence serving to keep them quiet, and free from those inares which would certainly be laid for them if they either had, or were supposed to have, wealth. By this means all comes to the hands of those industrious people, who think nothing mean, troublesome, or laborious, that is attended with profit. As to the name, by which they are distinguished in the text, the origin of it has been already mentioned. What the *French*, in their southern provinces, are to the *Spaniards* in *Europe*, the *sangleys* are to the *Spanish* inhabitants of the *Philippines*; they supply their wants, do their drudgery, flatter their vanity, bear their ill usage, and carry away their money, but not till they have a better title to it than themselves; and, to speak out, in this only lies the grievance. These facts are literally true; and yet are an allegorical picture of the different kinds of intercourse by which some nations are enriched, and others beggared.

(R) The industry and address of these people are so great, and they have the art of managing the passions and attacking the foibles of those they deal with so dexterously, that they constantly carry away almost all the silver that comes by the annual ship from *Mexico*. In short, they are the keenest traders in the world; and as they constantly outwit others, so it sometimes happens that they outwit themselves. A very diverting instance of this is preserved in one of the *Spanish* memorials, which, for the reader's amusement, we will transcribe: A certain *Spaniard* had the misfortune to lose a part of his nose, which exposed him in so disagreeable a manner to public notice at *Manila*, that he sent for a *Chinese* toyman, and asked him if he could not supply that defect by an artificial nose. The *Chinese* readily undertook, and effectually performed, what was required of him; with which the *Spaniard* was so well pleased, that he gave him twenty ducats. This was so acceptable to the trader, that, when he returned the next year from *China*, he brought with him a whole cargo of false noses, not considering that such accidents were not frequent enough to furnish him with customers; so that, with all his quickness and ingenuity, he had only his labour for his pains (22).

(22) Relac. de las Islas Filipinas, written by an ecclesiastic, who had resided in *Manila* eighteen years.

but for a few days, that they may not throw away other men's money. *Metus* is the game of even or odd, at which they play, laying down small heaps of money, to be won or lost by guessing right^a. They that use this sport are so expert, that they know the number by the dimensions of the heap; and sometimes they sharply withdraw a piece to make their number fall right. The *Spaniards* keep the *Chinese* very much under, not suffering them to be in Christian houses at night, and obliging them to be without candle-light in their houses and shops (S).

Of the other suburbs of Manila, and their people.

Of the buildings in Manila, and in the country round about that capital.

OVER the bridge adjoining to *Parian* are the suburbs or hamlets of *Tondo*, *Minondo*, *Santa Cruz*, *Dilas*, *S. Miguel*, *S. Juan de Bagumbaya*, *Santiago*, *Nuestra Señora de la Hermita*, *Malati*, *Chiepo*, and others, to the number of fifteen in all^b, inhabited by *Japonefe*, *Tagali*'s, and other nations, under the government of an alcaide.

THE houses are generally of wood, near the river, and standing on pillars, with steps going up to them, after the manner of *Siam*. The roofs are covered with *nipa*, or palm-tree leaves, the sides of cane, and they go up ladders to some of them, because the ground is moist, and sometimes full of water. In the time of the petty king *Matanda*, *Tondo* was fortified with ramparts and cannon; but could make little resistance against the *Spaniards*. In the space between these hamlets, on both sides of the river, as far as the lake of *Babi*, there are gardens, farms, and country-houses, pleasant enough to behold; so that, looking on it altogether, it is much like the large villages in the neighbourhood of *Siam*. As to the public edifices, they were formerly much more magnificent than at present, experience having taught them, that wood or cane are far better materials for building in that country than brick or stone; but the magnificence which reigns within, shews sufficiently that they are not either strangers or enemies to splendor^c. The jesuits college is by far the most considerable building in the city in all respects: it was founded in 1581, and, like other houses of that society, has been encreasing in wealth, as the fathers who inhabit it have done in credit and power ever since. There are, besides, a vast number, in proportion to the size of the place, of churches and religious houses. The castle or fort stands, as we have before observed, at the west end of the city, having the sea on one side, and the river on the other. It is styled the citadel of *St. James*, and was originally fortified in the shape of a triangle, having one bastion towards the sea, another towards the river, and a third at the west point, to cover the port, which is only fit for small vessels. And now, having said so much of the city, let us step out a little, and take notice of another place of consequence, which is generally considered as the sea-port, because, as we observed, small vessels only come up to *Manila*^d.

THIS town is called *Cavite*, a name bestowed upon it by the *Tagalians*, or *Tagalese*; it lies three leagues south of *Manila*, on a long narrow neck of land, on one side of which is the sea,

(S) The great inconveniency, and the apparent danger, of having these people in such numbers about the capital, have been the subject of remonstrances to the *Spanish* government almost ever since they were possessed of the island, but without any tolerable effect; for tho' the mischief has been sometimes moderated, yet it has been never extirpated: the reason of this is, that the governor, and the persons in power, find their account in continuing, and the public only would be benefited by the redressing this evil. In answer to the remonstrances, therefore, they never failed to acquaint the court, that the ordinary and extraordinary taxes upon the *Chinese* amount to a third part of the whole revenue of the *Philippines*; and that consequently this would be lost if they were banished; and this, tho' a very poor reason, has hitherto prevailed. In one of the *Spanish* memorials so often mentioned, the writer reasons upon this subject thus: the trade of the *Philippines*, as it is managed at *Manila*, is the richest in the universe; and yet his catholic majesty gets nothing, and his subjects very little. How happens this? As wealth is the object of commerce, it may be considered as a kind of gaming; but then it is a game of skill, and not of chance: those therefore who have knowledge and industry must in the end carry off all; and these at *Manila* are the *Chinese*: they hold the box, and, in the long run, all that is played for comes into their pockets; only the governors, and the great ones

from whom they derive this privilege, share in the spoils. The remedy is plain and easy in all respects but one, and that is, the fixing upon three honest governors in succession; men who would prefer honour and reputation to the uncertain hopes of carrying a fortune to *Spain*, which, tho' it has misled so many, is in reality a thing in which very few have succeeded. If such a succession of governors would treat the native *Indians* gently, encourage their manufactures, and suffer them to enjoy the fruits of their industry without molestation, the *Chinese* would be quickly beat out of this trade, in spite of all their cunning, a great part of the silver that comes from *Mexico* would remain in the island, shipping would increase, new markets would be opened, his catholic majesty's revenue would, in a few years, be ten times what it is, and the number of his subjects doubled, nay trebled; for multitudes of the *Indians* are Christians in their hearts, who will not receive baptism, that they may not fall under the yoke of a government which has not either justice, economy, or tenderness to recommend it; in which rapine and fraud have reigned for two hundred years, driven some hundred thousands from their native country for want of subsistence, and destroyed millions that remained behind, in spite of that beneficence with which Providence has bestowed upon these islands all those things that mankind concur in calling temporal blessings (23).

- a and on the other the bay that forms the port. It is defended by the castle of *St. Philip*, which commands the port, and is by much the best fortress in the island, being a regular square, with four good bastions well supplied with cannon; and here are the principal magazines for military and naval stores. The bay is for the most part very deep, there is in it plenty of good fish, and the sides of it are sprinkled with very pleasant villages'. Directly against the mouth of this bay lies the island of *Maribeles*, about three leagues in compass, and half a league in length. It is about twenty-four miles distant from *Manila*; and, though a place of very great consequence, has but a small guard under the command of an officer, who is also the Corregidore, or civil magistrate in the village. There are three mouths or entrances from the sea into the bay, the first between that island and *Punta del Diablo*, or *The Devil's Point*, which is about a mile and a half over, very deep, and therefore most used; the second lies between the opposite shore and the rock called *De los Cavallos*, or *The Horses*, it is scarce a mile over, shallow, and with many rocks in the passage, so that it is very unsafe; the third lies between the rock before-mentioned and the point of *Marigondon*, it is nine miles over, but encompassed with flats and shoals, so that it is dangerous to sail through it without a good pilot. The port itself is in the form of a semicircle, very well defended from south winds, but not so well sheltered from the north. On the same point with the castle of *St. Philip* stands the arsenal, where the galleons are built, for which service there are from three to six or eight hundred *Indians* constantly employed, who are relieved every month, and, while upon duty, are maintained at the king's expence. To the town, or, as some call it, city, of *Cavité*, belongs the suburb of *Saint Roch*, inhabited by *Indians* and *Chinese* as well as *Spaniards*, and more populous than the town itself. There are likewise upon this coast several other ports, but far less considerable; and yet of great use, as they afford shelter to the *Japanese* junks, and the vessels of other eastern nations, that at the proper season of the year resort thither annually in great numbers' (T).

- In respect to the government, we will, for the sake of decency, begin with the church. *Manila* was erected into a bishoprick in 1581; and seventeen years after became an archbishoprick, through the favour of the pope and the king of *Spain*: to this prelate all the clergy in these islands are subject, as their metropolitan. He receives yearly out of the king's treasury six thousand pieces of eight; and the twelve canons or prebendaries of his cathedral church have a clear income of between four and five hundred crowns each, paid them in like manner. Besides *Manila*, there are three other bishopricks in the *Philippines*; viz. *Zebu*, *Camarines*, and *Cagayan*; each of these prelates have 5000 pieces of eight a year, together with the bishop, without any declared fee, who succeeds in the first vacancy, to prevent the inconveniencies that might ensue from waiting the best part of six years, till the successor could be sent from *Spain*. The inferior clergy are very numerous; and, as all of them receive more or less from the royal treasury, this is a great burden on the state: yet we must not hastily pronounce it a useless burden, since it is very certain that the natives are retained within the bounds of their duty rather by the exhortations and influence of the ecclesiastics than by any other method (U). As to the civil government, the city of *Manila* is governed by two Alcaldes;

* Recueil des Voyages qui ont servi à l'Etablissement de la Compagnie des Indes Orientales, tom. iii. p. 102.
 * Relac. de las Islas Filipinas. Voyage de Compagnie, tom. viii. p. 98.
 Monde, P. v. b. i. c. 5. GEMELLI CARRERI, Tour du

(T) The very best accounts we have of these parts are not of so fresh a date as to enable us to speak with absolute certainty of their present condition; and for this reason we cannot venture to assure the reader, that the *Japanese* junks regularly visit the coasts of *Luçon* at this day, but that they frequently come with the *Chinese* vessels, and now-and-then venture alone amongst the adjacent islands, is generally agreed. The *Chinese* fleet arrives annually from the opposite coast from the middle of *December* to the end of *January*. About two months are spent by the merchants in dispatching their affairs; but they generally return to *China* towards the close of the month of *March*, or the beginning of *April*, after which, the navigation of these seas is reputed dangerous; and indeed, considering the nature of the vessels that sail in them, shipwrecks would be more common than they are, but for the numerous ports and creeks in the islands that lie in the neighbourhood of *Manila*, where at all times they can take shelter upon the first appearance of bad weather (24).

(U) There are not many secular priests; but these islands in general swarm with regulars of different orders, such as *Dominicans*, *Cordeliers*, *Jacobines*, *Augustines*, and *Jesuits*, who are intrusted with the care of the parishes into which each diocese is divided. They agree very well with each other, the last order only excepted, who agree amongst themselves, but with nobody else. It is to these missionaries that his Catholic Majesty owes all the *Indian* subjects that he has; and might be indebted for many more, if errors in the civil government did not deter them from making an open profession of Christianity. It appears plainly from the books they have written, and the memorials they have presented to the *Spanish* court, that they are the best patriots in the *Philippines*, and in many respects shew themselves to be very disinterested, in declaiming against sine-cures, and the unnecessary grandeur of some clergymen, while the people are in other places without spiritual guides, for want of having wherewithal to subsist them (25). Father *Navarette*, in whose work there are a thousand cu-

(24) Relac. de las Islas Filipinas y Molucas, por Hernan de los Rios Coronel. Carreri, Combes.

(25) Navarette, Gemelli

Alcaides ; the rest of the cities and great towns in the island have each an Alcaide ; and in every a village there is a Corregidore. Appeals from their sentences are made to the royal court at *Manila*, in which there are four judges and a fiscal or attorney-general ; each of these judges has a salary of three thousand three hundred pieces of eight *per annum*. The viceroy is president, and, in that quality, has an income of four thousand pieces of eight, but he has no vote ; yet, if the judges are divided equally, the president names a doctor of the civil law, who, in virtue of his appointment, has a decisive voice. The attorney-general, in right of his office, is protector of the *Cbinese*, in consideration of which he receives six hundred pieces of eight every year *.

In what manner the Indians are governed, and the nature of Encomiendas.

As for the *Indians* that are in subjection, they pay tribute in the following proportions : young men from eighteen, and from thence, if they continue single, to the age of sixty, pay b five rials of plate by way of capitation ; as single women likewise do from twenty-four to fifty ; married men pay ten rials. It is computed that there are within the compass of this government two hundred and fifty thousand *Indians*, subject to his Catholic Majesty, of whom two fifths hold immediately from the king, and the rest from lords or proprietors. Such a lordship is called, in *Spanish*, *Encomienda*, and the proprietor *Encomendado* ; but out of these there are considerable deductions, such as two rials for every head for the maintenance of the forces, and the like sum for the parish priest *. The royal revenue is computed at about half a million of pieces of eight, exclusive of casualties. In reference to the military force, the garrison of *Manila* consists of about eight hundred or a thousand men, and there are about three thousand more in the *Philippines*. The viceroy is by his office captain-general, with a salary of about c four thousand pieces of eight *. We shall speak hereafter of the extent and value of his authority and employment, considered under his highest title. And, having thus run through the several points proposed to be explained in relation to the island of *Luçon*, and its capital the city of *Manila*, we are next to attempt a short description of the rest of the *Archipelago*.

* Relac. de las Islas Filipinas, NAVARETTE, GEMELLI CARRERI.

GRAU Y MONTFALCON Justification, &c.

* Relac. de las Islas Filipinas y
Don JUAN

rious particulars, affords us a strong proof of this, when he reasons in the following manner against the Jesuits, who are the only preachers employing a military assistance in conjunction with spiritual messengers (26). " In *Japan*," says this venerable writer, " there was a great increase of Christianity without arms ; and if it fell to nothing, it was not for want of soldiers, but other things that might have been well avoided. The two general persecutions in *China* proceeded from other causes. I find there is something amiss every-where. The fathers of the society, carrying soldiers into *Ethiopia*, were expelled, without hopes of ever returning. In *Tanquin*, *Cochin-China*, and *China*, they were looked upon as spies : this is not so bad as the other. Nor does our going from *Manila* to *Luí* with soldiers make out any thing ; it was the particular opinion of one man, disapproved by others, and the ill success foretold. Whilst there were only three fathers in that province, they made some advance, and preached in peace and quietness : as soon as ever the soldiers came, the natives were alarmed, ran to arms, burnt, killed, and wounded, and all was lost. What happened in the islands called *Marianas* is well known, so that there is no ascertaining any thing in this matter. Another difficulty occurs to me, which is, that if missions must be carried on under the protection of an armed force, there will be very few ; therefore they must be either left off, or continued in the

" same manner the apostles followed them ; for
" whence shall we have a force to support those that
" preach in *China*, *Japan*, and the *Mogul's* country ? I
" only mention these, without speaking of many other
" vast kingdoms. Now if all the soldiers in the church
" will not suffice for three places, how must we relieve
" the rest ? I am persuaded one Christian converted and
" instructed peaceably, is worth twenty made with the
" shew of force. They who talk of the protection of
" Christian forces, imagine the soldiers will do nothing
" nothing but aid and protect ; but I say they will do
" more mischief with their lewdness in one day, than
" twenty religious men can repair in a year. But if
" there be no soldiers, say these folks, they will kill the
" religious men before they have done any good. Let
" them kill : Christ himself and his apostles were killed ;
" and it is enough done to sprinkle that country with
" blood, that it may afterwards yield a more plentiful
" harvest." This, we must allow, is very honest, and
very heroic. Other procurators (for to this dignity Father Navarette was advanced) insisted on the same points ; maintaining, that without troops they could subdue thousands to his Catholic Majesty's service, make these new subjects industrious without the help of any laws but those of the gospel, and the country rich and flourishing, if their converts were but secure from spiritual and temporal oppression.

(26) D. F. Navarette, *Tratados historicos de la Monarchia de China*.

S E C T. IV.

A like detail of the other islands dependent upon it, their situation, commodities, tribute, advantages and disadvantages, with the manner in which their inhabitants are treated, and their obedience secured by the Spaniards, notwithstanding the small force they have in this part of the world, and the many errors and imperfections in their government, which have more than once brought it to the brink of ruin.

- T**HE easiest, most natural, and useful manner, of describing the small islands in the immediate vicinity of *Luçon*, or *Luzon*, is to speak of them as they lie along the channel through which the galleon always passes in her voyage to *New Spain*, first; and then of those that lie south, west, and north, of that island. The nearest of these is *Capul*, three leagues in compass, the soil fruitful, pleasant, and commodious, for the *Indians*, who live after the manner of the *Bisayas*. A few leagues north-west from the mouth of the streight lies *Ticao*, eight leagues in compass, inhabited by free *Indians*, or, as the *Spaniards* style them, savages. There is in it a good port, with the conveniency of fresh water and wood, and it is therefore the last land touched at by the galleons⁷. Four leagues west of *Ticao* is *Burias*, five miles in compass. It has but few tributary *Indians*, who are comprised in the parish of *Masbate*, which is another larger island south of it, and not far distant from *Ticao*. This island of *Masbate* is thirty leagues in compass, eight in breadth, and proportionably long. Its ports are commodious for their ships to take in water. Here are about two hundred and fifty *Indian* families, who pay tribute in wax, salt, and civet. But those that dwell in the mountains, and originally came from other parts, are numerous. The gold mines produced formerly considerable quantities of that metal, twenty carats fine⁸: they do not at present work in these mines. As for the *Indians*, if they have but a dish of rice, they never mind that metal; and if ever they gather any in the rivers, it is when they are pressed for their tribute, and then they gather just as much as serves to pay it. The shores of these islands are often enriched with ambergrise, cast up by the current of the channels that run upon them⁹.
- LEAVING** *Ticao*, *Masbate*, and *Burias*, behind, and holding on the same way, is the island of *Marinduque*, fifteen leagues from *Manila*. It is eighteen leagues in compass, high, and abounding in cocoa and other fruit-trees, on which the inhabitants live, because there is but little rice. There is a great deal of pitch made, but little wax. *Mindoro* is about eight leagues from *Manila*, and five from *Marinduque*; fifteen leagues long, eight in breadth, and seventy in compass. The broadest part of it is that which looks towards the south, where, together with another high and round small island called *Ebin*, it makes a streight between it and *Panay*, which they call *Potol*. There is another known by the name of *Calabite*, between it and *Luban*. The land of *Mindoro* is high and mountainous, abounding in cocoa and all sorts of fruit-trees; but rice grows only in some parts. Along its channels, and the mouth of its rivers, there dwell those *Indians* who pay tribute; and on the east, north-east, and on the side opposite to *Manila*, are *Tegalians*, and so towards *Panay* and *Bisay*. Up the country live the *Mangbiani*, who, tho' differing in language, agree in having no form of government; they go naked, only covering their privities; and change their habitations according to the season of the year, because they live upon wild fruit. Though they are not far from *Manila*, they have not yet lost their simplicity, exchanging the wax of their mountains for nails, knives, needles, rags, and other baubles¹⁰.

A succinct account of the Philippine Islands, in their natural order.

The islands of Marinduque, Mindoro, Ebin, &c. described, with an account of their produce and people.

An account of the island Luban, and the produce and people of that and the adjacent isles.

- BACO** is the metropolis of the island, where the Alcaide, or governor, resides. Not far from *Baco* is a place they call *Old Mindoro*, from which all the island took its name. *Cape Varadero* stretches out towards *Tal*, a village on the coast of *Manila*, between the two bays of *Bombon* and *Batangas*; and a small island called *Verde*, or *Green Island*, lying between them. The channel for the ships going to and from *Cavité* is not above a mile over; and this narrowness is the cause of the whirlpools and currents, which endanger ships when they have not a fair wind and current at their entering the channel. In *Mindoro* and *Luban* they reckon there are one thousand seven hundred inhabitants, who pay tribute in wax, and black hemp which the cocoa-trees produce; the last of which serves to make cables for the king's ships. *Luban* is a small low island, five leagues in compass; near it is the little isle of *Ambil*, in which is a high mountain, seen at a great distance, by reason of the flames it throws out. On the other side *Luban*, northwards,

there

¹⁰ GEMELLI CARRERI, Tour du Monde, P. v. l. i. c. 3.

there is no island of note; only beyond *Cape Bajador*, opposite to *New Segovia*, at eight leagues distance from it, are the low little islands of *Babuyanes*, stretching out towards the islands *Formosa* and *Lequios* (X). In the nearest, which is conquered, there are about five hundred natives that pay tribute. It produces wax, ebony, botatas, cocoas, plantanes, and other things for the maintenance of the inhabitants. Fourteen or fifteen leagues south-west of *Luban* are the *Calamines*, a province made up of seventeen islands, all subdued, besides many others not yet reduced; among the first of which is a great one called *Paragua*, part belonging to the *Spaniards*, and part to the king of *Borneo* ^c.

Of the isles of
Paragua, and
the flat islands
which lie be-
tween that
and the great
isle of Borneo.

THIS island of *Paragua* is the third in bigness among the *Philippines*. The compass of it about two hundred and fifty leagues, the length one hundred; but the breadth not above twelve in some places, and fourteen in others. The middle of it lies between nine and ten degrees of latitude: its furthest cape, called *Tagusau*, towards the south-west, is fifty leagues distant from *Borneo*, in which interval there are many low islands that almost join the two great ones. The inhabitants of the coasts of these islands, and of *Tagusau*, are subject to the *Mohammedan* king of *Borneo* ^d; but up the country are *Indians* unconquered, barbarous, subject to no king, and therefore all their care is not to be subdued by the *Borneans* or the *Spaniards*; half the lands of this island are in their possession. The *Spaniards* have in it about twelve hundred tributary *Indians*, blacks, like those of *Afric*, who range about from place to place, without any certain abode (Y). They are very faithful to the *Spaniards*, who keep a garrison there of two hundred men, part *Spaniards*, and part *Indians*, with an Alcaide, or governor, whose residence is at *Taytay*, on the opposite point of *Borneo*, or, as the *Spaniards* call it, *Bornei*, where there is a fort. The *Lampuan*, or governor for the king of *Borneo*, resides at *Lavo*. The island is almost all very high land, and full of trees and wild beasts, and produces abundance of wax on the mountains, but very little rice ^c.

AT a small distance from the northern cape of *Paragua*, and west from *Manila*, are three islands, called *Calamianes*, which give their name to a province or government. These, and nine others near them, are comprehended in the same province, but are all small, and inhabited by peaceable *Indians*. In some of them there are one hundred and fifty, that pay tribute,

^c Relac. de las Islas Filipinas, GEMELLI CARRERI, NAVARETTE. ^d Tour du Monde, GEMELLI CARRERI, P. v. l. i. c. 8. ^e Relac. de las Islas Filipinas, NAVARETTE, LUYTS.

(X) It was to the eastward of these islands, but in a latitude not determined with any certainty, that towards the beginning, and even to the middle, of the seventeenth century, the *Spaniards* and *Portuguese* sent several ships to find a small island called *Riccadoro* (27), the history of which, in few words, was this: A *Portuguese* vessel, bound from *Macao* to *Japan* (28), after a violent storm, put into a small unknown island for shelter; and, finding that the hearth was loose, they made use of a kind of red earth, which they found there, to form a sort of bed under it, and, as soon as it was possible, continued their voyage. In a few days they found the hearth loose again; and, when they examined it, perceived that the red earth was partly consumed, and the rest turned into a large plate of gold by the heat of the fire, whence they bestowed the name of *Riccadoro* upon this island; which could never afterwards be discovered, by reason, as is generally believed, of the violent tempests to which ships are exposed in those seas (29). One of the last vessels employed for this purpose was sent by the viceroy of *Mexico* from *Acapulco*, under the command of one Captain *Sebastian*; which being driven by a storm on the coast of *Japan*, the government in that island, either from the suspicion natural to their councils, or from the insinuations of other *Europeans*, took umbrage at this expedition, and persuaded themselves that this ship was sent to discover a safe port upon their coast, to which *Spanish* forces might be transported, was one of the principal causes of the general persecution raised against the Christians, and the total prohibition of any commerce with

the *Spaniards* or *Portuguese* (30), of which we have already given an account in the foregoing chapter.

(Y) It may not be amiss to observe here, that no satisfactory account has been hitherto given of these two different races of blacks that inhabit most of the islands in this *Archipelago*; the one having flat noses, thick lips, and frizzled hair, like those from the coast of *Guinea*; and other, handsome features, with long black hair flowing in natural curls. The first of these pretend to be the original inhabitants of these islands; and in *Luzon*, particularly, they have told the missionaries, that the *Tagalese*, or *Tagalians*, were their slaves. The *Spaniards* distinguish these blacks by the name of *Negrillos* and *Sambali*; but acknowledge themselves at a loss to account for the distinction between them, or how either of these nations came into these islands. As to the *Negrillos*, it is most probable that they came from that country which has been so long, and yet is so little, known by the *Europeans*, and to which, from its being intirely inhabited by these people, they have given the name of *New Guinea*; and this is so much the more probable, because that *Archipelago*, composed of innumerable islands, discovered in the beginning of the eighteenth century, and called the *New Philippines*, lies in a sort of semicircle, between *New Guinea* and *Mindanae*, the most southern of the *Philippines*, and in which the number of these *Negrillos* is much greater than in any of the rest. On the other hand, the *Sambali*, or *Zambales*, are most numerous in the northern islands; and therefore it is likely, that they came from the continent of *Asia* (31).

(27) What is here said is on the faith of an old *Spanish* chart. (28) L'Amirante D. Hieronimo de Banuelos y Carillo, Relac. de las Islas Filipinas, on the margin of his discourse, where he also says he once met with a dreadful storm in the height of that island.

(29) Gemelli Carreri, Tour de Monde, P. v. l. iii. c. 6. But he says it was discovered by a galleon sailing from *Manila* to *Acapulco*, which would be more probable, if he did not confound the islands *Riccadoro* and *Ricca Plata* with the islands of *Solomon*.

(30) L'Amirante D. Hieronimo de Banuelos y Carillo, Relac. de las Islas Filipinas.

differently written.

(31) The same nation under different names, or the same name

a in others fewer. The chief product of their mountains is wax, which they gather twice a year. In the rocks over the sea, are found those so much esteemed and high-prized birds-nests^f; and on their coasts also are very fine pearls^g.

BEYOND the *Calamianes*, in sight of the high mountain of *Mondoro*, are the five islands of *Cuyo*, not far distant from one another. In them are about five hundred tributary families, still more civilized, and better affected to the *Spaniards*, than those of *Calamianes* and *Paragua*. They are very laborious, and therefore gather abundance of rice, grain, and fruit. The mountains abound in all sorts of beasts and fowls. At these islands ends the province of *Calamianes*, and begins that of *Panay*, the first land whereof is *Potol*. As *Paragua* is the biggest next to *Manila* and *Mindanao*, so *Panay* is the best peopled, and most fruitful in all the *Archipelago*^h. Its shape is triangular, and its compass one hundred leagues. The names of its principal capes are *Potol*, *Naso*, and *Bulacabi*. The coast from *Bulacabi* to *Potol* lies east and west; from *Potol* to *Naso*, north and south; from *Bulacabi* to *Iloilo*, another cape, less than the great ones, is also north and south; from *Iloilo* to cape *Naso*, east and west. The middle of the island is in the latitude of ten degrees. On the north side, almost in the middle between the two capes of *Potol* and *Bulacabi*, the famous river *Panay* falls into the sea; and the mouth of the harbour is covered by a small island, called *Lutaya*, in which port the *Spaniards* had a safe retreat, before they discovered and conquered *Manila* and *Cavité*. The fertility of *Panay* is caused by many rivers that water it; for there is no travelling a league without meeting a river, but more particularly by the *Panay*, which gives its name to the island, and runs forty leaguesⁱ.

THE island, for the better administering of justice, is divided into jurisdictions; the first, called *Panay*, contains all that lies between Cape *Potol* and *Bulacabi*; the rest of the island is subject to the Alcaide of *Oton*, who resides at *Iloilo*, a point of land running out into the sea, on the south side, between the two rivers of *Tig Bavan* and *Jaro*, and, with the island *Imaras*, forms a streight not above half a league over, or rather an open harbour. On this point the governor Don *Gonzalo Ronquillo* caused a fort to be built, in the year 1681. The island contains about sixteen thousand three hundred and sixty tributary *Indians*, partly belonging to the king, and partly to particular *Encomienderos*, or lords; but they all pay in rice, the island producing one hundred thousand bushels, *Spanish* measure, and but little other grain^k. The inhabitants are stout, lusty, and industrious farmers, and expert huntsmen, the country being full of wild boars and deer. The women make cloth of several colours. There are in the island fourteen parishes, belonging to the fathers of the order of St. *Augustin*, three benefices of secular priests, and one college of the society of *Jesus*, where they administer the sacraments to the garrison of *Iloilo*. Besides the tributary *Indians*, there are here those blacks the *Spaniards* call *Negrillos*, who were the first inhabitants of the island, and afterwards drove into the thick woods by the *Pisayas*, who conquered it^l. Their hair is not so stiff curled, nor are they so stout and strong, as the *Guiney* blacks. They live in the most uncouth parts of the mountains, with their wives and children, all naked like beasts. They are so swift, that they often overtake wild boars and deer. They stay about the dead beast as long as it lasts; for they have no other subsistence but what they reap with their bow and arrows. They fly from the *Spaniards*, not so much through hatred, as from fear. Among the islands about *Panay* lies *Imaras*, opposite to *Iloilo*, and about a quarter of a league distant. It is long and low, ten leagues in compass, and three in length, the soil fertile, abounding in sarsaparilla, and exceeding good water. On the mountains there are wild boars, deer, and good timber. It has also in it the port of St. *Anne*, three leagues from *Iloilo*^m.

TEN or twelve leagues to the northward of the point of *Bulacabi*, is an island, called *Sibuyan*, of the same sort with the last. Two leagues to the northward, are *Romblon* and *Batan*, then the island of *Tablas*, larger than any of the others, and five leagues distant from the point of *Potol*. In it there are many *Indians*, who speak the same language, and are little different from those of *Panay* in other respects. These are all the lesser islands that lie close to the great island of *Manila*; let us next proceed to those which are beyond, and at a greater distanceⁿ.

BETWEEN the two great islands of *Luçon*, or *Manila*, and *Mindanao*, the former the most northern, the latter the most southern, of this *Archipelago*, are those of *Leyte*, *Samar*, and *Bobol*, which, one after another, enter into that large semicircle, which is formed by them all together. The first of the three, and nearest to *Manila*, is called *Samar*, on the side which looks towards the isles, and *Ibabao*, on that side next the ocean. It is like the trunk of a man's

body, without head or legs. Its greatest length from *Cape Baliquaton*, which, with the point of *Manila*, makes the streight of *St. Bernardino* (Z), in thirteen degrees and thirty minutes of north latitude, extends to that of *Guignan*, in eleven degrees, towards the south. The other two points, making the greatest breadth of the island, are *Cabo de Spiritu Santo*, or *Cape of the Holy Ghost*, the high mountains of which are first discovered by ships from *New Spain*; and that which lying opposite to *Leyte* westward, makes another streight, scarce a stone's-throw over, and yet a galleon, called *St. Juanillo*, or *The Little St. John*, coming from *New Spain*, passed through it°. The whole compass of the island is about one hundred and thirty leagues. Between *Guignan* and *Cape Spiritu Santo* is the port of *Eorongan*; and not far from thence, those of *Palapa* and *Catubig*, and the little island of *Bin*, and the coast of *Catarman*. Vessels from countries not yet discovered are very frequently cast away on the before-mentioned coast of *Palapa*. Within the streights of *St. Bernardini*, and beyond *Baliquaton*, is the coast of *Samar*, on which are the villages of *Ibatan*, *Bangahon*, *Cathalegan*, *Paranos*, and *Calviga*. Then follows the streight of *St. Juanillo*, without which, standing eastward, appears the point and little island of *Guignan*, where the compass of the island ends. It is mountainous and craggy, but fruitful in the few plains there are. The fruits there are much the same as that of *Leyte*; but there is one peculiar sort, called by the *Spaniard Chucoy*, and by the *Chinese*, who put a great value on it, *Seyzu*, without kernels^p.

Of the island of *Leyte*, and its situation in respect to the rest of this Archipelago.

THE island of *Leyte* takes this appellation from a village called *Gleyte*, seated on a bay opposite to *Panamao*. From the point of this bay northwards, one side of the island runs as far as the streight of *St. Juanillo*, twenty leagues in length. Then turning down from north to south, is the island of *Panaban*, at about thirty leagues distance, where there are two points three leagues asunder; the first called *Cabalian*, the other *Motavan*, a name taken from a rock directly opposite, now called *Sogor*. *Ferdinand Magalhaens*, the first discoverer of these islands, in 1521, entered through this streight of *Panaban*. He who gave him the best reception, was the lord of the little island of *Dimassavan*, who conducted and guided him to *Cebu*, and there was baptized, together with the king of that island^q. From *Dimassavan*, or *Sogor*, westward, there are forty leagues to the point of *Leyte*, and so ends its compass of ninety or one hundred leagues.

Enjoys an excellent air, and has something peculiar in its seasons, which are very remarkable.

IT is well peopled on the east side, that is, from the streight of *Panamao* to that of *Panaban*, on account of the fruitful plains; but there are vast high mountains, which cut it almost through the middle, and occasion so great an alteration in the air, that when it is winter on the north side, at the same time as with us in *Europe*, it is summer on the southern coast. Thus, when one half of the island reaps, the other sows, and they have two plentiful harvests in a year, to which several rivers running down from the mountains not a little contribute. These mountains abound in game, as deer, wild cows, and boars, and several sorts of fowl. The earth produces great store of roots, on which the inhabitants feed as much as upon bread, grain, cocoa-trees; and good timber to build ships. Nor is the sea inferior to the land, yielding plenty of good fish. The island contains about nine thousand *Indians*, that pay tribute in rice, wax, and quilts. The people are susceptible of any learning; and have two good customs; the first, to entertain each other interchangeably, when they travel; the second, never to alter the price of any provisions upon any dearth, and this under severe penalties^r.

Its produce and revenue.

THE air is fresher in *Leyte* and *Samar* than at *Manila*, and consequently these islands are more pleasant. On the side of *Bay-bay* and *Ogmua*, *Leyte* is, next to *Bobol*, the third island,

^q PIGAFETTA,

^r GEMELLI CARRERI *Tour du Monde*, P. v. l. i. c. ix.

(Z) This is one of the most famous streights in the known world; and, as the difficulty of passing it is, in some measure, beneficial to the city of *Manila*, as it would scarce be practicable for a Squadron to sail through it, without having a pilot from the shore, so it is not a little troublesome and dangerous in its passage to the *Spaniards* themselves, as the reader will perceive from the description in the text, which is copied very exactly from an author who passed it himself, and who had the assistance of several *Spanish* accounts of the *Philippines*, of which he made very good use. The little island of *St. Bernard* lies in the latitude of twelve degrees forty-five minutes north, and the *Cape of the Holy Ghost* is in the latitude of twelve degrees forty minutes. In most of the *Spanish* maps it is called *Embocadero de St. Bernardini*; in some it is called *Esfricho de Manila*, that is, *The Streight of Ma-*

nila, to distinguish it from the other streight, which is likewise to be passed, before they reach the port of *Cavite*, which is called *Esfricho de Mindoro*, the whole passage being incumbered with small islands, that render it very difficult and dangerous (32). It has sometimes happened, that the annual ship from *Acapulco* could not enter the streight of *St. Bernard* for want of a wind, and then they are forced to put into the port of *Lampoon*, on the east side of the island of *Luzon*, from whence the cargo has been carried by parcels upon mens backs; and this has cost the lives of a thousand *Indians* at a time. Sometimes the annual ship has put into *New Segovia*, in the north part of the island, which being at a greater distance from *Manila*, twice the number of *Indians* have been killed, in conveying the cargo thither; and this through their not sailing early enough from *New Spain* (33).

(32) *Gemelli Carreri Tour du Monde*, P. v. l. iii. cap. 1, 2, 3. *The Spanish, Dutch, and English charts have been also consulted.*

(33) D. F. Navarrete *Tratados Historicos de la Monarquia de China*.

- a under the care of the fathers of the society, that is, the Jesuits. Its length, from north to south, is sixteen leagues, its breadth eight or ten, and its compass forty. The south coast, looking towards *Mindanao*, is the best peopled; that is, from *Lobog*, the metropolis, to the little island or peninsula of *Panglao*. There are three others, with fewer inhabitants, but in all they do not make above twelve hundred, that pay tribute. The soil does not produce rice, but is rich in gold mines, and yields a vast abundance of cocoas, batatas, and several sorts of roots, which serve instead of rice. There are multitudes of cattle in the mountains, and fish in the sea, which the natives exchange with those of the neighbouring islands for cotton. The people speak the *Bisayan* language; but are whiter, and have better countenances, than those of *Leyte*, *Samar*, and *Panay*, and are bolder men, both at sea and on shore. Their haughtiness appears by his surname who commanded them before the coming of the Spaniards, which was *Baray Tupueng*, that is, *Incomparable*, or *None such*. But their pride was humbled by the *Ternates*, *Portuguese* and *Spaniards*, successively; and this was foretold them by a *Baylona*, or priestess, of theirs, called *Cariapa*, in a lamentable tone, and in no less melancholy verses, as themselves report; and, indeed, all the annals or histories they have throughout the *Philippines*, are a kind of ballads, or poetical chronicles^a.

^a Relac de las Islas Filipinas.

S E C T. V.

Of the island of Cebu, the first seat of the Spanish government. The passage between Lima and that island shorter, and more commodious, than between Manila and Acapulco. The island of Mindanao, rich commodities thereof, and the present state of the inhabitants; as also of Xolo, with the reasons why the Spaniards have not been able to extend their authority farther, or make the revenue of these islands turn to a better account.

- c **C**EBU, *Sogbu*, *Sibu*, or *Zebu*, is but small, not extending above fifteen or twenty leagues, the breadth eight, and the circumference forty-eight. The chief point towards the south-east is called *Burulague*; and hence its two coasts run, the one, from north-east to south-west, to the strait of *Tanay*; and the other, from north to south, to the island of *Matta*, four leagues in compass, and the city of the holy name of *JESUS*^c. This is seated on a point, in the latitude of ten degrees, almost in the middle of the island, and distant from the isle of *Matta* a musket-shot on the east, and a cannon-shot on the west; where *Magellan* was killed, with his father-in-law, the chief pilot, and Captain *John Serrano*. Between these two lands lies a port, sheltered from all winds, and with two entrances; that is, one from the east, and one from the west; but there are shoals at both. Here *Magellan* found many vessels, of several nations, at anchor; and the king of that place demanding of him the duties for merchandize and anchorage, he excused himself; alleging, the greatness of the *Spanish* monarch, and that ships of war paid none (A). There were, at that time, in *Zebu* three thousand families of warlike people; and in it was afterwards founded the first town of *Spaniards*, with all magistrates of note^d.

In 1598, the king made it a city, sending *F. Peter de Agurto*, of the order of *St. Augustin*, to be the first bishop. It was then permitted to *Zebu* to send ships into *New Spain*,

^c Tour du Monde GEMELLI CARRERI, P. v. l. i. c. 9.

^d CORONEL ARGENSOLA, GEMELLI CARRERI.

(A) In the neighbourhood of *Zebu* there are some small islands, called *Pintados*, from their inhabitants, to whom the *Spaniards* gave the same name, because many of them had their bodies painted, in a very extraordinary manner. These people are blacks; and there are still many of them in the adjacent islands, that are not under subjection to the *Spaniards*. This painting was performed by incision and burning. Some were painted all over, others only on the breast, the hips, the back, or the arms, with a great variety of figures, such as snakes, dragons, or birds of prey. This was the finery of these naked people, a kind of herald's coat, by which their great actions were declared, since all these figures were emblematical, and consequently not impressed till the person who wore them had achieved such enterprises as these figures denoted (34). A strange way, at least to us, of conferring honour, but a sure one amongst

themselves; because, at first sight, they could read upon the body of a person of distinction, how he became so. It is plain, from the number of ships that *Magellan* found here, there was a greater commerce carried on amongst the inhabitants of the *Philippines*, before they were visited by the *Europeans*; and it is to be regretted, that the first *Spanish* discoverers did not leave us more distinct accounts of the state in which they found the countries they discovered, from whence many things might have been known, about which we are now wholly in the dark. One thing, however, is very certain, that, since the settling of the *Europeans* in these parts, the navigation of the natives has rather declined than increased; and even the *Chinese*, who used to visit most of these islands with numerous squadrons, content themselves now with their trade to *Manila*, and their junks are seldom if ever seen in any of the islands to the south (35).

(34) Relac. de las Islas Filipinas.

(35) It appears, from the Travels of Marco Polo, that the *Chinese* were formerly acquainted with the country of *New Guiny*; and it is highly likely, that they were better seamen than, than they are now.

At what time
it was erected
into a bishop's
see; and how
it has since
fallen to de-
cay.

as, at this time, only *Manila* can send two; and, for certain reasons that will be hereafter given, they now content themselves with one. In process of time, as the trade of that island increased, and more especially, from the grant of annual ships, the commerce of *Zebu* gradually sunk; insomuch that the chief town, though it still remains a bishop's see, is long ago become very little better than a village*. There are yet remaining, however, some vestiges of its antient grandeur, such as the cathedral, two or three monasteries, and a triangular stone fort, built for the protection of the harbour, and in which there are still kept two companies of *Spanish* foot. There are likewise in its neighbourhood two villages, which were formerly suburbs to the city; one of these is called *Parion*, where the *Chinese* merchants and artificers formerly dwelt, and in which some still remain; and the other inhabited by *Indians*, who are free from tribute, in consequence of their original agreement with the *Spaniards*, to whom they were the first that submitted, and were of very great use to them, in discovering and subduing the rest of the islands. It has been computed, that there are in *Zebu* about five thousand families, warmly attached to the *Spaniards*, in consequence of their being converted to Christianity. The only kind of grain in this island is what they call *Borona*, inferior not only to our corn, but even to rice; in colour it comes nearest to millet, but is much smaller, and of a different taste*. There is also abundance of that kind of plant called *Abaca*, which, when dressed in the same manner with flax, affords a finer and a coarser kind of thread. Of the former they make cloth, which serves for various uses, and, though not very beautiful, is, however, strong and serviceable; and of the latter they make cordage and cables, which are reported to be excellent, as they are not subject to rot by lying in the water, which is the fault of the black cordage made from the cocoa-trees. They have likewise in this island great quantities of cotton, which they manufacture into very fine quilts; and, with a woof of cocoa-thread, and a warp of cotton, they make a sort of cloth, which serves for many uses. As for more valuable commodities, they have not many; yet some they have, such as, a kind of drug resembling *assa foetida*, wax in great quantities, and very good, with some civet†.

The communi-
cation between
Lima and
Zebu easier
and shorter
than that be-
tween *Aca-*
pulco and
Manila.

BEFORE we quit this island, it is necessary to inform the reader of some particulars, of which he will not meet with any account elsewhere. We find very intelligent writers expressing their amazement, that the *Spaniards*, in their traversing the *Atlantic* ocean from the *Philippines* to *New Spain*, and from *New Spain* to the *Philippines*, should discover so little, and should never be able to find again those islands that were met with in their first voyages. Now the true cause of this may be very easily explained. The commerce between the *Spanish* dominions in *Asia* and *America*, while it remained fixed at *Zebu*, did not lie between that island and *New Spain*, but to *Peru*, the voyage being made from *Calao* to *Zebu*, and from *Zebu* to the same port. This being almost a direct passage, was much easier and shorter than that between *Manila* and *Acapulco*. Ships have come from *Calao* in two months, and have returned thither in three; and hardly any passage was made, without discovering some new islands, either on the south, or on the north, of the equator. In one of these voyages, as some accounts say, in the year 1507, the islands of *Solomon* were discovered, which were reported to be richer than any countries that had been found before that time‡.

Discoveries in
that passage.

THIS induced the licentiate *Castro*, when he was governor of *Peru*, to send a fleet, in 1579, under the command of Don *Alvaro Mendoza* and Don *Pedro Sarmiento*, to complete that discovery. They sailing from the port of *Calao*, eight hundred leagues west, found certain islands, in eleven degrees of south latitude, inhabited by people of a tawny complexion, who had in their huts cloves, ginger and cinnamon. The first island in which they landed they called *Isabella*, where they fitted up a pinnace, with which, and their ship's boat, they discovered eleven great islands, between nine and fifteen degrees of south latitude, all of them rich, well peopled, and abounding with spices, of which they brought back with them a considerable quantity. But Sir *Francis Drake* coming through the *Streights of Magellan* into the *South Seas*, very soon after this, orders came from *Spain*, forbidding any farther search after these islands. However, in 1595, the then viceroy of *Peru* equipped another fleet, or rather squadron, consisting of four sail, under the command of *Alvaro de Mandana*, who, missing the islands of *Solomon*, discovered, between nine and ten degrees of south latitude, several islands, in which, chiefly through their own fault, the *Spaniards* were very roughly handled, lost two of their ships, and the other two, with the greatest difficulty, arrived one of them at *Mindanao*, and the other at *Manila*§. This is a distinct and clear account of the several attempts made to recover these famous islands, and will fully convince the in-

CHURCHILL'S *Voyages*, p. 74. P. CHARLEVOIX *Traité Chronologique du Nouveau Monde*, tom. i. p. 33.

a telligent reader, that the *Spaniards* have been no great gainers by the alteration of their route to the *Philippines* (B). Let us now describe the remaining part of this *Archipelago*.

The islands lying next to *Zebu* are on the north-east, near *Cape Burulaque*, *Bantayan*, a small isle, encompassed by four or five less, in all which there are only three hundred *Indians* that pay tribute; and, for the most part, employ themselves in fishing, and making cotton cloth and hose. Between *Zebu* and the coast of *Ogmach* and *Leyte*, are other islands, called *Camotes*, the chief of which is *Poros*, dependent on *Zebu*. In it the point of *Tanion* stretches out to the island of *Negros*, one hundred leagues in compass, and is separated from it by a small chanel, a league over, but dangerous because of the current. This island extends northward from nine to ten degrees and a half. It is fruitful in rice, in which the inhabitants pay tribute; and it supplies *Zebu*, and other adjacent parts. The mountains are inhabited by blacks with curled hair, who, by reason of their numbers, gave their name to the island, and who live in a kind of brutal liberty, like their forefathers. The land is divided among them, some living on the tops of mountains, others on the sides; but they fight fiercely among themselves, if one party attempts to go into the territory of the other. This happens very often; for it is their custom, that those above can have but one wife, and her they must take by force from them below; and so, on the contrary, those below from those above; consequently, every day there is bloodshed, and some or other killed, commonly with poisoned arrows. These are headed either with iron, flint, bone, or wood hardened in the fire ^b.

At the mouths of the rivers dwell a third sort of blacks, who have no commerce with the other two, and are such enemies to the *Spaniards*, that they give them no quarter. Nevertheless, if the island happens to be invaded by pirates of *Mindanao* or *Xolo*, they run with their arms to defend it; and this done, they retire to the mountains. They behave in this manner, as looking upon themselves to be the old lords of the island. The *Bisays*, 'tis true, as an acknowledgement for having been permitted by them to settle here, supply them with rice, and the blacks requite them with wax. These *Bisays* live in the plain, and they are most numerous on the west side, under the direction of the fathers of the society. In the island there are about three thousand that pay tribute, governed by a Corregidore and a military commander. There grows a great deal of cacao, originally brought to the *Philippines* from *New Spain*, as also much rice, which the mountains produce without watering. The island

^b Tour du Monde, par GEMELLI CARRERI, P. v. l. i. c. 9.

(B) There have been frequent applications made to the court of *Spain*, to open a direct communication through the straits of *Magellan*, between that kingdom and the country of *Chili*, and, at the same time, a direct communication also between *Chili* and the *Philippines*. It has been shewn, that both these voyages might be performed in nine months, whereas the people in the *Philippines* are now sometimes six years before they receive any answer to the memorials they send to *Spain* (36). It has been also shewn, that, by this navigation, the richest commodities of the *East* and *West* Indies might be annually brought to *Spain*, with more ease, greater safety, and beyond comparison higher profit, than she has hitherto derived from her colonies in either *Indies*. But, notwithstanding all this, the *Spanish* ministers have been content to hear the same advice often repeated, without ever doing any thing towards carrying it into practice (37). This has been attributed to two causes. First, the danger and difficulty of passing the straits of *Magellan*; and yet those straits, when they were first discovered, were passed in three weeks (38), and have been very often passed since, with little difficulty, and without any danger. The second is, that another route has been long since settled, and constantly used, and which, according to a maxim that prevails in the *Spanish* councils, ought not to be changed, though they are well enough apprised of the many and great inconveniences that attend it. It may be, however, that there is a third cause, not hitherto suspected, and which, it is very probable, is the true one, as being more weighty, and founded upon much better reasons, than the other two. This may be the sense that the council of the *Indies* have of the truth of these suggestions, and the apprehensions they are under, that, if they should accept this

proposal, and carry it into execution with success, other nations might pursue the same course, the consequences of which might be fatal to their possessions, both in the *East Indies* and in the *West*. That the thing is really very practicable, may be inferred from the general consent of the ablest seamen of all nations, who have considered this point with attention, and more especially those who wrote from experience. A *Dutch* writer long ago observed, that the passage to *Batavia* through the *South Seas*, was, in many respects, preferable to that by the *Cape of Good Hope*. First, because, with all advantages of wind and weather allowed to each, it is the shortest by two months at least. Secondly, because it is attended with infinitely fewer difficulties with respect to winds, which are in all seasons fair through the *South Seas*; whereas by the *Cape of Good Hope*, ships have been fifteen or sixteen months in going to *Java*, nay sometimes nineteen months; whereas, by the *South Seas*, they may proceed to the *Philippines*, which is much farther, in nine months. Thirdly, on account of the healthiness, there being instances in some of those long voyages before-mentioned, of upwards of one hundred and sixty dying out of two hundred; whereas, by the *South Seas*, the voyage to the *Indies* has been performed without the loss of a single man. Fourthly, because very important discoveries may be reasonably hoped one way; whereas none at all can be expected in the other. Yet, in the course of one hundred and fifty years, the *Dutch* have not altered their notions in this respect, or made above one attempt of this kind, though that succeeded perfectly well, in every one of the particulars before-mentioned (39). Our famous seaman *Dampier* has said the same thing (40).

Fuegas, otherwise called *Siquior*, is near this, and also to *Zebu*. Though small, it is inhabited by people of valour, and dreaded by those of *Mindanao* and *Xolo*. The island *Panamao* lies west, on the farthest coast of *Carigara*, and not above a musket-shot from *Leyte*^c. It is sixteen leagues in circumference, the length four, and the breadth proportionable. It is very mountainous, and excellently watered by several rivers, and full of silver and quicksilver mines.

What particulars remain to be mentioned in reference to the Spanish empire in Asia.

THESE are what may be called the constituent parts of the *Spanish* empire in the *East Indies*; for, with regard to the smaller islands, some of which are inhabited, and others not, it would require a volume, to give even a succinct description of them. The inhabitants of each speak a different language; and, in some of the larger islands, where, as we have observed, different nations inhabit, there are of consequence as many languages as there are nations. However, many of these are but dialects, occasioned by a different pronunciation, so that they understand each other, at least in some measure, without making use of interpreters. There are besides, two languages which universally prevail; and the accounts we have of these are more than sufficient to satisfy an intelligent reader, that there must have been a time when these countries were in a better condition, their inhabitants more knowing, and much more polished, than at present^d (C). We have now executed all that we proposed, with regard to the provinces under the jurisdiction of the *Spanish* viceroy of *Manila*. But there are two islands still remaining, of which it is but fit we should say something; because, though they have long ago thrown off the *Spanish* yoke, they are still considered as a part of the *Archipelago* of *St. Lazarus*, and are, beyond all dispute, of as much importance as any of those before-mentioned, that of *Luçon* only excepted; and having done this, we will conclude this part of the subject, and proceed to those points which will best inform the reader of the motives that induced us to enter into such a copious detail of what relates to all these islands, the value of which has been hitherto very little understood.

Of the noble island of Mindanao, which is the most southern of the Archipelago.

MINDANAO is next to *Manila* in point of size. As to its shape, it appears almost triangular, ending in the three famous promontories of *Samboangan*, *Cape St. Augustin*, in six degrees north latitude, and *Cape Suliago*, in ten degrees thirty minutes. Between *Suliago* and the *Cape of St. Augustin*, which lie north and south, is the province of the warlike nation of *Caragas*. Between *Suliago*, which points to the north-east, and *Samboangan*, is the province of *Illigan*, the jurisdiction of *Dapitan*, and the people called *Subanos*. *Samboangan* and *Cape St. Augustin* lie east and west; and the people of them on the one side and the other border upon the provinces of *Bubayen* and *Mindanao*. The circumference is about three hundred leagues; but this island has so many long points running out into the sea, and deep bays, that a man may go across it any-where in a day and a half. It lies south-east of *Manila*, at the distance of two hundred leagues. About it there are many islands, of different sizes. Among those that are inhabited is *Xolo*, thirty leagues distant from *Samboangan*; *Balisan*, divided by a strait of four leagues; *Sanguil*, the peninsula of *Santranguan*, and others^e. *Mindanao* being so far stretched out and so much divided, enjoys, or participates at least of, several climates, and is encompassed by stormy seas, especially on the coast of *Caragas*. That part which is subject to the government of *Samboangan* is most temperate, the winds pleasant, seldom annoyed by storms, and still less by rain. The provinces of *Mindanao*, and *Bubayen*, subject to two *Moorish* kings, are very marshy, and, the plain country especially, in a manner uninhabitable, by reason of

(C) These two languages are, the *Tagala* and the *Bisaya*. The latter of these is coarse, ungrammatical, and current only among the vulgar; whereas the former is not only regular and copious, but extremely elegant and smooth. It consists but of twelve consonants and three vowels. They blend the *E* and the *I*, and the *O* and the *U*. They have characters for the consonants only, and distinguish the vowels by a single point, differently placed (41). The missionaries say, that this language has the dignity of the *Hebrew*, the precision of the *Greek*, the correctness of the *Latin*, and in its sound approaches the softness of the *Italian* (42). The people, in general, are better seamen than soldiers; and had, when the *Europeans* first visited them, many more, and

some of them, which they called *Caracwas*, much larger vessels, than are now in use. With these, though they had not the use of the compass, they made long voyages; that is, through the whole extent of the *Archipelago* (43); and carried on a much larger commerce than they do at present. From whence it is very evident, that, if they were better treated, lived more at their ease, and were encouraged to exercise and exert their abilities, they might be made infinitely more useful subjects, without any danger of revolting: and this the missionaries, more especially the Dominicans, have continually represented (44), sometimes in very strong terms; but hitherto, with very little effect.

(41) Relaciones de las Islas Filipinas. Argensola, Navarette. (42) From a memoir written by an ecclesiastic, who resided in these islands almost twenty years. (43) Combes Historia de las Islas de Mindanao, Iolo y sus adyacentes. (44) Argensola, Navarette. Relaciones de las Islas Filipinas.

- a the gnats^f. There are, throughout the whole extent of this island, about twenty navigable rivers, and above two hundred rivulets. The most remarkable of the former are *Bubayen* and *Butuan*, both flowing from the same spring, but the first runs towards the coast of *Mindanao*, the other towards the north, and falls into the sea, in sight of *Babul* and *Leyte*. The third river, called *Sibuguey*, rises near *Dapitan*, and divides the territory of *Mindanao* from that of *Samboangan*. There are also two lakes here, one called *Mindanao*, which, in that language, signifies a man of a lake, and gives its name to all the country, which is very large, and covered with a sort of herbs they call *Tanson*, that spread themselves over the water. The other, being eight leagues in compass, is on the opposite side of the island, and known by the name of *Malanao*. All the country, except upon the sea-coast, is mountainous; yet abounds in rice, and
- b produces very nourishing roots, as batatas, ubis, gaves, aperes, and others. There are infinite numbers of that sort of palm-trees which are called *Sagu*, of the pith of which, reduced to meal, they make bread and biscuit throughout all the island of *Mindanao*^g, but especially on the coast of *Caragas*, near the river *Butuan* (D).

MINDANAO produces all the sorts of fruit that are to be found in other islands of this *Archipelago*; but the cinnamon is a tree peculiar to this of *Mindanao*, grows on the mountains without any improvement, and has no owner but him that finds it; for this reason, whoever is so lucky as to meet first with such a valuable tree, falls immediately to making his utmost advantage of it; and, with this view, takes off the bark before it is ripe; and so, though at first it be strong, like that of *Ceylon*, yet in a small time, and at farthest in two years, it loses all taste and virtue. It is gathered in twenty-five villages, and about as many rivers, of the coast of *Samboangan*, towards *Dapitan*, on high and craggy mountains, and in one village of the province of *Cagayan*. The inhabitants of *Mindanao* find very good gold by digging deep into the ground; as also in the rivers, making trenches before the floods. There is sulphur enough for all sort of uses, and which may be easily collected in the burning mountains, the oldest of which is *Sanxil*, in the territory of *Mindanao*. In 1640 a high mountain broke out into flames, and so clouded the air, land, and sea, with its ashes, that it looked like the day of judgment. In the sea, between this island and that of *Xolo*, there are very large pearls taken^h.

The cinnamon-tree peculiar to this island, and the reason why it is but of little value.

(D) What we have delivered in the text, is supported by the authority of such writers as attest what they saw; but a distinct and accurate account of *Sagu*, or *Sagou*, for so it is pronounced, makes a large and curious article in natural history. Without pretending to enter into this matter fully, we will endeavour to give the reader competent satisfaction, in as few words as possible. The *Sagu* is one of the most numerous species of palms, grows in most of the *Molucca* islands, as also in the island of *Borneo*, which is held to produce the best. It seems designed by Providence to supply mankind with food, in countries where no kind of grain can be cultivated to any degree of perfection. The soil most proper for it is a low marshy ground, where it rises to the height of twenty-five, and sometimes thirty feet, and is as thick as a man can compass with both his arms. The trunk is smooth, for all the leaves rise from the head. They spring at first upright, and pointed, of the thickness at the bottom of a man's arm; by degrees they open, and decline their points, till they become as long as the tree is high. They are thick and strong, and are employed to cover houses, which they do much better than thatch; and for other uses. On the back of the leaf there are strong sharp prickles, that defend them from being eaten by beasts, and more especially by wild hogs, which feed on them greedily, when, as they grow old, these prickles fall off. As new leaves shoot, the old ones decay. The *Sagu* grows thirty years before it produces fruit; and then, instead of new leaves, there shoots out at the top a firm piece of wood, of the size of a man's arm, from whence are produced flowers and fruit. In the latter, which is of the size of a pigeon's egg, is contained a small nut, of a black colour, and sharp sour taste. It bears but once; after which the tree gradually decays. But there are very few of these trees that are permitted to bear fruit, since it is from the body of the tree they procure that meal which is of so great use. They judge of the

proper time for cutting it down from its leaves, which grow white and dry, and are easily rubbed to powder when the heart of the tree is in the best condition. As soon as it is cut down they bark it, and what is thus taken off is about two fingers thick; then they cut it into pieces of five feet long, and split each of these through the middle. Some say the meal is made from the pith; which others deny, affirming that it comes from the body of the tree; and yet this is no more than a dispute about words, since, in fact, the body of the tree is composed of different substances, that is, of a soft spongy matter intermixed with ligneous fibres. The former is carefully separated from the latter; then mixed, tempered, and rubbed, in water, till it is reduced to a flour, in which form it settles to the bottom of the vessels; and then, the water being poured off, is carefully dried, and becomes fit for use. Of this, while it is fresh, they make various kinds of food, grateful enough to *Indian* palates, though but insipid to *Europeans*, who, notwithstanding, by the help of lemon-juice, sugar, and spices, render it very pleasant. The bread made of *Sagu* is baked between earthen pans, in the form of square tablets, six inches long, four broad, and about a finger thick. What is intended to be kept longer, the *Indians* have a method of graining, and it may then be preserved for many years. The flour of *Sagu* is very light of digestion, nourishing and wholesome, exactly suited to the climate in which it is used, and therefore in those countries there is a vast consumption of it; and the *Dutch* transport great quantities to their remote settlements, where the soldiers make it their principal food. Of late years considerable quantities have been brought to *England* and *Holland*, where experience shews that it is a great restorative, and very fit for weak stomachs, which it strengthens by degrees, and in time recovers the lost appetite, and helps digestion (45).

(45) From the information of a Dutch gentleman who visited these islands, and resided some time in the *Moluccas*.

An account of
the island of
Xolo, its cli-
mate, produce,
and dependen-
cies.

THIRTY leagues south-west of *Mindanao* is the famous island of *Xolo*, or *Gilolo*, governed a by a king of its own. All the ships of *Borneo* touch there, and it may well be called the general mart of all the *Moorish* kingdoms. The air is wholesome and fresh, from the frequent rains falling there, which make the land fruitful in rice. This, as is generally reported, is the only island of all the *Philippines* which breeds elephants; and, as the islanders do not tame them, as the manner is in *Siam* and *Camboya*, they are mightily increased: there are also goats with spotted skins like leopards¹. Among the birds, that which builds a nest like a sparrow, which is boiled, and eaten as a restorative, which bird is called *Salangan*, is the most esteemed. For fruit, it produces the *Durion*; abundance of pepper, which they gather green; and a peculiar sort of fruit called *Of paradise*, and by the *Spaniards*, *The king's fruit*, because b it is found no-where but in his garden. It is as big as a common apple, of a purple colour, and has little white kernels like cloves of garlick inclosed in a thick shell like a piece of leather, and is of a delicious taste. The island of *Basilan* is three leagues from *Mindanao*, and twelve in compass. Being opposite to *Samboangan*, it may be called the garden that furnishes it with plantanes, sugar canes, and other kind of fruit with which it abounds* (E).

Of the several
nations inhabiting these
islands, their
customs, man-
ners, &c.

THERE are five nations in *Mindanao*, which are the *Mindanaos*, *Caragas*, *Lutaos*, *Subanos*, and *Dapitans*. The *Caragas* are very brave, when employed either by sea or land. The *Mindanaos* faithless, lazy, and cruel. The *Lutaos*, a new nation in all the three islands of *Mindanao*, *Xolo*, and *Basilan*, live in houses built on the tops of trees, at the mouths of rivers, which at flood cannot be forded; for *Lutao*, in their language, signifies a man that swims on the water. These men are such enemies to land, that they take no pains in sowing or reaping, c but live the best they can upon fishing, wandering about the seas of *Mindanao*, *Xolo*, and *Basilan*: yet they are cunning traders, and wear turbants, and use the same weapons the *Moors* do, as holding correspondence, and being in amity, with those of *Borneo*. The *Subanos*, that is, dwellers on rivers (for *Suba* signifies a river), are the lowest in esteem of any people in the island, as being base and treacherous in a supreme degree. They never depart from the rivers, where they build upon long timbers, so high, that there is no reaching their dwelling with a pike: they climb up at night by a pole fastened to it for that purpose. They are as it were vassals to the *Lutaos*. The *Dapitans* exceed all the nations before-mentioned for courage and wisdom, and were very assisting to the *Spaniards* in conquering the d islands.¹

The barbarous
highlanders in
Mindanao,
and their un-
accountable
passion for li-
berty.

THE inland part of *Mindanao* is subject to the mountain people, who, fond of sloth and liberty, keep there without any inclination to visit the sea, or maintain themselves by tillage; and, being thus grown wild for want of commerce, give strangers an opportunity of pos- sessing themselves of the forsaken shore and rivers. There are also, besides these nations, in *Mindanao*, some blacks like *Ethiopians*, who own no superior, any more than those on the island, or in the mountains of *Manila*; but live like beasts, conversing amicably with none, and doing harm to all they can reach. They have no settled place of abode, and in the worst of weather have no other shelter than the trees. Their cloaths are such as nature gave them, for they never cover so much as that which ought to be hid. Their weapons are bows and arrows; and they reap no other fruit of their barbarity but an useless e liberty^m.

Of the Mo-
hammedans
in these islands,
and the mean-
ness of their
pretensions to
that religion.

THE generality of the inhabitants of these islands are heathens; but from *Sanxil* to *Samboangan* the people along the coast are *Mohammedans*, more especially in the islands of *Basilan* and *Xolo*, which are the metropolis of that superstition, and the *Mecca* of the *Archipelago*, because the first teacher of it is buried there, of whom the giddy-headed *Casikes* tell a thousand fables. The *Spaniards*, at their coming destroyed his tomb. However, to say no more than the truth, they are generally atheists; and those that have any religion, for-

^m GEMELLI CARRERI, DAMPIER.

(E) Before the *Chinese* corresponded with the *Dutch* at *Batavia*, they had most, if not all their cinnamon from *Manila*, which the *Spaniards* procured by their commerce with *Mindanao*. There is no doubt that, if this spice was properly cultivated, it might be brought to as great perfection there as in *Ceylon*; but the *Moorish* princes are afraid of every thing of this kind, from an apprehension of drawing upon them the *Spaniards* or the *Dutch*, who, by treating them as if they thought they were born only to be their slaves, discourage all improvements; and, by grasping at more than they can manage, lose much of what, without either danger or difficulty, they might

possess (46). It is reported, that in this very island some excellent clove-trees were discovered; of which the king being informed, he ordered them to be plucked up by the roots, giving this remarkable reason for it: *It is better for us to do it than the Dutch* (47). In this he shewed himself a sound politician, preferring the safety of himself and of his subjects to any temporary profit that might have accrued from so valuable a commodity. As for sugar-canes, they were brought into these islands from *America* by the *Spaniards*, where they have long ago thriven so well, that sugar is there at a very low price, and is exceeding good in its kind (48).

(46) Extracted from a *Memoir* of a person who resided many years in the *East Indies*.
Voyages, in Harris's Collection.

(48) *Dictionnaire de Commerce*, vol. ii. col. 891.

(47) Dampier's

- a cerersⁿ (F). The *Mohammedans* know nothing of their superstition besides eating no swine's flesh, being circumcised, and keeping many wives; though they all agree in giving their minds to superstitious omens and auguries upon every accident. They are very temperate, contenting themselves with a little boiled rice, and, where that is not to be had, with roots of trees, without making use of any spice; and this, whatever their condition be, and whether they are rich or poor. The better sort, when they have a deer, goat, or fish, never use any seasoning but salt and water. Their cloaths are plain; for, being enemies to society, every man is his own taylor. One and the same garment serves for breeches, waistcoat, and shirt. By their sides they wear daggers after their fashion, with gilt hilts. Over their breeches they bind about them a piece of their own country stuff, so broad, that it hangs down to their knees; and on their heads they wear a kind of *Moorish* turban^o. The women, in the day-time, wear a sack instead of a petticoat, which at night serves for sheet, blanket, and quilt, upon a very scurvy mat; yet they wear rich bracelets on their arms. Their little wooden houses are covered with mats, the ground is their only seat, the leaves of trees serve them for plates and dishes, the canes for large vessels, and the cocoa-nuts for drinking-cups. As to manners they are more barbarous than other *Mohammedans*; for, if the father lays out any money for his son, or ransoms him out of slavery, he keeps him as his slave; and, which is more unnatural, the son does the same by his father. For any little kindness they do, they deprive him that receives it of his liberty; and their laws, for the crime of one man, make slaves of all the kindred. They do much wrong to strangers that deal with them, and the purse pays for all. They abhor theft: incest in the first degree is punished with death, that is, by casting the criminal into the sea in a sack. Law-suits are soon decided without many formalities, either in civil or criminal cases. The king of *Xolo*, for the administration of justice, has a prime minister whom they call *Zarabandal*, which is the supreme honour in that court. The great ones oppress the poor, because the king has not a proper degree of power^p. There are degrees of nobility, as of *Tuam*, that is, great lord; *Orancayas*, or rich men, lords of vassals. In *Mindanao* the princes of the blood royal are called *Caciles*, or as pronounced, *Cachiles*, the same style that is used in the *Moluccas*^q. In time of war these people have shewn great courage, both by land and sea, against the *Spaniards*, whom they have sometimes grievously distressed by their piracies, and repeated descents upon their coasts; to which they could never have been exposed, if, as they have often been advised, their governors would have built and maintained a small squadron of galleys, which might have been done at a moderate expence^r.
- b down to their knees; and on their heads they wear a kind of *Moorish* turban^o. The women, in the day-time, wear a sack instead of a petticoat, which at night serves for sheet, blanket, and quilt, upon a very scurvy mat; yet they wear rich bracelets on their arms. Their little wooden houses are covered with mats, the ground is their only seat, the leaves of trees serve them for plates and dishes, the canes for large vessels, and the cocoa-nuts for drinking-cups. As to manners they are more barbarous than other *Mohammedans*; for, if the father lays out any money for his son, or ransoms him out of slavery, he keeps him as his slave; and, which is more unnatural, the son does the same by his father. For any little kindness they do, they deprive him that receives it of his liberty; and their laws, for the crime of one man, make slaves of all the kindred. They do much wrong to strangers that deal with them, and the purse pays for all. They abhor theft: incest in the first degree is punished with death, that is, by casting the criminal into the sea in a sack. A GREAT part of *Mindanao* was formerly subject to his Catholic Majesty, which, however, cost a great deal of trouble in reducing, and was with much difficulty kept. Afterwards they made peace with the *Moorish* sultan, which gave them an opportunity of lessening their gar-risons, and depending rather upon the zeal of their missionaries in converting the *Indians*, who, when they became Christians, attached themselves firmly to the *Spanish* government; and, as they lie at a distance from *Manila*, are less exposed to oppression^s. The city of *Mindanao*, standing upon a river of the same name, and built upon high posts, like the capital of the kingdom of *Siam*, is a place of considerable trade, and where there are large quantities of gold stirring. Captain *Dampier* informs us, that, when he was there, the sultan and his subjects manifested a great liking to the *English*, and would willingly have allowed them a settlement; which, in his judgment, was a thing very practicable, provided ships were sent thither through the south seas; by which course, if they left *England* in *August*, they might arrive there in *February*. The reasons he offers in support of his opinion, that an advantageous

Mindanao originally dependent on the Spanish government in the Philippines, and the people very willing to receive any other European nation.

(F) This we say from the authority of the *Spanish* writers, and the judicious reader will understand it in its true sense. It is certain that most of the missionaries give us very dark and absurd accounts of the religious opinions of the natives; of which, in all the eastern countries, the people make a great secret, and that from a very plain and good reason, that what they esteem sacred may not be exposed to the ridicule of those who are of a contrary opinion. However, if this was a proper place, we could, from the inquiries of a learned and judicious writer (49), give a large detail of the religious notions of these people, which would effectually

clear them from the imputation of atheism, but would at the same time prove that they are wonderfully weak and superstitious. Their priests did indeed pretend to conferences with evil spirits, and instituted a multitude of silly sacrifices, which made them intentionally force-rers, though in reality they were groundless delusions, and meer acts of enthusiastic folly. The *Spaniards*, in this respect, have been very useful to them; for, since the introduction of the Christian religion amongst them, even those who do not embrace it have improved their sentiments, and in a great measure not only disuse, but despise, their former superstitions.

settlement might be fixed here, are very plausible, being taken chiefly from the advantageous a situation of the place, the rich commodities with which it abounds, and the trade that might be opened with the neighbouring countries ' (G). But when, on the other hand, we consider the rights of our exclusive companies, which are utterly irreconcilable to such a project, our constant complaisance to the powers that might take offence at our making such a settlement, and the decay of that enterprising spirit which can alone support undertakings of this kind, there is no great reason to suspect that any attempt of this sort will be made, at least in our times.

Not impossible, but some of the new projects for an East India trade may extend to these islands.

YET if, amongst the variety of projects formed by those powers that are endeavouring to raise a naval strength, they should ever fall upon a scheme for traversing the south seas, and entering this way into the *Indies* (which is far enough from being improbable), we shall b quickly be convinced, that the politics of the *Spaniards*, *English*, and *Dutch*, in neglecting and discouraging that route, are but indifferently founded, and that the profits of an *East India* trade, carried on this way, would very much surpass those that arise from that which is now in use. These may at present be considered as meer speculations; but the time may, and certainly will come, when posterity shall be satisfied that the *Indies* are but half discovered; and that countries may still be found, abounding in as valuable commodities, as any that have been hitherto brought to *Europe*, which the inhabitants would be glad to part with for our manufactures, and which commerce would be free from that popular objection of carrying out silver; though if this could be accomplished, there is little reason to believe that it would become more plentiful in *Europe*, because this would lessen the demand, and consequently we c should not receive so much from *America* ".

' DAMPIER's Voyages, in Harris's Collection, as below. p. 1422.

" See PURCHAS's Pilgrims, vol. iv.

(G) At the time Captain *William Dampier* was here, which was in *July* 1686, he was on board a buccaneer vessel commanded by Captain *Swan*; the account he gives of the island and the city, which, as we have observed in the text, have both the same name, is conceived in the following terms (50): " Some of the old people " of both sexes can speak *Spanish*, because the *Spaniards* " had formerly divers forts in this island; and would " without question have brought it under subjection, had " not the fear they were in of being attacked by the " *Chinese* at *Manila* obliged them to withdraw their " troops from thence; which opportunity the present " sultan's father laid hold on to make himself master of " their forts, and to expel them from the isle. But at " this time, as they are most afraid of the *Dutch*, so they " have often invited the *English* to make a settlement " there, believing them not so incroaching as either of " the before-mentioned nations. The chief trades in " this city are goldsmiths, blacksmiths, carpenters, and " shipwrights, for they build good ships both for trade " and war. Their chief commodities exported are gold, " bees-wax, and tobacco. The two first they purchase " from the mountaineers, and the last grows all over " the isle in vast plenty. These they exchange for calicoes, muslins, and *China* silks. The *Mindanao* tobacco is reckoned not at all inferior to that of *Manila*; " yet you may buy ten or twelve pounds of it for a rial." What he says as to an *English* establishment runs thus in his own words, " *Raja Laut*, and one of the sultan's " sons, came aboard us, and demanded, in *Spanish*, who

" we were; and being told that we were *English*, they " asked whether we were come to settle among them, of " which they had had some promise before, and were " now in hopes to see it effected, and to serve them for " a protection against the *Dutch*, whom they very much " dreaded. Truly, had we considered the matter, it " would have been much for our advantage to have done " so, considering the commodious situation of the isle " of *Mindanao* betwixt the *Spice Islands*; the three isles " of *Macangis*, abounding in spice and cloves, being " scarce twenty leagues hence and the *Philippines*; " neither did we want any thing requisite for such a settlement, being provided with all sorts of artificers, " as carpenters, bricklayers, shoemakers, tailors, &c. " as also with convenient tools, arms, guns great and " small, and ammunition sufficient for such a beginning: " and, notwithstanding the great distance of this island " from *England*, we needed not have been without hopes " of reasonable supplies thence, provided the ships set " out the latter end of *August*, and, passing round *Terra del Fuego*, stretched over towards *Mindanao*; or else " they might coast down the *American* shore as far as " it was found requisite, and then direct their course " for this isle, to avoid the *Dutch* settlements, and to " have the advantage of the east trade wind, after they " were past *Terra del Fuego*; by which means this voyage might be performed in six or seven, which, passing " thither by the *Cape of Good Hope*, would at least require " eight or nine months."

S E C T. VI.

The peculiar circumstances of the Spanish viceroy in the Philippines, and the singular policy by which a check is put on his almost boundless authority, and how this has sometimes operated. The state of the commerce between Spanish Asia and Spanish America; the objections raised against this commerce, and the regulations that have been devised, in order to render it more suitable to the public interest.

- a **A**S we have now described the principal islands in the possession of the *Spaniards*, we will next examine the general state of things, and shew of how great worth and consequence the *Philippines* are. The governor-general, in point of rank, is at least equal, if not superior, to the viceroy of the *Indies*. His salary, in that capacity, is upwards of five thousand pieces of eight *per annum*, which, together with his appointments as president of the royal audience, or supreme court of justice, and commander in chief of the forces, make up, in the whole, thirteen thousand pieces of eight; which, however, is but an inconsiderable part of his income^v. His power is almost without bounds, except such as are assigned by his own discretion. He has all military preferments in his gift; disposes of most of the civil employments when they become vacant; has the power of making twenty-two alcaides, or governors of provinces; puts in a governor of the *Marianne* islands, upon a demise, till his catholic majesty's pleasure is known; and names the general (so the chief officer on board the annual ship is called), which being a post worth fifty thousand pieces of eight, he does not bestow it, or indeed any thing else, for nothing^x. All the *encomiendas*, when they fall, are in his gift: he makes the *Indians* captains, majors, and colonels, in their militia; of which titles as they are very fond, so they are not unpolite to such a degree as not to express their gratitude properly to him from whom they received these honours. In fine, he has very little less than sovereign authority, with a prodigious revenue; and all this he enjoys for eight years without controul. But, as there is no condition in this life totally free from inconvenience, so there is one unlucky circumstance that attends this high office, and which renders it the less desirable: the *Spanish* court, considering that he is but a man, that power is apt to corrupt, and that the desire of wealth is a strong temptation, leave him, when he goes out of his government, in some measure, at the mercy of the people^y (H).
- b
- c
- d
- WHEN his commission is superseded, he cannot quit the island before his conduct has stood the test of a rigorous examination. His successor is commonly appointed his judge by a special commission; and, public notice having been given through all the islands, the people in general are allowed sixty days to come and make their complaints, and are allowed thirty more to produce their proofs. In some matters of a high and extraordinary nature, the judge is only at liberty to examine and record the evidence, which, together with his opinion, he transmits home to the council of the *Indies*; but, in things of smaller moment, he pronounces judgment^z; and this consists only of two parts, restitution to the person injured, and a fine

The extent of the Spanish governor's authority, and the vast emoluments arising from his office.

Severe trial to which he is exposed before he can quit the Philippines.

^z NAVA-

(H) It was a custom amongst the antient *Egyptians*, that, before their kings were interred, the priests went out, and made a long discourse to the people of the wisdom, piety, and virtues of the prince deceased; which if they approved and applauded, the rest of the funeral was performed with all imaginable splendor and magnificence: but, if the people testified their dislike of the priest's panegyric, and, instead of commendations, uttered complaints, he broke off in the midst of his discourse; there were no further thoughts of a public spectacle; but the body, being privately carried out, was interred with all the silence and secrecy imaginable (51). The same custom, as the Scriptures shew, obtained among the people of *Judea*; so that, according to the manner in which the monarch discharged his office, he was either privately interred, or his body, with much magnificence, deposited in the royal sepulchre of *David* (52). The state of *Ve-*

nice practises the like method upon the demise of a doge, the whole series of his conduct being strictly examined, and the funeral honours proportioned to the result of that inquiry (53). In the present case, it is highly probable that this examination was instituted to prevent the carrying away with him that fortune which the governor might acquire by oppression; and, from the consideration of his being obliged to restore, to deter him from making a bad use of his power. In case of his death, his conduct undergoes the like examination; and the first member of the royal audience, who succeeds in the administration till a new governor is appointed, is subjected to the like inquiry upon the determination of his authority; only he is not obliged to remain in the island till his trial is over, but, upon appointing an attorney, and giving security to abide the decision of the court, he is permitted to embark for *New Spain*, if he thinks fit (54).

to the king (I). In former times, this inquisition was very much dreaded; for, if the accusations were many and weighty, the governor was sent to prison; and there has been an instance of one that lay there five years; and others have died of the fright^a. Of late, it is said, a present of an hundred thousand pieces of eight to the successor has been found to furnish an effectual answer to most accusations; which has so provoked the people, that now-and-then they have taken the affair into their own hands, without waiting for the judge, which, tho' it be not a very justifiable action, is however a good precedent; and teaches governors that it is dangerous to forget their duty, for fear those who suffer by it should follow their example, and forget their obedience. Thus, as in most other cases, an extreme mischief produces its own cure.

Insurrection, in which the governor and his son were both put to death by the people.

AN instance of this kind happened in 1719, when the viceroy who then governed, after going as far in oppression as any of his predecessors, bethought himself of a new expedient, which was, to prosecute the merchants for fraudulent entries; and that he might not do things by halves, he not only suborned witnesses, but erected a court of his own creatures, who, he was sure, would believe them^b. So many were suddenly undone, that all the rest of the traders resolved to get out of his reach; and, having deposited their money in several convents, shipped themselves for different parts of the *Indies* till his time should be expired. But the governor went on with his prosecutions; and having condemned the absent merchants in what sums he pleased, demanded their effects from the convents, threatening, in case of refusal, to take them by force. Upon this the archbishop of *Manila*, attended by all his clergy, went to the palace, and expostulated with the viceroy; telling him in plain terms, that his own avarice was the sole cause of these disorders; and that he flattered himself in vain with impunity in case he violated the immunities of the church, which were originally intended, and in the present case were actually employed, for the public good. The governor, deaf to this good advice, ordered them immediately to depart; which they did. But an *Augustine* friar, provoked at the usage the archbishop had met with, and perceiving the people in the streets well armed, took a large silver crucifix, laid it upon his left shoulder, and bid all true catholics follow him. Seeing himself well attended, he returned again to the palace, where the governor, tho' he had but few persons about him, had the imprudence to order them to fire; which so irritated the people, that they presently stormed the place, and killed him upon the spot. His son, on the first news of the tumult, marched with the garrison from the citadel to his relief, and the people advanced to receive him. Their standard-bearer made him a short speech, in which he told him, that they were good subjects of his catholic majesty, and that they had punished one who was not so; that, with respect to him, the people of *Manila* had no ground of complaint, and that therefore he would do well to return to his post: but he, persisting in his resolution to revenge his father's death, met his own, the soldiers deserting him, and retiring back to the fortress. Upon the arrival of the new governor, all things were brought to a strict examination; the merchants were declared innocent, and invited to return; and, out of a million and a half of pieces of eight that were found in the deceased governor's coffers, full restitution made to such as had been wronged. On the other hand, there have been governors who have acted with such integrity as to be continued in this go-^f

^a D. F. NAVARETTE *Tratados historicos de la Monarchia de China*, l. vi. c. 4. of the East Indies, vol. ii. p. 293.

^b HAMILTON'S Account

(I) Amongst the governors of the *Philippines*, who, by a tyrannical abuse of their power, have suffered severely by this trial, one of the most remarkable was Don *Sebastian Hurtado de Corcuera*, who had the supreme power there in 1646. He undertook several great enterprises; such as the reduction of the islands of *Mindanao* and *Xolo*, in which he met with no great success: he quarrelled with the archbishop of *Manila*, and banished him the island: he was more arbitrary in all respects than any of his predecessors, and is reported to have been the first inventor of that tax or imposition called the *quandalas* (55). This consists in valuing the rice or corn upon the estate of an *Indian*, and ordering him to bring it into the public magazines, for the king's use, at a low price, to be paid nobody knows when. These, one would think, were hardships enough, and yet they are not the greatest with which this tax is attended; for very often those who assess the grounds suppose, that they will produce more than they really can, and then the owner is to purchase the rest with ready money. All these things made him very odious, so that his successor

kept him in prison five years; but at last he was sent home to *Spain*, where he was acquitted by the council of the *Indies*. The people of *Manila* said they had three sufficient witnesses against him; the squadron lost on the *Marianne* islands; the warehouse of rich effects burnt at *Acapulco* by lightning; the treasures that were seized belonging to him at *Burgos*; each of which was more than he could have got honestly in his government, and yet he had enough left to purchase friends and a good estate (56). His successor Don *Jaques Faxardo Chancón*, who had imprisoned him, was in his turn confined in the castle of *St. James* almost as long; and his successor Don *Saviniano Manriquez de Lara* was so terrified by the violence with which the people prosecuted him, that he could not help inquiring every moment of the annual ship on board which he was embarked, whether it was possible they should be driven back to *Manila*, which he dreaded more than death, and shewed the most extravagant transports of joy on being told they must absolutely go to *New Spain*, or to the bottom (57).

(55) D. F. Navarette *Tratados historicos de la monarchia de China*, l. vi. cap. 4.

(56) Colonel. D. F. Navarette *Tratados historicos de la monarchia de China*, l. vi. cap. 4. (57) Gemelli Carreri *Tour du Monde*, P. v. l. i. cap. 5.

a government after the first term was expired, and this notwithstanding seventy thousand pieces of eight had been paid into the royal treasury by the person nominated to succeed them; which nomination, at the request of the people of *Manila*, was recalled, and the money paid back. This governor, in his first term, discharged all the debts due to the *Indians* honourably, defrayed the public expences out of the stated revenue, paid in a balance to the public treasury of four hundred thousand pieces of eight, and raised the annual income more than one-fourth part of that sum, with the blessings of the people; and yet he saved an immense fortune by a decent frugality, a great part of which he directed to be laid out, by his will, in useful charities ^c (K).

It is very clear from this account, that experience, as well as reason, demonstrates these islands are very capable of producing more than enough to defray the expence of keeping them; and yet it is generally agreed, that the public revenue does not discharge above two-thirds of the annual expence. The remainder, which amounts to about two hundred and fifty thousand pieces of eight, is every year sent in silver from *Mexico*; which has been all along complained of as a most heavy grievance, because, as the *Spaniards* will have it, this silver is never seen again: but some very wise men believe, that the governors and other great officers transport at least an equivalent in gold and jewels, of which a great deal goes by the way of *Mexico*, and a great deal finds its way to *Spain* by some other route. This leads us to speak of the commerce of these islands, which, though nothing near so great as it might be, yet is very considerable, since the *European* and other inhabitants have between four and five hundred vessels of different sizes, with which they trade, amongst the islands, to several parts of the continent of *India*, to the *Portuguese* settlement at *Macao* in *China*, and elsewhere ^d. Besides this, *Manila* is a kind of magazine of *East* and *West* *India* commodities; and at the same time is, in some degree, a free port, where the ships of all nations, except the *Dutch*, are welcome. The *English* trade thither either under *Portuguese* colours, or the colours of some *Indian* nation; and of late the *Danes* have come thither in the same manner. While the inhabitants of *Goa* were able to carry on any trade, they sent abundance of ships thither, though there are still many that carry *Portuguese* colours, yet most of them belong to other nations; and those that actually come from *Goa* are not freighted by the *Portuguese*, but the *Canarins*; so low is that nation fallen through luxury and indolence, who, while they had courage and industry, were masters of the *Indies* ^e! A shrewd lesson this to such as esteem themselves so in these times.

As to the commodities of the *Philippines*, they have not many fit for foreign trade: what they have are, gold, but in no great quantity; civet, excellent in its kind, and of which they have a great deal; deer-skins, drugs, dyeing woods, wax, honey, and provisions. Besides these, they have several sorts of coarse and strong cloths, and other manufactures, made by the *Indians*; but what chiefly attracts the foreigners are the commodities and manufactures of *China*; such as wrought and raw silks, gold and silver tissues, rich cabinets, and other lacquered wares, with a numberless variety of other curiosities, brought thither by that ingenious and industrious nation, who though they are without doubt the principal gainers by this traffick, yet it is impossible it should be carried on at *Manila* without considerable profit to the inhabitants, who are vastly increased within these few years, and who, if they were free from some restraints, and affairs were administered with more regard to public than to private advantage, might be in far better circumstances than they are, more especially in times of peace, though even in war they are not often disturbed, and are no longer in any danger of being attacked or invaded in their own islands ^f. But, after all, it is the commerce between these islands and *New Spain* that is principally to be considered, because this renders them of such consequence to his catholic majesty, preserves the trade with *China*, furnishes honourable and beneficial employments to men of great birth and small fortunes; and, which is of the greatest consequence of all, defends the *South Seas*, and the *Spanish* dominions that lie along the coasts of them, from being exposed to any danger on this side, to which, if these islands were possessed by any other nation, they would be infallibly exposed; and therefore those ministers, who have been for depressing the inhabitants of the *Philippines*, and of which the race is not extinct at this day, are either not well acquainted with the importance of these countries, and the vast

^c D. F. NAVARETTE *Tratados historicos de la Monarchia de la China*, l. vi. ^d *Relac. de las Islas Filipinas*, NAVARETTE, GEMELLI CARRERI. ^e *Dictionnaire universel de Commerce*, tom. ii. col. 889. ^f GEMELLI CARRERI, *Dictionnaire de Commerce*, HAMILTON'S *Account of the East Indies*.

(K) The name of this excellent governor was Don *Fausto Cruzat y Gongora*, knight of the order of St. *Jago*, descended from the ancient kings of *Navarre*. He did not either court the people, or fear them; and they, on the contrary, both loved and feared him more than any of his predecessors. In one respect only he was unfortunate, which was, that two galleons were lost during his government; by which the inhabitants of *Manila* were very much impoverished (58).

advantages that might be derived from them, or are carried away by prejudices that are the result of narrow and partial views ^a.

Their trade, when first settled, not limited in any respect, tho' it was more considerable than now.

We have observed, that, when these islands were first settled, the seat of government was at *Zebu*, from whence the commerce was carried on to *Calao*, which is the port of *Lima*, and was very different in many respects from what it afterwards became; for in those early days the natives readily employed themselves in searching for gold, of which the *Spaniards* had much greater quantities than in succeeding times, because very probably they used them better: they had also no small share in the spice trade; so that the cargoes they sent to *Peru* were very acceptable. After the conquest of *Luçon*, and the building the city of *Manila*, when the *Chinese* trade began, in 1572, it was found requisite to make various alterations; for the voyage from thence to *Calao* proved very tedious and troublesome, and therefore the course ^b was changed; and, because the vessels were obliged to steer east-north-east to have the benefit of a proper wind, the port of *Acapulco* was fixed upon, as in many respects the most proper for this correspondence, by which the voyage to *America* was shortened by near one-half ^a. The trade, however, remained perfectly free and open, as it had been from the beginning, by which the new colony flourished extremely for about thirty years, the fleet from *Peru* coming constantly to *Acapulco* pretty near the time that the galleons arrived from *Manila*, in order to take their share of the commodities that they brought; and thus the mutual intercourse between the *Spanish* subjects in the *East* and *West Indies* was carried on to the general satisfaction of all parties, notwithstanding that the returns to *Manila* were chiefly made in silver, and that to a much greater amount than they are at this time ^c (L).

Looked on as prejudicial to New Spain, and on that account put under restrictions.

BUT, about the beginning of the seventeenth century, his catholic majesty's ministers in *Old* and *New Spain* fell into great apprehensions of the consequences of the *Manila* trade, which, they believed, tended to the impoverishment of both those countries, and to the enriching chiefly of the *Chinese*; insomuch that it was commonly said at *Mexico*, that the emperor of *China* might be able to build a palace with the bars of silver transported from that country. Yet the true cause of the sending such immense sums to the *Philippines* arose, at least in a great measure, from a thing of quite another nature: *Philip* the second, being master of the *Portuguese East Indies*, was very desirous of preserving the *Spice Islands*, the loss of which, it was very justly foreseen, would draw after it that of the *Portuguese* dominions in those parts; and therefore the *Moluccas* were put under the protection of the *Philippines*, but with this ^d unlucky circumstance, that the *Portuguese* drew from them all their spice to maintain their *India* trade, while the whole weight of the war lay upon the *Philippines*. This increased the annual expence to near eight hundred and fifty thousand pieces of eight, while the public income did not much exceed two hundred thousand ^a.

This occasions various remonstrances on both sides to the court of Spain.

BUT, notwithstanding all this was over and over remonstrated, the clamour against these islands grew so strong, that, in 1604, the trade was limited, that is to say, the people of *Manila* were allowed to ship goods to the value of two hundred and fifty thousand pieces of eight, and were to carry back no more than five hundred thousand. Some time after the commerce between *Peru* and *Mexico* was interrupted upon the same principles; and, as we have before

(L) It was within this period that the *Manila* ship was taken by captain *Cavendish*, with effects to an immense value; and considering that the annual allowance for the protection of the *Moluccas* amounted to upwards of six hundred thousand pieces of eight, the sums that were then transported from *New Spain* must have been near double what they are now; and yet it was for want of sufficient remittances that the *Spaniards* were obliged to abandon the defence of those islands, by which they fell into the hands of the *Dutch*, who owe the establishment of their *East India* company, and the immense profits that have resulted therefrom, to the wealth that immediately accrued from the valuable cargoes they brought from thence (59). A *Spanish* historian ascribes this to queen *Elizabeth*, who, as he says, persuaded the *Dutch*, by her ministers, to attempt the conquest of the *Moluccas*, as the most effectual means of weakening the common enemy (60). It is, however, infinitely more probable that the *Dutch* undertook this of themselves, in pursuit of

their own interest, and in emulation of what *Drake* and *Cavendish* had already performed; the latter coming home with a complete suit of silk sails, made out of the rich goods he took in the *Manila* ship, though he burnt in her five hundred tons of merchandize, and took out only the most valuable, with one hundred seventy-two thousand pezoës of gold, which was in those days accounted an immense treasure (61). He afterwards sailed to the *Philippines*, remained some days at the island of *Capul*, and there hanged the *Spanish* pilot, by whom his ship had been navigated from *Acapulco*, for writing a letter to excite his countrymen to come and attack them; setting forth the weakness of their condition, and with how much ease they might be taken (62). This voyage it was that furnished the *Dutch* with some of the best pilots in their service; and from thence, very likely, the *Spaniards* conceived that queen *Elizabeth*, to whom they willingly ascribed all the mischiefs they met with, put the *Dutch* upon sending squadrons into the *East Indies*.

(62) Argensola Hakluyt's Voyages,

remarked,

- a remarked, there wanted not some who were for pushing things to the utmost, and abandoning the *Philippines* intirely, in hopes that this would have occasioned sending more silver to *Europe*; a thing that would certainly have facilitated the ambitious views of the court of *Madrid*, which had embarrassed her with all her neighbours. We have already shewn how this stroke was prevented; and it will be sufficient for our purpose here to observe, that, for the next thirty years, there was nothing but uneasiness and complaints, references to the councils of the *Indies*, and such-like, followed by all the bad consequences that usually attend such litigious controversies; some insisting on the necessity of further restrictions; and others alleging, that the continuance even of those was more than sufficient to prove the utter ruin of the *Philippines*, where, however, the people were by this time doubled; and tho' few or none of the merchants were rich, yet they had wherewithal to subsist, and carry on trade, which they would have also extended, if they had not been with-held by their governors, in obedience to the instructions that from time to time they received from the ministers at *Madrid*; to whom, however, such as were really concerned for the welfare of the *Spanish* nation, where-ever settled, made repeated applications for some alterations, or that, at least, the commodities of the growth of those islands, and the manufactures of their inhabitants, might be exported without restriction ¹ (M).
- b

WHAT informations we have with respect to the issue of these disputes, are very far from being explicit or distinct for the last hundred years. All we know with certainty is, that the inhabitants of *Manila* have been long in possession of a right to send two galleons to *Acapulco*, for each of which they pay to the king seventy-five thousand pieces of eight. Of these one ought to be a ship of trade, and the other of force; but, to save expence, they send one very large ship, which they croud with goods and people to such a degree, that her lower tier of guns can never be used in her passage to *Acapulco*, till, by the consumption of provision, they are at liberty to raise them out of the hold, when they draw near the coast of *America*. These great ships are built at *Bagatao*, not far from *Manila*, where there is a fine arsenal, and all other conveniencies. The timber they make use of is excellent; their sails and cordage not inferior to it; and these, and every thing else that are used about it, are of their own produce, except iron, which comes from *China*, and is not very dear ^m. These ships are of very different sizes, from twelve hundred to two thousand tons; but, of whatever size the vessel be, the merchandize ought to consist of fifteen hundred equal bales, a great proportion of which belongs to the convents, that is to say, they have a right to send such a number of these bales, which they commonly sell to the merchants; and, in case they want money to provide a cargo, the convent furnishes them with that too upon bottomry. But, in all this matter there is prodigious corruption; for, instead of fifteen hundred, the ship often carries two thousand, and even two thousand five hundred bales, and, notwithstanding the magistrates and inspectors come on board, and clear the ship of these supernumerary bales, yet, in her passage through the streights of *Manila*, they are all put on board again, and, to make room for them, they break their water-jars, and scarce leave the room necessary for working the

The cargo of the annual ship at length enlarged to six hundred thousand pieces of eight.

¹ All these particulars are taken from the memorials from time to time presented to the Spanish court. m D.
F. NAVARETTE *Tratados historicos de la Monarchia de China*, l. vi. c. 31.

(M) The principles upon which these memorials from the agents for the *Philippines* are founded, regard every nation that has plantations, as well as *Spain*. In them it is laid down, that the king's maxims, and those of his ministers, are diametrically opposite; so that it is impossible to carry the point on one side but at the expence of the other: that the king valued all his plantations from a supposition that they contributed to extend the profession of the Gospel, to increase the number of his subjects, and to augment his power, by spreading his authority over nations formerly unknown to the rest of mankind: that the views of ministers were to provide for such as were sent governors, admirals, or judges, and to find their account in providing for them; that these men minded nothing but getting a great and a rapid fortune; that, in order to this, it was necessary to make the people slaves, and prevent to the utmost their either knowing or pursuing their own interest; that, having by such means answered their end abroad, they were bound, in case they returned, to preach up this false doctrine too, and were often so lucky to have that taken for sage experience, which was in reality hardened impenitence. They insisted, that the laws and declarations made by

the kings of *Spain*, from time to time, fully proved the truth of what they advanced; as, on the other hand, the conduct of the governors and great officers, with the complaints that were continually transmitted, afforded sufficient evidence as to the latter part of their doctrine. To all this they added, that the specious pretence of consulting the interest of the crown, was only an impudent attempt to colour tyranny and oppression, exercised by subjects for their private advantage, with the lustre of royal authority, which it was apparently calculated to destroy; since a viceroy, behaving like a tyrant, is guilty of the foulest species of treason, as not only acting against his master by breaking his laws, but traducing likewise his character, by presuming to do this when considered as his master's representative: that slavish tenures, high taxes, severe laws, standing troops, and a confined trade, might be fit instruments for ambitious and avaricious men, who meant to prey upon their fellow-subjects; but that rational liberty, mild laws, light impositions, a military spirit in the people, and all imaginable encouragement to industry, was the way to render a country populous, the people rich and happy, and their monarch great and glorious (63).

(63) D. Hieronimo de Banuelos y Carillo, Coronel, Gran y Montfalcon, Navarrete, &c.

ship^a. This is the true reason that they are so long before they get clear of the land, and a run the hazard of so many dangerous delays in their passage from *Manila* to the *Embocadero* of *St. Bernard*, which takes up sometimes five, sometimes six weeks, or even two months (N).

What the cargo consists in, the manner in which the ship is manned, and the vast profits of the voyage.

WITH respect to the cargo, it consists in part of the commodities and manufactures of the *Philippines*, the latter being very convenient for the wear of the meaner sort of people in *America*, as they are, though coarse, both lasting and cheap. But still the bulk of the cargo consists in foreign commodities, such as china, wrought and raw silks in prodigious quantities, of which we may form some computation from the number of stockings that are sent, of which there are commonly fifty thousand pair. Piece goods are another considerable article; to which if we add spices, and large quantities of goldsmiths work and toys, the reader will be pretty well informed of the contents of an outward-bound ship. She is accounted the king's ship from the very moment that she is put in commission, and she is manned and officered accordingly. The commander in chief has the lofty title of general, and has a captain under him, who makes forty thousand pieces of eight by the voyage; the pilot makes about twenty thousand, and each of his mates about half that sum. Those that go in quality of factors have nine *per cent.* upon the goods they sell; and every common seaman receives three hundred and fifty pieces of eight for his voyage out and home, which is performed within a year; but then he has only seventy-five paid him when he embarks at *Cavité*, and the other two hundred and seventy-five when he returns; which is a very wise provision, since otherwise their homeward-bound ships would be but meanly provided. The whole number of persons, passengers included, on board one of these ships, is from three hundred and fifty to six hundred; and, notwithstanding they are so many, they might in all respects be very well accommodated, if they would set any bounds to their avarice, and be content to send this vessel with a reasonable lading: and there are many of opinion that it would answer their purpose better if they sent two vessels, as they did formerly; because so unwieldy a ship is not only subject to many inconveniencies, but is also often in danger; whereas, if she was of a moderate size, there would be no hazard at all^o. But it has been found a vain thing to preach to men who are wholly governed by their passions; who desire to be rich at once; and who are content to expose themselves to the greatest miseries, in hopes of obtaining wherewithal to live voluptuously the rest of their days; in which, however, they are often deceived.

^o D. F. NAVARETTE *Tratados historicos de*

(N) One of the largest and best accounts we have of the passage through the straits of *Manila* is that given us by Dr. Gemelli; from whence it appears, that though the ship, on which he was embarked, sailed from the port of *Cavité* on *Friday* the twenty ninth of *June*, yet it was *Thursday* the ninth of *August* before they were clear of the land; that is, forty-two days in the whole. The latter part of his journal is worthy of the reader's notice (64): "There is no getting out at the *Embocadero*, or mouth of the chanel, where the currents are always impetuous, without a wind that is stronger than they. The *Embocadero*, or freight, is eight leagues in length, and four or five, and in some places six, over. It is inclosed, like the court or yard of a house, on one side, with the coast of the island of *Manila*; by the islands of *Boreas*, *Ticao*, and *Masbate*; by the six little

" islands *de los Narayos*, or of the orange-trees, which are desert; by the fruitful island of *Capul*, by the Indians called *Awa*; by the *Alupores*; and, lastly, by the west coast of *Palapa*: and, on the other, by the island of *Maripipi*, inhabited by *Talaxians*, *Tagapola*, *Mongol*, *Kamanda*, and *Limbanguayan*, which, all together, render the passage towards *America* very difficult, what way soever a man goes." It is from his account that we collect much of this delay is owing to the pernicious practice of putting on board the galleon a third part more goods than are registered; which not only renders her slow in sailing, and leaves the passengers hardly room to stir; but, in case of either tempests at sea, or being attacked by enemies, puts it out of the power of the crew to exert themselves as they ought for her safety, or their own defence.

S E C T. VII.

An Account of the wonderful voyage annually performed by the stated, licensed, and measured galleon, from Manila to Acapulco; a computation of the value of the homeward-bound lading; the common contrivances for deceiving the government, and defeating all their regulations; the immense profits which arise from this illicit commerce; the many dangers that arise from thence; and how often these annual Acapulco ships have been taken. Observations on the foregoing facts; and a further inquiry into the prevailing opinion, that this commerce is highly detrimental to Spanish America, and to Old Spain.

- a **T**HE ship, having received her cargo on board, and being fitted for the sea, generally weighs from the mole of *Cavite* about the middle of *July*, taking the advantage of the westerly monsoon, which then sets in, to carry them to sea^a. When they have got through the passage, and are clear of the islands, they commonly stand away east-north-east, in order to get into the latitude of more than thirty degrees, where they expect to meet with westerly winds, before which they run away for the coast of *California*. It is very remarkable, that, by the concurrent testimony of all the *Spanish* navigators, there is not one port, or even a tolerable road, found betwixt the *Philippine Islands* and the coast of *California* and *Mexico*; so that, from the time the *Manila* ship first loses sight of land, she never lets go her anchor till she arrives on the coast of *California*, and very often not till she gets to its southernmost extremity; and therefore, as this voyage is rarely of less than six months continuance, and the ship is deep laden with merchandize, and crowded with people, it may appear wonderful how they can be supplied with a stock of fresh water for so long a time: and indeed their method of procuring it deserves a very particular recital^b.
- THEIR water, as we have observed, is preserved on ship-board not in casks, but in earthen jars, which resemble the large oil jars in *Europe*. When the *Manila* ship first puts to sea, they take on board a much greater quantity of water than can be stowed between decks, and the jars, which contain it, are hung about the shrouds and stays; and though it is one convenience of their jars that they are more manageable than casks, and are liable to no leakage, unless they are broken, yet it is obvious that a six, or even a three months store of water could never be stowed in a ship so loaded by any management whatever; and therefore, without some other supply, this navigation could not be performed; which indeed they have: but the reliance upon it, at first sight, seems so extremely precarious, that it is wonderful such numbers should risque perishing by the most dreadful of all deaths, on the expectation of so casual a circumstance. In short, their only method of recruiting their water is by the rains, which they meet with between the latitude of thirty and forty degrees north, and which they are always prepared to catch: for this purpose they take to sea with them a great number of mats, which they place slopingly against the gun-wale, whenever the rain descends: these mats extend from one end of the ship to the other, and their lower edges rest on a large split bamboo; so that all the water which falls on the mats drains into the bamboo, and by this, as a trough, it is conveyed into a jar: and this method of supplying their water, however extraordinary it may at first sight appear, hath never been known to fail; so that it is common for them, when their voyage is a little longer than usual, to fill all the water jars several times over. However, though their distresses for fresh water are short of what might be expected in so tedious a navigation, yet there are other inconveniencies generally attendant upon a long continuance at sea, from which they are not exempted^c. The principal of these is the scurvy, which sometimes rages with extreme violence, and destroys great numbers of the people; but at other times their passage to *Acapulco* is performed with little loss^d (O).

(O) There is a considerable sum allowed out of the public treasury at *Manila* to furnish sweetmeats, wine, chocolate, and other refreshments for the sick; but the person to whose care they are intrusted, commonly embezzles and consumes them at his own table, which enables him to get the better price from those who eat with him; yet the natural temperance of the *Spaniards*, their having, generally speaking, a full allowance for fresh water (which might be had in most long voyages, if

the same care was taken as on board the galleon), their eating frequently fresh fish caught at sea, abstaining from spirituous liquors, and keeping up their spirits by many diversions, defends them in a great measure from those diseases with which the seamen of other nations are afflicted in voyages of a much shorter duration; notwithstanding all which, generally speaking, a considerable number die in this passage (65).

(65) Teixeira, Gemelli Carreri.

The true causes
assigned which
render this
transit over
the Pacific
Ocean so ter-
ridious.

THE time employed in this passage, so much beyond any other navigation, is perhaps in a part to be imputed to the indolence and unskilfulness of the *Spanish* sailors, and to an unnecessary degree of caution for so rich a vessel; for it is said that they never set their main-sail in the night, and often lie by. And indeed the instructions given to their captains seem to have been drawn up by such as were more apprehensive of a strong gale, though favourable, than of the inconveniencies and mortality attending a lingering and tedious voyage; for the captain is particularly ordered to make his passage in the latitude of thirty degrees, if possible, and to be extremely careful to stand no farther to the northward than is necessary for the getting a westerly wind^a. This appears to able navigators an absurd restriction; since it can scarce be doubted that in the higher latitudes the westerly winds are steadier and brisker than in the latitude of thirty degrees. So that the whole conduct of this navigation seems liable b to great censure; for if instead of steering east-north-east into the latitude of thirty odd degrees, they at first stood north-east, or even still more northerly, into the latitude of forty or forty-five degrees, in which course the trade-winds would greatly assist them, they might considerably shorten their voyage, perhaps perform it in half the time now allotted for it (P). For in their journals of these voyages it appears, that they are often a month or six weeks, after leaving the land, before they get into the latitude of thirty degrees; whereas steering a more northerly course, it might be done in a fourth part of the time; and when they were once well advanced northward, the westerly winds would soon blow them to the coast of *California*, and they would be freed also from other embarrassments to which they are now subjected at the expence of a rough sea, and a stiff gale^c.

The manner in
which she pro-
secutes her
voyage to the
coasts of Cali-
fornia and
Mexico.

THE *Manila* ship having stood so far to the northward as to meet with a westerly wind, stretches away nearly in the same latitude for the coast of *California*; and when she has run into the longitude of ninety-six degrees from *Cape Espiritu Santo*, she generally meets with a plant floating on the sea, called *Porra* by the *Spaniards*, being a species of sea-leek. On the sight of this plant they esteem themselves near the *Californian* shore, and immediately stand to the southward; relying so much on this circumstance, that, on the first discovery of the plant, the whole ship's company chaunt a solemn *Te Deum*, esteeming the difficulties of their passage at an end; and they constantly correct their longitude thereby, without coming within sight of land^d. After falling in with these signs, as they denominate them, they steer to the southward, not at all endeavouring to fall in with the coast till they have run into a lower latitude; for as there are many islands and some shoals adjacent to *California*, the caution of the *Spanish* navigators makes them very apprehensive of engaging with the land; however, when they draw near its southern extremity, they venture to hale in for the sake of making *Cape St. Lucas*, to ascertain their reckoning, and to receive intelligence from the *Indian* inhabitants, whether there are any enemies on the coast; and this last circumstance is a particular article in the captain's instructions; for by them the captain of the galleon is ordered to fall in with the land to the northward of *Cape St. Lucas*, where the inhabitants are directed, on sight of the vessel, to make the proper signals with fires; and, on discovering these fires, the captain is to send his launch on shore, with twenty men well armed, who are to carry with them the letters from the convents at *Manila* to the *Californian* missionaries; and are to bring c

p. 334. ^c HAKLUYT's Voyages, vol. iii. p. 446. GEMELLI CARRERI, Tour du Monde, P. v. l. iii.

c. 6. Lord ANSON's Voyage.

(P) In support of what is advanced in the text, it may not be amiss to observe, that a *French* ship in 1721 ran from the coast of *China*, by keeping in much higher latitudes, to the valley of *Vanderas*, on the coast of *Mexico*, in fifty days, that is, in as little time, or at least but a few days more than the *Manila* ship spends in getting clear of the land; but then it is said that she suffered so prodigiously by the scurvy in her passage, that she had not above four or five men left when she arrived in *America* (66). We may from hence form some judgment of the advantages that would follow from the discovery of a north-west passage, since it shews in how very short a time that passage might be reached from *China*: and, by the use of proper precautions, no doubt seamen might be defended from these dangerous effects of the scurvy. We have in a very early, but withal a very excellent, collection of voyages, that which is supposed to have been the first from *Acapulco* to *Manila* (67). This was by *Francisco de Gualle*, a *Spanish* captain, who sailed on the 5th of March 1582, and, arriving safely in the *Phi-*

lippines, he proceeded from thence to *Macao* in *China*. From this port he sailed again for *Acapulco*, and appears to have run into a high northern latitude, though he does not specify the degree; but he affirms, that running east, and east and by north, three hundred leagues from *Japan*, he found a very hollow water with the stream running out of the north and north-west, through which he ran about seven hundred leagues, meeting with whales, tunny, and other kinds of fish, which, as he observed, delight in a sharp rapid water; till, falling down to the latitude of thirty-seven degrees and a half, within two hundred leagues of the coast of *New Spain*, he lost that hollow sea, and began to meet with those floating greens which the *Spaniards* call *the Signs*, and happily completed his voyage in the year 1584. This shews, that in those early days the *Spanish* officers were both bolder and better seamen than they are now; as also, that these observations do not flow from conjecture or fancy, but are really founded in facts.

(66) The track of this voyage is marked in *De Lisle's Maps*. Lord ANSON's Voyage round the World, p. 334.
(67) Hakluyt's collection of Voyages, vol. iii. p. 442.

- a back the refreshments prepared for them, and likewise intelligence whether there are any enemies on the coast. And if the captain finds, from the account which is sent him, that he has nothing to fear, he is directed to proceed for *Cape St. Lucas*, and thence to *Cape Corientes*, after which he is to coast it along for the port of *Acapulco* * (Q).

- In obedience to these instructions all the officers on board act precisely as they are directed; from whence if in some respects their safety is the better secured, they are in others more exposed; for, in all cases of this nature, it is infinitely better to be careful in the choice of the person to whom so great a charge is intrusted, and then to leave things to his discretion, than to prescribe what he is to do, and perhaps tie him down thereby to do what otherwise he might not have done, and what it may be very improper for him to do. Besides, these rules were originally the produce of experience; but as experience is always increasing, so the value or those instructions must decrease; and, whatever the *Spaniards* may say, they are in effect little better than a contrivance to prevent the galleons from reaping any profit from modern discoveries, and restraining the art of navigation with more industry than other nations strive to improve it. Add to all this, that, unless the instructions could reach the wind and weather, it is hardly possible they should do much good; but they may and do occasion a great deal of delay and danger, and are the real causes that the *Spanish* seamen are less knowing and less active than the *English* or the *Dutch*. We need not wonder, therefore, that they are six or seven months in making this long run, and that they very seldom reach the port of *Acapulco* before the feast of *Epiphany*, so that they are from six-and-twenty to thirty or one-and-thirty weeks at sea. In this space they are exposed, as we may easily conceive, to great hardships, and a variety of diseases. Their biscuit grows extremely full of maggots, all kind of food becomes corrupted; and if it was not for sweetmeats, chocolate, fresh water, and the fish that is caught after they meet with the *Signs*, they would be reduced to great distress. The maladies under which they suffer are chiefly two; first, the *Berben*, which is a kind of dropsy that gradually destroys the patient, with a series of such mild symptoms, that he commonly dies talking, and without having the least suspicion of being near his end. The other is our *Sea Scurvy*, which is too common to be described. But, after all, it must be confessed, as we have already hinted, that the crew of a *Manila* ship are rather more than less healthy than might be expected, considering the number of people crowded together in a little room, and breathing nothing but sea-air for six or seven months together, and that air still more corrupted between decks by the noxious steams of the sick †.

- The port of *Acapulco* is the safest and the most commodious in the *Pacific Ocean*; the galleon enters it on the east side, the ships from *Pernu*, on the west. As soon as the vessel is moored, they begin to unload the cargo; and the town of *Acapulco*, and country round it, which a little before was a desert, becomes of a sudden a place of prodigious resort, and continues so till the sale is over; and then, all things being adjusted, they begin without delay to provide for their return. It is to be observed, that as the outward-bound *Manila* ship commonly meets with that homeward-bound upon the coast of the *Philippines* before her departure, so the utmost precautions are employed that every thing may be put into such order as that the galleon may return within the year, which is of great consequence, that they may arrive at a proper season to have a fair wind through the straits of *Manila*. In the space of four months that they lie in the harbour of *Acapulco*, they are sure to lose a part of the ship's crew through the unwholsomeness of the air, which is indeed so great, that nothing but the love of riches could tempt men to venture into it; and to speak the fair truth, they take care to be well paid that do *. But this mortality does not hinder their going back with more passengers, who are desirous of going to *Manila*; yet, notwithstanding this increase of people,

† GEMELLI CARRERI, Tour du Monde, NAVARETTE, GEMELLI CARRERI, CORONEL.

(Q) The Jesuits have of late years established a regular mission in *California*, which is supported by a large legacy left them for that purpose by the Marquis de *Valero*. Their principal settlement lies just within *Cape St. Lucas*, where they have drawn together a great number of the natives, whom they have taught the doctrines of their church, and have reduced to order and civility, engaging them likewise to practise mechanic arts and agriculture, which has freed them intirely from those wants to which they were formerly exposed in a state of savage idleness. Nay, so far have these people, instructed by the fathers of the mission, proceeded, as to plant and cultivate vines with success, and actually make

a wine that, in some degree, resembles *Madeira*, and begins to be esteemed through the whole kingdom of *Mexico* (68). It is to the care of these missionaries that the making proper signals for the *Manila* ship, when it arrives upon the coast, is committed; and, out of regard to their brethren at *Manila*, who are so deeply interested in the cargo of the annual ship, they are particularly attentive to whatever may contribute to its security. There may be perhaps too great a mixture of secular views in these precautions on both sides; but, however that may be, the *Spanish* government is certainly in the right to avail themselves of this disposition in the Jesuits for the advantage of the community.

(68) Lord Anson's Voyage, p. 336.

they are not so much crouded as in their outward-bound passage, because their cargo, being a mostly silver, takes up less room, and this enables them to ship a company or two of soldiers for recruiting their garrisons in the *East Indies*; neither are people so much afraid of making this voyage, because it is safer, shorter, and more pleasant. But, before we enter up on the homeward-bound voyage of the *Manila* ship, it will be requisite to say somewhat of the cargo which she carries back, in order to form some notion of the profits of this trade; which will enable us the better to judge of the great question, whether it be so detrimental to the inhabitants of *New Spain*, or lessens the exportation to *Old Spain* so much as is commonly imagined^a.

To what the value amounts of the cargo returned to Manila, from Mexico in the same ship.

We have already specified what are the goods that are sent from *Manila*, and these may be well enough reduced to four different sorts; under the first head may be ranged gold-dust, jewels, and rich toys, which, though in themselves neither necessary nor expedient to life, yet b must be allowed to have an intrinsic value, because, amongst all polite nations, the general opinion of mankind stamps such a value upon them. The next are the coarse goods which are worn by the meaner sort of people, and these are necessities. The third are raw silks, which make a considerable part in the cargo; and it is said that several thousands of people are maintained by the various manufactures in which they are employed. Under the last head we may bring rich silks, fine stockings, chintzes, most kind of piece goods, spice, and perfumes, which are luxuries: all these are paid for in a great measure with silver. As to the rest of the cargo, it is made of cochineal, sweetmeats, *Spanish* wines, and millinery ware from *Europe*, for the use of the ladies at *Manila*, and throughout the *Philippines*. In order to make an estimate of the quantity of silver that returns in the *Manila* ship, there seems to be c no better method than to take the old proportions, for they seldom vary; and therefore, if, when the trade was limited to two hundred and fifty thousand pieces of eight, the return amounted to half a million, now the trade is extended to six hundred thousand pieces of eight, the return will be one million two hundred thousand of the same pieces; which, with two hundred and fifty thousand pieces of eight annually remitted to make good the deficiency in the revenues of the *Philippines*, make, in the whole, one million four hundred and fifty thousand pieces of eight; and whoever will compare this with the sums taken in the *Manila* ship, will find that there is not much ground to question this calculation^b.

How far this in reality affects the commerce between New and Old Spain.

THE next thing to be considered is, how far this in reality affects *New* or *Old Spain*. With regard to the former, silver is in fact no more than a commodity, with which the inhabitants d of the new world go to market; and, to speak impartially, it is of no great consequence to them, if they part with their silver, whether it is carried east or west into *Asia*, or into *Europe*, for in both cases they see no more of it; and even they, who complain most of this traffick, acknowledge that they have as much, or more, from *Manila*, than they could have from *Europe* for the same sum. So that it is not easy to see what reason the inhabitants of *New Spain* should have to complain; and in fact they do not complain, but others complain for them; which brings us to the second question, and that is, What loss the people of *Old Spain* suffer by this commerce? And, so far as we can discern, that amounts to little more than the value of the silks, which, it is supposed, if they did not come this way, must come e from *Europe*, and consequently the value of them be returned thither in silver; and to this indeed it is not easy to give any other answer than this: That the crown of *Spain* is best judge of the value of the *Philippines*, and whether the addition of that quantity of silver to her revenue would be an equivalent for the loss of those islands; which must necessarily ensue, if this commerce should be prohibited, as has been over and over demonstrated, when this point has been debated in the council of the *Indies*^c (R).

^a What is said in the text is taken chiefly from the Spanish memorials. DAMPIER, COOKE, and Lord ANSON's Voyages. Spanish inhabitants in the *Philippines*.

^b HAKLUYT, PURCHAS,

^c Taken from the memorials in justification of the

(R) Amongst other answers given by the advocates for the *Philippines* to this objection continually thrown in their teeth, that most of the silver they receive passes speedily into *China*, from whence it is never to be recovered, there is one to which the *Spanish* ministers never could frame any reply. Admitting, say they, the fact to be exactly as it is stated, that the subjects of the emperor of *China* reap all, or the best part of, the profits of our commerce, what mischief follows from thence to *Spain*? The emperor of *China* never attacks the subjects of his Catholic Majesty, forms no pretensions to their prejudice, nor ever shews the least favour or countenance to their enemies. But, with respect to the silver that is

sent from *New* to *Old Spain*, it remains not long there, any more than that which is sent to the *Manilas*. Whither, then, does it pass? Into the hands of the irreconcilable enemies of his Catholic Majesty, by whom it is employed in paying armies, and equipping fleets, for the ruin of his countries, and the destruction of his subjects. By which commerce, then, does *Spain* suffer most, by that which carries a valuable commodity into the dominions of a prince whose subjects furnish at least something in exchange, or by that which furnishes the enemies of the *Spanish* crown with the means of becoming rich themselves, while they keep her in a state of distress and necessity (69)?

- a THE galleon being thus fitted for her return, the captain, on leaving the port of *Acapulco*, An account of the homeward bound galleon's passage from Acapulco to Manila. steers to the latitude of thirteen or fourteen degrees, and runs on that parallel till he gets sight of the island of *Guam*, one of the *Ladrones*. In this run the captain is particularly directed to be careful of the shoals of *St. Bartolomew*, and of the island of *Gasparico*. He is also told in his instructions, that, to prevent his passing the *Ladrones* in the dark, there are orders given, that through all the month of *June* fires shall be lighted every night on the highest part of *Guam* and *Rota*, and kept in till the morning^d. At *Guam* there is a small *Spanish* garrison, intended to secure that place for the refreshment of the galleon, and to yield her all the assistance in their power. However, the danger of the road at *Guam* is so great, that though the galleon is ordered to call there, yet she rarely stays above a day or two; but, getting her water and refreshments on board as soon as possible, she steers away directly for *Cape Espiritu Santo*, on the island of *Samal*. Here the captain is again ordered to look out for signals; and he is told that centinels will be posted not only on that cape, but likewise in *Catanduanas*, *Butusan*, *Birriborongo*, and on the island of *Batan*. These centinels are instructed to make a fire when they discover the ship; which the captain is carefully to observe: for if after this first fire is extinguished, he perceives that four or more are lighted up again, he is then to conclude that there are enemies on the coast; and on this he is to endeavour to speak with the centinel on shore, and to procure from him more particulars of their force, and of the station they cruise in; pursuant to which he is to regulate his conduct, and to endeavour to gain some secure port amongst those islands, without coming in sight of the enemy; and, in case he should be discovered when in port, and should be apprehensive of an attack, he is then to land his treasure, and to take some of his artillery on shore for its defence, not neglecting to send frequent and particular accounts to the city of *Manila* of all that passes. But if after the first fire on shore, the captain observes that two others only are made by the centinels, he is then to conclude that there is nothing to fear; and he is to pursue his course without interruption, and to make the best of his way to *Cavité*, which is the constant station for all the ships employed in this commerce to *Acapulco*^e (S).
- b
- c

- d WE have dwelt the longer upon all the circumstances of this intercourse between the *Philippines* and *New Spain*, as it is in many respects the most extraordinary and the most important, as well as the longest, navigation on the globe, and upon which therefore many curious observations may be made. In the first place, it is the highest and most decisive proof in regard to the superiority of the moderns in maritime skill, since the antients could neither have comprehended the possibility of such a thing from the state of geography in their times; and must have believed it impracticable upon their principles, even if the possibility of it had been rendered ever so plain. It is no objection to this, that *Ptolemy* is supposed by some of the moderns to have mentioned these islands; for, granting this supposition to be true, which is more than can be supposed, yet that would have given him no light in reference to that passage to them of which we have been speaking^f. But if we admit farther, that the possibility of such a passage might have occurred to any of the antients, as it actually did to *Columbus*, they could never have judged it within the power of man to execute it, considering that a voyage not only for many days, but for many months, without sight of land, was a thing of which they neither had nor could have any idea. This notion, as we have observed, first entered into the imagination of *Columbus*; and yet there is great reason to presume, that if he could possibly have made a right calculation, and had understood that two hundred and thirty degrees of longitude must be traversed in sailing westward from the coast of *Spain* to the *East Indies*, it would have appeared even to him a matter extremely doubtful, if not utterly impossible. But in a series of years, and that a very short one; since, from the first voyage of *Columbus* to that of *Magellan*^g, there scarce intervened thirty; this was conceived, undertaken, and exe-
- e

It was reasonable to treat it more largely as it is very singular and important.

^e Lord ANSON's Voyage round the World.

^g RAMUSIO, HERRERA, ARGENSOLA.

(S) In some of the *Spanish* memorials it is suggested, that the principal cause why they rely so much upon keeping their officers to strict obedience, and bend all their care to foresee accidents, and, as near as may be, to provide against them by proper precautions, is the knowledge they have of the hasty and haughty disposition of such as rise by degrees to the post of general of the galleon; who, if they were left in any degree at liberty, would, from a variety of motives, venture upon many things dangerous, at least, if not destructive of the vessel intrusted to their charge. It is further said, in support of these notions, that hardly any of the galleons have been lost or taken but by the neglect of the instructions:

which it is very probable may be true, and yet it is not at all impossible that there may be another reason for their adhering so steadily to this conduct, which they may not be willing to disclose, and that is, the employments in the galleon being all purchased; so that men are not raised to their office from an opinion of their abilities, or out of regard to their services, but for their money; and, as the royal audience cannot prevent this, the only remedy they have left, is to prescribe them their duty as punctually, and to tie them to the strict performance of it as far, as they are able; taking care at the same time to give them all the assistance possible (70).

(70) Relac. de las Islas Filipinas, Navarette, Gemelli Carreri.

cuted; and consequently incomparably greater improvement was made in this art of navigation, than in the many hundreds, and even thousands, of years preceding. Of such consequence it is to keep men in action, to excite their faculties, and to inflame their courage, by emulation, and to make one discovery a step to another. It was by means like these, that so much was done in so small a time; and, by the neglect of these means, that so little has been done ever since.

An exact computation of the distance sailed by the outward and homeward bound ship. But, before we part with this subject, it will be expected that we should inform the reader exactly how great the run, from *Manila* to *Acapulco* one way, and that from *Acapulco* to *Manila* the other, really is; because authors differ very much upon this subject, as well those who, from their great skill in the mathematics, may be presumed to be good judges, and even those who have made the voyage, and therefore might put in their claim to be still better (T). But, as these variations plainly prove, this is a point not easily, and at the same time accurately, to be decided. In the passage from *Manila* to *Acapulco*, a vessel is obliged to steer, when clear of the land, into twenty degrees higher latitude, to obtain a wind; and, when she is near the coast of *America*, to descend again towards the equator almost as much; which is one cause that renders this voyage so tedious, as it evidently makes it the longer^b. However, supposing the *Manila* ship to get into the latitude of thirty-five degrees as soon as possible, and to keep as near as may be under that parallel, till she meets with the sea-weeds mentioned in the foregoing description, her course will then be about three thousand leagues, very little more or less. In returning from *Acapulco* to *Manila* they generally get as near as may be into the latitude of the last-mentioned place, and so run strait before the wind, which makes their course about two thousand five hundred leagues; which, being plainly shorter, incumbered with much fewer difficulties, and the ship having a smaller cargo on board, enables them to perform this run in half the time that is spent in the outward-bound passage. On the whole, therefore, the galleon sails from *Manila* towards the end of *June*, or the beginning of *July*; reaches *Acapulco* about the beginning, the middle, or the end of *January*; is ready to sail again by the beginning of *April*; and enters the port of *Cavité* about the same time that she left it the year before, where the seamen receive the remaining two hundred seventy-five pieces of eight as soon as the treasure is landedⁱ.

^b HAKLUYT, PURCHAS, NAVARETTE.

ⁱ GEMELLI CARRERI *Tour du Monde*, P. v. l. iii. c. 6.

(T) It will be proper to give the reader some few instances of the different accounts that have been given of this matter even by the best writers. *Varenius*, who is justly esteemed for his judicious system of geography, delivers himself thus (71): "General winds are found only between the tropics round the earth, except in some places where they are seven degrees beyond the tropics; and they are ever from the east, or from collateral points, as south-east and north-east, and that the whole year round, yet not always with the same degree of force in all those places; but they are hindered in some places more, in others less. They are most constant in the *Pacific Sea*, viz. that part of it which lies between the tropics; so that the ships which come from *Acapulco*, a port in *New Spain* in *America*, to the *Philippine Islands*, that is from east to west, often sail three months without ever changing or shifting their sails, having a constant east or north-east wind; nor did ever any ship yet perish in that vast voyage of one thousand six hundred and twenty miles: and therefore the sailors think they may sleep there securely; nor is there any need of taking care of the ship, when that general wind carries them strait to their desired port, the *Philippine Isles*; near to which, indeed, there are some other winds, that come against the general wind." Dr. Gemelli, who made the voyage from *Manila* to *Acapulco* in 1698, reports things very differently (72): "Inquiring, says he, of the pilots, how many leagues and degrees we had sailed, I found them of several opinions, and this because we had not kept our course, but pined backward and forward to no purpose. *Peter Fernandez*, a Portuguese, born in the island of *Madeira*, the chief pilot, said we had run one hundred twenty-five degrees, and two thousand five hundred Spanish leagues. But *Isidore Montes de Oca*, of *Seville*, his mate, would have it to be one hundred and thirty degrees, and about three thousand leagues.

"In sailing from *Acapulco* to *Manila*, it is certain there is none of this needless compass taken, as has been observed before; for, having fallen down from bare seventeen degrees to thirteen, they then run upon one and the same parallel quite to *Manila*, right afore the wind, which carries them in two months and a half, or three at farthest, without any storm, and therefore they run through only one hundred and eighteen degrees; which being from east to west, it is hard to measure the leagues; but the pilots guess them to be about two thousand two hundred Spanish. Another way may be taken, which is from *Acapulco* north-west as far as *Cape Mendocino*, and then to steer for the *Marian Islands* and *Manila*; and then they say the whole run is one hundred and seventeen degrees; and, allowing seventeen Spanish leagues to every degree, they are two thousand one hundred and fifty-nine leagues." In the account we have of Lord Anson's voyage (73), this subject is thus treated: "In the infancy of this trade it was carried on from the port of *Callao* to the city of *Manila*, in which voyage the trade wind continually favoured them so, that, notwithstanding these places were distant between three and four thousand leagues, yet the voyage was often made in little more than two months." When the reader has perused these passages, he cannot but be convinced of the truth of what is said in the text: yet, in regard to *Varenius*, we must observe, that his are probably German miles, of which there are fifteen in a degree, and consequently he makes the distance two thousand two hundred leagues. The pilots on board Dr. Gemelli's ship seem to have been very skilful and prudent men; and as to the last computatoin, it is spoken only in general, for the calculation given above corresponds with the Spanish chart printed in that voyage, which is by very much the best that was ever published.

(72) *Gemelli Carreri Tour du Monde*, P. v. l. iii. c. 6.

- a THE *Spaniards* give this immense collection of water between *Asia* and *America*, the title of the *Pacific Ocean*, because it is generally speaking smooth and calm, along the coasts of *Chili*, *Peru*, and *Mexico*, insomuch that they make use of very rude methods of sailing, without meeting many untoward accidents; but they are misled, who, from these accounts, infer that these annual ships are little exposed to danger, since it is very certain that many of them have perished, as well in their homeward as in their outward-bound voyages; and have been swallowed up in this ocean, as well as wrecked upon the coast of the *Philippines*, though there are more instances of the latter. The *Spaniards* have another reason for calling it the *Pacific Ocean*, which is, that it is seldom navigated by any other ships than their own, and consequently the horrors of war are but little known therein^k.
- b YET with respect to this there must be some restrictions made, for the peace of these seas has been often interrupted since the *Spaniards* became masters of the new world; and these annual ships, in particular, have been often attacked, and sometimes taken. As for instance, that great and very fortunate *English* seaman Captain *Thomas Cavendish* took an outward-bound *Manila* ship as she was going into the port of *Acapulco*, November the fourth, 1587, which was within a short time after this correspondence was fixed^l. He afterwards visited and alarmed the *Philippines*; neither ought we to omit that he made his passage thither in a surprising short space of time, leaving the coast of *America* on the 19th of *November*, and arriving before the strait of *Manila* on the fourteenth of *January* following^m. On the twenty-second of *December* 1709 one of the outward-bound annual ships was taken near *Acapulco* by Commodore *Rogers*, with his little squadron consisting of the *Duke*, the *Duchess*, and the *Marquis*; and they afterwards attacked the larger ship, but, for want of ammunition and men, were not able to carry herⁿ; and, on the twentieth of *June* 1743 an homeward-bound *Manila* ship was taken by Commodore *Anson*, for this, and other great services, created afterwards a peer of this realm^o. It is not requisite to detain the reader with an account of unsuccessful attempts; amongst which may be reckoned that of Captain *Dampier*, who attacked the *Manila* ship, *December* the sixth, 1705, with great advantage; and had certainly taken her, if he had boarded her in time: but his cannon, being five pounders only, could not do her much mischief; and when, after two hours fight, she began to return his fire with twenty-four pounders, it is a much greater wonder that he was not taken, than that he should retire in his leaky and rotten ship from a dispute that was so very unequal. And with these instances of *British* courage, in which we have not been so much as rivalled by other nations, we will put an end to the historical part of this subject, in which the reader may see at one view all that we have been able to collect from a multitude of authors who have written before us upon this subject.

S E C T. VIII.

An inquiry into the real importance of these islands; the unquestionable excellence of their situation; the causes why they have not been hitherto so beneficial as they might be to the crown of Spain; the improvements of which they are capable. Facility of making, and certainty of their success; always neglected, misrepresented, and misunderstood, by the ministers of his Catholic Majesty, tho' no part of his dominions more valuable, or of greater consequence.

- e WHAT we have already said is sufficient to shew what an interest the *Spaniards* have in the *East* as well as in the *West Indies*; and how the communication between colonies so remote from each other, as well as at so great a distance from their mother country, has been maintained for near two hundred years^p. But to render this chapter complete, it will be very expedient, we might perhaps say absolutely necessary, to join a representation of what it may be; the rather, because we have copious materials in our hands for that subject, that have not hitherto seen the light, and, being at once both new and instructive, cannot but be acceptable to the judicious and inquisitive reader. Some of the ablest of the *Portuguese* statesmen have attributed the decline of their commerce and naval affairs to the want of establishing, in due time, a full and free communication between their *East India* settlements and those of *Brazil*, which they saw, when it was too late, would have increased their shipping, and have enabled them to have defended both countries, at the beginning of the last century, much better than they did. But, in excuse of this, they plead, and may with justice plead, that they were but a province to *Spain*; and that all the force that had been raised by the invincible
- f

The shewing what might be reaped from the Philippines, a necessary part of this section.

^p Dictionnaire universel de Commerce, tom. ii. col. 89.

courage, and indefatigable industry, of their countrymen in *Asia* and *America*, was in part a wasted by, and in part exposed to ruin in, the case of another nation: so that when, by a great and glorious effort, they raised the present royal family of *Braganza* to the throne, and thereby recovered their independency, they found their strength too far exhausted to maintain all their acquisitions; and therefore were obliged to submit to great losses in the *Indies*, that they might preserve, as well as recover, their possessions in *Brazil*¹. This may serve as a lesson to the *Spaniards*, the only *European* nation, except the *Portuguese*, that have colonies, both in the *East* and *West Indies*, so situated, as to admit of a regular and constant intercourse, and which, if *Spain* would exert itself, might unquestionably be made the basis of a maritime power, equal, if not superior, to that which was sacrificed by *Philip* the second to the fond pursuit of universal monarchy.

Reasons why these islands are of so little benefit, tho' so happily situated.

If we consider the nature and condition of these islands, together with the strength and influence of the *Spaniards* in the *Philippines*, it is impossible not to perceive that they are capable of being put, in a very short time, in so flourishing a state, as to raise them above the apprehensions of suffering from any enemy, how formidable soever. There is nothing requisite to this, but the reforming some errors in point of government, and raising none to the supreme power unless they have passed through the intermediate offices, such as alcaide, admiral, and member of the royal audience. The releasing the Christian natives, at least the *Tagalians*, and some other nations, from personal services, and that subjection which borders upon slavery; the making a prudent reduction of the number of *Chinese* that reside in *Luçon*, and the rest of the islands; and inviting, as well as permitting, other strangers, upon whose fidelity they might depend, not only to trade, but to reside there²; these are points that have been often recommended, but hitherto have not been well received. Yet the introduction of these would intirely change the face of affairs, would repress the luxury of the *Spaniards*, and revive the industry of the natives; for, while any number of people are vested with a power that enables them to tyrannise, they will never have any thing in view but pleasure, which is a gentle word for the gratification of their lusts; and, while the far greater part of the people are rendered slaves, to support these petty tyrants, they will be as idle as they can; for industry is produced by hope, and a slave, having nothing to hope, will not exert his strength, or employ his faculties, beyond what is extorted from him by fear: no regulations, therefore, can possibly render people under such a constitution great or rich, in any considerable degree.

The only speedy and effectual remedies that can be applied to these evils.

But in such a country as the *Philippines*, where provisions are to be had in the greatest plenty, if œconomy was rendered necessary to the *Spaniards*, and property secured to the natives, all things would thrive apace. The latter would no longer make a secret of their riches, but endeavour to procure as much gold as they did when the *Spaniards* came first thither, and how much that was may be guessed from what Captain *Cavendish* found in the *Manila* ship, which amounted to one hundred and twenty-two thousand *Pezces*³. All their manufactures would increase; and, having traders amongst them, timber in the greatest plenty, and many good ports, those manufactures would be carried to markets, and these would be quickly found amongst nations that go almost naked, and would be glad to get cloaths if they were sure to keep them; and this they might do if they were civilized; a task the missionaries would find it easy to perform, if, to their promises of infinite happiness in the next world, they could add procuring them a moderate share of it in this. It must be granted that these islands are not so populous as they were, but there are still ten times as many people as are necessary to render them as flourishing as any colonies in the world; and it appears plainly from the best accounts, that the greatest part of these might be reclaimed, since it is not subjection, but slavery, that they abhor⁴ (U).

THE

² HAKLUYT'S Voyages, vol. iii. p 816.

³ DON JUAN GRAU Y MONTFALCON CORONEL, NAVARETTE,

(U) Father *Navarette* assures us, that in his time the *Indians* shewed their confessors very rich pieces of ore, and, on their promise of secrecy, acquainted them where they were to be had; which secret they religiously kept, for otherwise the *Spanish* governors would have employed these poor people in the mines, in the same manner as they do in the woods, that is, till they were consumed by hard labour; and therefore the missionaries, as themselves profess, never disclose any accounts that they receive, for fear it should be made a reason to impose greater hardships on these miserable people than those they suffer already (74). It appears from the accounts

transmitted to *Spain* above a century ago, that the gold then brought in was very considerable, and few or none of the *Indians* were without ornaments of that metal; but now they do not either gather or wear it, at least not commonly. Yet that the great have ways and means of coming at it, is highly probable, since Captain *Rogers* was told by a person he met with in *Holland*, who had resided in the *Philippines*, and was on board the largest ship when Captain *Rogers* attacked her, that they had a considerable quantity, and yet were not near so richly laden as those ships sometimes are (75). It is also agreed amongst the best writers, that not only *Luçon* and *Mindanao*,

(74) D. F. *Navarette* *Tratados Historicos de la Monarchia de China*. vi. cap. 6. the South Seas, in *Harris*.

(75) *Cooke's Voyage to*

- a THE situation of these islands is beyond comparison the properest for universal commerce, *What a vast commerce from all parts of the Indies might be attracted to the Philippines.* as the reader must long ago be sensible, from the accounts that have been given him, of their vicinity to *Japan, China, Cochin-China, Cambodia, Siam, Birnee, Ceylon*, and the *Spice Islands*, besides those countries and islands that are so little known about *New Guinny*, which there is good reason to believe, are as rich as any yet discovered. If any insuperable difficulty should be found, from the great force and as great prudence of the *Dutch* in covering *Banda* and *Amboyna*, the free commerce with those countries might be easily dispensed with, by encouraging the cultivation of spices in *Mindanao*, where it is certain they have a great deal of cinnamon; and where it is as certain they might have cloves and nutmegs, if they were sure of protection^u; and this in the space of a very few years the *Spaniards* in the *Philippines* might afford
- b them, against the whole world, could they once persuade themselves of the truth of a maxim which hitherto they have not relished, *that commerce is a stronger tie than conquest; and that a brave people, such as the inhabitants of that island and Xolo naturally are, prove more useful as allies than as subjects, because they then serve as guards to those, who, in the other situation, would be obliged to keep up great garrisons, in order to guard against them.* As the domestic affairs of these countries mended, they would infallibly become the mart and magazine of all the rich commodities of the east; to this they were destined by nature, from this they are withheld by the *Spaniards*; if they would remove that severity which has hitherto kept them in a mean condition, and trust the rest to Providence, they might in a manner sit still, and see their empire in a short space exceed their most sanguine expectations, and, if possible, their wishes.
- c They would then have no need of their silver from *America*, unless it was to assist the circulation of their commerce; and very possibly the crown of *Spain* might find it requisite to compel an annual ship to proceed to *Acapulco*, instead of permitting it as a favour; unless they should be wise enough to leave the commerce of their colonies without restriction, which would be attended with greater advantages than can result from all the laws and regulations in the world (X). All this, the reader must observe, is built on a supposition that the *Spaniards* in these islands may be brought to act for their own profit.

At first sight these propositions may appear very improbable; but if we reflect how much the articles of goldsmiths work and rich toys might be increased by breeding the young *Indians* to those trades, instead of employing the *Chinese*; and remember, that the metal and labour of the subjects of *Spain*, in one quarter of the globe, is a just equivalent for the metal and labour of the subjects of the same crown in another; and that the raw silks and piece goods from *Coromandel* might be paid for in the commodities and manufactures of the *West Indies*; it will be no difficult matter to discern, that, without having recourse to severities, this trade might be gradually put into the best method the court of *Madrid* could desire; and, as the crown of

^u Dictionnaire universel de Commerce, DAMPIER, HAMILTON.

nao, but all the rest of the *Philippine Islands*, have gold in them (76); and that it is chiefly found by the blacks that live in the mountains, who sometimes purchase necessities therewith from the *Indians* subject to the *Spaniards*, and with whom, if they were better treated, an advantageous traffick might be established. Tyranny ever defeats its own purposes, and, by endeavouring unjustly to grasp all, actually destroys all.

(X) The maxim of the *Spanish* court has always been to make their possessions in the *Indies* beneficial to the crown, rather than to the nation; and this is the true cause that they have been much less serviceable than they might have been, to both. The want of a free commerce has checked their navigation, hindered the increase of shipping, and kept them poor and weak in the midst of riches. It may be suggested, that, if they were ever so much inclined to encourage the commerce, of which we have been speaking, it could never come to much, because the length of the voyages would deter private men from trading from the *West Indies* to the *East*, and from the *East Indies* to the *West*, in their own bottoms (77). In answer to this we shall observe, that some private traders in *France*, in 1715, fitted out four or five ships for the *South Seas*, where they arrived safely; and, after vending their cargo there, sailed from the coast of *Peru* to *China*, which is a longer voyage than to the

Philippines, performed it successfully in less than four months, and returned from thence into *France* (78); which shews what the hopes of gain will produce, and what may be done, where people are sure of being rewarded for the risques they run, and the labours they endure. The only maxim, therefore, that can encourage trade, is, making every thing easy to those who are disposed to engage in it, and to let the profits of the government be the last thing to be considered; for which they will not be the less, since the monarch of a rich people can never be poor; and the crown, where the people are poor, can never be long rich. These points one would have conceived well understood in *Spain* above twenty years ago, when upon a proposal for erecting a company for managing the trade of the *Philippines*, most points relative to this commerce were thoroughly examined, and the whole digested into a charter, granted for twenty years to Don *Emanuel de Arriaga*, and those who should embark with him, upon the terms prescribed (79). But, whether the scheme was formed purely for stockjobbing, whether it failed for want of adventurers, or whether the season for mercantile improvements in the dominions of his Catholic Majesty was not yet come, it so fell out, that nothing farther ensued from this vast project, than barely letting the intelligent world see what might have been done.

(79) Supplement au Corps Diplomatique du

Spain actually receives twelve *per cent.* by way of duty on the exports from both countries, if a this trade were put into a right method, she would be no loser by it *. For though it be true, that the silver sent from *New Spain* into the *East Indies* never returns, yet it may be also affirmed with great truth, that the silver sent into *Old Spain* seldom remains there long, but is carried away by other nations that furnish the commodities and manufactures, in exchange for which the silver comes from *Mexico* and *Peru*; so that, at the bottom, it is not the silver which the *Spanish* politicians contest for, but the mere sight of the silver, which certainly ought not to be put in competition with the ease and welfare of their subjects, or with the grandeur and security of the crown †. Neither is this argument overthrown by what has been suggested to his Catholic Majesty's ministers, as if the convents, and more especially the Jesuits at *Manila*, were the principal gainers by the trade there; since, if this be true, we b must naturally imagine that the society have some secret ways of getting their wealth home; and, if that be so, it answers the aim of the court, and brings into *Spain* either the silver, or the value of the silver, that passes to *Manila* ‡. But, if the truth of this be suspected, the court have always a short and effectual remedy in their power, by giving the convents an equivalent for the concessions that have been made them in respect to the cargo of the annual ship, or the suppressing those allowances that are paid in ready money out of the king's treasury, if, when this affair is thoroughly examined, the services they perform, in keeping the *Indians* steady in their obedience, shall be thought too little to merit so large an income §.

The Spaniards without trading themselves, might draw a considerable revenue from permitting the *Indians* to have a free port.

BUT there are two points more, which, in reference to this subject, certainly merit great notice. The first is, the ease with which, in consequence of proper instructions from the court c of *Spain*, the governor of the *Philippines*, without the *Spaniards* being compelled to industry, might make any convenient place the centre of commerce for the remotest nations of the east. Vessels from *China*, *Formosa*, *Corea*, and the islands dependent on *Japan*, if not from *Japan* itself, would infallibly resort thither in great numbers, in order to trade with each other, and with vessels from *Borneo*, *Celebes*, *Gilolo*, and even remoter parts of the *Indies* †. It may be, and indeed it very probably is, true, that something of this kind is done already, from whence the governor reaps a very large profit ‡. But this must be done clandestinely; and the larger the governor's profit, the heavier the oppression, and, of consequence, the more confined this trade; whereas if this protection was given them by his Catholic Majesty for a reasonable indulto, and that candidly levied, the resort of vessels would increase every year, more especially if magazines were erected at the public charge, and let upon easy terms §. This expedient would in a short time bring vessels from countries with which the *Spaniards* are at present unacquainted; and, if they were disposed to make inquiries, would furnish them, with little trouble, and no expence, with a more certain knowledge of the countries ¶, whether continents or islands, or, to speak with greater propriety, large islands or little ones, interspersed between *Asia* and *America*, than either themselves, or any other nation, with infinite hazard and labour, have been hitherto able to obtain §.

By allowing the same privilege to ships from the European settlements in the *Indies*, might be lost without the American commerce.

THE other point is of no less consequence. There has been heretofore, and very probably there still is, a small trade carried on there by connivance from the settlements of other European nations in the *Indies* †. If, instead of this illicit commerce, the same, or some other port, c was, in like manner, under a reasonable indulto, and proper restrictions, opened for them, it would produce a great revenue, and in a short time enable the *Spanish* subjects in the *Philippines* to subsist with smaller, or perhaps without any, remittances of silver from *Spanish America*; and then it might be very practicable to reduce the size of the annual galleon, or to render its voyages less frequent; for example, to limit this indulgence to three or five years, and so put an end effectually to that sort of commerce, which, whether with or without reason we shall not pretend to determine, has given so long and so much umbrage to the ministers in *Old Spain* ‡. For here, as in all other parts of the world, absolute prohibitions, even under the highest penalties, have only served to introduce smuggling, beneficial to a few private persons, but always prejudicial to the public; whereas an open trade, wisely regulated, would enrich f his Catholic Majesty's subjects in general, defray the expences of government; and within a very short period convince the court of *Madrid*, that these islands, instead of being a burden, might become as valuable in all respects as any country subject to the crown of *Spain*. We will close these hints by adding, that all the advantages proposed might be obtained without hazard, and without difficulty, except that of adjusting a proper plan of instructions, adhering

g Collected from the very latest accounts of the commercial notions of the Spanish ministers.

a to them steadily, and making severe examples of any, who, through avarice or ambition, should break through them, or attempt to sacrifice to private interest a system happily established for the public benefit.

It is however said, by those who pretend to know the world, and to give such advice to princes as may be easily executed, and of the effects of which the event may be soon known, that the *Manilas* are and have been a constant drain ever since they have been discovered : that this is a thing plain, and which cannot be disputed : that the silver returned by the annual ship might be brought into *Old Spain* ; that the demands for money there are very pressing ; and that, after all, if the *Philippines* have any value, it would be discovered by prohibiting this trade ; and then the only reformation necessary would be, to bring the expences of the government there to a level with its income. On the other hand, these people say, that, after waiting and expecting almost two hundred years for the performance of those fair promises that have been made by the advocates for this establishment, it is downright madness to wait any longer, and still higher madness to be at any expence to promote the commerce of a colony with which they have no direct communication ; that, when no longer supplied by *New Spain*, the government there would naturally exert itself for its own preservation ; and that, by taking this step, a clear million yearly would be added to the cargo of the galleons. These are not fictitious suppositions, but the plain undisguised substance of certain representations from some who thought themselves, and were thought by others, great politicians. Yet it falls out, that some objections have occurred to these reasonings, which are said to be founded upon self-evident principles, such as, that the bringing the expences of their own administration within the settled revenue of the crown, would render these regulations needless ; that it might be proved, the million saved in *New Spain* would not come over in the galleons, but be swallowed up in the illicit trade with other *European* nations ; and that the certain consequence of this new scheme would be, the speedy loss of the *Philippines*, and the re-establishment of a commerce in the south seas, under the protection of a foreign fleet ; with this additional circumstance, that these evils would admit of no remedy ^b (Y).

But those who are for the milder methods, which have been before stated, pretend to have in reserve some expedients which would free their system from all objections, put the success out of all doubt, and not leave the court under any lingering expectations as to the event. In few words, then, their additional suggestions are these : That a squadron of two or three good ships, laden with *European* commodities, should be sent directly from *Spain* to the *Philippines*, through the south seas, which might be done in half the time that the northern nations send theirs to *China* ; that by this means they might maintain a trade with the *Chinese* upon better terms than they have hitherto done ; that these ships might carry silver, in exchange for gold-dust ; and that the produce of part of the *European* goods, as well as the remainder of those goods, whatever it might be, should be embarked on board one or more galleons, and transported to *Acapulco*, and the produce of their cargo there sent home to *Old Spain*. By this means all desirable ends would be answered ; for the inhabitants of the *Philippines*, having no other means of obtaining silver than by exchanging gold, would soon find the means of procuring it ; and they farther add, that, by settling the islands of *Juan Fernandez*, a regular intercourse with *Spain* would be established in a few years ; the trade of that kingdom revived,

^b Drawn from the memorials addressed to the council of the Indies, and the preambles to some of the royal edicts.

(Y) These suggestions are said to have made a great impression on the mind of the late Mr. *Patinho* one of the ablest and most disinterested ministers that *Spain* has had to boast for many years ; and some have believed he would, had he survived much longer, have carried this scheme of recalling the concession of the annual ship into execution (80). But, in that case, no doubt he would have provided some other way of corresponding with the *Philippines*, perhaps that which is above suggested. For, without that commerce, or an equivalent for that commerce, it would be impossible for the *Spaniards* to keep them long in their possession. One great argument in favour of these islands, which has never hitherto been mentioned, is this, that the crown of *Spain*, by keeping them, might enable its subjects to carry on the richest trade in the *Indies*, without attempting any farther establishments or conquests ; which is a point that deserves to be very well considered, since it was embracing an empire too extensive for their power,

that proved fatal to the *Portuguese*, and it is suspected may some time or other prove injurious to another great power (81). Certain it is, that the *Dutch*, by grasping too much at first, were in very great danger of losing all, since, upon their miscarrying in the first siege of *Malacca*, and Don *Pedro de Acuna*'s recovering the *Moluccas* with the force he brought from the *Philippines*, their affairs were in a dangerous situation ; and, had he and his successors been effectually supported from *New Spain*, all that was expected from them might have been performed (82). But if the indulgences above-mentioned were granted to the subjects of *Spain* in those islands, their strength would increase every day, and, with it, their wealth and commerce, without attempting any thing upon their neighbours, or without any great hazard of their neighbours being able to do any thing against them, because these improvements might be made in a time of full peace, and without infringing treaties (83).

and rendered independent, and, in consequence of that, their naval force restored; which ^a would add infinitely more to the lustre of the *Spanish* crown, and the welfare of his Catholic Majesty's subjects, than all the ambitious projects in *Europe*, which serve only to excite the general hatred of their neighbours, and to consume all the wealth of the *Indies*; while the inhabitants of that country, to which it comes, are often in danger of starving for want of bread: an evil to which they were never exposed, till these projects of bestowing crowns, and maintaining armies in foreign countries, engrossed the attention of their sovereigns, and consequently became the prime object of their minister's counsels ¹ (Z).

Our reasons
for entering so
deeply into this
subject, and a
short hint of
what may
happen.

We live in an age when the advantages of commerce are understood in many countries, enjoyed by some, and thirsted for by all; when every year almost produces some new design; ^b and when a variety of undertakings, thought desperate and chimerical in their beginnings, have been prosecuted with effect. There is therefore nothing more probable, than that the present age will see still greater alterations, and stranger revolutions, than have hitherto happened in this respect. To point out where and how, therefore, these may be brought about, when it can be done with propriety, and upon good grounds, is the most useful and necessary part of Universal History. It informs the understanding, it enlarges the capacity, it opens all the faculties of the mind, enables us to feel what we read, to judge of what is past, to reason on the present, and to foresee what is to come. Upon these motives we have been induced to treat the history of the *Philippines* so fully and so freely, that the reader might perceive not only what they are, but what they may be. To many, indeed, the latter part of the chapter will appear uncertain, and to some improbable; but by that time they have read the seventh, ^c and have seriously reflected on the suddenness with which the *Dutch* made themselves masters of the *Spice Islands*, and, with the immense profits arising from that trade, laid the foundation of their empire in the *Indies*, they will very probably alter their opinions, and see as plainly as we do the importance of the *Philippines*, which are certainly, of all the countries in the *East Indies* (which it is possible for *Europeans* to possess), at once the richest in themselves, and the most capable of improvement, and will for that reason be sooner or later the object of much more attention than has been hitherto paid to them. But it is now time to leave these speculations to the judgment of the public, and to proceed with the course of our history.

¹ Collected and digested from the facts in CORONEL, NAVARETTE, GEMELLI CARRERI, and other authentic writers.

(Z) Those who are conversant in naval history will easily discern that there is nothing difficult, much less impracticable, in these propositions; for, in matters of this nature, there is no surer maxim than this, *that what has been done, may be done*; and there is nothing suggested in them but what has been performed more than once by private persons; and which therefore the crown of *Spain* might not only execute, but execute with the greatest facility (84). Whether they will ever execute

it, or not, is another point; but at present it is said that things of this nature are much more attended to, at the court of *Madrid*, than formerly; and that they are effectually convinced by experience, the strength of their monarchy has been more lessened by their own negligence (85), in affairs of this nature, than by all the efforts that have been made against them by all their enemies.

(84) There are instances of English, French, and Dutch vessels, fitted out by private persons, that have performed this voyage.

(85) A translation of a large Spanish treatise on trade is actually in the press.

S E C T. IX.

The situation, natural history, and commodities of the Ladrones or Marianne Islands; their discovery; genius and temper of their inhabitants; their history, present state of those islands; the policy of the Spaniards, in respect to them; their great importance; and some conjectures as to the causes of their being so much and so long neglected.

THE islands which are to be the subject of this section, were originally discovered by *Ferdinand Magellan*, in the first attempt ever made to sail round the globe. He is said to have called them when first seen, *Las Islas de las Velas*; that is, *the Islands of Sails*; or *de las Velas latinas*, that is, *of triangular sails*; from their prows, in which the inhabitants stood out to sea upon the approach of his ship; but afterwards, *Las Islas de los Ladrones*, or, *the Islands of Thieves*; because the *Indians*, who came on board him, stole every thing that was made of iron within their reach^a. It was not till the latter end of the last century that they obtained the name of the *Marianne Islands*, from the queen of Spain, *Mary Anne of Austria*, the mother of *Charles* the second, at whose expence missionaries were sent over thither, to propagate the Christian faith^b. We hardly ever find them called by the name first-mentioned; except in the relations except in the relations of *Magellan's* voyage. As to the second, it became their common appellation; and in all the old books of history and voyages, as well as in maps^c, we find them stiled *the Ladrones*; notwithstanding which, the last-mentioned name has gradually gained ground, and prevails at present; so that they are now commonly stiled in most of the languages of Europe, *the Marianne*, or rather, though less correctly, *Marian Islands* (A).

THESE islands lie between thirteen degrees twenty-five minutes, and twenty-one degrees of north latitude, almost in a line from south to north, occupying the space of about four hundred and fifty miles, having the islands of *Japan* on the north, and the country of *New Guinea* on the south, on the verge of what is called *the Pacific Ocean*, and at the distance of twelve hundred miles from the *Philippines*^d. *Antonio Herrera* says, they are *sixteen* in number^e. Modern geographers acknowledge but *fourteen*, and place them in the following order^f. From south to north, viz. 1. *Guaban*, *Guam*, *Guan*, or, as the natives pronounce it, *Guabon*,

(A) An ill name once given, is long kept, however it might be originally founded. In the collections of voyages, histories, and books of geography, written in *Latin*, we find this little Archipelago stiled *Insula Latronum*, or sometimes, *Insula Furum* (1); in the *French* writers, *Isles des Larvones* (2); in our own language, *the Islands of Thieves*. The best authors differ much, as to their situation, and their names. *Herrera*, who is dignified with the title of Geographer Royal to the Crown of Spain, in his excellent description of the *Indies*, which is dated from *Valladolid*, October 15, 1601, tells us (3), that they lie between the north latitude of twelve and seventeen degrees; the soil, says he, is sterile and miserable, without flocks, metals, or much provision, inhabited by a poor, naked, thievish people; and he makes them sixteen in number. The most northern, he says,

is called *La Inglesa*: next to that, *Ota*, *Mao*, *Cbemechea*, *Gregua*, *Agan* or *Pagan*, *Oromagan*, *Guguan*, *Chareguan*, *Natan*, *Sapan*, *Botan* and *Volia*. *Luyts*, who, generally speaking, followed the best guides, divides them into the northern and southern islands (4); amongst the former he reckons *Deserta*, *Malabrigo*, *La Inglesa*, *Mano*, *Cberofla*, *Guana*, *Pagan*, *Artemagan*, *Guiga*; amongst the latter, he names *Cberiga*, *Sapan*, *Guaban*, it may be *Guban*; *Volia*, *Bataba*, and *Bacim*. It is of use to know these different names, more especially as they are very remote from those that are now in use. They still distinguish the nine northern islands from the rest, by the name of the islands of *Gani*; though sometimes they are also called *Las Islas de las Bolesanes* (5) from the two burning mountains that are in them.

of the island of *St. John*; 2. *Zarpana, Rota*, or the island of *St. Anne*; 3. *Aguigan*, or the island of the *Holy Angel*; 4. *Tinian*, or the island *Buena Vista Mariana*; 5. *Sapan*, or the island of *St. Joseph*; 6. *Antajan*, or the island of *St. Joachim*; 7. *Sarigan*, or *St. Charles's* island; 8. *Guguan*, or the isle of *St. Philip*; 9. *Alamagan*, or the island of the *Conception*; 10. *Pagan*, or *St. Ignatius's* island; 11. *Agrigan*, or the isle of *St. Francis Xavier*; 12. *Affonsong*, or the island of the *Assumption*; 13. *Mang*, or *Tunas*, called also the island of *St. Lawrence*; 14. *Urrica*, or *Urac*, which is uninhabited.

The island of
Guahan, the
most southern,
and the most
considerable a-
mongst them.

THE island of *Guahan* or *Guam*, which is the most southern of these islands, lying in the latitude of thirteen degrees twenty-five minutes north, is about thirty-three *English* miles in length, twelve in breadth, and one hundred and twenty in circumference^a. There is a chain of mountains runs from south to north, between which lie many pleasant and fruitful vallies, and the mountains, being covered with tall flourishing trees, look green and very chearful at a distance^b. The coast is plain, and for the most part of an excellent soil, being watered, more especially on the west side, with abundance of pleasant streams, the verdant banks of which render the country very delightful. On this side of the island, there are two different ports, *Hats* and *Umatay*, where the *Dutch* have sometimes careened their ships. On the east side of the island, there are also two reasonable good ports *Iris* and *Piggug*, separated only by a point of land; but the best port of all, is that of *Agadna*, where the *Spanish* town and forts stand, and where, except in hurricanes, ships may ride in the utmost safety from all winds, from ten to eighteen fathom water; the bottom being perfectly sound and good^c. There were formerly between thirty and forty villages in this isle, but they are now fewer; and, amongst those that are left, *Agadna* and *Umatay* are all that deserve the name of towns; the houses in them being tolerably well built, and having a considerable number of *Spanish* inhabitants, as also churches, convents, and some other public edifices. As the climate, though warm, is equally pleasant and wholesome, as all the necessaries of life are to be obtained here, with very little trouble, and that too in the greatest abundance; and, as they have all the materials for building houses, almost in every part of the isle, it is strange that they have no more and better settlements in it; and stranger still, that even those they have are far from being in a thriving condition^d (B). In the year 1684, the *Spaniards* built a ship here, of the burthen of one hundred and sixty tons, for the *Manila* trade; but nothing of that kind has been done of late years. On the contrary, as will be hereafter shewn, they seem to make it a point of policy to preserve their present settlements, because they are absolutely necessary, without any thoughts of extending them. This is the only one of these islands in which any *Spaniards*, the missionaries only excepted, reside; though they send small detachments from their garrison to the adjacent islands from time to time to bring them refreshments; and it is here that the *Manila* ship touches in her passage, for the sake of fresh provisions and recruiting their sick, which is the principal reason that the

^a Pere LE GOBIEN, *Histoire des Isles Mariannes*, liv. iii. Du Bois *Geographie Moderne*, P. ii. chap. xiv. art. v. De la BARBINAIS LE GENTIL *Tour du Monde*, vol. i. p. 210. ^b Capt. COWLEY's *Voyage round the World*, p. 15. DAMPIER's *Voyages*, vol. i. p. 291. De la BARBINAIS LE GENTIL, *Tour du Monde*, tom. i. p. 219. ^c Pere LE GOBIEN, *Histoire des Isles Mariannes*, p. 75. Capt. COWLEY's *Voyage round the World*, p. 20, 21. ^d Giro del Mondo del Dottor GIOVAN. FRANCESCO, GEMELLI CARRERI, PET. MART. Dec. v. lib. 6. Du Bois *Geographie Moderne*, P. ii. chap. xiv. art. v.

(B) We shall, in its proper place, take notice of the policy pursued by the *Spaniards*, in their manner of trading to the *Marianne* islands, and the motives upon which they act. In this note we shall only observe, what the colour is they give to strangers, for a manner of proceeding that seems to be so repugnant to common sense. They always allege, that these islands are a kind of honorary conquest, which his Catholic Majesty holds at a very large expence; not for the sake of any utility that results from them, but to shew the puissance of his crown, which parts not even with useless countries. It is said also to be done on a principle of religion, that so many thousand souls, as the missionaries have here gained from the empire of darkness, to the kingdom of light, may not fall again into the same desperate state (6). As flimsy and superficial as these coverings are, many have taken them for very serious truths, and have ridiculed, as a weakness in the *Spaniards*, what was in reality a much greater weakness in themselves (7). That this is a

pretended reason only, and not the true one, appears manifestly from hence, that the *Spaniards* were for a long series of years in possession of these islands, before they took care to convert the *Indians* at all; and even now there is an evident contrariety between the pious disposition of his Catholic Majesty, and the political system of his ministers; since, without doubt, the missionaries would incline to preserve and protect their converts; whereas nothing is clearer, than that most of the governors of these islands have thought it their interest to lessen and destroy them (8). But, notwithstanding all this, there can be nothing more true and certain than the matter of fact here laid down, that the island of *Guam* might be cultivated to advantage, since it enjoys a fine air, a mild climate, a fertile soil, and is subject to fewer inconveniencies, than many of the other countries that have been cultivated to advantage by other *European* nations, and than some even of the *Spanish* plantations.

(7) De la Barbinais le Gentil

a crown of Spain has been at the expence of supporting a fortress, and maintaining a garrison, without drawing any thing from the produce of the island¹.

ZARPANA, *Rota*, or the isle of *St. Anne*, lies at the distance of seven leagues from *Guam*, *A succinct description of the island of Zarpana, or St. Anne.* and is about forty-five miles in circumference, being in the latitude of fourteen degrees north. This is also a very pleasant and fertile island, finely diversified with rising grounds, covered with lofty trees, beautiful plains of a rich black soil, and extremely well watered. There are two excellent ports, one on the south, the other on the north-west side of the island. The latter was called in the language of the natives, *Socanrayo*, but the Spaniards call it *the Port of St. Peter*. This isle was extremely populous, when the Spaniards first came to *Guam*, and long after. Some of the missionaries suffered death in their endeavours to propagate the faith amongst them; at present the *Indians* are very few, in comparison of what they were, for reasons that will appear in the course of this section^m.

AGUIGUAN, or the island of the *Holy Angel*, lies in the latitude of fourteen degrees forty-three minutes, about forty miles from *Zarpana*ⁿ. It is but a small island, about nine miles in compass, mountainous, but pleasant, and formerly very well inhabited. This seems to have been the island that Captain *Funnel* touched at in 1730, when the people came off in their boats, and furnished him with fish, eggs, yams, potatoes, and other refreshments. They offered to have paid them in money, which they looked at, and refused, making signs that they would be better pleased with tobacco; which was given them. To one poor *Indian*, who went on board, they offered a glass of brandy, and he seeing them drink it freely, ventured to swallow some of it, but immediately tumbled down, as if he had been dead, staring and keeping his mouth open; upon which they put him on board his own prow, recommending him to the care of his countrymen, at the same time giving them to understand, he would come to himself in a little time^o (C).

TINIAN, or the island *Buena Vista Mariana*, lies at one league distance from the island last-mentioned, and is about forty-five miles in circumference. A *Manila* ship, called *the Conception*, was cast away upon this coast, in the year 1638, at which time, as the missionaries assert, one of the natives, whose name was *Taga*, saw in a vision the Blessed Virgin, who exhorted him to become a Christian, informed him of the shipwreck, and directed him to succour the poor people who had escaped. This man went accordingly to the *Manila's*, where he was baptized; and it was on account of his vision, that the island received its *Spanish* name^p. Here it was, that the present Lord, then Commodore, *Anson*, touched in his passage to the *Philippines*; and in the history of his voyage, we have a much better account of this island, than we are ever like to receive, of any of the rest; and for this reason, and as it will serve to give us a more certain and distinct notion, not of this only, but of these islands in general, we shall borrow from that account what may best answer this purpose^q.

THIS island lies in the latitude of fifteen degrees eight minutes north, and longitude from *Acapulco* one hundred and fourteen degrees fifty minutes west: its length is about twelve miles, and its breadth about six, extending from the south south-west to north north-east. The soil is every-where dry and healthy, and somewhat sandy, which being less disposed than other soils to a rank or luxuriant vegetation, is the reason that the meadows, and the bottoms of the woods, are therefore much neater and smoother than is common in hot climates. The land

¹ Giro del Mondo del Dottor GIOVAN. FRANCESCO, GEMELLI CARRERI. De la BARBINAIS LE GENTIL Tour du Monde, tom. i. p. 215. Lord ANSON's Voyage, Book iii. chap. i. ^m Memoire du Pere LOUIS de Morales. (C) It is not absolutely certain that this was the island seen by Captain *Funnel*. But if it was any island of this Archipelago, as he seems to think it was, it must have been this, for he describes it to have been a small island, very high land, but flat and green at the top, adorned with beautiful trees, and looking at a distance wonderfully pleasant. It is true, he places his island of *Magao* in the latitude of thirteen degrees; which does not agree with this island at all. But then he says, that falling to the southward, they had sight of the island of *Guam*; from whence it is plain that he was mistaken in his former conjecture as to the latitude of this island, of which

he speaks only by guess, and that it lay in a higher situation, as it really does. When they were within less than a degree of the equinoctial, they found three islands not described in the charts, and they gave names to two of them, from particular accidents that befel them, calling one *the Island of Dearth*, and the other of *Disappointment*. These islands were exceedingly populous, in so much that there came out between forty and fifty prows, with about four or five hundred men on board them (9); and this is a strong confirmation of what the missionaries tell us concerning the great number of inhabitants in the *Ladrone* or *Marianne* islands.

(9) *Funnel's Voyage round the World, in Norris's Collection, vol. i.*

rises by easy slopes, from the very beach, to the middle of the island, though the general course of its ascent is often interrupted by gentle declivities, and pleasant vallies; and the inequalities that are formed by these gradual swellings of the ground, are most beautifully diversified with large lawns, which are covered with very fine trefoil, intermixed with a variety of flowers, and skirted by woods of tall and well-spread trees, most of them worth notice, either for their aspect or their fruit. The turf of the lawns is quite even, and the bottom of the woods, in many places, clear of all under-woods; and the very woods themselves usually terminate on the lawns with a regular out-line; not broken or confused with straggling trees, but as uniform as if they had been laid out by art. There arise from hence a great variety of the most elegant and entertaining prospects, formed by the disposition of these woods and lawns, and their various intermixtures, as they spread themselves differently through the vallies, and over the slopes and declivities with which the place abounds.

Of the cattle, poultry, and wild hogs which the Spaniards breed here.

THE animals partake in some measure of the romantic cast of the island. For the cattle, of which it is not uncommon to see thousands feeding together in a large meadow, are certainly the most remarkable in the world; for they are all of them milk-white, except their ears, which are generally black. And though there are no inhabitants, yet the clamours of domestic poultry, which range the woods in great numbers, perpetually excite ideas of the neighbourhood of farms and villages, and contribute thereby to the cheerfulness and beauty of the place. The cattle on the island are at least ten thousand; and there is no difficulty in getting near them, as they are not at all afraid of men. While powder is plenty, the shortest and easiest way is shooting; but if it is requisite to save your ammunition, your men may run them down with ease. Their flesh is extremely well tasted, and more easily digested, than any elsewhere to be met with. The fowls are exceedingly good, and may be also run down with little trouble; for they can scarce fly further than an hundred yards at once; and even that will fatigue them so much, that they cannot readily rise again. Besides the cattle and the poultry, here are abundance of wild hogs; these are most excellent food; but, as they are a very fierce animal, people are obliged to shoot them or hunt them with large dogs, which the crew of the *Centurion* found upon the place, at their landing, and which belonged to the detachment then upon the island amassing provisions for the garrison of *Guam*. These dogs are trained to the killing of hogs, and have great spirit; but though they are a large and bold breed, the hogs fight with so much fury, that they frequently destroy them.

The excellency of the fruits, and of those that are peculiar to these islands.

IT is not only the plenty and excellency of its fresh provisions, that recommends this island, but it is as much perhaps to be admired for its fruits, and vegetable productions; for in the woods there are inconceivable quantities of cocoa-nuts, with the cabbages growing on the same tree. There are, besides, guavas, limes, sweet and sour oranges, and a kind of fruit peculiar to these islands, called by the *Indians RIMA*, but by us, the *Bread-fruit* (D), constantly eaten by the seamen instead of bread, and universally preferred to it. It grows upon a tree, which is somewhat lofty, and which, towards the top, divides into large and spreading branches.

* Lord ANSON's Voyage, p. 415. Mr. PASCOE THOMAS's Journal, &c. p. 165, 166. Voyage, p. 147. Mr. THOMAS's Journal, &c. p. 165, 166.

* Lord ANSON's

(D) This plenty of bread-fruit, is the distinguishing blessing of these islands; as, for any thing we know, there is no fruit of the like kind found any-where else. The more intelligent writers tell us, that there are two sorts of trees that bear bread-fruit. The first of these is the *Rima*, which bears a very large fruit, as big as a melon, with a rough prickly coat, and of the colour of a date; in the middle there is a large kernel, like a white nut. The other is the *Ducdu*, the tree of which, in size, shape, and leaves, differs little from the former, but the fruit is long, and no bigger than a large pear. The pulp is white and soft, sticking to about fifteen kernels. These, as well as that of the *Rima*, when roasted, eat exactly like chestnuts (10). It appears from hence, that what is called the *Rima* in the text, was in reality the *Ducdu*; but the other being the more common name amongst seamen, and both being esteemed bread-fruits, the mistake was very easy. There are, it seems, besides these, some other sorts, to which the natives give the name of *Nica*, *Iffuni*, *Dago* (11), the fruit of which,

when treated like that of the *Rima*, that is, when baked in an oven, or roasted under embers, then suffered to grow cold, and the black skin rasped off, taste exactly like new bread, and is equally wholesome, nourishing, and pleasant. Some or other of these fruits are to be found in each of these islands, and from them they are all transplanted, and grow in different parts of the island of *Guam*. It is highly probable, that, as the natives had not the use of fire, they dried these fruits in the sun, and so laid them up for store, in that apartment in their house which was destined to that purpose. For in this state the fruit will keep four or five months; and for the other eight, they may be taken daily from the trees (12). By the way, it may not be amiss to observe, that the fruit of the *Bananas*, more especially of that kind to which the name of *Musa* is commonly given, ripen best, and are most agreeable to the stomach; when the fruit, which grows in clusters (13), is pulled at its full size, but still green from the tree, hung up, and suffered gradually to become of a yellow colour in the open air (14).

(10) *Giro del Mondo del Dottor Giovan. Francesco, Gemelli Carreri*, P. v. *Gentil Tour du Monde*, tom. i. p. 216. See the article *Musa*, in *James's Dictionary* in the *Indies*.

(11) *De la Barbinais le*

(13)

(14) From the information of persons who have lived long

- a The leaves of this tree are of a remarkably deep green, notched about the edges, and are generally from a foot to eighteen inches in length. The fruit grows indifferently on all parts of the branches. It is in shape rather like a large pear, than an apple, and is covered with a rough rind, and is usually seven or eight inches long. Each grows singly on its stalk. This fruit is in the properest state to be used when it is full-grown, but still green; at which time its taste has some resemblance to that of an artichoke bottom, and its texture is not very different, for it is soft and spongy. As it ripens it grows softer, and of a yellow colour, and then contracts a luscious taste, and has an agreeable smell, not unlike a ripe peach; but in this state it is esteemed unwholesome, and is said to produce fluxes¹. Besides the fruits already enumerated,
- b scurvy-grass, and sorrel; all of them highly acceptable to men long cooped up at sea, and sinking under that loathsome disease the scurvy. There are plenty of fish upon the coast, but so luscious that they are thought unwholesome. But it must not be forgot, that near the center of the island, there are two considerable pieces of fresh water, which abound with ducks, teal, and curlew. The whistling-plover are also to be found there in prodigious plenty. These pieces of water, in conjunction with wells and springs, which are every-where to be found, or sunk with little difficulty, make some amends for the want of rivulets, which are so common in *Guam*, and which, with all its beauties and blessings, it must be owned, are not seen in *Tinian*².

c It must however be admitted, that the having no such running streams, is in many respects a very material defect; and there is another, which, though of less consequence, is rather more troublesome, and that is the swarms of musketoes, and other kind of flies; and, which is yet worse, a sort of tick, which not only infest cattle, but will also thrust itself into the skins of men, and thereby create, if not a dangerous, yet a painful inflammation. The centipedes and scorpions have likewise been found there; and it is not impossible that there may be other venomous creatures³.

But the most important and formidable exception to this place remains still to be mentioned; this is the inconvenience and the little security there is, at some seasons, for a ship at anchor. The only proper anchoring place for ships of burthen, is at the south-west end of the island. The bottom of this road is full of sharp-pointed coral rocks, which, during four months of the year, that is, from the middle of *June* to the middle of *October*, render it a very unsafe place to lie in (E). This is the season of the western monsoons; when near the full and change of the moon, but more particularly at the change, the wind is usually variable all round the compass; and seldom fails to blow with such fury, that the stoutest cables are not to be depended on: what adds to the danger at these times, is the excessive rapidity of the tide of flood, which sets to the south-east, between this island and *Aguiguan*, a small island which we have already mentioned, near the southern extremity of *Tinian*. This tide runs at first with a vast head, and over-fall of water, and occasions such a hollow and over-grown sea, as is scarcely to be conceived. Those who lie here in this season must be under the dreadful apprehension of being pooped by it, though in a sixty-gun ship. In the remaining eight months of

(E) The season described in the text, is that of the hurricanes, of which they have commonly one or two in a year, and sometimes more. Always violent, often terrible, and sometimes fatal. In the month of *November* 1680, there happened one which overturned almost every habitation in the island of *Guam*, which overwhelmed and destroyed part of a little isle lying near its coast, and which ruined most of their plantations (15). Such dismal events as these, however, are far from being frequent. Indeed the annual return of the hurricanes, is the greatest inconvenience to which these islands are subject. But then it is to be considered, that it is not only a cause of mischief and disorder, but also an instrument of singular advantage, and productive of great good. These violent winds cleanse the air of all noxious va-

pours, and so thoroughly purify the climate, that it remains equally serene and wholesome during the remaining part of the year. Neither is this to be considered as an accident peculiar to these islands; on the contrary, it is common in the *West Indies* (16), and in other parts of the world, of which the reader will meet with a remarkable instance in a subsequent part of this work. On the whole, therefore, how alarming and dangerous soever these boisterous seasons may be, more especially to seamen, yet custom, and their salutary effects, render them less terrible than otherwise they would be to the inhabitants; who, as they can judge of the time of their approach, are able from thence to take such methods as are most expedient for their own security.

(16) *Banks's Posthumous Works*, p. 364. P.

the year, that is, from the middle of *October*, to the middle of *June*, there is a constant season ^a of settled weather, when, if the cables are but well armed, there is scarcely any danger of their being so much as rubbed; so that during all that interval, it is as secure a road as could be wished for. To this it is proper to add, that the anchoring bank is very shelving, and stretches along the south-west end of the island; and that it is entirely free from shoals, except a reef of rocks, which is visible, and lies about half a mile from the shore, and affords a narrow passage into a small sandy bay, which is the only place where boats can possibly land ^x.

The island of Saypan, or of St. Joseph.

SAYPAN, or the isle of *St. Joseph*, lies in the latitude of fifteen degrees twenty minutes, at the distance of nine or ten miles from *Tinian*, and is about twenty miles in circumference; on the west side of this island, at the bottom of a steep bay, well sheltered with wood, lies a safe and commodious port, called *Canthabilda*, as the *Spanish* writers inform us ^y. After *Guam*, ^b this is the largest, and was formerly the best peopled of all these islands, and was not thoroughly subdued by the *Spaniards* till the beginning of the current century. The country is diversified with hills and plains, looks very green and pleasant at a distance, and is no less beautiful when examined more at leisure, as it affords all the necessaries of life in the utmost plenty, and is blessed with a fertile soil and a serene climate ^z.

Description of the remaining part of the islands in this Archipelago.

ANATAJAN, or the island of *St. Joachim*, lies in the latitude of seventeen degrees twenty minutes, and is about thirty miles in compass. This is the first of those called *the Northern Isles*, and lies somewhat more than an hundred miles distant from *Saypan* ^a. *Sarigan*, or *St. Charles's Island*, in the latitude of seventeen degrees thirty-five minutes, about twelve miles in compass, and about nine distant from the last-mentioned island ^a. *Guguan*, or the isle of *St. Philip*, lies in the latitude of seventeen degrees forty-five minutes, eighteen miles distant from *Sarigan*, and about nine miles in compass ^c. *Almagan*, or the island of the *Conception*, in the latitude of eighteen degrees ten minutes, about ten miles from *Guguan*, and eighteen miles in compass ^d. *Pagon*, or *St. Ignatius's* island, in the latitude of nineteen degrees, thirty miles from *Almagan*, and about forty in compass ^e. *Agrigan*, or the isle of *St. Francis Xavier*, in the latitude of nineteen degrees four minutes, a large mountainous island, fifty miles in circumference, remarkable for its vulcano ^f (F). We are informed by an author of credit, that it is well inhabited, and that formerly the inhabitants of this, as well of as the rest of these islands, put to sea in their prows, in order to carry provisions and refreshments to any ships they could discern; but that an insolent *Spaniard*, having beat some of them, they never afterwards went ^d out to meet the galleons ^g.

The three most northern isles, which are little known to the Spaniards.

ASSONSONG, or the island of *Assumption*, (in which there is also a vulcano) lies in the latitude of twenty degrees fifteen minutes; about eighteen miles in circumference, and lying twenty leagues north from *Agrigan* ^h. *Maug*, or *Tunas*, called also the island of *St. Lawrence*, composed of three rocks, somewhat more than twenty miles in compass, lying in the latitude of

(F) Those who are of opinion that islands have their rise from earthquakes, and that these again are caused by subterranean fires, look upon these islands as a very strong instance in favour of their hypothesis. They allege, that through the whole *Archipelago* of *St. Lazarus*, vulcano's are frequent, as we know they are in the *Moluccas*, and in the *Philippines*, and some there are said to be in *New Guinea*; as, on the other hand, they are frequent enough to the northward of these islands, even as far as *Japan* (18). The form also of these islands, or at least most of them, is agreeable enough to this notion of their origin, inasmuch as they rise gradually from the shore on every side, swelling in the middle to a very great height; and others appear to be no more than a large mountain arising out of the sea: whence those who defend this sentiment, will hold that these islands are of later origin than the rest of the world (19); and a very ingenious countryman of ours has suggested a method of

discovering, or, at least, coming near, the age of such islands, by considering the depth of soil that is upon them; so that, according to his system, the southern islands should be more ancient than the northern, since the latter are many of them but bare rocks, or very little better at this day (20). It has been urged as a conclusive argument against this, that, being a point of fact, it ought to be proved from history rather than argument; but, if it be considered on one hand, that it may be positively proved that some islands have thus arisen out of the deep (21), so that the fact is not either impossible or improbable; and that, on the other hand, there is no evidence that can be brought to confute it, it is shewn to stand on a proper basis, and justly considered as a point about which men may think freely, and determine for themselves, as the rule of reason, assisted by the light of experience, shall guide them.

a twenty degrees thirty-five minutes, about fifteen miles from *Affonfung*¹; and much about the same distance north, lies *Urraca*, or *Irac*, the last of these islands, which it does not appear was ever inhabited, and of which therefore we meet with no particular description^k.

THESE islands lie in the torrid zone; and yet so much is the heat of the sun tempered by the humidity of the air, and by the breezes of the sea, that the climate is, generally speaking, equally serene, salubrious, and pleasant; only in some seasons of the year, as has been before observed, they are liable to hurricanes, which, though they do sometimes a great deal of mischief, yet, as we have already intimated, clear and refresh the air, in such a manner, that before they were visited by the *Europeans*, the people commonly lived beyond the age of a hundred, without being disturbed with sickness or infirmities^l. For the most ancient *Spanish* writers, as we have already remarked, speak of these islands as mean, barren, contemptible places; and indeed it is apparent, that they would be understood to have thought them so, since, as they allege, their government took near a century to consider whether they should keep them or not. In order to comprehend this clearly, and to reconcile it with what has been already said, it is necessary to lay open the nakedness of these miserable isles, and to acknowledge, that, with the finest sun and the most fertile soil, they afford not either precious stones or metals. However, this mean barren country produced fruits, sallads, and a variety of wholesome herbs, and in the greatest plenty. Beasts indeed they had none, and but one kind of birds, not unlike the turtle dove^m. There were indeed fish of many different kinds in their rivers, and upon their coasts; but whether they eat them or not is doubtful, the reason of which will appear hereafter.

The climate and soil of the Mariana Islands in general.

THE inhabitants are a tall, robust, and very large-made people, but at the same time as active as it is possible to conceive them; of a dark colour, yet not quite so dark as the inhabitants of the *Philippines*; coarse-featured, and rather hard-favoured. The men went entirely naked, the women only concealing what natural modesty teaches should be concealed. Both sexes were endowed by nature with strong parts, which, however, seldom taught them to correct their passions, which were also strong, but they were rather employed in the indulging them. Quick in apprehension, not deficient in understanding; very ready and even eloquent in expressing their thoughts, but no less adroit in concealing them; of very lively imaginations, extremely fond of pleasure, not unacquainted with virtue, but very little inclined to practise it. Lust, dissimulation, and revenge, as the missionaries say, were their prevailing vices; to gratify which, they very seldom stuck at any thing. Yet, take them all together, excluded from the rest of the world, and scarce having an idea of any other people than those in the adjacent islands, which were extremely populous, containing all together above one hundred thousand people, they were, these just allowances made, a very extraordinary nation, and as such, deserve to be better known than commonly they are; the rather, because, after having carefully reviewed and compared the accounts given of them, by writers of different nations, it seems not impossible to describe them with some tolerable degree of accuracy and truthⁿ.

An account of the persons, inclinations, and faculties of the inhabitants.

In point of religion, they may be said to have none; and yet they were over-run with superstition. They had scarce any notion of the *DEITY*, but had a very distinct idea of the *Devil*. They very firmly believed the immortality of the soul; and, though they had no conceptions of rewards and punishments after death, yet they were thoroughly persuaded that there was a place of happiness, and another of torment. They had no proper name for the former, which they fancied to be under the earth, describing it as a delicious garden, full of lofty cocoa trees, abounding with rich fruits, and watered by pleasant rivers, running through flowery vales that exhale the richest odours. The latter they call *Zazarraguan*, or the house of *Chayfi*; that is, the demon who they believed afflicted the souls that fell into his power with variety of tortures. They did not ascribe this to the crimes they had committed, but imagined that every one who died a natural death went immediately to Paradise, and that such as were cut off by violence, were doomed to the house of *Chayfi*^o. When their friends or relations were dying, they stood with a neat little basket on one side of them, and desired that the soul would be pleased to repose there whenever it came to make them a visit. Those of the better sort filled these baskets with fragrant herbs, and rubbed them with odoriferous oils, carrying them sometimes into pleasant places, and at others to the houses of their friends; and sometimes left them

Without religion, and yet exceedingly given to superstition.

there, supposing that the souls might be delighted with this change of habitation. All these marks of respect did not proceed so much from reverence and affection, as from terror and apprehension; for they imagined that the *Anitis*, so in their language they stiled these departed spirits, appeared to, and mal-treated them, disturbing them, more especially in their dreams; and therefore at certain seasons they fasted, and took other methods to appease them^a.

Without government, and yet having a race of nobles excessively proud.

As they are superstitious without religion, so no people in the world are so transported with notions of nobility of blood, without having either authority or government. There are amongst them three kinds of people; the *Chamorris*, or noblemen, the middle, and the common sort of men. The first of them have a kind of estates upon which they live; but they have no tenants, vassals, or domestics. They have great respect shewn them; in their public councils, their speeches are heard with silence and attention; but notwithstanding this, every other man was likewise heard, and that advice was likewise followed which the majority thought best. A *Chamorris* has something elevated and noble, not only in his look and in his person, but in his behaviour and manner; for usage in all countries establishes politeness, and the usual compliment among them is *Ali Ariamo*, "Suffer me to kiss your feet." They never converse with ordinary people; on the contrary, if such eat or drink in their houses, they look upon them as polluted^b. If at any time they are under a necessity of speaking to persons beneath them, they stand at a great distance, deliver themselves very succinctly, and with a loud voice. If a *Chamorris* marries into a common family, it is held such a dishonour to the whole body of the nobility, as can be atoned for only by his blood. Yet, with all this delicacy about marriage, their estates do not descend to their children, but to their nephews, either by their brothers or sisters. There is no form of rule amongst them, nor any kind of authority but what is acquired by persuasion, which goes as far, and lasts as long, as superior eloquence can carry or maintain it. Whatever notion, therefore, these people may entertain of freedom, this is certain, that they carry practical liberty as far as it is possible^c.

The singular manners, strange fables, and ridiculous vanity of these people.

It is a point not hitherto decided, from whom these people are descended, or whence they came; but, from the affinity of their language with the *Tagalese*, of which we have spoken in the former section, some have thought it probable, that they were of the same stock with the inhabitants of the *Philippines*; others, from their love of freedom, the haughtiness of their spirits, and their high notions of nobility, have inclined to think them a-kin to the *Japanese*. It is possible that the *Chamorris* may be of the one country, and the rest of the nation of the other. They have poets among them who are extremely admired, and who, in their songs, celebrate the great actions of their ancestors, and feed the poor people with fond notions, not only of their excellence in bodily strength and agility, for which there might be some colour, but also of their superiority in science, over all nations in the world^d. They make them believe that the first man was formed out of the earth of the island of *Guam*; that he was afterwards turned into a stone, and this stone being broke to pieces, and scattered over the rest of the world, there sprung up from thence all the rest of mankind. "Hence," say they to their vain and credulous audience, "being banished so long and so far from their native country, they have lost the use of speech, and understand not us or themselves; for though they utter sounds roughly, and out of their throats, that resemble words, yet they do it only like fools, or the birds that we teach, having but an imperfect notion of what they would express." The gift of language being reserved to us, their parents." They have another sort of people amongst them called *Macanas*, wise-men, like the *Magi* amongst the *Persians*; they direct them in their superstitions; teach them how to sooth the *Anitis*; know the virtues of different herbs, and practise a kind of surgery amongst them. But still all depends upon persuasion; so long as they can please and delight, so long they are obeyed; for every man, from the hour he can supply his own wants, is master of himself, and absolutely independent. Yet this very wise and knowing nation had not so much as the idea of fire, till they were taught it to their cost, by the *Spaniards* burning their houses, and then they took it for an animal that fed upon wood; and therefore, if before this time they lived on fish, as it is certain they caught them, they must either have eaten them raw, or dried in the sun; concerning which however we have no distinct account^e (G).^f

IN

^a Du Bois Geographie Moderne, p. 702. PERRÉ LE GOSIEN Histoire des Isles Mariannes, p. 67, 68. ^b Histoire des Isles Mariannes, p. 49, 50. ^c Du Bois Geographie, p. 703. (G) In all that we meet with relating to these people, there seems to be nothing so much out of the road of credibility, as their being utterly unacquainted with fire;

and the rather, because, besides lightning, which they must have seen in their own island, they could hardly stir to any considerable distance at sea, without having a sight

- a** In these islands the women have all the graces of the sex in their persons and their manners. Their features are softer and more regular, their complexions much clearer, and they have an easy address, a cheerful humour, and are as much devoted to ease and diversions as in the politest countries on the globe. They have their assemblies, as well as the men, in which they amuse themselves with reciting the performances of their poets, in a manner perfectly peculiar to themselves. For casting themselves into a circle of ten or a dozen, they speak, or rather chaunt, all at once, and yet so distinctly, with such harmony, and with so fine a cadence, as appears equally surprizing and satisfactory, even to the *Europeans*. On such occasions they are adorned after their manner; that is, with little shells, and pieces of tortoise-shell hanging on their foreheads, with girdles of the same shells interwoven with flowers of different colours, and little cocoa-nuts neatly engraven^a. *Their women endowed with surprizing faculties, which gain them a great and constant superiority over the men.*
- b** They commonly wear only a piece of mat for modesty's sake, in which they surpass the men, who, as we have already observed, go absolutely naked; but at these assemblies they wear an entire garment made of twigs and roots, which disfigures them extremely; for it makes them look as if each of them was in a cage, and yet they move in them with agility enough; dance with shells between their fingers, as the *Spaniards* do with castanets; and heighten the poems they sing, with such a variety and propriety of action, that they may be esteemed a kind, and not the worst kind either, of pantomimes^b. As their excelling in these amusements renders them esteemed and admired, they are the chief objects of their thoughts; and it is from a continual exercise, that they attain such a wonderful perfection in the conduct of their voice, and the graceful and becoming management of their limbs^c.
- c** In consequence of these superior accomplishments, the sex have a more absolute dominion here, than almost any-where else. It is true a man may marry as many wives as he pleases, provided they are not relations; but this seeming privilege signifies little, since, as the effect of their labour would not produce a competent maintenance for more, they are glad to be content with one. We have before observed, that in these islands every man was master of himself, but not of any other man. From the moment he marries, half his little authority is taken away; for the wife commands every thing within doors, and her husband too, so long as he is there. If he gives her any reason to be jealous, she is at liberty to punish him in such a manner as to prevent any future suspicion. If he is lazy, passionate, or sullen, his wife takes the other married women in the neighbourhood to her assistance, who, armed with the husband's spears, come and punish the delinquent, by destroying his plantation, or perhaps his house; and even his person is not in safety, if he falls into the hands of these enraged females^d. The wife is also at liberty, in case she is offended, to retire to her own relations, who are glad of such an opportunity of plundering their neighbour, under pretence of punishing him. If she is of a milder disposition, she may leave her husband without assigning any other cause than that she is weary of him. He may also leave her, or rather oblige her to quit him; but then she takes with her the best part of his substance and his children; so that a man by letting slip an hasty word, loses both family and fortune in an instant, and sees them perhaps conveyed to the house of his neighbour the next day. In case a woman is false to her husband's bed, he may revenge himself as he pleases on her lover, and even put him to death; but unless he has a mind to be left alone, he must take care not to express the least resentment towards her^e. *The unreasonable privileges the women enjoy in a state of marriage.*
- d**
- e**

From a sense of the trouble and inconveniency attending the married state under these circumstances, many of the young men ran into a profligate kind of life, from which they were seldom reclaimed. They corrupted young women by presents; or, if their parents were poor, bought them, while they were yet children, and placing these in a house common to themselves and their companions, preferred to a regular oeconomy these kind of public stewards^f. *From the consideration of this, many refrain from marriage, and lead a de-*

fight of some or other of the neighbouring volcano's. Yet the fact is very positively affirmed by the *Spaniards* (22); and which adds great weight to their testimony, the inhabitants of some other countries at no great distance, have been found by discoverers of other nations in the very same condition (23). But we shall perhaps be the less surprised at this, when we reflect that one of the most judicious writers of antiquity thought that mankind in general came to know the benefits resulting from this element, not so much from the help of reason, as from accident. Trees, says he (24), standing close in a wood,

so that their boughs were intermixed, being violently agitated with the wind, from the friction took fire; which men contemplating at first as a strange sight, but by degrees observing that its splendor diffused light and warmth at the same time, resolved to avail themselves of these blessings; and accordingly obtained fire by rubbing together dry sticks. There is something in this very well imagined, and not altogether destitute of probability; more especially as many barbarous nations (25) retain this method of kindling fire.

bauched and
profligate
state of life.

THIS dissolute sort of life prevailed very much before the *Spaniards* came amongst them, and by corrupting their minds, and enervating their strength, rendered them ripe for those calamities which afterwards fell upon them. It is true, by the wiser and better part of the nation (for there will be in all nations distinctions in point of morals, as well as from station or birth) these men were held in the greatest abhorrence. However, as their number was always great enough to furnish conversation amongst themselves; and as the genius of the people is strongly bent to pleasure, they were not to be restrained by any sense of shame: and in the more distant islands, and even in the mountains of the island of *Guam*, where the people still enjoy their liberty, these sort of associations are still frequent enough; and it is chiefly from the bad behaviour of those debauchees, that authors have represented the inhabitants of the *Marianne* islands, in general, in a worse point of view than they have deserved^b. For in reality, the vices to which these people become addicted, render them as despicable in the eyes of their countrymen as in those of the *Europeans*. But as there is no nation in which there are not bad men, so it is not from the actions of such, that we ought to take the character of a whole people; though there have been likewise some who have erred on the other side, and given much higher commendations to the natives than they deserved. The truth lying here, as well as in other places, in the mean between both, without diminishing their virtues, or exaggerating their vices; and upon this principle we have hitherto, and shall hereafter endeavour to represent them impartially, and to exhibit their manners, such as they really were^c.

Account of
their houses,
furniture,
utensils, and
other domestic
concerns.

THEIR houses were built with palm-trees, and such other timber as their respective islands afforded, and were, generally speaking, divided into four apartments, by a kind of mats, made of the filaments of leaves, roots, and twigs of trees, and the covering was commonly of the same material, but of a coarser kind. Each of these apartments was destined to a particular purpose; they slept in one, they eat in another, they laid up their fruit and provisions in a third, and they worked in the fourth. Their utensils were not many, but every thing they had was neat in its kind, and carried in it marks of genius, by which they supplied many things that more civilized nations derive from experience. As to defensive weapons, they had none; and as to offensive, they had no idea of bows, arrows, swords, or indeed of any other instrument of violence, but a lance or javelin, made of a tough strong wood, and pointed with human bones, which they rubbed till they became sharp; and even the slightest wounds with these were said to be in their own nature venomous and mortal^d. There can be no doubt as to the fact, if the concurrent evidence of the writers of all nations may be esteemed sufficient authority (H). We may likewise add to these circumstances, that the reason seems pretty evident, for they had no kind of metals, nor were they furnished with the bones of any other animal that were strong enough to be applied to this use. These and stones were their only weapons; and though they had not before been taught by the *Spaniards* the use of slings, yet they threw them with great dexterity, and with such surprizing force, as to enter into the bodies of trees at a considerable distance^e.

Their military
disposition,
manner of
making war,
and exercises.

As they had no policy of any kind, so every man revenged the wrongs, or what he took to be wrongs, that he sustained, in what manner he thought fit, and in like manner the inhabitants of one district, if they conceived themselves injured by those of another, commenced hostilities, and continued them till they obtained satisfaction. In these wars fraud and cun-

(H) In respect to these savages arming their spears with human bones, the missionaries, and all the writers of voyages, antient and modern, concur (26). In one of our *English* writers, we have an account of the number of lances they make out of one man's bones, which were no fewer than eight. Of the leg-bones they make two; of the thigh-bones as many; and two out of the bones in each of his arms (27). These bones are not only made very sharp at the point, but are serrated or jagged from top to bottom. Some writers affirm, that from the natural venom in these weapons, wounds made by them are always mortal; others, that they prove so, if not cured

in seven days (28). The reason of this is not easily to be conceived. It may perhaps be chiefly owing to the jagged sides of their lances, which, being thrown with prodigious force, may so tear and lacerate the part, as to produce dreadful effects, without supposing any peculiar venom in the bones; though it is upon this that the missionaries, and indeed most writers, insist. It may not be amiss to observe here, that the natives of *California*, who in their persons and manners very much resemble the natives of these islands, use the very same kind of lances (29), except that they are made either of flint or agate, and sometimes of the bones of large fish.

a ning had a much greater share than courage or force. They laboured as much as in them lay to surprise or circumvent their enemies; and in the choice of ground, in making false attacks, and in laying ambuscades, they shewed equal address and patience, remaining sometimes for two whole days without provisions. But when they came to engage in earnest, their disputes were not either long or bloody. If one or two men were killed, or half a score disabled, there was an end of the war; those who were defeated sending immediately ambassadors to make submission, and to settle terms of peace. In order to qualify themselves for martial exploits, the principal diversions amongst the men consisted in robust exercises, such as running, leaping, wrestling, pitching stones, and throwing lances at a mark^f.

b THEY were likewise very dexterous in swimming and diving, to which they enured their children, as soon as they were able to walk, and thereby rendered them not only hardy and robust, but so accustomed to and fearless of the water, that they were in a manner inhabitants of that element, at least in comparison of other men; and would bring up stones, or fish, or whatever else they could perceive in the sea, from a great depth. Their ingenuity and mechanic genius were most conspicuous in the invention of that singular vessel called by our seamen the *flying prow*, which has been commended and admired by all, but chiefly by those whose skill in naval architecture enabled them to judge of it best (1). In these vessels, before

Skill in mechanic arts, inventions, and application of them to the business of life.

^f Du Bois Geographie Moderne, p. 703.

(1) The flying prow, or proe, as some write it, is very justly considered as the most exact and finished piece of architecture, which hitherto the world has seen. When we say this, we must be understood to mean, in respect to the purposes which she is contrived to answer; since in this alone consists the excellence of any vessel; and therefore this prow being the best adapted that can be imagined to the nature of the seas and winds, in and by which she is to sail, certainly merits that character, and would be considered as a master-piece of art, if made in the most civilized country, with the help of the best materials, and tools the most fitly adapted. But if we consider it as framed here under great defects, in regard to the former, and without the assistance, at least till the *Europeans* came hither, of any one instrument made with iron, it becomes truly wonderful (30). In order to give the reader the best idea that we can, we shall first describe it exactly, and then remark its particular advantages, more especially with regard to the navigation, in which it is principally employed, and then leave it to his judgment, whether the invention, construction, and management of so extraordinary a vessel, is not an incontestible proof of the genius, sagacity, and courage of these people (31). These prows are of different sizes, especially in point of length; however they may be taken at a medium at forty feet; but they are not above two feet in breadth. The body of this vessel is composed of two pieces, joined end-ways, and sewed together with bark, calked, and otherwise secured by a natural bitumen, which is common in most of the islands. At the bottom the timber may be about two inches thick; which in working her into shape, is reduced to less than one. The depth at most about four feet. In the center stands a mast four-and-twenty feet high; she carries a triangular sail, fixed to a yard and boom, above twenty-seven feet every way. As all other vessels have their stems and sterns of different constructions, the prow, on the contrary, has them both alike, so that each serves indifferently for stem or stern, as they steer on different tacks. But as other vessels have both sides alike, the construction of the prow differs from them also in this respect; for though the windward bellies out like other boats, yet the lee side is perfectly flat. In order to carry so great a sail, without danger of oversetting, she has a frame laid out to windward, consisting commonly of three strong beams, which rests upon a log hollowed in the shape of a boat. This frame is about twelve feet

in length, and the little boat about thirteen. We find this contrivance stiled an *outleagner* or *outrigger*, and is well secured by two cross bars, and has also two braces from the head and stern to keep it steady. There is likewise a thin plank on the very same side of the vessel, upon which an *Indian* sometimes sits, and on which they likewise lay goods. One of these prows carries generally six or seven *Indians*, two placed at the head, two at the stern, who steer alternately with a paddle, according to the tack she goes upon, the rest being employed either in bailing out the water, which she accidentally ships, or in setting and trimming the sails (32). The mast, yard, boom, and outrigger are made of bamboo, the sails of matting, and very neat. When they have a mind to tack, they bear away a little to bring her stern up to the wind; then, by easing the halyard, and raising the yard, they lift it out of the socket in which it rested, and carry it round the lee-side till it falls into the socket at the other end of the boat; and the boom, being shifted into a contrary situation, that which was before the head becomes the stern of the vessel, and she is trimmed upon the other tack. As all the islands of this *Archipelago* lie nearly in a line from south to north, and are within the limits of the trade-wind, it is evident that these vessels, which sail excellently on a wind, can run from one island to another, and back again, only by turning the sail, and without ever putting about (33). It is the smallness of their breadth, and the flatness of the lee-side, which gives them this great advantage, which no vessel can have that goes large; and this advantage consists in going with as great, and sometimes with greater velocity than the wind. This accounts in some measure for the very extraordinary things we are told by the *Spaniards*, of the prodigious degree of swiftness with which these vessels run; and though, as in all cases of this nature, some exaggeration may be suspected, yet a hundred miles in five hours with a brisk trade-wind, how strange soever it may seem, may not exceed the bounds of truth (34). The dexterity of the natives, in steering, trimming, and righting these vessels, in case they were overfet, has been already mentioned, and occurs so frequently in the text, that there is no need of insisting on it here, where what has been already said will fully justify the commendations bestowed on these wonderful vessels, and the inferences made from thence, as to the natural abilities, skill, and application of these people.

they had any acquaintance with the *Europeans*, they made considerable voyages from one island to another; and when overset, shewed great presence of mind in turning them, refitting, and getting again on board; so that, taking all circumstances together, they might be esteemed none of the worst soldiers, and as brisk and bold seamen as any in this part of the world. They are likewise said to have planted and cultivated their ground; but in what manner, or with what kinds of seeds, does not appear; for though they are now expert enough in this kind of cultivation, yet it manifestly appears that they have learned this from the *Spaniards*, and very possibly have thereby lost the remembrance of the practices of their ancestors, if there were ever any such, which cannot be affirmed with certainty. If one might be indulged a conjecture, nature having given to these people bread upon trees, might be less bountiful to them in other respects; nor is this notion inconsistent with experience^a.

Some have laboured to justify them from the imputation of thieving.

ACCORDING to some of the missionaries, *Magellan* did great wrong to these people, when he fixed upon their islands the appellation of *Ladrones*. The natives, say these missionaries, are so far from being of a thievish disposition, that they leave every thing open, without the least suspicion of each other, and without ever suffering by this seeming neglect^b. It is however worth observing, that it is no conclusive proof these people were not thieves, because they had no conception of theft. Other barbarous nations, as well as they, have respected property amongst themselves, and yet made no scruple of taking whatever came within their reach from strangers. However *Magellan* was not so much to blame, since seamen of other nations, and in latter times, have given them much the same character; and, which does them still less credit, have given very good reasons why they bestowed it upon them; so that an implicit belief is as little due to these modern writers, as any other; and if truth in this case be worth coming at, we must come at it in this, as in other cases, by reflection and comparison^c.

Improbable that they should be light, fickle, and of a volatile disposition, and yet subtle and deep dissemblers.

THERE seems to be also some contradiction in what they report of the fickleness and mutability of the natives in their temper, eagerly seeking things one minute, and rejecting them the next, and representing them at the same time as very deep dissemblers, concealing their resentments even for years, and taking sudden and surprising revenges as soon as suitable opportunities offered. Such descriptions are unnatural. Men of a fluttering and volatile disposition are very capable of duplicity, but not of studied dissimulation^d. The missionaries very probably deceived themselves, by attributing to old resentments, and the recollection of past injuries, seemingly forgot, what in reality sprung from levity, or from some sudden, and, to them, unobserved cause of offence, which at the present opportunity excited these people to revenge, who, if that had been wanting, might have buried it in oblivion^e. These reverend authors, like all other historians, treat human nature from what they feel in themselves, and attribute facts done by others to such passions as would have led them to the commission of the like; which is not sound reasoning; for men uninstructed and undisciplined have quick and violent passions, but know not how to stifle or restrain them. These, however bad, are the effects of reflection and education; and savages are no more capable of them than of logic and other sciences; a habit of thinking being equally requisite in both cases^f.

Pleasure the great object of their desires. With some remarks on the disposition of savages.

THE missionaries are probably more in the right, in representing pleasure as the great object these people had in view; for that is the natural object of mankind in general, and the great use of reason is to distinguish rightly in the choice of pleasures, and in adapting properly the means for their attainment. It is in this the great difference between uncivilized and civilized nations subsists. The former are less capable of making a true judgment of appearances, and, by hastily grasping at whatever they take to be pleasure, run themselves upon those evils, which, if they saw them, they would certainly avoid. This kind of ignorance, natural and consequently inseparable from savages, is what better disciplined people, when they either see it with astonishment, or feel it to their cost, term barbarity; and therefore the first step towards doing any good with such men, is to teach them to reason right; and, though this would be a much slower, it would be a much surer, method of leading them to embrace true religion; and it is certainly for want of this that so many of the missionaries, in these islands particularly, have become martyrs; for while they pleased themselves with making multitudes of converts, they in reality made very few *Christians*. The reader will discern the use

a of these reflections hereafter, by seeing, that without having recourse to them, a great part of what we have yet to say would appear confused and embarrassed at least, if not unintelligible. For this reason we hope to be excused for entering into a series of arguments that might otherwise be looked upon as an useless digression from that subject, which in reality could be no otherwise illustrated. History that conveys no instruction, differs little from fiction; an history falsely written, is much worse. Truth alone gives it value; and therefore too much care cannot be taken to render the truth understood.

We come now to speak of the discovery of these islands, and to report the very few facts that constitute their history since they were discovered. *Ferdinand Magellan*, in that adventurous voyage in which he completed the design of the great *Columbus*, whose intention it was to reach the *East Indies* by a west course, arrived, after having been longer out of sight of any known land than ever any man had been before, amongst these islands, on the sixth day of *March*, 1521. He is said to have passed between an island lying towards the north-west and two others bearing south-west, one of which was higher and bigger than the other; and there *Magellan* attempted to have gone on shore, but was prevented by a multitude of canoes, or *Indian* prows; the people on board which, coming to the ships, stole every thing upon which they could lay their hands. Upon this he changed his purpose of bringing his ships to an anchor; and, to gratify his own and his people's resentment, landed only with forty armed men, set fire to fifty houses, burnt some of their prows, killed seven of the inhabitants, and recovered one of his boats, which they had carried away. It was from this accident that he stamped them with the reproachful name of *las Islas de los Ladrones*, in *Latin*, *Insule Latronum*, or *the islands of Thieves*. After this exploit he left them, and arrived in four days at *Samal*, generally supposed one of the *Philippines*.

It is by no means clear, to which of these islands this history belongs. It has, with great probability, been supposed, that the northern island was *Saypan*; and if so, then the island which felt these effects of his fury, must have been *Tinian*. We are assured, that when the people were shot through and through with arrows, they drew them out of their bodies, and gazed at them with a curiosity that overcame the sense of pain, till they dropped down dead. What was no less singular, notwithstanding all that had happened, the people followed him out to sea with two hundred prows, and held up fish and other things, as if they had still desired to barter with them. In some of these prows, the *Spaniards* saw women lamenting and tearing their hair, as they supposed, for the loss of their husbands: and the short account given of these people in *Magellan's* voyage, agrees very exactly with what we have said more at large, and from thence, no doubt, the generality of writers have been led to the conclusion, that the islands *de las Velas*, and the islands *de los Ladrones*, are the same; which however, when maturely considered, may, notwithstanding this concurrence of opinions, remain still a matter of some doubt^a (K), unless we very much enlarge the bounds of this *Archipelago*, in order to embrace them.

THIS

^a G. BATTISTA RAMUSIO RACOLTO dell'e Navigazioni & Viaggi, tom. i. fol. 355. b. PURCHAS's Pilgrims, vol. i. B. ii. chap. iv. p. 37. EDEN's History of Travayle. ^b G. (K) We have several relations of *Magellan's* voyage; that which we have followed in the text, is that of Sir *Anthony Pigafetta*, a knight of *Malta*, who accompanied him in the voyage. He places these islands in the latitude of twelve degrees north; and then says, that there was a small island lying to the north-west, and two others to the south-west, which does not at all agree with these islands (35). *Herrera*, having mentioned *Magellan's* passage through the streights to which he gave his name, tells us (36), "That from the latitude of twenty-one degrees fifty minutes south, he sailed two thousand leagues without seeing any thing except two desert islands in the midst of the ocean; and on the 20th of *January*; whereas *Pigafetta* says it was on the 6th of *March*; they found themselves in the latitude of fifteen degrees forty-eight minutes north, where they saw two very beautiful islands, inhabited by abundance of

" brutish people who worshiped idols and passed from
" one island to the other, being eight leagues distant, in
" canoes; the biggest of which could carry only ten men.
" They had well-shaped triangular, or, as some call
" them, *Shoulder of Mutton* sails, made of palm-tree
" leaves; their food was cocoa-nuts, yams and some lit-
" tle rice. So many of the natives going aboard, that
" the ships could not hold them; *Magellan* ordered
" them to be turned out, which was done by force, be-
" cause willingly they would not go. Those *Indians*, be-
" ing provoked at it, returned in their canoes, and threw
" so many stones, and staves hardened in the fire, that
" though at first he had ordered that they should not be
" hurt, not being able to endure it any longer, he caused
" the great guns to be fired, which killed some; and yet
" they came again, to barter what they had for such
" things as they had on board the ships. One afternoon,

(35) *Pet. Martyr*, Dec. v. *Eden's History of Travayle*, fol. 430. *Purchas's Pilgrim*, vol. i. B. ii. ch. ii.
(36) *Historia de las Indias Occidentales*, Decad. ii. lib. ix. cap. iii.

The small notice taken of them, during a long space of time, by the Spaniards.

THIS harsh treatment, on so short an acquaintance, must seem to be but an ill presage of what the inhabitants of these isles were to expect from their intercourse with *Europeans*; for, except the gaining a notion of the element of fire, and its uses, they reaped no advantage from this visit. We have seen at the beginning of this chapter the obstacles that, for a time, had prevented the *Spaniards* from improving that communication which they had opened between the *East* and *West Indies*, and which was the only cause of their visiting these islands, as it had been of their discovering them; and this accounts for their gaining so little knowledge, and taking so small notice of them during that interval, insomuch, that it is not very easy to find when they visited them next, or whether they considered them as places worthy the honour of being annexed to the *Castilian Empire*. The riches of the *Moluccas* had first tempted them to this route, and when the *Spanish* government consented to suspend their pretensions to these, and make so light of the informations they had received of the *Philippines*, we need not at all wonder that the *Ladrones*, without metals and without spices, were thought in a manner beneath their attention; and it is very remarkable that *Argensola*, who wrote under the royal protection the history of the *Moluccas*, though he gives us a succinct relation of *Magellan's* voyage, does not so much as mention the discovery of these islands. It was really a misfortune to the *Spaniards*, that their first discoveries proved so extremely rich, for it made them overlook all other advantages. So that they did not sufficiently attend to the connection of the different parts of their empire in the *East* and *West Indies*; and at the same time, wasted the vast wealth they drew from thence, in grasping at dominions that could be of little or no use to them in *Europe*; which reasons will sufficiently account for the declension of the *Spanish* monarchy, at a time when universal empire was the aim of its monarchs, and, for the accomplishment of which, they seemed to have the properest means in their own hands.

The Spaniards, after some intermission, visit these isles in their passage to the Philippines.

AFTER two and twenty years deliberation, the general, *Don Ruy Lopez de Villa Lobes*, was sent to take possession of those islands which *Magellan* had discovered, and to which his successor, *Don Miguel Lopez de Legaspe*, gave the name of the *Philippines*. They both touched at the *Ladrones* in their passage for refreshments, but without making any stay, or leaving any of their people behind them; and thus they became, and more especially the island of *Guam*, what it is still, a place of refreshment in the great run between the two *Indies*. In 1568 a *Spanish* ship going to the *Philippines* with two companies of soldiers on board, some of the men landed on the isle of *Guam*, and began to traverse it in search of provisions. Amongst these was a youth about twenty, who, walking unarmed through a wood, met with a boy about fourteen, who made up to the stranger, caressed him extremely, and at length, laying hold of him about the middle, ran away with him laughing. The poor *Spaniard* struggled, but was afraid to cry out, apprehending that the savage would have killed him; however the noise they made in passing through the wood brought four *Spaniards* armed, to see what was the matter. Upon this the boy quitted his prey, and fled through the wood with amazing

ANTONIO DE HERRERA Descripción de las Indias Occidentales, cap. xxvii.

quista de las Islas Filipinas y Malucas, lib. i.

ARGENSOLA Con-

COLIN. Hist. de las Philipinas, lib. i.

“ as they were cruizing by one of those islands, the *Indians* loosened the skiff that was at the commander's stern, and carried it away. The next morning he sent two boats with ninety armed men, to a place at the foot of a mountain, whither they had carried the skiff. The *Indians* ran up the hill, and threw so many stones as if it had hail'd; but, as soon as the muskets were fired, they fled. Then the *Spaniards* entered the town, set fire to it, killed all they found there, and carried off the provisions. The *Indians* supposing that to be done for the skiff, turned it out to sea; which *Magellan* secured, watered, and divided the refreshments, many of the men being sick for want. The next day he sailed from those islands, which he called *de las Velas Latinas*, that is, of the shoulder of mutton sails, advanced three hundred leagues westward, and discovered many islands, where there was plenty of provisions, and they understood the language of an *Indian*, *Magellan* had with him.” It seems clear, from this relation, that these could not be the islands that have since passed under the name of the *Ladrones*; since it is on all hands agreed, that the natives never were idola-

ters; and besides, in the best *Spanish* maps, the navigation of *Magellan* is laid down according to *Pigafetta's* relation, and, of consequence, the islands he touched at are placed to the south of *Guam* (37); and we shall hereafter see that there are very probable grounds to believe, that we must either extend the *Ladrones* some degrees nearer the line, or else admit that these islands had no other title to this appellation, than being inhabited by a people who used the like kind of prows, and were as thievishly inclined as those that *Magellan* had met with (38). Which-ever of these two opinions we adopt, we must acknowledge that there are many more isles fully inhabited by nearly the same kind of people; so that the arguments hereafter advanced, as to the improvements that might be made, and the advantages that might be drawn from a judicious management of these countries, and the people placed in them by Providence, are not at all affected by the *Spaniards* embracing a contrary scheme, pursuing it steadily for a long series of years, and bringing it, of late especially, to a seeming point of perfection (39).

a swiftness. This shews, that in their primitive state, and before they altered their manner of living, to imitate the *Europeans*, these people had a prodigious strength and a surprising agility¹.

ABOUT five years afterwards, *Don Martin Henriquez*, Viceroy of *Mexico*, directed the same Captain *Juan Lopez de Aguirre*, who was going again to the *Philippines*, to seize some of the youths of this island, and to carry them with him, that being educated there, and taught the *Spanish* language, they might learn from them a more distinct account of the country than they had been able to procure. He executed the order he had received, and, amongst the youths that he then carried away, was the very boy who had attempted to steal the *Spaniard*. When they came to *Manila* they knew each other again, and became very good friends, when the b savage very frankly told the soldier, that if he had succeeded in his design, his intention was, according to the custom of his country, to have knocked him on the head, then to have sucked out his brains, to have burnt his body, and drank the ashes in palm-wine; which, he said, was their way of interring their relations, and to have kept his bones to make heads for his lances². These are circumstances of which the missionaries take no notice, because, in all probability, these barbarous customs had been laid aside long before they came into these islands; or, if not, very industriously concealed.

OUR famous discoverer, Captain *Thomas Cavendish*, was the first of our countrymen who visited these isles; for, as we shall shew in its proper place, Sir *Francis Drake's* touching here, though universally affirmed, is either false, or very uncertain. The time of Capt. *Cavendish's* arrival was on the 3d of *January*, 1588, having traversed the *Pacific Sea* in forty-five days; and passed in that space, according to his computation, eighteen hundred leagues. He arrived about two in the afternoon upon the coast of *Guam*, and was presently surrounded by sixty or seventy *Indian* prows, full of people, bringing with them plantanes, cocoas, potatoes, and fresh fish which they had caught at sea. The method they took in exchanging, was to tie a piece of old iron to the end of a fishing-line, or of a cord, which they threw into a prow, which the natives untying, and taking away the iron, replaced it with some of the things they had³. But it seems they were more eager for iron than our people were for refreshments, since they followed them so long and pressed them so close, notwithstanding they ran over some of their prows, that at length the Captain gave orders for firing upon them; d however, they avoided the shot by dropping over-board. Our people report them to have been of a tawny colour, larger and fatter than most of themselves, with long black hair hanging down to the middle of their backs, or else tied in a knot upon the crown of their heads. They much admired their prows, or, as they stile them, *Canoes*; which, they say, were neatly made, considering they had no sharper tools than either flints or shells. They were no less struck with their skill in navigating them, and with their boldness and agility in diving. Captain *Cavendish* continued his voyage from hence, as *Magellan* did, for the island of *Samal*, which he discovered on the 14th of *January*, being three hundred and ten leagues from the island of *Guam*⁴.

IN the year 1596, one of the ships belonging to the squadron of the *Adelantado Alvaro de Mendana*, who had sailed from *Peru* to discover the islands of *Solomon*, arrived unexpectedly at *Guam*, and in a fragment of the account of that voyage, which is still remaining, we have some very curious particulars relating to these people. The author tells us, that he saw some of their prows in which there was only one *Indian*; and though it had a mast, sail, yard, tackle, halliards, and helm, he steers with one hand, and with the other hoists, lowers, and trims his sail, having one of the tacks fastened to each foot, and so veers out, or hales to, as occasion serves. Both ends are heads; and as soon as the sail is flipt round, they make way without bringing about the vessel. They are very swift, and when a wave breaks and fills it full of water, the man casts himself into the sea like a fish, overturns the boat, and clears it of all the water. The boat being clear, he gets in at one side; being come to shore, he takes his vessel on his back, and leans it against a tree, on which he has his habitation, like a bird, living upon the fish he takes. It is affirmed in this relation, that these people were idolaters, worshipping the sun, moon, and stars, and even crocodiles and sharks; that they sacrificed to them, by putting their gifts into a prow, and sending it out to sea; that their houses were built upon posts or trees; that they laughed at money, but were exceedingly desirous of iron, of which they made themselves tools; that they first flay'd and then burnt the bodies of their dead, preserving their bones; that they drank the ashes of the corpse in palm-wine; and that on such occasions they hired mourners, who, if the deceased was a man of quality, sung his

praises for a week together; relating all his actions from his cradle to his grave; and if any of these were comical, the audience, consisting of some hundreds, laughed; and if any terrifying accident was mentioned, they shrieked all together in the most frightful manner^y (L). In other respects, this narrative agrees with what we have already mentioned.

Arrival of the
first Dutch
ship that ever
visited the
Ladrones

THE first native of *Holland* that visited these isles was *Oliver van Noord*, with two ships under his command, on the 16th of September, 1599. They were immediately surrounded by a multitude of prows, full of the natives, who roared out *Hiero, Hiero*; that is, *Iron, Iron*; the *Dutch*, who had seen Capt. *Cavendish's* account, treated them as he did, throwing iron tied to ropes into their canoes; and in return they tied baskets of fruit, roots, and rice, for now they cultivated that grain^z. These *Dutchmen* thought *Magellan* was in the right in his sentiments, as to these people; for, upon examining the baskets, which seemed to be full, and were indeed very neatly made, they found nothing but shells, leaves, and a little rice sprinkled at the top. Some of these people, not satisfied with trafficking at a distance, came on board, and began very soon to lay hold of any bit of iron they could reach, and jump over board with it. A *Dutch* seaman upon this drew his cutlass in a passion; an *Indian*, who stood near him, twisted it instantly out of his hand, jumped over-board, and carried it with him^a.

Find all things
much in the
condition that
Captain Ca-
vendish de-
scribed them.

THOSE who remained on board, and had stolen nothing, saw all that passed with the greatest indifference that could be, eat and drank very readily whatever was set before them, and when they were satisfied jumped over board. To make a trial of their dexterity in diving, a *Dutchman* threw five pieces of iron one after another into the sea. One of the natives dropped after them, and having continued under water some time, brought up all five, and swam on board his prow. All that our countrymen had advanced concerning these people, as to their size and looks, as well as their uncommon strength of body, we find confirmed by the *Dutch*, who add, that both men and women seem to have no sense of modesty or shame. By this time there was one innovation had crept in, for all the men had their hair cropt; whereas the women wore theirs long and flowing upon their shoulders^b. The *Dutch* visited these islands afterwards very often, and sometimes careened their ships there, finding them very commodious for that purpose, at certain seasons of the year; and as yet the *Indians* were so far independent, that they shewed a like regard for all *European* nations; that is, they got from them as much iron as possible, by every method, fair or foul, that they could devise. This perhaps proceeded rather from a principle of barbarity than injustice; for it is a common principle with almost all savages to plunder strangers, though they may at the same time distinguish and respect property among themselves; so that thieving was rather the vice of their heads than of their hearts.

Sir WILLIAM MONSON's Naval Tracts in Churchill's Collection.

(L) The missionaries assure us, that no nation in the world can be more eloquent in sorrow than the people of these islands, and more especially the women, who with great skill and care erect tombs, or rather trophies, to the memory of the person they deplore (40). If he was distinguished in his life time by feats of arms, these trophies are adorned with lances; if he was more addicted to the sea, and conspicuous for his dexterous management of the prow, then the trophy was constructed by striking the mast deep into the earth, breaking the vessel, yard, and boom to pieces, piling them up on every side, interspersed with paddles stuck up and down; to which were fixed fragments of the sails. If he was both soldier and sailor, the lances and the paddles were intermixed, and the whole was surmounted with branches of green trees, and whatever else could contribute to render the pile agreeable and magnificent, according to their notions. Their funeral rites lasted for several days, during which they wept and fasted till they could scarce be distinguished to be the same persons (41). The reader will not perhaps be displeased, to see one of these funeral lamentations in two parts. The first woman began thus: "There is no longer life left for me. The remainder

" of my days is protracted death, accompanied with
" never-ending sorrow and bitterness. The star that con-
" ducted me has disappeared. The moon that gave me
" light is extinguished. The sun that cheered me is
" eclipsed for ever. Henceforward it will be an eternal
" night, in which, floating through waves of grief, I
" shall be at length ingulphed in misery and despair."
To this the other answered: "Alas! I have lost my all;
" the comfort of my days is gone; my heart shall beat
" no more with joy in his presence. The image of our
" ancient warriors! the honour of our race! the hero of
" our nation! is no more! he has left us! why should we
" stay behind? what avails life, when he for whom we
" lived is no more?" It (42) is very strange that the
missionaries were able to make no more of a people,
whose abilities were so great, whose parts were so ap-
parent, and who, in the midst of barbarism, threw out
such undeniable marks of genius. One cannot help
thinking, that a nation like these, might have been em-
ployed to better purposes than tilling rice grounds, and
herding cattle, and might have deserved a milder fate
than they seem to have met with, which falls very little
short of utter extirpation (43).

- a It was near a century and a half, from the time of *Magellan's* discovery, before the *Spaniards* thought in earnest of taking possession, or making any kind of establishment in these islands. Their vessels touched there indeed annually in their voyages between the *Indies*; they had taught the inhabitants to sow rice and other grain, they gave them pulse, roots, and the seeds of different kinds of vegetables; they left fowls, hogs, and black cattle to breed there; and it sometimes happened that some *Spaniards* were left there, either to recover their health, or to collect provisions against the arrival of their ships; but still the *Indians* retained their liberty, and their morals were not at all mended by their intercourse with the *Europeans*. On the contrary, they grew rather worse; for they imitated very readily the vices that they saw, and paid very little regard to the exhortations, that were but half understood, and which came from such of the missionaries as were passing from *New Mexico* to the *Philippines*, and who saw with regret a nation no way deficient in natural capacity, immersed in brutal pleasures, and wholly destitute of the light of religion ^d.

How long the Spaniards took to deliberate whether they should make a regular settlement or not upon these islands.

- It was upon the application of some of these zealous missionaries that his Catholic Majesty, *Philip* the fourth, had formed a design of sending over some fathers to preach the gospel to these *Indians*. This project, which he did not live to compleat, was executed by his daughter, *Mary Anne* of *Austria*, who governed the monarchy of *Spain* during the minority of *Charles* the second. This pious design of hers was accomplished about the year 1668, notwithstanding some obstacles it met with from both the viceroys of *Mexico* and the *Philippines*, who, foreseeing that they should be made responsible for the success of these missions, and apprehending from thence an increase of trouble, were not very forward in executing the orders they received from court, to second the zeal of these ecclesiastics ^e. At length, however, they were sent over, and left to take their fate amongst these savages, many of whom they converted after their manner, and transmitted very florid accounts of the progress of the gospel amongst the inhabitants of these, now styled from their patroness, the *Marianne Islands*. These accounts produced what they expected, strict orders to the *Spanish* viceroys in the *East* and *West Indies* to give what assistance was in their power to so pious and salutary a work; which, however, as one of the best and honestest of their own writers has observed, flourished much more while the missionaries depended upon their spiritual weapons, than when their preaching was afterwards supported by a military force ^f.

The missionaries apply to the crown of Spain to send over spiritual guides to convert the inhabitants of the Ladrões.

- d *Don Juan de Vargas Hurtado*, going over in 1678 viceroy of the *Philippines*, touched at *Guam*, and at his departure appointed *Don Juan Antonio de Solas* Governor of the *Marianne* islands; with about thirty soldiers, and from this time we may date the *Spanish* dominion here; which however was but very feeble, their whole possession consisting only of a sorry village or two, in each of which, as well as in some other places, the missionaries had built churches. In 1681 *Don Antonio de Seravia* was appointed by the royal authority governor of these islands, independent either of the viceroy of the *Philippines* or *Mexico*. He began speedily to exert his authority, and persuaded many of the *Indians* to acknowledge themselves subjects to the crown of *Spain* ^g. He was succeeded, in 1683, by *Don Damian de Esplana*, who was assisted by *Don Joseph de Quiroga*, and now it was thought necessary to construct a fort for the security of the settlement, and during this space the missionaries visited several other islands with which the *Spaniards* were little, if at all, acquainted before; and where, though they made many converts, yet they met with much opposition; and some of the nobles, whom they had converted, apostatizing, excited the people to stick to their old customs, and employed that natural eloquence, for which they were so famous, to ridicule the new doctrines, and the new customs, which these strangers had introduced. The missionaries say, and very probably with truth, that it was those dissolute people, who affected a community of women, of whose practices we have before given an account, who were the chief authors of those disputes. But however that matter might be, these disorders went on increasing, till at length they ended in a general revolt: by which the *Spanish* settlement, though grown much more considerable than it was, became in no small danger of being totally subverted: for, notwithstanding the great inequality of their arms, the advantages the natives derived from their cunning as well as from their numbers, enabled them to carry on the war with vigour, at the same time that many of the fathers were assassinated, and put to the most cruel deaths (M). By which acts of violence on both sides, such an animosity was raised between the two nations

The succession of Spanish governors in these isles to the time of the revolt.

(M) It is on all hands agreed, that father *Diego Lewis* of *Sanvitores*, of an antient and honourable family in *Old Castile*, was the author of this mission. He is represented as a man of the most fervent piety, whose zeal

nations (for as yet the *Indians* might be stiled a Nation) as never afterwards subsided, or could be thoroughly removed ^h.

Captain Eaton, an English buccaneer, arrives at Guam, and is well received by the Spanish governor, and kindly treated. It was about the middle of *March*, in this year, that captain *Eaton*, in an *English* ship of force, visited this island, and found all things in the utmost disorder. The governor sent to know who he was, which was a question captain *Eaton* did not care to answer; he pretended, therefore, that his was a *French* ship, fitted out for discovery, and in that light he was well received, supplied with every thing he wanted on moderate terms, and many acts of friendship and reciprocal presents passed between him and the governor. The accounts we have in this voyage agree in all respects with those we have from the missionaries. The natives treated his people sometimes ill, sometimes well, according as they were stronger or weaker; and, upon captain *Eaton's* making some excuses to the governor, on account of three or four that were killed in a fray, in which he affirmed that they were altogether in the wrong, the governor told him, he did not doubt it, and that he could not do him a greater pleasure than to kill as many as he pleased; for that they were a subtle, mischievous, cruel people, who kept no terms with any body, and with whom no terms ought to be kept. At his request captain *Eaton* spared him four barrels of gunpowder; which, in all probability, prevented the *Spaniards* from being driven out of the island; and their whole intercourse, from first to last, was managed with the utmost civility and candour on both sides; and, which in such cases very rarely happens, they parted better friends than they met, and without the least coldness or suspicion on either side ^l.

The natives offer him the island, if he would assist them in expelling the Spaniards. THE wild natives, on the other hand, acted as if they intended to make good the character the *Spaniards* had given them: sometimes they associated with, and were extremely kind to, the *English*, whom they assisted in their hunting and fishing; but whenever they had, or thought they had, a favourable opportunity, they fell upon them, and endeavoured to destroy them, which ended in the slaughter of many of themselves. However, in a day's time they came to traffick with them again, as if nothing had happened, and broke their faith again, as

^h Capt COWLEY's Voyage round the World, p. 17. DAMPIER's Voyage, vol. i. p. 300, 302. Pere LE GOBIEN Histoire des Isles Mariannes, p. 308, 309. ^l Captain COWLEY's Voyage round the World, p. 17.

for the gospel, and whose desire to succour the infidels in these islands, induced him, with infinite labour and trouble, to procure the necessary means of passing thither with a few of his companions, which at length he accomplished in the year 1668 (44). At first they had prodigious success, or at least they flattered themselves with that notion, baptizing the natives by hundreds. But it quickly appeared that many of these new *Christians* only suffered themselves to be called so, and that for a time, falling as suddenly back to their old superstitions as they had hastily left them. Amongst those who accompanied *Sanvitores* was father *Lewis de Medina*, who, in the second voyage he made to the island of *Saypan*, was murdered there, *January* 29, 1670 (45). Father *Sanvitores*, whom the Jesuits stile the Apostle of these islands, was slain by an apostate in the island of *Guam*, *April* 2d, 1672 (46). Father *Esquerro* perished in like manner with seven of his companions, *February* 2, 1674 (47). Father *Peter Diaz* met with the like fate from some of the young debauchees, whom we have mentioned in the text, and who, in the language of that country, are stiled *Urritaos*. He had converted a young woman whom he had kept, and had induced her to leave her infamous profession, in order to lead a life of devotion; which so provoked these rash profligate young men, that they murdered this missionary and two of his companions, and burnt the seminary which they had erected (48). Father *Sebastian de Maturay*, who also went with *Sanvitores*, being betrayed by one of the nobility of the country, was basely murdered as he was going with him in a boat by sea (49). In the general insurrection, Father *Emanuel de Salazzano* and several others were massacred, when the natives endeavoured to destroy

all the *Spaniards*. Father *Theophilus de Angelis* was half hanged, and then cudgelled to death by two of the *Urritaos* (50). Father *Augustin Strobach*, a native of *Moravia*, met with the same barbarous treatment; and Father *Comans* was destroyed in the island of *Saypan* in the year 1685 (51). All of those missionaries, however pious their intentions might be, and it would be very uncharitable to suppose that they sacrificed their ease, their country, and even their lives, through any other motive, were certainly guilty of great indiscretions; for, instead of engaging any number of these people to change their former manner of living, and to form themselves into a regular society, they introduced austerities, which these people could not either relish or understand; laid great stress upon ceremonies, which had no real utility and, instead of the gospel morality, amused their hearers with idle legends, which, in a little time, they began to ridicule: and thus, by not laying a right foundation, and making the regularity, justice, and industry of their converts the marks of their *Christianity*; and, perhaps, having themselves wrong notions of martyrdom, which they seem to have sought with a kind of passion not very reconcileable to *Christian* principles, they became victims to the ignorance and fury of these savages, whom, if they had been treated with more prudence, and taught the great duties of morality, and shewn the necessary consequences of them, in making men happy here and hereafter, they might certainly have reclaimed, and rendered in process of time honest men and good *Christians*, with honour and safety to themselves, and brought by that conduct of no small advantage to the *Spanish* government.

a soon as they were trusted. A little before captain *Eaton* went away, they sent some of their principal persons to acquaint him, that the best part of their countrymen had quitted the island, and were gone to another; which was true: that they were resolved to throw off the yoke of the *Spaniards*; and, if he would assist them in doing this, they were content to receive him and his people for their masters; which proposition the captain rejected with indignation^k (N).

We learn from the missionaries, that this, and other insurrections, were intirely owing to the natural eloquence of some of their *chamorists*, who were continually declaiming against the *Spaniards*, and the mischiefs they had brought upon them. Several of these harangues they had preserved; and tho' the greatest part of what they contain is foreign to our purpose, yet some particulars there are that deserve to be mentioned. They not only complained, that, under the pretence of making them more happy, these strangers had deprived them of their liberty, and hindered them from exerting their natural strength, by confining them, which they called *cloathing*; but, which is more out of the way, that they had brought among them new diseases, such as rheums and cholics; and had also brought amongst them musketoes, and other venomous insects, with which they were never plagued before; with many other accusations of the like kind; affirming, that, before they came, they led a quiet, tho' laborious life; and if they had fewer conveniencies (for they allowed that the *Spaniards* had taught them many things), yet their wants were fewer, and, upon the balance of the account, they were no gainers. One would imagine, that, if these facts had been true, they would not have had any weight with the people; and, if they were true, we cannot help thinking them not a little extraordinary. This war subsisted for several years, and was not thoroughly extinguished till Don *Joseph de Quiroga* came to the government, who not only put an end to it, but reduced all the *Marianne* islands, north as well south, about the year 1695^l.

In the course of the present century, things have gradually taken but an ill turn for the *Spanish* government here; insomuch that, we are assured, some of the largest islands are no longer inhabited. On *Tinian* there is not a soul, except as they are sent occasionally to bring away provisions; and but three or four hundred upon *Rota*, where they cultivate fruit, rice, and garden-stuff for the use of the *Spanish* garrison in *Guam*. We have no sort of certainty as to the state of the rest, and more especially of the northern islands, which possibly may be tolerably well peopled still, as lying at a greater distance from the *Spanish* settlement, and more out of the way of their annual ship^m. We must observe, that most writers of voyages are to be read with great circumspection, and more especially many of the *French*, who, rather than appear ignorant of any thing, supply the defect of knowlege by a lively imagination, and give their own notions and conjectures as matters of fact. In this respect, our own and the *Dutch* authors are more to be depended upon; and though their accounts are somewhat drier, and

Pretences of the natives, on account of which they took up arms.

The Marianne Islands now in a very low and poor condition.

^k Ibid. p. 18, 19. DAMPIER'S Voyage, vol. i. p. 301. p. 376.

^l Pere LE GOBIEN Histoire des Isles Mariannes, lib. viii. ^m Giro del Mondo del Dottor GIOVANNI FRANCESCO GEMELLI CARRERI, DE LA BARBINAIS LE GENTIL. Tour du Monde, tom. i. p. 241. Lord ANSON'S Voyage, p. 450. 452.

(N) It was very fortunate for the *Spaniards* that their governor, Don *Damian d'Esplana*, treated this captain *Eaton* in the friendly manner he did; for, at this juncture, their affairs were in so critical a situation, that it depended upon the accidental arrival of this ship, and the behaviour of those on board it, whether the *Spaniards* should keep or lose the island of *Guam* (52). Captain *Eaton*, tho' he was no better than a buccaneer, had a sense of honour and gratitude, which induced him to reject the proposals, made him by the natives, of attacking the fort, and plundering the island; which, tho' his force was not great, he might easily have done. It was also very fortunate that none of the people on board his ship had penetration enough to discover the advantages that might have resulted from their accepting such a proposal, since it might have put the *Manila* ship in their power, and made all their fortunes at once; which was the sole object they had in view. But, besides the civility of the *Spanish* governor, they had conceived so bad an opinion of the natives, that they would have nothing to do with them; and indeed it does not appear from their accounts, that the manners of these people had

been much mended by their conversation with the *Spaniards* (53). However, they were as remarkable for their strength and activity as when they were first visited by the *Europeans*. Captain *Cowley*, who kept a journal of this voyage, tells us, that they took four of these savages prisoners, and brought them on board, with their hands tied behind them. In this condition three of them leaped over board; upon which captain *Eaton*'s people followed them in the boat, with a resolution to destroy them, which, even in this defenceless condition, was not easily done; for a strong man could scarce penetrate their skins with a cutlass; the second received forty shots before he breathed his last; and the third, tho' he had his arms pinioned, as well as his hands tied behind him, swam a full *English* mile before he was destroyed (54). We may certainly infer from hence, that if ever any other nation had interfered with the *Spaniards*, and had civilized and taken these *Indians* under their protection, they must have quickly expelled them from the *Ladrones*; and what they would have lost thereby, as well as what the conquerors might have gained, the subsequent part of this section will render sufficiently apparent.

less entertaining, yet experience shews, that they are less exaggerated, and come much nearer the truth (O).

IN

(O) It would be very unjust to pass censures of this kind without offering some proofs to support them; and it would be to little or no purpose to enter into the detail of such proofs, if at the same time they did not contribute to illustrate and explain the subject; but, when these circumstances concur, they cannot be displeasing to an inquisitive and judicious reader (55). The expedition of the *Duke* and *Duchess*, under the command of captain *Woods Rogers* and captain *Stephen Courtney*, was one of the most remarkable, as well as one of the most fortunate, undertaken by our countrymen. After making many considerable prizes in the *South Seas*, they arrived in sight of these islands in *March* 1710; and the account given of their reception take in captain *Rogers's* words (56): "In order to recruit quietly, we endeavoured to get some of the natives aboard that were in the prows, to keep them as hostages, in case of sending any of our men to the governor. One of them, as we were turning into the harbour with *Spanish* colours, came under our stern. There were two *Spaniards* in the boat, who, on our assuring them that we were friends, came on board; and soon after came a message from the governor, to whom he wrote a very respectful letter, and the next day received a civil answer to it, with a generous offer of any thing the island afforded; which made us very easy. On the 13th, an entertainment was provided on board the *Bachelor* for the *Spanish* gentlemen; to which I was carried, being not able to move myself, but was hoisted in a chair out of the ship into the *Bachelor*; where we agreed, that a deputation should be sent from each ship to wait on the governor with an handsome present, in acknowledgement for his great civility, and the readiness he expressed to supply us. On the 15th there was another entertainment on board the *Marquis*, to which I was carried, as to the former; and after which a committee was held, in which our former resolution was confirmed. On the 16th our pinnace went out, with several of our officers, to the governor's ashore, who received them with all imaginable friendship and respect, having near two hundred men drawn up in arms at their landing, and the officers and clergy of the island to conduct them to the governor's house; which was a very handsome seat, considering where we found it. They entertained them with at least sixty dishes of several sorts, the best that could be got on the island; and when they took their leave, each fired a volley of small arms. They presented the governor, according as we had agreed, with two negro boys dressed in liveries, twenty yards of scarlet cloth, serge, and six pieces of cambric; which he seemed wonderfully pleased with, and promised to assist us in whatever lay in his power. The very next day we got our dividend, being about sixty hogs, ninety-nine fowls, twenty baskets of *Indian* corn, fourteen bags of rice, forty-four baskets of yams, and eight hundred cocoa-nuts. On the 18th there was an entertainment aboard us, where we had most of our officers, and four *Spanish* gentlemen from the governor. I made them as welcome as time and place would permit, diverting them with music, and our sailors dancing till night, when we parted, well pleased on both sides. We got some more bullocks on board, being small, lean cattle; but what we gladly accepted: each ship had fourteen in all. Next morning each ship had two cows and calves more, being the last. We had a meeting on board the *Marquis*; where it was agreed to make a handsome present to the governor's deputy, got our provisions together, wherein he used all possible dispatch. We gave him and the rest of the gentlemen what they esteemed double the value of what

" we received from them; which they certified under their hands, and that we had been very civil to them. We also gave them the like certificate signed by all our officers, to shew to any *English* that might have occasion to recruit there, and parted very friendly."

A *French* gentleman, who landed here on the 30th of *May* 1716, gives us the following account of things, which is set down precisely in his own words (57):

" The other three ships, that entered the road immediately after us, proved to be our comforts. This circumstance, which would have given us great satisfaction at any other time, gave us very little at present; for we were afraid that too many ships arriving at time, might create a kind of famine in an island, which, we knew, was not very well provided. It imported us very much to prepossess the viceroy in our favour. With this view I went on shore with the captain, and we went together to render him our first visit. They made us pass through a wicket, which was the sole entrance to his palace. We then advanced under a portico, where I saw some fusces, seven or eight bandoliers, some lances, four colours, and a drum. Forty soldiers, ranged in two lines on the stair-case, received us with all the gravity which is the characteristic of their nation; and an officer, with an air of ceremony, introduced us into the apartment of the viceroy. The gay and easy air with which that great man received us, gave us sufficiently to understand, that he was not all displeased at the thoughts of tasting bread, and renewing his acquaintance with a flask of wine; things to which, as he told us himself, he had been for some time a stranger. The word *palace*, no doubt, will appear strange to you; but you are to know, that what with you is called a *bowel*, passes in these colonies for a palace. This, of which I am speaking, is covered with straw and palm-tree leaves. It consists of three apartments; the two first occupied by the viceroy, and the third is destined to the use of a number of young *Indian* girls, whom he caused to be bred up out of charity; which he may do without scandal, as his great age secures him from censure. He promised us very readily all sorts of refreshments, and we relied confidently upon his word; for, being a *Spaniard*, we very well knew, that he had rather fast six months than break it. We went then to pay our respects to the two father jesuits, who seemed to be very pious men; without doubt it is not ambition brings them to these islands, where they lead a life very austere, and full of mortification. The day after our arrival, the viceroy, Don *Juan Antonio Francisco Hernandez Pimental y Telado*, came to return our visit on board our ship. We regaled him in the best manner our scanty circumstances would permit; what pleased his excellency most was our discharging seven guns by way of salute. We agreed with him for the number of cattle we were to have in exchange for flour, biscuit, wine, and brandy. The people of the country go in a manner naked, and are afflicted with a leprosy, which is a kind of epidemic distemper amongst them. Their cabins are covered with palm-leaves, and are built of the bodies of trees drove one into another. Their manner of living is melancholy and miserable; that of the *Spanish* garrison must be more so, as they are less accustomed than the natives to such a kind of life. The preservation of this island costs the crown of *Spain* annually a great sum. It seems to be a mere honorary conquest, of no manner of utility. No doubt his catholic majesty would have it thought, that he is at this expence from a religious motive, and for the sake of preserving in the faith those whom the missionaries have converted; but, notwithstanding all their care,

" of

(35) *DiBionnaire universelle de commerce*, tom. ii. col. 292.
Vol. i. p. 179.

(57) *Captain Woods Rogers's Voyages in Har-*
bour's collection, vol. i. p. 207.

- a In respect to the present state of things, there are, according to the latest *Spanish* accounts, about four thousand inhabitants in the whole island of *Guam*, of whom about a fourth part are said to live in the city of *San Ignacio d' Agand*, where the governor generally resides, and where the houses are represented as considerable, being built with stone and timber, and covered with tiles; a very uncommon fabric for these warm climates, and savage countries^a. Besides this city, there are upon the island thirteen or fourteen villages. As this a post of some consequence, on account of the refreshment it yields to the *Manila* ship, there are two castles on the sea-shore; one is the castle of *St. Angelo*, which lies near the road where the *Manila* ship usually anchors, and is but an insignificant fortress, mounting only five guns, eight-pounders. The other is the castle of *St. Lewis*, which is north-east from *St. Angelo*, and four leagues distant, and is intended to protect a road where a small vessel anchors, which arrives here every other year from *Manila*^b. This fort mounts the same number of guns as the former; and, besides these forts, there is a battery of five pieces of cannon on an eminence near the sea-shore. The *Spanish* troops, employed on this island, consist of three companies of foot, from forty to fifty men each; and this is the principal strength the governor has to depend on; for he cannot rely on any assistance from the *Indian* inhabitants, being generally upon ill terms with them, and so apprehensive of them, that he has debarred them the use of fire-arms or lances, that he might be the less in danger of feeling the effects of their resentment^c.

Present state of Guam, and of the Spanish settlement on that island.

- c SOME writers attribute the gaining of these islands to the crown of *Spain* to the missionaries rather than to the civil power, and perhaps with reason; but then they may, with equal justice, attribute likewise to them the loss of these islands, by calling in the sword continually to their assistance; and a *Spanish* ecclesiastic observed this long ago^d; for, from the beginning of their missions here, as well as in the *Philippines*, the bulk of the people conceived an aversion or a contempt for the religion which they taught, and multitudes of those whom they converted at first, revolted afterwards, and, like all apostates, became the bitterest enemies to that faith which they had professed, and to which they were very rarely, if ever, reconciled^e. It seems to be now generally understood, that the *Spaniards* have given over all thoughts of rendering the *Marianne Islands* a province of consequence to their empire, and seem to circumscribe their views within the narrow plan of keeping *Guam*, as a post of communication between their possessions in the *East* and *West Indies*^f (P). But, after taking so much pains as we have done,

Keeping the natives low, and under subjection to the Spanish garrison in their fortress on the island of Guam, the sole aim of the Spaniards.

“ of fifteen thousand inhabitants that were in this island,
“ they are now dwindled to fifteen hundred, and some
“ of these keep in the mountains, that they may retain
“ their ancient liberty, and not be obliged to submit to
“ the *Spanish* yoke.”

He then tells us, that the viceroy furnished them with one hundred fowls, forty ducks, four oxen, six sheep, eight hogs, and some greens; and that he excused himself from letting them have more, because he expected the *Acapulco* ship. He adds, that the viceroy permitted him to carry away eleven of his soldiers, who were weary of the thin subsistence they derived from the bread-fruit, and other miserable provisions, and rejoiced at the thoughts of filling their bellies with biscuit and salt meat. By comparing these two accounts, the reader cannot but see, that the latter is a very abusive return for the kindnesses they had received, and must be well enough satisfied, considering the stock the *Spaniards* had at *Tinian* and *Rota*, that the soldiers had no great temptation to go to sea to avoid starving; and, what is very extraordinary, he tells us in the very next page, that they feasted luxuriously upon the *Marianne* capons, which they found to be fine and fleshy, and the most excellent of their kind that they ever eat.

(P) The reader will be pleased to distinguish between the object of the *Spanish* policy, which is what we cen-

sure, and the method by which they have pursued that object, the propriety of which we do not at all controvert. If any arguments could be adduced to prove, that it was inconsistent with the true interest of the *Spanish* crown to settle and people these islands effectually, and that, at the same time, it was necessary to preserve some footing in them, there would no doubt at all remain that they have shewn great skill and dexterity in the execution of this scheme (58). They have, as we plainly see, by means, some of them evident enough, and others at which it is not difficult to guess, diminished a mighty number of inhabitants that they found, and remained upon these islands long after they were in possession of them, to a very handful, who either live under the yoke, or, if they enjoy their liberty, are indebted for it to the inaccessible places to which they are retired. On the other hand, their own settlements are strong enough for any purposes they are to answer; and the governor has it always in his power to supply any refreshments of which the *Manila* ships can stand in need, at the same time that there is so little plenty in *Guam* as to furnish him with plausible excuses in respect to any adventurers that touch there, and, at the same time, to take from them all inclination of attempting to dispossess him, from an apprehension of their wanting subsistence in a short time, even if they accomplished their design (59). Taking therefore things in

done, after drawing together so many materials, comparing them with each other, and digesting them in the best method we could, let us have leave to make the best use of them we can; which, we apprehend, will consist in shewing, that the *Spaniards* have intirely mistaken their object, and that it would have been far more advantageous for them to have used their endeavours to cherish the inhabitants of these islands; to have cultivated them with the greatest care; and to have rendered them as fertile and populous as so favourable a climate, and so fine a soil, would certainly have enabled them to do, if they had gone prudently and heartily about it.

The Marianne Islands the natural barrier of the Spanish empire in both Indies, and, with due care, would have been invincible.

In the first place, they ought to have considered it as the common barrier of their empire in *Asia* and *America*, placed there by the hand of nature, and of consequence capable, according as it was managed, of turning highly to their advantage, or much to their detriment. These countries were such as offered all the comforts, and with them all the conveniencies and pleasures of life, to those that occupied them. If, instead of a handful of starved, straggling soldiers, one or two hundred white families had been transported thither early from *Mexico*, and proper provision made for them in the island of *Guam*, which, in comparison of the benefits bestowed, might have been done at an inconsiderable expence, they would, in the space of half a century, have become, in comparison of the country they inhabited, a nation; and, if the *Indians* had been kindly treated, they would willingly have sheltered themselves under their protection, and imitated their manners. As to those who might have been so obstinate, so flagitious, or so mutable in their dispositions, as not to be won, or not to be kept by good usage, they would have quitted the island, and this would have been a good riddance. When *Guam* was once thoroughly settled, a colony might have been sent, without hazard, from thence to *Tinian*, or any other of the larger islands, and settled in a such a manner as not to fear any disturbance from the natives, who ought never to have been deprived of their liberty, but left to discover the disadvantages of it by the comparison of their own wretched condition with the easy circumstances of the *Spaniards*, and of their countrymen who had voluntarily sought their protection, and adopted their manners¹.

How the missionaries might have been made extremely useful in the carrying on such a plan, and increasing the strength of the colony.

THEIR missionaries might then have been of great use in carrying such a plan into execution; and if, instead of baptizing them in a hurry, they had insisted on their living a certain number of years after a civilized manner, and behaving like honest men, before they became Christians, baptizing, however, all who desired it, when dangerously ill, or at the point of death, this had gained subjects to the state, as well as members to the church; and, if they had exacted a small tribute from those who lived according to their own customs, without harassing or injuring them, and exempted them from all tribute when they became Christians, trusted them with arms, and advanced them to small honours civil and military, they would soon have had many thousands of good subjects, a multitude of sincere Christians, and consequently a great strength. If their nobility had been complimented with titles, and a little degree of power, it would have attached them to their benefactors, and they would have been sure to have employed their eloquence on the side of that government, from which they derived such a real advantage. Wherever they had erected a church, they might also have established a town; and whether there are or are not good ports in these islands, they might, with a little management, have raised a great naval strength for that part of the world, considering the natural ingenuity of the inhabitants, and their turn for navigation; which, if it had only served to reduce these islands by degrees, and to have maintained a constant intercourse amongst them when reduced, would have been productive of infinite benefits² (Q).

THESE

² Lord Anson's Voyage, p. 453.

in this light, and allowing the principle upon which they act, we must confess, that they have conducted their measures prudently enough; but there is a very wide difference between acting wisely upon false principles and upon true; and tho' it must be confessed, that a great part of what the world calls *policy*, is in fact such a manner of acting, that is, taking right steps to come at wrong ends, this does not in the least alter the case, or demonstrate any thing more than this, that the same art and address may be employed to carry a mean and unworthy plan into execution, that would have rendered a noble, generous, and beneficent scheme successful (60). Let any candid and competent judge reflect on the steps taken by the *Spanish* court to reduce their subjects in the

Low Countries into a state of servile submission, which at first produced dejection and poverty, and, in the end, the loss of those valuable provinces, though there was great skill, immense treasures, and innumerable forces, consumed in the prosecution of that design (61), and he will not accuse us of arrogance for arraigning the rectitude of their conduct in this part of the world, where, sooner or later, the same event will fall out that happened there.

(Q) It must be allowed, that there was a concurrence of some very unlucky circumstances that might seem to give a colour of reason to proceedings, which, however, are altogether unsustainable when examined to the bottom. The *Spaniards*, indeed, have many splendid and heroic

(60) Pere Le Gouven Histoire des Isles Mariannes, liv. i. p. 31. other original writers, in relation to these transactions.

(61) Compare Grotius, Meteren, Strabo, and

- a THESE islands might have served for a nursery of soldiers and seamen, who might have been, in many respects, useful to the crown of Spain. For, in the first place, they lay much more conveniently for defending and succouring the *Moluccas* than even the *Philippines*: they would easily have prevented foreign nations from passing through the *Pacific Ocean* to the *East Indies*: they might have been made the magazine of *Indian* commodities from the *Philippines*, and the exchange of these for the wealth of *Mexico* and *Peru* might have been regulated, according to his catholic majesty's orders, by the government established in these islands, which could have no interests of its own; and the very want of mines and other natural riches in these isles, instead of being a defect, would have been a circumstance beneficial to the interest of Spain.
- b BUT supposing them ever so blind, as indeed they must have been, to the singular and self-evident advantages which might have resulted from establishing a force in countries, which, from their fertility, and the number of people already in them, might have been so easily, and with so much certainty, secured, one may, with equal reason, wonder that they had not their eyes open to the danger of other nations taking advantage of their supineness: for, if a settlement had been made in one of the more distant islands, and those who made it had conducted their affairs with any tolerable degree of prudence and policy, they might have established themselves so effectually, even before the *Spaniards* were well apprised of it, as to have been in a condition to have resisted any strength they could have brought against them; more especially if they had drawn the natives to their side, and had given them arms and encouragement to act against the common enemy. The want of good ports would have been an advantage to such a people; for, with a fort or two to command the roads, and a number of small vessels fit for cruising, they might maintain themselves, and at least disturb, if not intirely interrupt, the communication between *Manila* and *Acapulco*. The natives, as useless as they are to the *Spaniards*, might be made good subjects by proper usage; and, if they are dangerous enemies now, would be in that case much more formidable. Tho' to some this may seem a singular and even a strange supposition, yet it will not appear so visionary or so impracticable, if we call to mind certain matters of fact, which will shew us, that it might once have been, if it was not, apprehended.
- c WHEN Sir *Francis Drake* and captain *Cavendish* were in these seas, they might certainly, if they had thought fit, have seized and fortified any one of these islands; and tho' it may be true that this did not, or could not, enter into their heads, yet accidents might have forced them to it; for, had they been wrecked upon any of these islands, they could have had no other
- d
- Might have been also made the center of commerce between them, and by that means prevented that trade being injurious to Spain.
- The great danger the Spaniards might run, if other nations should ever establish themselves upon any of these islands.
- Some facts, which, seriously considered, shew, that this is far from being impracticable.
- * DON JUAN GRAU Y MONTFALCON justification de la conservation de les Islas Filipinas. Pilgrims, vol. i. c. 4. p. 37. Capt. COWLEY's voyage round the world, p. 20. DAMPIER's voyages, vol. i. p. 301. x PURCHAS's

heroic virtues, very capable of rendering them great conquerors; but then they are not a little wanting in social qualities, have for the most part but slight notions of oeconomy, and believe themselves born to be the masters in whatever countries they arrive (62). The good fortune that had attended them in *America*, and after that the rich conquest of the *Philippines*, gave the common soldiers a natural contempt for a country, in which there was nothing plenty but provisions. From the very beginning they had continual quarrels with the natives, which inspired them with an implacable hatred, and an invincible, tho' perhaps ill-founded aversion for those poor people, whose ignorance, tho' the effect of necessity, made them contemptible, in spite of those efforts of genius which ought to have recommended them to better usage (63). Their missionaries certainly came with pious intentions, and applied themselves with great zeal and sincerity to convert these savages to the Christian faith; but it appears plainly, that these were another sort of jesuits than those who go on the same errand into richer countries. They had none of the arts and address which some of their brethren have shewn in *China*, in the *Indies*, and in *Paraguay* (64). They never thought of accommodating themselves to the notions and man-

ners of these people, or adapting their instructions, so as to lead them gradually to a relish of civility, order, and government. They were for teaching them prayers by rote, and fixing in their minds a veneration for ceremonies, of which it was impossible they should understand the meaning. It must, on the other hand, be allowed, that they never met with any people, either in *Asia* or *America*, more unfit than these *Indians* were for them to deal with. Men of lively parts, quick penetration, not deficient in sagacity, strongly prejudiced in favour of their opinions, and passionately fond of that liberty, which the *Spaniards* were as obstinately bent, as soon as it was in their power, to take from them (65). Things being in this situation, and the government of Spain shewing no great inclination to interfere in any other manner than by supporting the garrison and these missionaries, treating also their expences on these heads as a burthen upon their other provinces, and a dead weight upon the crown (66), we may the less wonder that things took such a turn, or that, having reduced those, who should have been their subjects, into the low rank of slaves, they rendered irreconcilable enemies such as might have been made useful allies.

chance for preserving their lives and liberties, but by fortifying, associating with the natives, and endeavouring, by their assistance, to make themselves masters of the first *Spanish* vessel that came in their way. There was another *Englishman* taken in the *South Seas*, Sir *Richard Hawkins*, who, if he had come here, as he intended, was, of all men living, the most capable of such an enterprize; for he had a head to project, and a heart to execute, whatever was in the conception of the men of that age, when sea-officers undertook with cock-boats what would now be thought to require puissant squadrons. If we remember, that *Philip* the second sent in all haste to build a city, and fortify the dreary freights of *Magellan*, as soon as he knew that *Drake* had passed them, we may justly wonder that the *Spaniards* entertained no apprehensions of these isles; and if we meditate ever so little on the scheme of a living admiral, when he thought himself confined to the island of *Tinian*, we shall see some cause to doubt whether such actions are yet out of date. But the *Dutch* have had much greater opportunities: they have passed the *Marianne Islands*, not with single ships, but with fleets; and, if they had left a body of men in one of them, they might have corresponded with and relieved them from the *Moluccas*. Or accident might have led the buccanzers, as daring and enterprising men as any that the world has seen, to have seized some of these islands for a retreat; and if they had, their companions, beyond doubt, would have resorted to them, and the consequences might have been just as fatal to the *Spaniards*, as a settlement of the same kind of people at *Petit Guaves*, to which the *French* owe their being masters of the best part of *Hispaniola*.

It is obvious, upon the whole, that the Spaniards have mistaken their point as to these isles.

At all events we are very certain of three things: first, that other nations, as well as the *Spaniards*, have often visited these islands, of which we have given many instances. Secondly, that the *Spaniards* have been in no condition at any time to dispute with them; but, on the contrary, have been forced to furnish them with refreshments. And, thirdly, that if, instead of touching at *Guam*, they had gone to any of the other islands, they might have been long enough there to fortify, before the *Spaniards* had been in any condition to drive them out. These circumstances are more than sufficient thoroughly to establish the position we have laid down, that the *Spaniards* have not only neglected the manifest advantages they might have drawn from these islands, but have as little consulted their own security; from whence one would imagine they thought, that, by being blind themselves, they should be able to close the eyes of all other nations; and in this respect, indeed, they have hitherto had very good luck, which has sometimes answered the end, and thereby passed upon the world for the most refined policy ^z (R).

W^B

(R) The reader, no doubt, will perceive, that little is said in the text, either to support the matter of fact, that the *Spaniards* had never any thoughts or design of improving these islands, and that still less is said with respect to the motives that induced them to form this resolution; which, considering the reputation they have always had for political abilities, might well be expected, and which we therefore purposely reserved to be explained in this note (67). That enterprising spirit, which distinguishes discoverers from the rest of mankind, and which, in a superlative degree, distinguishes *Columbus* from all other discoverers, continued for a long time to glow in the bosoms of the *Spanish* heroes, who, with amazing ardour, pushed their conquests and their inquiries through every part of the known world (68). It continued to subsist even after their empire was firmly established; and it was the custom of the viceroys both of *Mexico* and *Peru* to fit out vessels to range the coasts, that the annals of their respective governments might be adorned with fresh acquisitions to the crown of *Castile*, which rendered them revered in the *Indies*, and procured also a proportionable degree of respect in *Spain*, in case they lived to return home. So long as this disposition

was applauded, the affairs of the nation, in these distant parts of the world, continued to flourish, and their fame and empire were extended together (69). But when once *Drake* penetrated into those recesses, where no stranger had ever come before, and had audaciously ventured to disturb the quiet of the *Pacific Ocean*, *Philip* the second, who began to find the force of his monarchy declining, thought it wisdom to put a check to these enterprizes, believing it to be equally inconsistent with his wisdom and his greatness to let his subjects find countries that they were not able to occupy, and serve as pilots to other nations in exploring new lands (70). The check he then gave, perhaps with good reason, since the *Spaniards* have attributed to him the surname of *the Prudent*, quenched that heroic flame, which hitherto had invigorated and supported their empire. That calmer kind of policy which succeeded, and which was built upon the principle of preserving the vast dominions that had been already obtained, changed the face of things, and produced a new race of men in the *Indies*. Pride and cunning soon took place of that haughty ambition, and those extensive schemes of conquest, which rendered their former heroes famous. The governors, who from this time succeeded, endea-

(67) Sir *Richard Hawkins*'s observations in his voyage into the *South Sea*, London, 1622. fol. 37. xxx. (68) *Petrus Martyr. Epist. Marian. Herrera.* (69) *Antonio de Herrera descripción de las Indias Occidentales. Hawkins's relation of the state of Nova Hispania, addressed to Richard Hakluyt, Esq; London, 1572. History of Spanish America, from Spanish writers.* (70) *Churchill's voyages.*

- a We mean not, however, to deny, that tho' the *Spanish* court and governors have thought fit to reject the maxims that seem to us right, they have substituted in their stead another plan of their own. We see plainly that they have, and we can determine, from facts, what the nature of that plan is. Their original design was to keep as few people, and at as small an expence as possible, in the island of *Guam*, and not to trouble themselves with any of the rest; and to this they steadily adhered for a long series of years, till at length the missionaries, supported by the piety of their catholic majesties, forced them to abandon this method, and to suffer them to attempt the conversion of the *Indians*. But whatever they may be elsewhere, the jesuits have not shewn themselves very able men here; and very possibly the reason is, that the country being poor, the zealous and the pious, not the shrewd and the sensible jesuits, have addicted themselves to this mission; whence it has come to pass, that their converts have been lazy bigots, that have done little good to the colony, and a great deal of mischief to their own nation: from the consideration of this the old plan has been revived, and by degrees carried into execution^a. The governor relies on the little strength he has in their single settlement on the single island of *Guam*; keeps the natives, not immediately under his obedience, as poor, as low, and as defenceless as possible; and treats such as acknowledge his authority not as subjects, but as slaves. His principal endeavour is to be able to command, upon any occasion, a sufficient stock of provision for the service of his colony, and of the annual ship. This, it seems, is thought the best use that can be made of the *Marianne Islands*, the surest method of being safe from the resentment of the natives, and the best security that can be had against these islands falling into the hands of any other nation. This, from the facts we have collected from writers of all nations, at different times, and under circumstances that cannot deceive us, is the plan at present pursued, and which, for any thing we can perceive, is likely to be pursued, so long as *Indians* enough remain to enable their masters to keep this settlement^b (S).

^b DAMPIER'S voyage, vol. i.

endeavoured, most of them, to make a fortune, by plundering abroad, and to save themselves, by present, from being punished for it at home. This induced them to treat with coldness those projects which their predecessors had encouraged, and, under the specious pretence of public oeconomy, to discountenance private virtue, and every thing that wore the face of novelty, or could not be attempted without expence (71). Hence all the representations against the treasure sent to the *Philippines*, in the former section; hence the severe restrictions on the commanders of the annual ships; hence the contempt of these islands; and hence, in short, that new system, which, by extinguishing enthusiasm, has introduced a consumptive languor into their conduct, and taught other nations, by their example, that, in sovereignties of this sort, when the appetite of acquiring is once either lost or restrained, it is very difficult, if not impossible, to preserve what has been already acquired (72).

(S) If any critical reader should object, that as the *Spanish* plan of governing these countries may spring from the genius of the people, and the settled maxims of their ministers, with whose motives we are little acquainted, so the censures may likewise arise from the temper of this nation, and the liberty we take of entering into, and discussing all subjects according to our own notions of things; tho' perhaps they may be as partial and remote from truth, as the conduct of those nations seems to us to be, which we blame without reserve. But to this we oppose a short, plain answer; which is, that the wisest and most intelligent persons among the *Spaniards*, who have treated upon these subjects, have differed as much as we do from their politicians, and declared expressly in favour of the scheme which we recommended (73). Many of the *Dominican* and *Franciscan* missionaries have freely owned, that the true way of converting *Indians* to

the faith of the gospel, is that which we have laid down; that they have pursued it, and pursued it with success; nay, they are so candid as to acknowledge, that some of the jesuits, and particularly *Francis Xavier*, stiled by his own order the apostle of the Indies, was of this mind, and thought, that baptizing men, and teaching them to say a few prayers, was a very imperfect manner of conversion; and that the true road was to enlarge their understandings, and reform their manners, so as to render them sober, sensible, and honest men; and that then there was no doubt of their becoming and remaining good Christians (74). Others have taken great pains to expose the folly and weakness of restraining the colonies from a free correspondence with each other; which, they have asserted, was the only means of rendering them rich and populous, and, which was still of greater consequence to the people in them, easy and happy. They complain, that those notions were not relished at *Madrid*; and the cause they assign for this is no other than that they were not well understood (75). They give us plainly to understand, that the temporary restraints, which *Philip* the second very wisely introduced in times of great trouble and confusion, and when almost every state in *Europe* was endeavouring to raise its power, and encrease its riches, at the expence of the *Spanish* monarchy, had been adopted as invariable maxims of state, from which his successors and their ministers were never to depart: whereas, in prudence, the principles of their conduct ought to change with the times; and that, as soon as a solid peace was restored, these restraints ought to have been taken away. It is from these writers that we learn, that the modern distinction between the interests of *Spain* and the interests of the colonies, has no foundation in nature; but must be necessarily attended with consequences very injurious, and which, in time, will become fatal

It must be left to the decision of the reader, whether this precarious, or the former more beneficial plan, ought to have preferred.

BUT whether this manner of treating these isles, and their inhabitants, be consistent with the dictates of humanity, the law of nature, or the moral doctrines of the Christian religion, we must leave to the equitable decision of the public, who are also the proper judges, whether, even considered in a political light, this scheme of management will serve long to answer their purpose; or if it had not been much better to have cherished and civilized these people, to have carried some of them to *New Spain*, and some to the *Philippines*, while very young, and, causing them to be taught there the *Spanish* language, have brought them back well educated, and instructed in different arts and trades, into their own country, where they might have been doubly useful, from the exercise of their own abilities, and their capacity of teaching others^c. This certainly would have attached them effectually to the *Spanish* interest, which of course they must have adopted, together with the manners of the nation; and they might then not only have had thousands of subjects to cultivate and improve a country so well able to support them, but also to maintain and defend it, for their own sakes, against all invaders. This would also have more effectually answered the intention of yielding assistance, as well as furnishing provisions and conveniencies, to their galleons that have touched there, and have done more honour, and been less expensive to the *Spanish* government, than the plan that is now pursued, even supposing that there were sufficient reasons against prosecuting any more extensive schemes for rendering these islands the center of commerce between the two *Indies*. At all events, however, there is one clear and certain remark that may be deduced from this history and these observations, with which we shall conclude the present section^d (T).

WHATEVER claim the *Spaniards* may have to treat countries, which they have discovered and possessed, in the manner they think most advantageous to their own views, and whatever

^c D. F. NAVARETTE *tratados historicos de la monarchia de China*, lib. vi. cap. 4. ^d ANTONIO DE HERRERA *descripcion de las Indias Occidentales*, cap. 29. Sir WILLIAM MONSON'S naval tracts in Churchill's collection. Lord ANSON'S voyage.

fatal to both (76). They likewise make no difficulty of asserting, that most of their governors have nothing in view but raising fortunes hastily, and making such representations at home as may facilitate their own private designs; that such as have digressed from this narrow path, and acted with better views, have too often been exposed to the resentment of the ministers, who, for want of better lights, adhered to the opposite plan, and have been misrepresented as factious and capricious persons, who, out of a vain conceit of rendering themselves popular, or a presumptuous opinion of their own superior abilities, had an inclination to change the old established measures, and to introduce innovations that might be destructive to the interests of *Spain*. This last point is the great barrier, which protects all the ill conduct and strange management that renders the *Spanish* empire, in both the *Indies*, so inconsiderable to what it might be; and there is nothing clearer, than that while this doctrine prevails, no innovations on any account are to be admitted, no amendments can ever be practical (77). We will add but one word more, that as there is nothing plainer to one, whom reading and reflection has made a proper judge of the matter, than that the trade of the *East Indies* might be carried on with greater ease, and to a greater extent, by the subjects of the crown of *Spain*, than by those of any other power in *Europe*; so this was long ago freely and fully stated (78), and is not at all a new thought, from which we mean to arrogate any merit to ourselves, unless there be a merit in reviving and defending truth, and from this disposition inculcating, that the doctrines we support are not barely relative to the *Spaniards*, but calculated for the use of all nations who have colonies (79), and who can only profit by them through a steady adherence to that common interest, which belongs alike to both, and which must always be preferred to whatever seems to be the separate interest of either.

(T) In this section we have drawn together as ample a description of these islands, as full an account of their produce, as distinct and circumstantial an history of their inhabitants, as, from all the materials we could collect,

it was possible for us to deliver; and we hope it will be the better received, because nothing of the kind is to be met with elsewhere; and therefore such an account seemed equally wanting in a geographical, historical, and political light, in each of which we have endeavoured to consider it. The sole cause of our taking all this pains was, the importance of the subject, which we have exerted all our diligence to illustrate here, and which will still appear more fully hereafter. Not that the sense of this was totally hidden before; but it was so briefly hinted, and that chiefly in books of an old date, and very little consulted, that it seemed to us in danger of being forgot and overlooked in succeeding times; and we thought it our duty to prevent this. There is no less merit in reviving useful knowledge that has been neglected, than in making new discoveries; and it sometimes happens, that the one makes way for the other: for, if the intelligent reader will be pleased to reflect, he will find very few modern inventions, that, from their utility, have made any figure in the world, but have been afterwards disputed in favour of the ancients; sometimes it may be with, and very often, perhaps, without much reason. It is very possible, that, notwithstanding these islands have been upwards of two centuries thought of little or no value, and equally disregarded by their possessors and by all other nations, they may hereafter be seen in another light, as has been the case of the islands of *Mascarenhas* and *Mauritius*, settled and abandoned, re-settled, and again relinquished by several nations, and at length discerned to be, and under proper management demonstrated to have been always, places of very great consequence, and that might have been turned to singular advantage. This, however, ought not to be always left to chance, or the concurrence of unlooked-for events, more especially when some pains, and a moderate degree of attention, are all that are necessary to place things in their true light; that is, in the light that does most honour to Providence, and that points out how they may be rendered beneficial to mankind. This, without doubt, is the capital object of history; and this we have been careful to keep in view.

(76) Navarette. *Ouaglie*. Coronel, as cited in the former section. (77) *Relation historique du royaume de Chile*, lib. ii. c. 4. - a right they may have to desolate those islands, and extirpate their inhabitants, they certainly can have none to preclude the rest of the world from knowing the advantages they might have drawn from them, and that other nations may yet draw from them, when, from the prosecution of this refined policy, they shall come to be deserted; neither is it consistent with the scope of an **UNIVERSAL HISTORY** to suffer the intelligence derived from the discoveries made by any nation, and the benefits that may result from them, to be resolved again into oblivion; because it proves to be, or at least it is thought to be, the interest of that nation, that they should be as much forgotten as if they had never been known. For the same reasons, and with the same right, that, in the former part of this work, we have laboured to recover the knowlege of the earliest state of countries, and their ancient history, we are intitled to pursue our inquiries, with regard to the emoluments that mankind in general may reap from the prosecution of the intended or accidental notices that have been received of the almost innumerable islands that lie scattered in this part of the world, and that many, not without probability in their conjecture, have thought to be the fragments of some great continent, that once united the now separate parts of this globe^c. This design, without doubt, lies within the compass of our undertaking; and how far soever these endeavours may be defective, they will at least manifest our desire to accomplish, in the fullest manner, the plan that we proposed, and point out to posterity the method by which it may be rendered complete.
- b

But, at all events, the consequence of these islands ought to be so explained, as that posterity may know what advantages might result from possessing and improving them.

S E C T. X.

An account of the discoveries made to the northward of the Ladrones; the consequences of these discoveries in regard to the enriching those islands, the augmenting the Spanish empire in the Indies, and contributing to the more perfect knowlege of the more distant, and hitherto least considered part of the globe; and of the means of facilitating the correspondence with them.

- c **T**HE great design of colonies, considered in a political light, is the advantage of the mother country, which, without doubt, is a very lawful and laudable object; but all Christian princes and states profess at least an higher and more noble view, that of contributing to the happiness of mankind here and hereafter^a. If therefore colonies are slighted from politic motives, it must be because they lie at too great a distance, are very difficult to keep, and, tho' kept, incapable of being so improved as to render a sufficient profit to their mother country, in proportion to the trouble and charge she may be at in keeping them. From these motives it has been said, that the crown of *Spain* ought, and would long ago, have slighted the *Ladrones* or *Marianne Islands*, if they had not been restrained by Christian charity towards the natives. In the former section we have shewn, that there are good reasons to believe, that, strictly speaking, this is not the sole motive of their keeping them, but rather that of facilitating their correspondence with the *Philippines*, for which purpose they are absolutely necessary; and we have likewise pointed out the means by which they might have been made very useful and profitable in other respects^b. The design of this section is to prosecute that subject, and to prove this incontestably from the great discoveries they have made to the northward, the still greater discoveries that might be made, and the advantages that, with a moral certainty, might be expected from these, which would render this archipelago as beneficial to *Spain* as any countries in her possession^c.
- d

Besides immediate advantages arising from the possession of the Ladrones, they may be rendered more so by discoveries.

- e **I**N the beginning of the sixteenth century, they had very different notions in *Spain* from those that prevail at present; since, in the year 1525, Don *Garcia de Loaysa* was sent with a squadron of seven sail to the *East Indies*, by the *Streights of Magellan*, with instructions to make the most particular observations in his power, in order to facilitate that navigation, and to render himself acquainted with the properest means of carrying it on as well from *Old Spain* directly, as from the conquests already made in *America*^d. At his entering the *South Seas* from the *Streights of Magellan*, a small vessel, that served him as an advice-boat, was separated

On the first coming into the Indies the Spaniards were strongly influenced with this spirit.

from

from his fleet, and, after running great hazards at sea, came at length into a port of New Spain, when the people on board were in great danger of starving^a. By this accident the famous *Hernando Cortes*, then the emperor's viceroy, came to have notice of this expedition, and of the purpose it was to answer; upon which, he ordered a squadron to be fitted out as soon as possible, composed of new ships, which he had built in these parts, under the command of his nephew *Alvaro de Saavedra*, who had orders to follow Don *Garcia*, and to make himself well acquainted with his discoveries; because *Cortes* looked upon the *Moluccas*, and all the countries between him and them, as belonging of right to his government (A). Thus we see, that, at this time, they were not afraid, either in *Spain* or in the *Indies*, of pushing their discoveries with vigour, tho' the means of doing that, and of supporting them when done, were very small, more especially in comparison of the present state of things. Both these expeditions might be said to prove unfortunate: Don *Garcia* died in his passage; but *Alvaro de Saavedra*, after twice putting to sea with an intention to return to *New Spain*, died at the *Moluccas*^b. However, both these commanders discovered new islands in the vicinity of the *Ladrones*, and gave their countrymen the first hint, that this archipelago was of considerable extent, and that it would turn to some account, if they would examine the several islands of which it was composed. These advices were well received; for, in those days, there was a competition amongst the *Spanish* governors in *America* who should most enlarge his province, or make the greatest discoveries.

The discoveries made to the northward by Villa Lobos; and how they came to drop.

BUT the most important discoveries, in reference to the islands lying north of the *Ladrones*, were made near twenty years afterwards, when the viceroy, Don *Antonio de Mendoza*, sent *Ruy Lopez de Villa Lobos* into these parts. He, sailing from the *Philippines*, in order to return to *New Spain*, discovered, almost under the tropic of *Cancer*, some islands, to which he gave the name of *Malabrigos*, that is, *The bad Roads*; because the coasts about them were foul, and afforded them no anchorage^c. Beyond these he met with two fair islands, lying almost close to each other, which, for this reason, he called *Las dos Hermanas*, or *The two Sisters*. Beyond them they saw four more islands, called, from the fiery mountains in them, *Los Volcanos*: in these, it is said, there is great plenty of fine cochineal. Beyond them, that is, still farther to

(A) In order to understand clearly what is said in the text, as well as several other passages in this section, it will be necessary to put the reader in mind of what has been already mentioned, as to the lines of demarkation settled by the papal authority, in order to prevent any disputes from arising on account of the discoveries made by the subjects of *Castile* and *Portugal* (1). The first of these lines was drawn parallel to the first meridian, at the distance of thirty degrees west, passing through *Newfoundland*, and by the mouth of the river *Maranon*, thro' the midit of *Brazil*. The other line was supposed to pass through the meridian of *Malacca*. These lines were the east and west boundaries of the *Spanish* discoveries, and the west and east boundaries to the *Portuguese*. Upon this principle *Herrera*, though he calls all that the *Spaniards* possessed by virtue of this papal grant, the *Spanish West Indies*, in opposition to the discoveries of the *Portuguese*, which were called the *East Indies*; yet, when he enters upon the description of the former, he gives us a new division, which is very remarkable, and of which the reader will take particular notice. He styles all that the *Spaniards* possess in the north of the new world, from *Quivira* to *Porto Bello*, *Las Indias del Norte*, or, *The North Indies*; all that they possess from *Porto Bello* to the *Streights of Magellan*, *Las Indias de Medio Dia*, or, *The Southern Indies*, which, he says, was in his time falsely called *America*. From whence we see, that, in those days, that term was applied only to the south part of that great continent, the whole of which now passes under that name (2). The remainder, that is, all between the *South Seas* and the latter line of demarkation, he describes under the name of *Las Indias del Po-*

niente, or, *The West Indies*. This cannot but appear extremely strange to an *English* reader, who has been always accustomed to consider these very countries as the extreme parts of the *East Indies*; but, to put this matter out of all doubt, we will give the author's own description, so far as is necessary to render his meaning certain and perspicuous (3): "The *West Indies* (says he) comprehend all the islands and firm land, which lie within the line of demarkation for the crowns of *Castile* and *Leon*; which western line of demarkation passes thro' the city of *Malacca*; and to the eastward of this line, between that and *New Spain*, there lies, in a vast gulph, an infinity of islands, great and small, with many tracts of coast and of firm lands, which are divided into the *Spice Islands*, or the *Moluccas*, the *Philippine Islands*, the coasts of *China*, the *Liquors Islands*, the islands of *Japan*, the coasts of *New Guiney*, the islands of *Solomon*, and the *Ladrones*. The climate of all these countries, whether islands or continent, is, generally speaking, moist, and temperately warm; the land fertile in all sorts of provisions, with some gold, but not fine; no silver; abundance of wax; and inhabited by people of very different colours, the greatest part, however, resembling 'the *Indians*, but intermixed with some whose countenances are very white, and others who are downright negroes." These remarks, tho' a little dry in themselves, are of the utmost consequence to the understanding whatever is delivered of the *Spanish* empire in these parts of the world, and any discoveries that may be made of continents or islands by them neglected.

(1) See before, sect. i. of this chapter in the text, and also in the notes A, B, C. (2) Antonio de Herrera descripcion de las Indias Occidentales, cap. iv. xiv. Argensola conquista de las Islas Malucas, lib. i. (3) Antonio de Herrera descripcion de las Indias Occidentales, cap. xxii.

- a the east, they had sight of *La Farfana*; and beyond that a high-pointed rock, which threw out fire and smoak at five different vents. They saw likewise five or six islands more, to which they gave no names. The wind proving contrary, they resolved to return again to the *Philippines*, and, in their passage, met with a cluster of islands in about sixteen degrees north latitude; the inhabitants of which were white, the women handsome, and well-dressed, with many ornaments of gold about them. These people had stout vessels, sixty feet long, and of a proportionable breadth, composed of planks five inches thick, and rowed with oars. These islands seem to have been to the north-west of the *Ladrones*; for the inhabitants told them, that they traded in these vessels to *China*, and made this voyage in a week. They likewise found other barks, very handsomely made with two decks. On the upper deck were white
- b people well-dressed and commodiously accommodated; on the lower deck were blacks, by whom these vessels were rowed, at which the *Spaniards* were very much surprised; for at this time, they had not the least conception of there being any Negroes in that part of the world^b. It is surprising, but the fact is nevertheless true, that we meet with nothing more of this *Archipelago*, nor are these islands laid down in any of the *Spanish* maps. It is however very probable from hence, and it will appear still more so, from other circumstances hereafter to be mentioned, that there are many islands to the north, to the north-east, and to the north-west of the *Ladrones*, very well worth being visited, if the *Spaniards* had thought proper^c. But at this period they seem to have been hindered by the discovery of the *Philippines*, which was a much greater object, and consequently occupied their attention for many years (B).
- c AFTER that great project was in some measure accomplished, this of prosecuting these northern discoveries, might have been also undertaken and perfected, if only two or three hundred children, from ten to fifteen years old, had been removed from the *Ladrones* to the *Philippines*, educated there in the *Christian* religion, according to the customs of the *Spaniards*, in the knowledge of their language, without suffering them however to forget their own^k. They might then have been brought back to some of their own islands, and afterwards employed as seamen, under the direction of *Spanish* officers, in examining gradually

They might however have been easily improved, and the Ladrones, in consequence of it.

^k Don JUAN GRAU Y MONTEFALCON Justificación de la Conservación de las Islas Filipinas. ALONSO DE OVALLE Relación Histórica del Reyno de Chile. Atlas Maritimus & Commercialis, p. 322.

(B) There is no doubt to be made that persons in authority, and such as are curious amongst the *Spaniards*, have very accurate accounts, at least of all those islands that, from time to time, have been by their licensed pilots inserted in their maps; such as that *Archipelago*, to which they have given the name of *Islas del Fuego*, or *Islands of Fire*; and many others, of which the rest of the world know little or nothing, and are not like to be better informed for any thing this nation has discovered, at least till they are in the humour to make some use of these discoveries (4). Amongst others, there is very little doubt that they bestowed the name of *Hermosa* on that island, which has been since called *Formosa*; upon which they had once a fortress called *Kilung*, which, whether they of themselves abandoned, or whether it was destroyed by the *Dutch*, is not clear (5). So that it appears from hence there was a time, when they were less indifferent to these things than they are at present; and one would have imagined that something worth attention might have been found in a fair, fruitful and pleasant island, for so themselves describe it, abounding with rich commodities, amongst which gold is particularly reckoned, and, in point of size, not inferior to *Sicily*. Indeed we find the clearest evidence of their having long ago a strong propensity to look into these matters, and to make themselves masters, not barely of the situation and size of the islands in these seas, but also of the havens that were in them, and the commodities with which they were

furnished; and it is from their own account we learn that they were apprized of four islands to the east of *Japan*, the inhabitants of which brought annually from thence considerable quantities of gold in bars, cotton cloth, a kind of fish like tunney in pickle, and other things (6). These islands certainly still exist, and, though it may be true that their commerce is sunk, at least of such as lie nearest to them, from the natural timidity of the oriental nations, who chose rather to lose the advantages resulting from commerce, than run the hazard of being conquered by the *Europeans*, yet certainly there is nothing improbable in affirming that, by proper instructions and due application, these people might be again recovered, at least to the state they were in before, and consequently, a correspondence with them prove advantageous (7). But, though nothing of this kind seems to have been thought of during this last century, yet even in that time fortune has favoured them with the discovery of several beautiful islands lying directly north from the *Mariannes*, and east from *Japan*, which they call the *New Islands of the Year 1736* (8), to distinguish them from another *Archipelago* of islands, lying one degree lower, and consequently nearer, which were discovered in 1664 (9). We have taken the more pains upon this head, that the reader might be satisfied that all we have said in the text is well-founded in fact, and not advanced at random.

these islands. If we suppose them only to have advanced as many degrees farther to the north, ^a as *Guam*, the most southern of these islands, is from *Vrac*, which is the most northern, they could not fail of meeting with islands better inhabited and better improved than their own¹. By this method of making discoveries, they might in a great measure have spared their own people, and might have performed great things with small trouble, little risque, and hardly any expence. Their other colonies would not have suffered in the least by this; on the contrary, whatever profits had attended these discoveries, might have centered in the *Ladrones*, and from them might have been carried either to the *Philippines*, or to *America*, and from thence to *Europe*^m. We shall presently see that in islands under a higher latitude, and yet much within the reach of this method of discovery, the richest and most valuable commodities in the world are to be had in plentyⁿ; and, by making the *Ladrones* the magazine of these, through the labour and industry of its natives, they might easily have removed that reproach of poverty with which they have stigmatized these islands. ^b As if a race of strong, active, ingenious people, naturally addicted to navigation, and capable, if properly instructed, of other arts, might not have proved the instruments of riches in the hands of a wise and well-judging nation; more especially, considering the happiness of their situation, with so many inviting prospects on every side^o.

Some of the richest countries in the world lie in the vicinity of the *Ladrones*.

In order to apprehend this more clearly, let us consider that the rich countries of *Sapan* are not more out of their reach than the *Philippines*; and though it be true, that they would be now very unwelcome guests there, yet the case was not so always; and it may be, they might have afforded the *Christians*, their friends in those islands, some assistance, if they had ^c used any diligence in their discoveries on this side; for they knew very well, from the intelligence given them by the missionaries there, as by other chanel, that there were many, and some very large islands, between the *Ladrones* and the islands of *Japan*; and if they had either made settlements, or so much as entertained any correspondence with their inhabitants, they might perhaps have enjoyed as much, or more, of the commerce of that empire, than by having an immediate correspondence with it^p. Neither were the *Spaniards* at all times insensible or inattentive to this; and, from whatever motives they were led to desist from their endeavours, most certainly it did not arise from any apprehension of their being impracticable. It is more likely to have arisen from their contempt of all advantages but what proceeded from absolute conquest. The *Portuguese*, indeed, grew quickly into ^d love with trade, and began to be softened by the manners of the *East*; but the same cannot be said of the *Spaniards*^q. They maintain their national character in all climates, and affect to live no-where unless they are acknowledged for masters. However, even this need not have discouraged them; they might have found islands, in which a settlement made by their subjects, under the protection of a good fort with a *Spanish* garrison, might have answered all their purposes effectually, and fixed them in the possession of a commerce that might have been connected with the *Philippines*, as easily as with the *Ladrones*^r.

An account of the islands *Liquios*, *Lequeios*, or *Riuku*, in the neighbourhood of *Japan* and *China*.

To shew the certainty as well as the probability of what has been advanced, let us observe, that those islands so famous amongst the first discoverers, and with the very names of which we are scarce acquainted, lie directly within their reach. These are the *Liquios*, the *Lequeios*, ^e or, as some call them, the islands of *Riuku*, situated from the twenty-sixth to the thirtieth degree of north latitude, and consequently, but five degrees higher than the most northern of the *Ladrones*. The *Liquios* have the islands of *Japan* on the north, the continent of *China* on the west, the island of *Formosa* on the south-west, the *Ladrones* a little to the south-east, and the ocean without any continent, for any thing we know, on the east^s. They are an *Archipelago*, consisting of many small islands, with two pretty large ones to the north, stiled from thence the *Great Liquios*; and also two more considerable than the rest at the southern extremity, which are stiled the *Lesser Liquios*. It is an established maxim with the *Japanese*, that these are the most fertile countries in the world; and, if they are to be credited, the inhabitants reap annually two harvests from the same land. This consists chiefly of rice, tho^t, besides this, they have also other grain, with a great variety of excellent fruits, abundance

- a of cattle, with some gold and rich perfumes. The inhabitants are esteemed the gayest, happiest, and easiest people on the globe; and this, notwithstanding they are subject at least to four, if not five, masters. They have a sovereign of their own, stiled like the spiritual emperor of *Japan*, their *DAIRO*; but whether he has a temporal lieutenant, or not, is uncertain. They are likewise tributaries to the king of *Saxbuma*, one of the princes of *Japan*, to whom they pay a considerable sum annually, besides occasional presents to the emperor. They also collect an acknowledgement of considerable value every year, as a testimony of their respect for the emperor of *China*¹. It is indeed said, that many thousand *Chinese* took shelter here at the time of the last revolution, and are at present incorporated amongst the natives, whom, it is not unlikely, they have improved in agriculture, manufactures, and commerce; but, with
- b respect to navigation, those people, at the time that the *Europeans* entered the *Indies*, were thought superior to the *Chinese*, and were also the most candid, and the most respected traders in the *East*, where the profession of a merchant was always honourable, and where there are still many who live with a degree of magnificence scarce inferior to princes (C).

THE great characteristic of these people is their love of tranquility, and their application to the arts of peace; by which, in the midst of those revolutions, that have not only disturbed but have destroyed, in a greater or less degree, the nations round them, they have kept themselves in pretty much the same situation, in the enjoyment of their own laws and customs, and in the exercise of navigation and commerce; which has supplied them with the means of defending themselves from those distresses, which their more puissant, though more haughty neighbours, have severely felt. The richness of their soil and the mildness of their climate, instead of rendering them idle, has prompted them to improve to the utmost the blessings which nature has bestowed². Their fields are cultivated with the utmost care, and, according to their different natures, appropriated to different kinds of grain. When the harvest is once over, they distinguish every sort into fine, coarse, and refuse, out of the first they supply themselves for domestic uses, and for exportation; the second they moisten and malt, of which they make a very pleasant beer, called *Sacki*, which however is very apt to give the choleric, if drank cold. Of the third, or spoiled grain, they make what is stiled in their language *Auamuri*, which is, in plain *English*, *Malt Spirits*; they are likewise very solicitous in cultivating their gardens, in which they have roots of all kinds, a great variety of pulse, medicinal herbs, and very fine flowers. Their principal manufacture is that of silk, with different kinds of which they are all well-clothed, and yet reserve a considerable stock for exportation; mother of pearl, and cowries, for which their is a great demand in *Japan*, where they grind down those

The genius of this nation, and the means by which they have kept themselves free and happy.

¹ ANTONIO DE HERRERA Descripción de las Indias Occidentales, cap. xxvi. PURCHAS'S Pilgrims, B. v. chap. xiv. sect. i. Du Bois, Geographic Moderne. ² P. CHARLEVOIX Histoire du Japon, vol. i. p. 6. 171.

(C) It is from such *Europeans* as travelled by land into the *Indies*, before the *Portuguese* discovered the passage by the *Cape of Good Hope*, that we learn the state of these countries, and their inhabitants, to have been quite other than we should have imagined it, if it had not been for those relations. The island of *Ormuz* was in those days, as we have else-where shewn at large (10), the center of commerce for the exterior *Indies*; where, also, what little trade they had with *Europe* was likewise managed, as *Malacca* was for the interior; and in truth one cannot easily conceive a place better adapted for it by nature. Here the merchants met from the coasts of *Egypt*, *Arabia*, and *Persia*, on one side; from *Corra*, *China*, *Japan*, and it may be yet more distant countries from the other; and hence *Lewis de Barthelemy*, or *Versteman*, one of the oldest travellers of whose works there is any thing yet remaining, tells us, that he thought there were more ships in this port than in any other in the world; which, the times considered wherein he wrote, may very possibly be true (11). In like manner *Edward Barbosa*, another ancient traveller, whose works, though but imperfectly, are still preserved in the very best collection of voyages extant, speaks of those people we have mentioned in the text in the following terms (12): "In the front of the continent of *China* there are a multitude of islands along the sea-coast, and beyond these, as it is reported, a very large country, held to be a

"continent, from which there came to *Malacca* annually three or four ships, with those from *China*, navigated by white men who were great merchants and very rich; for they brought with them in their vessels great quantities of gold in bars, silver, grain of all sorts, flour, much fine porcelain, and some pieces that were exquisitely fine, with other rich merchandize which they exchanged for pepper, and other commodities which they found in this place. These people are called *Liquiens*, and, according to the unanimous report of the people of *Malacca*, they were another sort of men, dealt more largely, were richer, better clothed, and, in all respects, superior to the *Chinese*. But of these people, at this day we are not able to give any better account; because they have forborne to visit the *Indies* since the crown of *Portugal* became masters of, and exercised authority in them." We may conclude from hence, that there requires some art and management to deal with this nation; but at this time of day one would imagine, that for the sake of the advantages that might be drawn from them, the *Spaniards* might be induced to deal with them, without attempting any thing against their liberty, upon the preservation of which their commerce probably depends, and which therefore those who would gain by them, ought not in point of interest to infringe.

(10) See before chap. iv. sect. v. of this book. (11) See his Travels preserved in *Eden's History of Travels*, 4to, 1577.

(12) G. Battista Ramusio Raccolto delle Navigazioni, e Viaggi, tom. i. fol. 320. b.

that are perfectly white, into an impalpable powder, which is afterwards converted into a paint, and used by persons of both sexes. They have, besides, another kind of shells, either naturally flat, or made so by art, which are used in *Japan* for glazing the windows of their houses *.

Other islands may be discovered, the inhabitants of which may equal these in industry and plenty.

As the true characteristic of this nation is industry, they have probably found a way to pay their tributes to *Japan* and *China* out of the balance of their respective trades; for, besides the produce of their own islands, they carry the several commodities and manufactures reciprocally of *Japan* into *China*, and of *China* into *Japan*, by which they are great gainers; and perhaps much of the gold that is seen amongst them is the result of this traffic. If therefore the *Spaniards* could have fixed themselves here, as without question they might easily have done, *European* and *American* commodities would undoubtedly been very welcome to these judicious traders, and, it may be, the *Japanese* would have taken them this way, notwithstanding all their prohibitions *. It is not at all improbable that other islands might be found between the *Ladrones* and the *Liquios*, not deficient in rich and valuable goods; and it is very well known that there are several clusters of small islands to the westward, between these and the continent of *China*, particularly those to which our buccaneers gave the name of the *Bashee Islands*; in which there are gold, and some kind of spices, not to mention gums, and drugs for dyeing; so that we have advanced nothing chimerical, or without good grounds on this head of important discoveries in the vicinity of this *Archipelago*, which has been so frequently treated, for want of due consideration, in a despicable light † (D). Let us take liberty to add,

* ANTONIO DE HERRERA Descripción de las Indias Occidentales, cap. xxvi. P. CHARLEVOIX Histoire de Japon, vol. ii. p. 470. † HARRIS'S Collection of Voyages, vol. i. p. 686. P. BENTIN Tab. PURCHAS'S Pilgrimages, book v. chap. xiv. sect. i. See the Spanish chart preserved in Lord ANSON'S Voyages.

(D) The reader may very probably expect that we should produce some authorities of a later date, and will be perhaps surprised that we cite none but antient collections, and writers who lived long before our own time. We must, in answer to this, observe, that these were times of discovery, while the *Spanish* empire was yet growing, before systems of trade were invented; and, in consequence of them, exclusive companies erected in other nations. Since this period, things have rather gone backward, with respect to such kind of enterprizes; and since the commencement of the present century, it would be in vain to look for authentic testimonies in any point of this sort (13): But to put the probability of what is said in the text beyond all doubt, we will shew from an eye-witness, and a native of our own country, what sort of people they are who inhabit the *Bashee Islands*; and when we see how consistent it is with the relations we have already given of the inhabitants in the *Liquios*, except that these are much more civilized, but at the same time less free, it will beyond contradiction appear, that any nation blessed with common sense, and at the same time not void of common humanity, might do with these people, who are very numerous, what they pleased. Our author observed, in the first place, that he did not perceive any apparent signs of religion amongst these people; but we must not conclude from hence that they have none, because all *Eastern* nations observe great secrecy on that head. He adds, that there was no magistracy or form of civil government amongst them; except that parents governed their families with absolute authority, and were punctually and dutifully obeyed; however, he collected that they must have some laws, from the instance of a young man's being buried alive for theft. As to the temper and behaviour of the natives, take the writer's own words (14): "They have but one wife, with whom they live and agree very well, and their children live very obediently under them. The boys go out a fishing with their fathers, and the girls live at home with their mothers; and when the girls are grown pretty strong, they send them to their plantations to dig yams and potatoes, of

" which they bring home on their heads every day
" enough to serve the whole family; for they have no
" rice or maize. Their plantations are in the vallies at
" a good distance from their houses, where every man
" has a certain spot of land which is properly his own.
" This he manages for his own use, and provides enough,
" that he may not be beholden to his neighbour. They
" are in their persons a very neat, cleanly people, both
" men and women, and they are withal the quietest and
" civilest people that I did ever meet with. I could never
" perceive them to be angry one with another. I
" have admired to see twenty or thirty boats aboard our
" ship at a time, and yet no difference amongst them, but
" all civil and quiet, endeavouring to help each other
" on occasion; no noise, or appearance of distaste; and
" although sometimes cross accidents would happen
" which might have set other men together by the ears,
" yet they were not moved by them. Sometimes they
" will also drink freely, and warm themselves with their
" drink, yet neither then could I ever perceive them out
" of humour. They are not only thus civil among
" themselves, but very obliging and kind to strangers;
" nor were their children rude to us as is usual. Indeed
" the women, when we came to their houses, would modestly
" beg any rags, or small pieces of cloth, to swaddle
" their young ones in, holding their children out to us;
" and begging is usual for all those wild nations. Yet
" neither did they beg so importunately as in other
" places; nor did the men ever beg any thing at all." These people also build very good boats, for the most part small; but they have some large enough to hold forty or fifty men, which are rowed by twelve or fourteen oars on a side. There is nothing improbable or absurd in supposing that these people are very much sunk from what they once were; for that they have still laws, is a proof that they had formerly a government, which being totally subverted, the power is now returned to those who derive it from nature. Their justice and humanity are also the relics of better times; and their propensity to trade, very probably the remains of that disposition

(13) Discourse of Lopez Vaz, concerning the Spanish Power in the Indies, in Hakluyt's Voyages, vol. iii. p. 778. Sir William Monson's Naval Trade in Churchill's Collection, vol. iii. p. 437. Mun's Advantage of foreign Trade.

- a add, that if the missionaries had suggested something of this kind to the *Spanish* government, and had offered their service for the education of the *Indian* youth, in a manner that might have rendered them fit instruments for the execution of projects of this nature, they might have done a double service to the natives, and to their masters; and, by introducing a principle of industry and the love of arts, have awakened those latent seeds of civility and social qualities which those people must have retained, if there be any truth in the missionaries conjecture, that they are descended partly from the *Japanese*, and partly from the *Tagaleans*; both nations endowed with great qualities, which however might be easily obscured, and in a manner lost, in the gradual barbarism that succeeded their banishment from their native seats, and their being intirely excluded from all converse with their countrymen ^a.
- b THERE is another advantage which might be reasonably expected from their entering into a strict intercourse with the inhabitants of the *Liquios*, and that is, gaining some knowledge of the concealed commerce of the *East*; for it is well enough known, though we are not able to enter into particulars, that as the *Chinese*, the *Japanese*, and the inhabitants of these islands, carried on a very extensive trade through the greatest part of the *Indies*, before the arrival of the *Europeans*, though the two last nations have relinquished it since, yet they either preserve other branches of trade, or have opened new ones to the north and west, especially with the islands that lie between *Corea* and *Japan*. There could therefore be no insurmountable difficulty in drawing from these people lights on this head, which we are not likely to obtain any other way. If the *Spaniards*, or their missionaries, still retain the same zeal for propagating the *Christian* faith, this might prove a sufficient spur to their endeavours, as no method could be devised more likely than this to procure an entry into some of the dominions of *Japan* ^b. In return also for any information they might receive, the missionaries themselves might impart to the inhabitants better notions than they can possibly have at present, in respect to Astronomy, Cosmography, and Navigation; and, as they have naturally a turn to these sciences, they might be quickly put upon exercising any improvements they made, according to the directions, and in some degree for the benefit, of their instructors ^c.
- If by these, or by any other means that such a correspondence is most likely to discover, they could find any island in a high latitude, capable of receiving, and affording refreshments to the *Manila* galleon, it would be an inexpressible advantage to that commerce, and save, in the course of a few years, a number of lives, equivalent to the people that might be necessary to the making such an establishment; from which many other advantages also, at which we are not so much as able to guess, might be derived ^d. We may, however, take the liberty to add, that this would also facilitate a direct commerce between *Mexico* and *China*, which, however strange and chimerical it may appear to modern readers, was a thing not unattempted almost two hundred years ago; when, in virtue of their possession of the kingdom of *Portugal*, the *Spaniards* were masters of *Macao*; so that in respect to this, we proceed upon the uncontroverted maxim, that what has been may be; and what this nation could do so many years past, they might still, with the help of greater advantages than they then had, be able to perform ^e. We likewise know that in those, and in later voyages, islands that promised very fair, have been seen, particularly a very large one, in the latitude of somewhat more than thirty-seven degrees, which however no ship, in so long and hazardous a passage, will ever stay to examine; and, indeed, if they were inclined to do it, they are so strictly tied down by their instructions as to have it put entirely out of their power. But if, by such a method of gradual discoveries, any island fit for the purpose could be found, there is scarce any doubt that it would be a very welcome addition to their dominions, independent of the

the people of these islands might be attracted and rendered useful in different ways by the missionaries.

The great advantages that would result from their having an haven in some island in a high northern latitude.

which enabled them to manage a more extensive commerce in earlier days; for there is nothing more certain, than that the *Indian* nations in general abhor all commercial restraints; and though they have been so long deprived of it, still languish for a free trade (15). On

the other side it is easy to apprehend how useful, even in their present state, such people might be made to those who would barely undertake to encourage and protect their commerce, in consideration of a proportionable tribute, or other services.

(15) *Mossi's Histor. Indic. lib. v. Grotii Histor. Belg. lib. xi. xv. Dampier's Voyages, vol. ii. p. 116, 117.*

hopes they might receive of its resembling those islands abounding with silver, of which they have so many traditionary accounts, as has been already mentioned^c (E).

It would enable them to know the certainty, as to a north-west passage.

THEY would then have it in their power, if, upon mature deliberation, they should think it for their advantage, to resolve with certainty what has been so long a problem, whether there is, or is not, any north-west passage into the south-seas. It may possibly be doubted, and not altogether without foundation, whether such a discovery, supposing it practicable, would be acceptable or not to the *Spaniards*^f. This must be left to them to determine; but thus much is certain, that they are better acquainted with it too, if we could depend upon a fact, advanced in some memoirs, that in 1609 a ship, bound from *Acapulco* to the *Philippines*, was driven by a storm through that passage, and, after touching at some port in *Ireland*, arrived safe at *Lisbon*; where, by order of his Catholic Majesty, all the pilots journals were burnt, to prevent the discovery of that passage by other nations; which, if such a thing ever happened, might very probably be true^g. At all events, however, it could not be detrimental to the crown of *Spain* to arrive at a certainty in this point; more especially as things are now so much changed, that possibly a new route might be considered in another light than it then was^h (F).

^h Sir WILLIAM

MONSON'S Naval Tracts, in Churchill's Collection, vol. iii. p. 428, 429. 445.

(E) It may possibly be objected, that the *Spaniards*, having been so long in the use of this navigation, must not only be the best acquainted with it, but must also have long ago discovered such countries and islands as lie between the two continents, and would certainly examine and possess them, if they apprehended any such advantages could be derived from them, as we have suggested. It will be farther said, that the views of princes and politicians are very different things from the visions of speculative men, who travel only in their closets, make discoveries upon paper, and frame schemes for themselves and men of a like turn to admire; but which great ministers treat with derision. The truth of this is not to be disputed. But the point to be enquired into is, who are most likely to be in the right? Princes and politicians are great names; persons of science and sagacity are great men. The former are generally occupied about the concerns of their own times, the latter look forward, and endeavour the benefit of posterity. It was not *Ferdinand*, though honoured with the title of the *Wise*, the *Great*, and the *Catholic*, who discovered the new world; but poor *Columbus*, who had been treated as a chimerical projector, and whose vast designs had perished in embryo, if *Donna Isabella* had not enabled him to carry them into execution, by pledging her jewels (16). But to the present point: In some *Spanish* charts there are many islands marked in a high latitude; in others but a few, and we have already assigned the reason. Thus much however is certain, that there are not above thirteen degrees of latitude between the most northern of the *Ladrones*, and that *Archipelago* discovered to the eastward of *Japan* in 1716, which lie directly north from the *Ladrones*, and within which space, in some *Spanish* charts, there lie between thirty and forty islands; so that it cannot be denied, that an entire discovery of these may be made with the greatest facility (17). Besides, *Don Juan de Gama* discovered a continent, or at least a very large island, in a still higher latitude east of *Japan*, and north of those islands; so that there is nothing improbable or difficult, much less absurd, in what we have laid down (18); on the contrary, there can be nothing more certain than that such countries there are, and that what sort of countries they are, may be known with ease by the *Spaniards*, if

they think fit. What motives they may have to decline such discoveries, is another question which we do not presume to treat expressly; because we are not sufficiently acquainted with them. But be their motives ever so wise, or ever so well founded, they must arise from the circumstances of their own affairs, and the nature of their government, with which we have clearly nothing to do; as we consider the *Spaniards* in this section simply as possessors of these countries, and in that light capable of converting those possessions to such uses as they think proper, and, amongst others, to these.

(F) It is a matter of great consequence towards the understanding of this subject thoroughly, to know and compare the notions of the *Spaniards*, concerning the probability of this freight, by which a north-west passage might be opened into the *South-Seas* in the most early times. We have mentioned, at the beginning of this section, the expedition of *Don Garcia de Loaysa* to the *Moluccas*, by the straits of *Magellan*. It seems there was one *Esleevan Gomez*, an able pilot, who was desirous of making the voyage, but was rejected (19). This pilot had proposed to the emperor *Charles* the fifth, the discovery of a north-west passage into the *South-Seas*; which not being listened to, and being piqued at this ill usage, he proposed to the count *de Aranda*, and some others, to go by this passage to the *Moluccas*; for which purpose they furnished him with a galleon in 1525: he spent ten months in the voyage, went first to the *isle of Cuba*, then steered northward as high as *Cape Race* in the latitude of forty-six degrees north; and then his heart failing him he returned to *Corunna* (20). An unlucky jest ruined his reputation; and, which is stranger, hurt the credit of the north-west passage. When the ship came into port, somebody asked what they had on board? A seaman answered, *Esclavos*, slaves; a person who was watching on shore, mistook the sound for *Clavos*, cloves; and riding post to court, declared that *Gomez* was returned with a cargo of spice from the *Moluccas*; which, when the mistake came to be discovered, exposed him and his patrons to much derision (21). But what credit soever this passage might lose in *Europe*, both *Portuguese* and *Spaniards* remained firm in the belief of it in the *Indies*, as appears amongst other evidence, from the following

- ^a THE *Spaniards* settled in *America* must also know whether the old reports of a correspondence between the *Indians* in the north-west part of *America*, behind *California*, with the inhabitants of *Asia*, or of the continents, or islands between *Asia* or *America*, has any real foundation or not. This was once strongly believed, from arguments partly, and partly from authority, by the *Spaniards*, as well as other nations; and by the *Spaniards* in this part of the world, as well as in *Europe*. It is indeed true, that this notion has been also contradicted as positively; and that of late years very little has been said about it. But uncertainty or silence conclude nothing as to the nature of the fact, or its importance¹. The *Spaniards*, at least the *Jesuits* under their protection, have considerable missions in *California* and *Quivira*, who might easily resolve this doubt; the resolution of which, when their concerns in the *Indies* are thoroughly understood, and attentively considered, must appear of great consequence to the court of *Spain*, for reasons that will be seen in their proper place. After being in possession of these countries for upwards of two centuries and a half, it is certainly high time to be thoroughly acquainted with every circumstance that relates to, and every advantage that can be drawn from, them; for otherwise, such countries are rather discovered than possessed; if that possession consists only in holding them to little purpose; or rather with-holding them from others who might possess them to better purpose². But this will appear still more preposterous, if we consider, that almost two centuries ago this humour of keeping without using, was con-

The Spaniards do, or at least may, easily know whether any correspondence subsists between the northern Indians and any oriental nations.

¹ Historia natural y moral de las Indias en que se tratan las causas notables del Cielo, y elementos, metales, plantas, y animales dellas, por el P. HACKLUYT's Collection of Voyages, vol. ii. p. 429.

passage of an account written by a countryman of ours in 1572, after residing in *New Spain* five years (22). "There is west out of *Mexico*, a port town, which is on the *South Sea* called *Puerto de Acapulco*, where there are those ships which they have ordinarily for the navigation of *China*, which they have newly found. This port is three score leagues from *Mexico*. There is another port-town which is called *Culiacan*, on the *South Sea*, which lieth west and by north out of *Mexico*, and is two hundred leagues from the same; and there the *Spaniards* made two ships to go seek the streight or gulph, which, as they say, is between the *Newfoundland* and *Greenland*, and they call it the *Englishmens* streight; which as yet was never fully found; they say that streight lieth not far from the main land of *China*, which the *Spaniards* account to be marvellous rich."

This author writes from information; we will next produce the sentiment of a *Spaniard*, writing from his own knowledge, and asserting matters of fact in relation of his own return from *China* to *New Spain* (23). "Running thus east and by north about three hundred leagues from *Japan*, we found a very hollow water, with the stream running out of the north and north-west with a full and very broad sea, without any trouble or hindrance in the way that we past; and what wind soever blew, the sea continued all in one sort with the same hollow water and stream until we had passed seven hundred leagues. About two hundred leagues from the coast and land of *New Spain*, we began to lose the said hollow sea and stream; whereby I most assuredly think and believe that there you shall find a chanel, or strait passage, between the firm land of *New Spain* and the countries of *Asia* and *Tartary*; likewise all this way from the aforesaid seven hundred leagues, we found a great number of whale-fishes and other fishes, called by the *Spaniards* *Atuns*, or *Tunnies*, whereof many are found on the coast of *Gibraltar* in *Spain*; as also *Albacoras* and *Bonites*, which are all fishes, which commonly keep in chan-

nels, freights, and running waters, there to disperse their seed, when they breed; which maketh me the more assuredly believe, that thereabouts is a channel, or streight to pass through." From reports and conjectures we will now pass on to facts. Mr. *Michael Locke*, an *English* merchant, who was at *Venice* in the year 1596, became there acquainted with a *Greek* pilot, whose true name was *Apostolos Valerianos*, whom the *Spaniards* called *Juan de Fuca*; he had made two voyages by the direction of the viceroy of *New Spain*; the last in 1592, for the discovery of this streight, which he affirmed he did discover between the latitude of forty-seven and forty-eight degrees; which streight was thirty leagues wide at the mouth, with a head-land on the north-west side, having a remarkable spired rock rising up like a pyramidical pillar. Through these freights he sailed for some time, discovering several islands, and having a wide open sea to the north-east (24). At his return to *Acapulco* he was very highly commended by the viceroy, who advised him to go to the court of *Madrid* with certificates, in order to obtain an adequate recompence for this important service from his Catholic Majesty. He returned accordingly, was received with great testimonies of approbation and respect; but finding, after long solicitation, only reiterated promises, he returned into his own country most highly provoked against the *Spaniards*, and, by the interposition of Mr. *Locke*, made a tender of his services to Queen *Elizabeth*, offering, with a vessel of the burthen of forty tons, and a pinnace, to discover this streight from one entrance to another, in the space of thirty days. This proposal was well received in *England*; but the frugality of that queen's administration was so great, that, for want of a single hundred pounds to defray the *Greek* pilot's passage, it was delayed till the time of his death (25). That this Mr. *Michael Locke* was a very inquisitive and a very indefatigable man, we have an indisputable testimony yet remaining, in a copy of *Ramusio's Collection of Voyages*, with marginal remarks in his own hand-writing, now in the possession of Robert Harper, Esq; of *Lincoln's Inn*.

(22) Mr. Henry Hauke's Relation of his Observations in New Spain, addressed to Richard Hackluyt, Esq; (23) The Voyage of Francisco de Gualle, in Hackluyt's Collection, vol. ii. p. 442. (24) Hackluyt's Collection of Voyages, vol. i. p. 412. (25) Purchas's Pilgrims, vol. iii. p. 849, 850.

demned by the best judges of the *Spanish* interests in these parts, so that these are not notions either foreign to the subject, or incompatible with the genius of the *Spanish* nation; but, on the contrary, schemes advanced by their own writers, treated by them in a very masterly way, and insisted upon as absolutely requisite to connect the several parts of the *Spanish Indies*, and thereby compleat that plan of empire opened by discovery, pursued by conquest, and to be maintained, established, and completed, by a wise and well conducted policy ¹.

No less than four different schemes offered for opening a communication between the north and south seas, soon after their discovery.

We find that no less than four different schemes had been offered for opening a passage from the *North* to the *South Seas*, exclusive of that by the straits of *Magellan*, or of the north-west passage, if such a passage there be. The great object of all these schemes, was the rendering the navigation practicable from *Spain* to the *Philippines*, without being exposed to any of those inconveniences that had been experienced in passing the straits of *Magellan*, and were supposed to incumber that by the north west ². All these schemes went clearly upon a supposition, that the true interest of the *Spanish* crown consisted in keeping up a close and constant correspondence between all her colonies, however situated; and also between these colonies and their mother-country. Those who proposed, and those who supported, these schemes, were convinced that this regular intercourse was not only requisite to the reciprocal welfare of the colonies, by enabling them to assist and enrich one another, and the most effectual means of keeping them well stocked with people; and those people properly employed in exposing their persons, and exerting their faculties for their own emolument and the public service; but likewise that this would turn most to the benefit of *Spain* ³, as, by adopting any one of these schemes, the colonies would have been effectually secured from receiving the commodities or manufactures of *Europe*, otherwise than from, or by the permission of, their mother-country; and, at the same time, all the rich products of the *East*, as well as the *West Indies*, must have been transported to *Spain* (G).

(G) All the methods devised to open an easy passage from the *North* into the *South Seas*, ought to be considered in no other light than as attempts to accomplish the first and great design of *Columbus*, which we have so often mentioned, of reaching the *East Indies*, by a west course (26). Such as have best understood the interests of the crown of *Spain*, have continued to look at this as the principal object, as the means of uniting the capital sources of commerce, and securing thereby all the advantages of the richest trade in the world to the crown of *Spain*. The first of these communications that have been mentioned, is between the gulph of *St. Michael* in the *South Seas*, and the gulph of *Uraba* in the *North*. The river *Darien* falls into the latter; and this passage, through the province which the *Spaniards* call *Terra Firma*, is computed to be about five and twenty leagues (27). There is no doubt that this would be commodious enough, if the country was thoroughly peopled, the soil properly improved, and the roads rendered perfectly commodious. But then to the attainment of these conveniences, absolutely necessary to such a passage, there are very great, and perhaps insurmountable obstacles. In the first place the country is naturally very barren, which makes the climate exceedingly unwholesome. The low land is marshy, and, upon digging a few feet deep, there rises a foul stinking water, equally noxious and unpleasant (28). We shall therefore say no more upon this head. The second is between *Panama* and *Porto-*

Bello, of which we have taken notice sufficient in the text. The third by the lake of *Nicaragua*, would be so short, so easy, and so commodious, that it is a very difficult task to guess why it has not been attempted at least, or put in practice. This fresh water lake is perhaps the fairest and finest in the world, considering the country about it; which is so rich, so wholesome, and so pleasant, that when the *Spaniards* first came thither, they stiled it the *Paradise of Mohammed*, and it is still with great propriety called the *Garden of America* (29). They have two very large cities upon this lake, one called *Leon*, the other *Granada*; and a multitude of large towns, which are very populous. The lake is one hundred and thirty miles long, and communicates with the *North Sea*, by the river *Desaguadero*, that is the discharge; and a good port might be made at the mouth of it. There is also a fine river that falls into the *South Sea*, which is navigable within a few leagues of the city of *Leon*; and besides, the large and commodious port of *Rio Lejo*, where they build most excellent ships, is at no great distance (30). As the country of *Nicaragua* is one of the best, if not the very best peopled of all the provinces of *New Spain*, as having in it near half a million of *Indians*, who now live happily and at their full liberty, and are many of them in easy circumstances, which they have acquired by trade, no time need be lost in the execution of this project; which, permission once procured from *Europe*, would execute itself (31). The fourth is through the

a THEY conceived, and it is not easy to assign any competent motives why we should so much as suspect they conceived amiss, that the easier and the safer these voyages between their distant colonies could be made, the closer and the more extensive their correspondence, the more a spirit of industry would be cherished among the inhabitants, the greater wealth they would acquire, the more their commerce, and of course their naval power, would flourish; and, of consequence, the more lucrative that exclusive trade to which they were tied with Spain. Such was the old original scheme of *Spanish* power in the *Indies*, calculated to secure, maintain, and extend itself; such were the means contrived to keep alive that spirit by which these dominions had been acquired; and such the method calculated for raising a force adequate to the preservation and protection of these increasing conquests, out of the conquests themselves, and of obviating all the inconveniences that flow from a stagnation of wealth and power, by a continual and brisk circulation of both; finding such employment for the people and their rulers as might prevent their sinking into indolence and luxury, and drawing from their labours a suitable tribute to their mother-country, for the force originally imparted and all her occasional supplies. This was certainly a practicable method of maintaining things in a flourishing condition, of answering all the purposes of prince and people; and maintaining without decay, that vigour which had given rise to this amazing empire.

b OF all these schemes, in the sentiments of a very ingenious and judicious writer, who addressed the great work he composed to his Catholic Majesty, that seemed to be the most eligible, which proposed bringing the ships from the *East Indies* to *Panama*, in the *South Seas*; from whence their lading might, without much trouble, be carried by a plain easy road of not more than four leagues, or twelve *English* miles, to the river *Chagre*; and from thence on board large lighters to *Nombre di Dios*, or *Porto Bello*; whence with the products of *America*, they might have been transported on board the galleons to *Europe*. By this scheme he supposed that many good purposes might be answered; the voyage between the two *Indies* performed in the shortest manner possible, by sailing almost all the way under the same degree of latitude, parallel to, and at a small distance from, the equinoctial, through the *Pacific Ocean*, properly so called, in a short time, and with little hazard. Besides, this would have created scarce any alteration in the established method; which, as we have more than once remarked, is a thing of great consequence, since the *Spaniards* have naturally an attachment to the routes once fixed, and are not easily drawn to venture upon any alterations, though the advantages derived from them should be ever so probable. If this scheme, which, to do the author justice, was both natural and practicable, had taken place, the improvement of the *Ladrones*, so as to have rendered them fit to have been made the magazines of the commodities of both the *Indies*, for the sake of shortening the passage, rendering the correspondence more certain and uniform, and preventing, as might have been easily done,

Proposal for fixing this commerce between Panama and Porto Bello, in consequence of which the Ladrones would become the magazine.

province of *Honduras*; and though the distance between the two seas be there three-and-fifty leagues from *Puerto di Cavallos*, in the *North Seas*, to the bay of *Fonseca*, in the *South*; yet, by means of two rivers which contribute to form those ports, the transit by land would have been but a few miles (32). The report of this being made to Philip the second, he ordered (which shews that at this time such a proposition was very acceptable, that it should be examined by Battista Antonelli, an experienced engineer, who, though he admitted the communication was practicable, yet thought it would be attended with such inconveniences as gave no encouragement to attempt it (33). We may add to these a fifth, which, though the least convenient of any, is the only one in use; and this is from *Acapulco* to *Vera Cruz*, of which

we have already spoken in another place (34). There seem to be three principal reasons why the *Spaniards* have fixed and continued their correspondence between the *East* and *West Indies* to these ports. The first is, the great difficulty they found in returning from the *Philippines*, or even from the *Ladrones*, by navigating within the tropics. The second, that though the passage between *Acapulco* and *Vera Cruz* is by land, and of so great an extent, yet it is very secure. The third, that they have been long jealous of, and little inclined to, the *East India* trade, as carrying away a great quantity of silver (35). However, it is not at all impossible, that means might be found for lessening, at least, if not for removing, all these difficulties, and putting this intercourse in a much better train than it is in at present.

any clandestine commerce, would have followed of course; and consequently must still follow, if upon due reflection any thing of this kind should ever be carried into execution: for it is impossible that the circumstances favourable to such a conveyance, should ever fall under mature consideration without producing this effect; and of course, there are very strong grounds to expect, that sooner or later this will happen; and this *Archipelago*, at present so little attended to, become very suddenly the center of as valuable a trade as any in the universe, merely from their commodious situation; which, however long neglected, is a benefit never to be lost, as there is no prescribing against the grants of nature^a.

But such a commerce as has been mentioned with any oriental nations, would be still better.

BUT, after all, perhaps still greater advantages might arise, from pushing their discoveries to the north, to the north-west, and to the north-east; since there is a very high probability, indeed almost a certainty, that this would be attended with very beneficial consequences; and if the accumulated commerce from these places could be fixed to some convenient port on the continent to the north-west of *New Mexico*, it could not fail of drawing such a resort of people into that province, by the inviting prospect of growing very rich in a short time, as would enable them to cover effectually that frontier which is most exposed; as the *French* have long had their views on this side, and have taken some pains to make themselves well acquainted with this very subject; though hitherto not at all in a condition to embrace such an undertaking^b. It is therefore of the highest importance to the *Spaniards* to provide for their own security in the proper season, by prosecuting their discoveries and settlements to the north and north-west; which, though otherwise very difficult, the prospect of such a trade would extremely facilitate.

More especially, as this would effectually secure *New Mexico*, and the provinces adjacent.

It is true, that they have very rich mines, and very considerable settlements in *New Mexico* and the adjacent provinces, with which they have had good reason to be content, if at the same time they could be secure. But, as in process of time these countries may be in as much danger as ours are at present, from the *French* carrying on their discoveries and intrigues with the *Indians* behind them, it may be fairly presumed that so wise and so penetrating a nation will not continue to neglect the shortest and most effectual method of providing even against this distant danger; more especially as they would find it not at all difficult to transport the produce of this new commerce by the great rivers that fall into the gulph of *Mexico*; and, by speedily raising considerable towns on the banks of which rivers, they would, considering the present disproportion between their establishments, and those of their ambitious neighbours, form such a barrier on that side as would free them from all apprehensions^c. A thing so necessary and so practicable, that though we have no direct authority to support the assertion, yet we cannot help believing, that it has already merited their notice; and that, whenever we have any distinct and authentic account published of the state of their dominions in these parts, in respect to which we must confess ourselves much in the dark, it may be found, that what we have represented as mere conjectures, which in truth they are, might have been supported from matters of fact, if they had come early enough to our knowledge. Whenever this shall happen, it cannot fail of doing us credit with our readers; and till it does happen, we must depend upon their candour, grounded on a persuasion, that the pains we have taken in travelling so far through an unbeaten road for their service, cannot be unacceptable to inquisitive and impartial judges^d.

Nothing laid down in this section but what is equally well founded on reason and experience, and consequently both possible and practicable.

ALL that has been proposed in the course of this section, is so far from consisting of guesses or suppositions, that on the contrary, nothing is laid down as either practicable or possible, but what is demonstrated so to be, either by arguments absolutely conclusive, or from matters of fact. The natives of the *Philippines*, of the *Marianne* islands, and of all the provinces of *New Spain*, are people not at all deficient in bodily strength, in abilities, or even in point of docility, if the best *Spanish* writers are to be believed; and consequently, there is not the least reason to doubt, that with proper instructions, kind treatment, and due rewards, they might be brought with a very small intermixture of *Spaniards*, to execute every thing that could be expected from them. As the *Spaniards* might chuse out of all these nations, might blend them in what manner they thought proper, and might employ them in such different services as they were fittest to execute, they might employ them without either fear or danger. They might tempt them with so many different recompences, and reward their services with

a such a variety of indulgences, as in a short time would furnish them with volunteers in all these countries. They might undertake and execute the several discoveries proposed; at least in a great degree from the *Philippines*, *Mariannes*, and *Mexico* at the same time; and, by carrying on such discoveries gradually and equally, make them facilitate and support each other. As they have such mighty benefits to expect from their progress in these improvements, so they have no great obstacles to overcome; no puissant enemy, they have any just reason to fear. They may act in what manner they will; they may do as much or as little as they please; they may publish or conceal what they think proper, and carry all their designs to a degree of perfection; or at least very near it, before the rest of the world knows any thing of the matter^a.

b BESIDES, as things now stand, the crown of *Spain*, instead of having all *Europe* for enemies, as in the days of their ambitious monarch *Philip* the second, have, under their present monarch *Ferdinand* the sixth, no enemies at all. There is therefore nothing difficult in undertaking, or in executing these designs. We will next say something in regard to their expediency. A sedentary inactive life is fatal to all colonies at a great distance from their mother-country; it is the parent of luxury and corruption; more especially where they have any people under subjection to them; for then the colonists become tyrants, and those who ought to be subjects only, are made slaves. Experience has shewn this amongst the *Spaniards*, and no remedy has been found effectual; because the true remedy was never applied^a. It consists in reviving industry and public spirit, in diffusing a sense of honour and reputation, and of putting these in the power of all ranks of men to acquire. If this was once done, men of birth, fortune, and education would pique themselves on entering on such enterprizes; and, as these could not be effected without the assistance of meaner people, the necessity of using would induce them to cherish their vassals, and in the space of a few years, such an alteration of manners would be made, as would greatly increase the *Spanish* power, how little addition soever might in that space of time be made to their dominion^b.

This subject more fully explained, and, by various arguments, clearly illustrated.

c ALL that we have offered falls naturally and clearly within the bounds of the present section, in which we undertook to prescribe what had, and what might be discovered to the north of the *Marianne* isles, which, of course, made it requisite for us to interweave facts and reflections, the latter being as much historical as the former, one having a retrospect to events past, the other exhibiting a prospect of those that may probably happen^a. It was our business to treat here of that part of the globe, which is in so very peculiar a situation, we scarce know to which quarter it belongs, some portions of it being known; such as the *Liquios*, and the other islands that lie in their neighbourhood; some again half known, such as the *Spaniards* have marked in their charts and given names to; some still less known, as the countries from whence the vessels came that are said to have been on the north-west coast of *America*, and some altogether unknown; but the existence of which may nevertheless be presumed, from a concurrence of circumstances; such as the continent, or islands that lie between *Asia* and *America*; that is, to the north-east of the former, and north-west from the latter^b. We have spoken of all these as far as our lights will carry us; and however little we have said, that little is much more than the reader will be able to find in any other book, or at least in any book that is come to our knowledge. Our aim in all this has been to point out the means of making farther discoveries; to encourage them, by shewing the facility with which they might be made; and, which is still more, the benefits that would result from it. In doing all this, we have seriously and conscientiously endeavoured to fulfil the will of our Creator, who made this world, and all the parts of it, for the use of men, and who regards all the nations of the earth as one family^c.

All these points fall naturally into the compass of this section, and could not have been properly introduced anywhere else.

d As the *Ladrones* and *Marianne* island were first discovered by, have always been, and still are, in the possession of, the *Spaniards*, what we have delivered in the former section and in this, come in their proper places, and, indeed, could come in no-where else, with any shadow of propriety. As those discoveries that may be made from them, may, with the greatest ease and certainty, as well as with the greatest security, and with the most probable hopes of

Tho' the property of the Marianne islands, and the right of making discoveries from them, belong to the Spaniards, the right of knowing them belongs to all the world.

advantage, be made by their present possessors, we have stated things accordingly; and in stating them, respected chiefly *Spanish* authorities, agreeable to the nature and end of this work^a. But though the property and possession belong to the *Spaniards*, yet all mankind have an equal right to know the situation, history, and circumstances of these islands, and their inhabitants, as well as the advantages that have been drawn, and might be drawn from them. The less that has been said of them elsewhere, the more largely they ought to be considered here; since one principal intention of this work is not only to collect and digest into proper order what has been elsewhere said, but also to supply the defects of others. It may be, that some of the particulars we have mentioned have been little considered, at least of late years, by the *Spaniards* themselves; or, if they have considered them, it is pretty certain they have not favoured the rest of the world with their reasons for making so little use of them, or for declining the most apparent use, that of augmenting and extending their discoveries^b. But, whatever motives they may have for this, these can be no motives to us to be as silent as they seem to be indolent; and if, from the influence of these motives, they should continue for ages to come to act with the same supineness they have done for two centuries past, this will not alter the nature or the reason of things; or detract in any degree from the truth of what we have asserted, from the lights of history and experience, much less preclude the rest of the world from examining into the possibility or practicability of finding some means or other for bringing those scattered islands and continents, whatever they may be, lying in the vicinity of these possessions of the *Spaniards*, into connection and correspondence with other known parts of the globe; and therefore we thought ourselves at full liberty to treat this subject as freely and as copiously, as it appears to us that the advantages which might flow from a better acquaintance with these continents and islands deserved^c.

The present administration in Spain intent on promoting its true interests.

As we pretend to no more than a very indistinct idea of the reasons which have hitherto influenced the conduct of the *Spaniards*, in respect to a great part of their possessions in both the *Indies*, we presume not to decide positively, as to the propriety or impropriety of this conduct. We cannot, however, help thinking, that a time may come when so wise and prudent a nation may think proper to alter this conduct, and we conceive this time will come, when they apprehend the interest of all the parts of which their extensive empire is composed in their true light. We should certainly find it no hard task, if this was a proper place, to enumerate many probable causes why this has not hitherto sufficiently occupied their attention^d. The principal, without doubt, has been the confusion of their affairs in *Europe*, from their attachment to various ambitious plans; most of them repugnant to, and all of them far removed from, the true interests of their monarchy; that is, the support of the crown of *Spain*, and the promoting the happiness of its subjects. It is not often that these are the sole objects of the prince and his ministers; but, without the least intention, and therefore we hope without the least imputation of flattery, we may with the utmost probability affirm, that these are the sole views of his present Catholic Majesty and his ministers. They see the grandeur and the interests of *Spain* in the true point of light; and therefore bend all their endeavours to reduce the interior government of that great monarchy into the most exact order. They have persisted in this for some years, in which it must be admitted they have done a great deal; but, at the same time, it must be allowed, that they have a great deal still to do, before, even with their inflexible assiduity, so great a work as this is can be fully accomplished^e.

Highly probable, that when they have rectified their errors in their domestic government, they will also reform and improve their colonies.

WHEN this shall be accomplished, we cannot doubt that the same principle of public spirit will determine the *Spanish* administration to enter, with like diligence and circumspection, into every thing that regards the state of their colonies; and whenever this comes to pass, there is no question to be made, that the great importance of this *Archipelago* will be discerned, and the proper measures taken to draw from it all those advantages of which it is capable; and more especially those that may result from discoveries, for the making of which it is so happily situated^f. As, in order to this, it will be absolutely necessary to make a new disposition of the remaining inhabitants, and to labour the civilizing and converting them to the Christian faith, by methods better adapted to those humane and salutary purposes, than have been hitherto employed, we cannot doubt that these will be taken, or entertain the least diffidence,

a that when they are taken, they will not be attended with the most happy effects¹. For it is impossible, that if the natives of any one island were so thoroughly reclaimed as to live in the comfortable state of a Christian society, and in the possession of all the conveniences of life, with less labour than they now take, with an apparent peace of mind and undisturbed security; that their countrymen, who are far from being stupid, should remain inattentive to such an example, or prefer naked misery, and indigent indolence, with that profligacy of life which is naturally attended with checks of conscience, to freedom, quiet, and rational happiness; more especially, if some of their brethren were employed to exert their natural talents for eloquence, in displaying the numberless advantages that would attend so just and easy a change of manners².

b YET, if after all that has been said and shewn, there could so much as the colour of a doubt remain, as to the utility and importance of this chain of islands, or the great ease, and as great certainty, with which the *Spaniards* might be able to improve them to the utmost, and render them equal, if not superior in value, to the *Philippines*, or any province of theirs in *America*; this will be fully explained, and set in the clearest light possible in the next section; in which we are to examine what are, or what might be, discovered to the southward, to the south-west, and to the south-east of the *Marianne Islands*; what means there are of making these discoveries, and what beneficial consequences might be with probability expected from them; for the whole subject being then complete, the several parts of it will reciprocally reflect light upon each other.

¹ Atlas Maritimus & Commercialis, p. 322. de Chile.

² ALONZO DE OVALLE Relacion Historica del Reyno

S E C T. XI.

The discoveries that have been, or probably may be, made to the south-east or south-west of the Mariannes; the gradual discovery of the Caroline Islands, or New Philippines; their situation, soil, climate, produce, and inhabitants; the appearance there is of many rich and valuable commodities in these isles; the certainty of raising spices of all sorts in them; and the advantages which would result from thence.

c **W**E have asserted, and we hope we have also shewn, that great advantages might have arisen to the crown of *Spain*, from the possession of the *Ladrones* or *Marianne Islands*, by the conveniency of their situation for making very important discoveries. It falls out notwithstanding, that tho' nothing could be well more obvious or apparent, yet almost all the discoveries that have been made since they were in possession of these islands, either to the north or to the south, have not been the effects so much of choice as of chance¹. That their number has been greater on the north than towards the south, is very plainly owing to the routes the annual ship is forced to take in going to *Acapulco*, which, notwithstanding all the care they can use, varies very considerably almost every voyage; whereas, in going from *Acapulco* to *Manila*, they bear down as near as may be to the latitude of *Guam*; and, meeting commonly a fair wind, continue their course in as direct a line as possible². Indeed this has not been always the case; because, before this transit was established, they sailed from different ports of *America* for the *Philippines*; and probably, if it had not been for this, they would scarce have made any discoveries at all, as in fact, notwithstanding this, they have made but very few³.

In order to be convinced of the truth of this observation, we need only cast our eyes upon the most authentic *Spanish* charts, at the distance of a long series of years, and observe the small difference there is between them⁴. This must appear the more extraordinary to every intelligent reader who has considered this subject with attention; when he reflects on the motives that first determined the *Spaniards* to attempt an intercourse with the *East Indies* through the *South Seas*, and the prodigious expence of blood and treasure with which, while

¹ GALVANO'S Discoveries, translated by Hackluyt, lib. iii. Sir WILLIAM MONSON'S Naval Tracts, lib. iv. Pere LE GOBIEN Histoire des Isles Mariannes, liv. x. ² GIOVAN. FRANCISCO GEMELLI CARRERI Giro del Mondo, P. v. lib. iii. c. vi. Discourse on Navigation and Discoveries, chap. xi. Lord ANSON'S Voyage to the South Seas, chap. x. ³ HERRERA Descripcion de las Indias Occidentales, cap. xxviii. they retained the dominion of the crown of *Portugal*, they laboured to preserve the *Moluccas*^a; since, if there was wisdom and fortitude in this conduct, notwithstanding it weakened and almost exhausted their settlements in the *Philippines*, it might seem a self-evident deduction, that acquiring in a less hazardous way as great advantages as could have been attained by the keeping of those islands, might have demanded some attention; more especially when this alone was necessary, and not any extraordinary expence, any naval armament, or any considerable effort whatever^c.

But still more
for with these
on which their
empire is estab-
lished in Ame-
rica.

BUT, notwithstanding all those circumstances of inattention, the very discoveries thus in a manner forced upon them, were attended with informations that ought to have excited curiosity; and certainly would have done it, if they had acted from those principles on which they first established their dominion in the *East Indies*. For the sight of islands, pleasantly situated, well inhabited, and in a good climate, might have deserved examination; since the richest countries are not always the most promising at first sight; and the smallest islands are sometimes found to be countries of great value. Besides, in these untraced parts of the globe, the knowledge of one country leads to the knowledge of another, and the reward of discoveries, though it comes late, comes at last^b. The small islands that were first seen and possessed by *Columbus*, were soon after slighted for the sake of better, to which he was led from the knowledge of these; but, if he had given himself no farther trouble, or if he had measured the profits of the new world by the acquisitions made by his first voyage, where had been the *Spanish* empire in these parts at this day^c? Or why, since this principle of examining and enquiring, from as little encouragement, proved so fortunate and so glorious to him and the princes who employed him, ought so opposite a conduct to be pursued here, where possibly the like pains and diligence might be still more amply rewarded?

The islands ly-
ing directly
south from the
Ladrones,
and when dis-
covered.

IMMEDIATELY to the south of the island of *Guam*, and between ten and thirteen degrees of north latitude, lie the islands of *Ban*, *Bota*, *Saint Baravel*, and the shoals of *Santa Rosa*. We have no description of any of these places; but it is highly probable, as we have shewn in a former section, that the three first islands were those seen by *Magellan*, and consequently the first discovered, since they agree better with the circumstances of *Pigafetta's* description than the island of *Guam*, and those in its neighbourhood^d. What seems to confirm this, is, that the names of these islands occur in all the old lists of the *Ladrones*, in which we do not find *Guam*; and also in some catalogues we find the names of the northern islands, mentioned in the former section, likewise inserted; which shews that things have not always stood, even in the sentiments of the *Spaniards*, in the manner they do at present^e. If these were the islands first seen by *Magellan*, they were even in those days well peopled, and those people were not ignorant of the arts of navigation, or naval architecture; so that in process of time, and when things were settled and reduced into better order, there might have been grounds for prosecuting these discoveries further, or, at least, for enquiring into the condition, manner of subsistence, and what correspondences were entertained amongst their inhabitants (A).

(A) We have intimated more than once, that there are some points not clearly understood in the accounts we have of *Magellan's* voyage. It is expressly said, that from the *Ladrones*, which-ever of them it was he saw, he continued his voyage to the little island of *Zamal*. This island from its nearness could be none of the *Philippines*. The next day he went on shore upon an uninhabited island, upon which he bestowed the name of *Buenos Senales*, which we find placed by *Herrera* near to *Mindanao* (1). While he remained here, he was visited by a canoe with nine people on board from the island of *Zuluan*, who are very highly commended for their humanity and civility. These men afterwards brought other boats; and it is very remarkable, that the cargoes

of these boats did not speak a barren indigent country, any more than the behaviour of those on board shewed them a brutal or barbarous people. Amongst their merchandize, an eye-witness assures us, that there were cloves, cinnamon, ginger, pepper, nutmegs, mace, and gold, wrought into many antic forms. The people who brought them were naked, with large pieces of gold in their ears, and having jewels set in gold for bracelets; about their waists they wore a coarse cloth, made of the rind of a certain tree (2). Their island was situated in the latitude of ten degrees north; and taking all circumstances together of country, boats, and people, was probably one of the *New Philippines*. In those days the inhabitants of all the isles enjoyed a free and exten-

- a AMONGST the islands to the south-east, we find laid down in the old maps *Abreoso*, which in the new charts are stiled *Islas de Abreos*; *Mira como vas*, which is as much as to say, *take care how you move*; these are laid down as three pretty considerable islands, with shoals about them. *Quita Sueño*, that is, *leave your sleep*; *La Poblado*, or *the well-peopled island*. Most of these are left out in the new charts, in some of which we find others inserted; such as *St. Stephan*, *Isla de Arceles*, *Casobas*, *Lafurganes*, and *Pescadores*, or, *the Fisher's Island*¹. The island of *St. Bartholomew* lies in the latitude of fourteen degrees north, and near twenty degrees to the east of *Guam*, and appears both in the old and the new charts to be larger than any of the *Marianne Islands*. We have no description of any of these islands, probably because they were only seen by ships in their passage; but they might be easily examined, and perhaps many more found in or near the same track, if any vessels were employed from *New Spain* to that purpose; and, though they might not happen to produce any valuable commodities, yet certainly they would facilitate the correspondence with the *Marianne Islands*, in case they were thoroughly settled and improved; and, in that respect, might be rendered equally beneficial and convenient². To say nothing of the probability there is, that some larger and more valuable countries might be discovered, since it is not easy to conceive that there should be so many small islands, with shoals about them, in so vast an ocean, without some great and more considerable continent, as is common in the like cases, and of which instances will occur within the compass of this section, as well as within the bounds of this *Pacific Sea*.
- b

- c As to the islands of the south-west, we find three islands lying in a triangle, in the old charts, which are called *los Corales*, or *Islas del Coral*, that is, *the Coral Islands*. The *Archipelago*, stiled *de los Reyes*, because discovered on the feast of *Epiphany*, consists of five islands. The island of *Sabavedra* is a pretty large one. The *Matalotes*, or *Companions*, are smaller. The *los Jardines*, or *the Gardens*, were so called from their having a very beautiful and pleasant appearance. *Isla de Aracifes*, or, *the island of Rocks*, is also pretty large, but in a manner inaccessible. *Pulo Vilan*, or the island of *St. Vilan*, is as large as any of the *Ladrones*; and the island of *St. Juan*, or *de Palmas*, is the most to the west of them all, and the nearest the *Moluccas*³. We know that when these islands were first discovered by the *Spaniards*, they were very full of people, the inhabitants had prows of different sizes, were not at all shy of strangers, but readily came on board the ships; but, though we have these and other particulars in our old collections, yet we find no mention of them in modern books; as if it was designed they should retire again from the knowledge of men, and relapse into their original obscurity. If this arises from negligence, it ought to be prevented; if from a point of mistaken policy, we ought, in justice to the rights of mankind, to defeat it. Discoveries are made for the common benefit; more especially, after they have been once published; and, tho' the *Spaniards* may improve or neglect those islands at their pleasure, yet they cannot prescribe against the rest of the world's knowing whether they improve or neglect them.
- d

- e We have before mentioned some of the discoveries of *Alvaro de Sabavedra*, whom his cousin, the famous *Ferdinand Cortes*, sent to the *Moluccas*. He, endeavouring to return from thence in the month of *May*, 1529, had sight of a large country to the south, along the east coast of which he sailed till the month of *August*, running in that time the space of five hundred leagues. Having run as low as seven degrees south, he judged it expedient to return, and in his passage saw several considerable islands, about which there were sands and shoals, though the coast of the larger country seemed to be clean and good anchorage. After

five commerce; and in consequence of that, were far more humane, civilized and polite, than they are at present (3). They collected these rich commodities for the sake of trade, and exchanged them for others which they liked better. But when the *Spaniards* and *Portuguese* had settled some of the islands, those that lay at a distance lost all communication with them, the inhabitants preferring poverty with freedom to all the advantages that arose from commerce; and thus, by degrees, they degenerated from what they were, and be-

came less knowing and more savage than they had been, retaining however the knowledge of some mechanic arts, and some small remains of science; which still speaks plainly enough that their ancestors were another kind of people, as having lived in better times; and, by the help of this key, the reader will understand very clearly many things that would be unintelligible, if not incredible, in the relations he will meet with in the course of this section.

(3) Galvano's Discoveries, as translated by Hackluyt. Historia Indica, lib. i.

Argensola Conquista de las Islas Malucas, lib. i. Maffei

passing the line, he discovered an island lying some degrees towards the north, which he called *Isla de los Pintados*, or *of the painted People*; because the inhabitants were white, but had their bodies painted very curiously of different colours; he judged them, by their complexions and features, to be descended from the *Cbinese* *. They did not seem to have any government amongst them, were very timid; and, more especially, afraid of fire, which they had never seen. They buried their fruits and small fish in the sand, in places most exposed to the sun, for a certain time, and then took them up, eating them, as it were, baked. In the latitude of ten degrees north he discovered an *Archipelago* of islands abounding with palm trees and very fine grass. These people he also judged to have been originally from *Cbina*, tho' they now lived like the former, without any kind of rule. They were clothed in long white habits, made of a sort of grass, but were very lazy, living in the like indolent manner with the former; and had prows made of a sort of white pine, which at certain seasons came floating upon their coasts, they knew not how, or from whence; which, however, they wrought very neatly and ingeniously with tools made of shells †.

The inhabitants of this continent, and adjacent islands, black people, with curled hair.

THE inhabitants of the larger country, which, in respect to the islands, was a kind of continent, and the inhabitants also of most of the islands, were absolutely black, with curled hair like the negroes, and from thence called *Papuas*, which, in the language of the people of the *Moluccas*, signifies a dark-coloured people. Cortes afterwards sent other ships along this coast to perfect these discoveries, as the *Portuguese* had done before from their settlements; the result of which was the discovering many other islands, most of them peopled; and that the inhabitants of the larger country were divided into several kingdoms, some of which were tributaries to the monarchs of the *Moluccas*. The people in these islands and on the continent had considerable quantities of gold, some fine spices, and other rich commodities, and carried on at this time some degree of commerce †. But as yet they were not very well known, and the natives of the *Moluccas* affected to keep their intercourse with them, and the profits that accrued to them from it, very private.

This country comes from hence to be called Nueva Guinea, or New Guinea.

ABOUT the year 1545, *Ruy Lopez de Villa Lobos* coming into these parts with the title of General, and a squadron of six sail of good ships, gave new names to several of the places which *Sabavedra* had discovered; and, amongst the rest, bestowed that of *Nueva Guinea*, or *New Guinea*, upon the country of the *Papuas*. From this time till the end of that century the *Spanish* pilots examined the whole of the coast very carefully, bestowed names on several bays, promontories, and harbours, and gave it as their opinion, that either this continent was continued, or, that a multitude of large islands lay south-east from thence, as far as the straits of *Magellan* †. They likewise agreed, that the country was fruitful, well-peopled, and that the inhabitants had ornaments of gold. Amongst others they reported this singular circumstance, that there were intermixed with these blacks a race of white people, not like the *Europeans*, but of a chalky tallowish white, with very weak eyes, scarce able to bear the light of the sun, and a weak, languid, and helpless people withal; though there were also some, but very few, that were brisk, active, and had tolerable good eyes †. These sort of people the *Spaniards* distinguished by the name of *Albinas*; and they seem to be precisely the same kind of men with the *Moon-eyed Indians*, on the *Isthmus* of *Darien*, of whom we have a copious and circumstantial description †.

Don Joseph de Quirogoa causes search to be made for the island of Carolina.

WE have mentioned in a former section Don *Joseph Quirogoa*, who was governor of the *Marianne Islands*, and who completed the conquest of that whole *Archipelago*. This gentleman, having intelligence that a large island had been seen to the south-west, sent in the year 1686, Don *Alonso Poon*, a *Chamorris*, or one of the native nobility, to discover it, but without effect. He was sent four years after to as little purpose. This did not hinder the bestowing the name of *Carolina* on this half-known island, in honour of *Charles* the second, then king of *Spain*. In 1696, it was again seen by a vessel bound from the *Philippines* to the *Marianne Islands*, and was then stiled the isle of *St. Barnabas*, as having been seen on the feast of that apostle †. The year following an accident disclosed, what whoever considers their situation in a map, will conceive it almost impossible that the *Spaniards* should not have

a known before, that there was a large archipelago of fine islands between them and the *Mariannes* (B). This event fell out by two prows, on board of which were thirty of the inhabitants, being driven on the twenty-eighth of September, 1696, on the island of *Samal* by the eastern monsoon, which reigns in those seas from *October* to *May*. These people are in their own language called *Palaoes*; and some of them had been before blown by the like accident into other of the *Philippines*, without any great notice being taken of them; but the coming of these into an island where there were upwards of forty missionaries, occasioned a stricter and more effectual enquiry, as they drew from them competent accounts of their country (C).

THEY

* Philosophical Transactions, N°. 317. p. 189.

(B) That the *Spaniards* having before them the voyage of *Magellan*, and those who were employed to perfect his discoveries, should never gain any knowledge of this archipelago, or that they should conceal it, if they did, is not easily to be understood. But, be that as it will, we have before hinted, and we will now prove, that these islands have not been always hid from the eyes of the *Europeans*. Sir *Francis Drake* undoubtedly passed through them, and the account he gave of them very well deserves the reader's notice, who, from the foregoing sections, will clearly discern that the islands he mentions were not, as hath hitherto been supposed, the *Ladrões*, but the islands of which we are now speaking. He quitted the country of *New Albion*, which is a part of *California*, in the year 1578, and the next land he saw was this chain of islands. We will deliver this account in the words of the original voyage; for, though the language be old, yet the observation, that Sir *Francis Drake* first discovered these islands, is wholly new (4). "After we had set sail from hence, we continued without sight of land till the thirteenth day of *October* following, which day in the morning we fell in with certain islands eight degrees to the northward of the line; from which came a great number of canoes, having in some of them four, in some six, and in some also fourteen men, bringing with them coconas and other fruits. Their canoes were hollow within, and cut with great art and cunning, being very smooth within and without, and bearing a gloss as if it were of horn daintily burnished, having a prow and a stern of one sort, yielding inward circle-wise, being of a great height, and full of certain white shells for a bravery; and on each side of them lie out two pieces of timber about a yard and a half long, more or less, according to the smallness or bigness of the boat. This people have the nether part of their ears cut into a round circle, hanging down very low upon their cheeks, whereon they hang things of a reasonable weight. The nails of their hands are an inch long, their teeth are as black as pitch, and they renew them often by eating of an herb with a kind of powder, which they always carry about them in a cane, for the same purpose. Leaving this island the night after we fell in with it, the 18th of *October*, we lighted upon divers others; some whereof made a great shew of inhabitants. We continued our coast by the islands of *Tagulada*, *Zelus*, and *Zewarra*, being friends to the *Portugals*; the first whereof hath growing in it great store of cinnamon." It is plain, from the furniture of these vessels, from their having two outlayers instead of one, but more especially from the number of persons on board them, that they did not come from any of the *Ladrões* islands; though there is no need of adding any additional arguments to this, if we consider the latitude assigned, and the islands that our great seamen report to have been in their neighbourhood. By comparing this with the former notes,

and carrying their contents along in his mind, the reader will be thoroughly convinced that, exclusive of the entertainment he receives from the drawing together so many curious and neglected passages relating to these distant countries, we afford him incontestible evidence of the truth of our suggestion, that the *Spaniards* always had, and still have, spice islands in their possession, whenever they shall esteem it consistent with their policy to bring the produce of them into *Europe*.

(C) We may with some colour of justice suspect, that, notwithstanding what most of the *Spanish* writers affirm, the governors of the *Philippines*, and other sensible people in that part of the world, were not so long or so utterly ignorant of some such archipelago as this, before the accident happened that is mentioned in the text. For we know that some years before this, the king's brother of these new *Philippines*, in a sea voyage, was driven on the coast of *Caragan*, in the great island of *Mindanao* (5). The *Spanish* fathers, who have a very fine mission there, received this prince with a great deal of honour and friendship, and instructed him in the Christian religion; which he was so well pleased with, that he never thought again of returning to his own country. In the mean time the king, dissatisfied at the loss of his brother, fitted out a fleet of one hundred small vessels, which he sent to every island under his dominion, to see if they could learn any news of him. One of these little vessels was forced by a storm on the coast of *Caragan*, at the same place as the king's brother was before; where landing, they immediately knew him, and, with tears, told him the occasion of their journey, the discontent of the king his brother, and desired him to return back with them. The prince thanked them for the trouble they had been at, and desired them to satisfy the king that he was well and contented, but could not by any means be persuaded to return home again. One would have imagined that this single fact might have occasioned an inquiry, if nothing of the like kind had ever happened before. But even in *Samal*, the island to which these people came, there had small vessels run a-shore, sometimes with, and sometimes without, people on board them (6). From the reports of some persons thus cast away, a story was very current amongst the *Spaniards*, of an island of *Amazons* who were visited, at a certain season of the year, by men from an opposite island, who, after staying with them a short time, retired with all the male children of a certain age. They believed, upon the credit of the same persons, that in some island, at no great distance, there was such plenty of ambergris that the ignorant inhabitants caulked their boats with it. A very grave judicious writer, who seems to make no difficulty of admitting the story of the *Amazons*; which, however, might possibly be founded only in a mistake, because these people breed up their boys and girls at a distance from each other, and in separate houses; looks upon what is said of the ambergris as the most ridiculous

History of the
shipwreck of
thirty Palaos,
by which their
islands are
made known.

THEY had run before the wind for seventy days together, according to their own relation, a without being able to make any land till they came in sight of the town of *Guivam*, an inhabitant of which being on the shore, perceived them, and judging, from the make and size of their vessels, they were strangers, and out of their course, took a piece of cloth, and made them a signal of entering the road as he directed, to avoid the shoals and banks of land. These poor people were so frightened at the sight of this stranger, that they began to put to sea again; but the wind forced them back towards the shore: when they came near, the *Guivamese* made the same signal as before; but, seeing they would unavoidably be lost, he threw himself into the sea, and swam to one of the little vessels to bring them safe into the harbour *. He was no sooner got to them, but the women, with their children on their backs, and all that were in that vessel, threw themselves over-board, and swam to the other. He, b seeing himself alone in the vessel, resolved to follow them, and getting on board the second, shewed them how to avoid the shoals, and brought them in safe. In the mean time they stood immoveable, and resigned themselves up entirely to the conduct of this stranger, as if they had been so many prisoners. The inhabitants of *Guivam* received them very kindly, and brought them wine and other provisions. They eat cocoas very freely, which are the fruit of the palm-trees of this country. Their pulp is something like that of chesnuts, only that it is more oily, and it supplies them with a sort of sweet water, very pleasant to drink. They gave them rice boiled in water, which is eaten there, and all over *Asia*, as bread is in *Europe*; they looked on it with surprize, and taking up some grains of it, threw them on the ground, supposing them to be worms. Upon bringing them larger roots, called *Palavan*, c they eat them hastily and heartily *. They brought them soon after two women that had formerly been driven on shore on the coast of *Guivam*, and who understood a little of the language of this country; one of the women found amongst those strangers one of her relations, and as soon as they knew each other, they fell a weeping. The inhabitants of *Guivam* strove with each other who should entertain these strangers at their houses, and furnish them with provisions, cloaths, and other necessaries. Of thirty-five persons that embarked, there remained but thirty; five dying through want of provisions, and other hardships in so long a voyage; and, some time after their arrival, another died *.

Account given
by them of
their islands,
and of the peo-
ple who in-
habit them.

THEY related, that their country consisted of thirty-two islands, which could not be far distant from the *Mariannes*, as was judged by the smallness of their vessels and the form of their d sails, which are very like those of the *Marianese*. It was supposed that these islands were in eleven or twelve degrees of north latitude, more southerly than the *Mariannes*, and under the same degree of longitude as *Guivam*; for, sailing directly from east to west, they came ashore at this town. These strangers added, that of the thirty-two islands three of them were uninhabited, but abounded with wild fowl, and all the rest were well peopled. Upon asking them the number of inhabitants, they pointed to a heap of sand, to shew that their number was very great. The names of these islands are *Pais*, *Lamululutup*, *Saraon*, *Taoropie*, *Valayyay*, *Satavan*, *Cutac*, *Yfaluc*, *Piraulop*, *Ytai*, *Pic*, *Piga*, *Lamurrec*, *Puc*, *Falait*, *Caruvaruvong*, *Ylatu*, *Lamuliur*, *Tavas*, *Sayen*, *Tacaulep*, *Rapiyang*, *Tavon*, *Mutacusau*, *Piyilu*, *Olatan*, *Palu*, *Cucumyat*, and *Piyalucunung*. The three islands that have nothing on them e but wild fowl, are *Piculet*, *Hulatan*, *Pagian*. The most considerable of all these islands is *LAMURREC*, where the king of the country keeps his court, and to him the governors of all the other islands are subject (D). Among those strangers there was one of the governors, and his wife, who was the king's daughter; though they went half naked, yet their deportment

Lettres

of all fictions (7). Yet, how absurd soever it might appear in *Spain*, the people of *Samai* did not in the least hesitate at believing it; and for this plain reason, that the very same thing had happened more than once upon their own island. But, before much of this precious drug had been thus abused, the Father Jesuits smelt it out, bought it for a trifle of the *Indians*, and sold it for a good price to those who knew where to bring it to a still better market (8). It appears evidently enough from hence, and we could prove it from many other instances, that it is a fashionable doctrine at present in *Spain*, that

these undiscovered countries are all barren and have nothing in them worth seeking.

(D) As a proof that these people were very intelligent to a certain degree, it is sufficient to observe, that they exhibited a map of the whole archipelago, consisting of eighty-seven islands. The method they took to do this, was very singular, and we may likewise say, in some measure correct. They laid down upon a table as many small stones as there were islands, placed them in their proper position, and, as these were copied upon paper, they gave the name of each, and directed a figure

(7) Fr. B. G. Feijo, *Theatro critico universal en Madrid*, 1742, 4to, tom. iv. Dis. x. § xvi.

(8) Giovan.

- a deportment, and a peculiar air of greatness, sufficiently distinguished them from the rest. The husband had his body painted all over with certain lines, in such a manner that they formed several figures. The rest of the people were also painted more or less. The women and children were not painted at all; there were nineteen men and ten women of different ages; the make and colour of their faces were much like the *Philippinese*. The men had a sash wrapped several times round their bodies, covering their reins and thighs; they wore on their shoulders about an ell and an half of coarse linnen cloath, like a cowl, tied before, and hanging loose behind. Both men and women dressed much alike, only that the women had a piece of cloth somewhat longer, that hung from their waist down to their knees ^a.
- b THEIR language differs from that of the *Philippinese* and *Mariannese*; their manner of pronouncing comes nearest that of the *Arabs*; and some, who understood the language, observed the women that seemed the most considerable amongst them, had several rings and necklaces of tortoise shells (called here *Carey*), and others made of a substance much like amber, but not transparent. The manner of their living at sea for seventy days together, continually driven by the wind, was thus: They cast out a sort of net, made of a great many twigs of trees tied together, with a large mouth for the fish to enter, and terminating in a point, to prevent their getting out. The fish they took after this manner was all the nourishment they had; and rain-water saved in cocoa-shells, which is the fruit of the palm-trees, and of the figure and size of a man's head ^b.
- c THEY have no cows in their islands, and at the sight of them they run away, as they did likewise at the barking of a dog; neither have they cats, stags, horses, or, in general, any quadrupede; or any fowl, but sea-fowl, excepting them which they breed up; but never eat their eggs. Notwithstanding this, they are very chearful and well-contented with their condition. Their songs and dances are exact and regular; when they sing, it is all in concert, every one observing the same humour and gestures, which makes it very agreeable. They were surpris'd at the government, politeness, and manners of the *Europeans* ^c. They admired not only the solemnities and ceremonies of the church, in celebrating the divine service, but also the music, instruments, dances, and arms of the *Spaniards*; and gun-powder was what surpris'd them most. They wondered at the whiteness of the *Europeans*, in respect of whom they were perfectly tawny, as well as the inhabitants of this country. It did not appear that they had any knowlege either of a Deity, or that they worshipp'd idols. Their customs were perfectly savage, minding nothing but eating and drinking, in which, though they observe no set time or place, when hungry or dry, and when they can find any thing to satisfy nature; yet they eat but little at a time, and never enough to suffice for a whole day ^d.

Their language, ornaments, and manner in which they supported themselves at sea.

Advantages and disadvantages of their country, and manner of living, and their admiration of the customs of the Europeans.

to be inscribed in it, to shew how many days sail it would take to pass round it; and a figure to be placed between every two islands, shewing how many days sail was between them. The whole very clear and intelligible; nor have we any thing better of the kind since (9). The island from whence these people came, was *Amorsot*, in the latitude of ten degrees thirty minutes north; and the island to which they were bound was *Paiz*, lying to the south-west, at the distance of about twelve days sail, and in the latitude of ten degrees north. The island in which they lived, was three days sail in circumference; that to which they were bound, four. The largest of these islands, which the *Spaniards* write *Panloco*, the *French* *Panloque*, and in our *English* maps it is *Panlog*, lies but three days sail east, from the point of *Guivam*; and not above two days sail north-east of the island of *Mindanao*, between the latitudes of eight degrees twenty minutes, and eleven degrees thirty minutes north (10). According to this description of theirs, the whole five provinces of these islands lie from one degree thirty minutes south, to

sixteen degrees north, having the island of *Samal*, that of *Mindanao*, the *Moluccas*, and *Gilolo*, to the west; the *Marianne Islands* to the north-east, and the *Pacific Ocean* on all sides (11). The reader will perceive, that this differs in some respects from what is advanced in the text; but we cannot help that; the former stands upon the credit of the first narrative, written upon the spot, and at the time; the latter, upon a subsequent epistle to Father *le Gobien* at the time that he transmitted the former to his brethren the Jesuits in *France*; and, as he affirms, that his remarks were written from later informations, and with a view to supply the deficiencies of the first account, it was thought they could not appear more properly here than in a note (12). It may not be amiss to add, that this reverend father, not being initiated into the maxims of *Spanish* policy, assures us, that there is great probability, from their situation, and many other circumstances, that these islands may abound with gold, amber, spice, and other valuable commodities (13).

Great resem-
blance in their
manners to
those of the
Marianese.

THEY shewed much respect and deference for their king, and the governors of towns, and obey them very punctually. Their civility and respect consists in taking hold of the hand or foot of the person they would honour, and gently rubbing their faces. Amongst their utensils they had some saws, not made of iron, but of a large shell, called here *Tacobo*, which they rub and whet upon a certain kind of stone. They were surpris'd to see the number of carpenters tools, used in building a merchant-man at *Guivam*. They have no metals in their country. The father missionary made each of them a present of a large piece of iron, which they received with as much joy as if it had been gold; and, for fear it should be stole from them, they laid it under their heads, when they went to sleep^c. They have no other arms than lances or darts armed with human bones, vey sharp and well fixed. They are naturally very peaceable; but if any quarrel happens amongst them, it is decided with some cuffs on the head, which yet very rarely happens; for, when they would come to a closer fight they separate them, and they are soon reconciled. They are not dull and heavy; but, on the contrary, have a great deal of liveliness and spirit. They are not so lusty as the inhabitants of the *Mariannes*, yet are they well-proportioned, and shaped much like the *Philippinese*. Both the men and women let their hair grow long, and hang loose on their shoulders. When they understood that they were to be conducted to the presence of the father-missionary, they painted their bodies all over with a yellow colour, which is looked upon by them as a great ornament. The oldest of these strangers was once before cast on the coast of *Caragan*. They are very expert at diving; and they said, that, in fishing, they took two large pearls in their shells, but threw them into the sea again, not knowing their value^f.

Are most kindly
treated by
the missionary
and people of
Guivam, and
are very sensible
of it.

WHEN they were brought into the presence of the father-missionary, and saw the profound respect that was paid him, they, as was very natural, governed by the remembrance of their own customs, immediately conceived that he must be the monarch of this country, and as absolute as their own, and, of course, that upon the breath of his lips their future fate must depend. They approached him therefore with all possible testimonies of awe and reverence; and he, on the other hand, laboured as much as in him lay to console them, and to make them sensible that they had nothing to fear. He was particularly careful to caress their children, of whom three were still at the breast, and five were but just weaned, and able to go alone. He likewise took care to distribute them properly; so that the married people should not be separated, and that at least two of them might always remain together, and that they might not pine for want of society. This care had proper effects; the people were extremely sensible of the kindness shewn them, conformed themselves gradually to the customs of those amongst whom they lived, and offered very readily to go with any that should be sent to convert their countrymen to the Christian religion, and bring about a correspondence between their islands and those under the dominion of his catholic majesty^g; to all which they had been sollicitated by the missionary.

Several years
elapse before
any attempt is
made to per-
fect this disco-
very.

THIS was well received by the governor of the *Philippines*, who talked of the expedition to the islands of the *Palaos* as a thing worthy of being undertaken; but never undertook it, nor his successor after him. Father *Andrew Serrano*, a missionary of great piety and probity, who had spent thirty years in preaching to, and protecting the *Indians* in the *Philippines*, took the matter sincerely to heart, went in the year 1706 to *Rome*; and having obtained recommendations to the court of *Madrid*, in consequence of these, orders were sent for dispatching thither two missionaries immediately^h. These orders were executed in the month of *November* 1710, when a ship was sent on the discovery, with two missionaries on board, and one of the converts that had remained at *Samal*. After sailing fourteen days, they observed two islands bearing from them north-east, which the fathers called the islands of *St. Andrew*. A boat came from one of these islands; and, upon their countryman's shewing himself, the people came on board, crying out, *mapia! mapia!* which, in their language, signifies *good folks*ⁱ.

The attempts
that are made
are defeated,
and the views
at length
abandoned.

THEY were very kindly received, and extremely well pleased. They said, that the name of their island was *Sanfarol*; and that the principal isle of their archipelago was called *Panlok*, lying north-north-east. They mentioned also two other islands to the south-west and the south-east, which they called *Merieres* and *Paulo*. The captain could find no port or road; however, the two missionaries would land, and were accordingly put on shore, with the *Palaos* they brought with them, his wife and children. These islands were in the latitude of five d grees and twenty-eight minutes north. They afterwards steered for *Panlok*, which was fifty leagues distant; but that also proved destitute of a port; nor was it possible, in their return, so much as to send the boat on shore at *Sanfarol*; so that they returned without any

a news of their missionaries. Upon his coming back to the *Philippines*, father *Serrano* embarked on a like expedition; and many years elapsed before any news was heard of any of these fathers. At length came advice from *China*, that the fathers *Duberon* and *Courtil*, who were sent first, were murdered by the natives, who were no such innocents in their own country as they appeared to be at *Samal*^k (E). As for father *Serrano*, he prevailed upon the captain of his

^k *Fastes chronologiques de la decouverte du nouveau monde*, par Pere CHARLEVOIX, p. 44. FR. B. G. FEIJO *Theatro critico universal*, tom. ix. p. 138. *Lettres edifiantes et curieuses*.

(E) In order to throw some light upon what is said in the text, and to give the reader as good an account of these people as possible, we shall transcribe some passages from the original journal of this expedition, penned by a person who had a considerable command on board the ship, and who appears to have written with equal perspicuity and impartiality (14): "The people are extremely well-shaped, and of a very robust constitution; they were naked, except that about their middle they wore a piece of mat. Their hair was curled; they had very little beard; and, to defend themselves from the rain, they wore upon their shoulders a kind of mantle made of a thick, soft mat, and on their heads hats of the same sort of stuff, round which they stuck birds feathers upright. They were extremely surprised to see our people smoke tobacco; and of all things seemed most to esteem iron, and whenever they saw it, they gazed on it in such a manner, as visibly betrayed how much they coveted it, and, in case we did not understand their dumb signs, they made no difficulty of earnestly and frequently demanding it."

"In the afternoon there came off two other boats, in each of which there were eight men. As soon as they came near us, they began to sing, beating time with their hands upon their thighs. When they were on board, some of them began to measure the length of the ship, taking it for granted that it was made of a single tree, while others counted our number of men. They brought us some loaves, some fish, and some herbs. These islands were all covered with trees to the sea-shore. Their boats appeared to us very neatly made, in which they made use of triangular sails, having a lee-board on the other side the boat, in order to preserve it from going over. When we were very near the land, I sent my under-pilot to sound, that I might bring the ships to an anchor."

"The shallop being arrived within a quarter of a league of the island, there came off three boats full of people; and some of them going on board our shallop, one of the *Indians* took notice there of a sabre, which after he had for some time considered attentively, he jumped into the sea, and took it with him. My under-pilot, at his return, reported that there was no fit ground for anchorage; inasmuch as there was a great depth of water, and a rocky bottom all along the shore. I afterwards sent another man on the same errand, who quickly returned with the same answer. All this time I had made a shift, by keeping under sail, to stem the current, which ran very strongly to the south-east; but the wind failing in the evening, we began to drive at large: the *Indians* then got into their boats to go ashore."

"Our missionaries laboured all they could to keep them on board; but could not prevail upon them by any means. They talked with them, however, some time on the first principles of our religion, and taught them to pronounce plainly the holy names *Jesus* and *Maria*. We asked them several questions, as to the bigness of the island, and the number of its inhabitants. They answered, that the island was about two leagues and a half in circumference; and that very probably there might be eight hundred people, who lived chiefly on cocoas, fish, and fallads."

"The currents carrying us away to the south-east with great violence, we were not able to recover the land till the fourth, about six in the morning. We then found ourselves at the mouth of the chanel betwixt the two islands. I then sent the shallop once more to look for an anchorage: it was to no purpose; for, about four in the afternoon, they returned with an account, that the coast was an intire rock, and that it was to no purpose to let go an anchor."

"On the 5th of *December* 1701, about seven in the morning, the two fathers came to a resolution of going ashore, and setting up a cross. Don *Padilla* and myself represented to them the dangers to which they would be exposed, and how much they had to fear from these islanders, with whose tempers we were so little acquainted, and how much they might be embarrassed, in case the currents carried us to such a distance as might put it out of our power to send a boat to bring them off, or to afford them any assistance. Their zeal was so warm, that they made little account of these difficulties; but persisted firmly in their resolution, in spite of all we could say. At last, therefore, leaving brother *Baudin* on board the ship, they went into the shallop, taking with them the quartermaster of the vessel, and the ensign of the land-forces we had on board; they likewise carried with them the *Palaos*, together with his wife and children."

"After the two missionaries were gone, we held a council of war, to consider what we should do next. Don *Padilla*, the lay jesuit, my sub-pilot, and myself, were of opinion, that the wisest thing we could do was, to steer for the island of *Panloque*, the largest of these isles, and which was distant from that we had quitted about fifty leagues. It was about nine o'clock in the morning of the eleventh that we discovered that island. At noon we were in the latitude of seven degrees fourteen minutes north, the land being about a league off. At four in the afternoon came off four boats, which kept at the distance of about half a cable's length, and were soon after followed by two other boats. At last, some of the people jumped over board into the sea, and swam on board us, with intent, as it appeared, to steal any thing on which they could lay their hands. One of them laid hold of an iron chain, and pulled at it, in hopes of breaking it; another caught hold of a hammock that was hung out to dry; and a third was endeavouring to get in at a port-hole."

"Don *Padilla*, considering the behaviour of these people, thought proper to put the soldiers under arms, there being at least fourscore men in these boats, and, at the same time, made a sign to the islanders to keep at a distance. Upon this, they began to row towards the shore; but, at their going off, let fly a shower of arrows, four of which fell on board our ship. Don *Padilla* then thought fit to order a general discharge of our fire-arms; upon which the *Indians* jumped over board, leaving their vessels, and swimming towards the shore at a prodigious rate; but, when they found that we gave over firing, they returned to their boats, reembarked, and made for the land as fast as they were able. These *Indians* were all of them naked, and some had painted their bodies of different colours."

"Their

(14) *Relation en forme de journal de la decouverte des Iles de Palaos, ou Nouvelles Philippines*.

his ship to attempt running into a creek ; but his zeal proved fatal alike to himself and the crew, one *Indian* only excepted, who afterwards, by some means or other, was carried to *Cbina*, and gave this account to the fathers jesuits there, by whom it was transmitted to their brethren at the *Philippines* ¹.

An account of
the whole archipelago from
some of the natives, cast
ashore upon the
east end of the
island of
Guam.

At length, however, this whole archipelago, to the number of eighty or eighty seven islands, was discovered in the same manner that parts of it had hitherto been, that is, by accident. In 1722, a strange bark ran on shore on the east end of the island of *Guam*, having on board eleven men, seven women, and six children. One of the natives, who was fishing near the place, having given notice to the chief man of the village, he persuaded the people to come on shore, which they did, and were very kindly entertained. Their vessel appeared very curious, even in the eyes of the *Mariannese*, whose prows all the rest of the world so much admire. In many respects it resembled these ; but in some was very different. The head and stern were exactly alike, representing the tail of a dolphin ; upon the deck were four little cabins wonderfully neat, and very artificially covered with palm-leaves ^a. Of these there was one at each end of the boat, and one on each side of the mast upon the outlayers ; for they had two : whereas the *Marianne* prows have but one. The hold was, in like manner, divided into several apartments, some for containing their cargo, and others to hold their provisions. This vessel had sailed, in conjunction with four others, from the island of *Fariolep* for that of *Ulcea*, and had been driven out of their course by a storm. According to the account they gave, these islands lie from the *Line* to eleven degrees of north latitude, having *New Guiney* on the south ; the *Philippines* on the west ; the *Marianne Islands* to the north ; and the *Pacific Ocean* to the east. This archipelago is divided into five provinces, each of which has its peculiar language ; but all have such an affinity, that, tho' with some difficulty, the inhabitants of one province can make themselves understood by those of the other ; and some think, that these five languages are only different dialects of a corrupt *Arabic* ^b.

The inhabitants
are an active,
well-made, vi-
gorous, and in-
dustrious peo-
ple.

THESE islands enjoy as fine a climate, except in the time of hurricanes, as can be wished : the soil is very fruitful, producing excellent grafs, some delicious fruits, and abundance of very beautiful and shady trees. It is true, they have not rice, or wheat, or barley, or *Indian* corn ; but they have fruits, roots, and fish in great plenty, and some fowl ; but no quadrupeds of any kind. The people are tall, and well-made ; their hair is a little inclined to the crispness of the negroes ; their noses larger ; their eyes full, and very piercing ; and their beards thick, which no other *Indian* nation have. What is most singular, their complexions differ through all the shades from a light olive to a dark copper colour (F). They have a very grave

¹ Fautes chronologiques de la decouverte du nouveau monde, par Pere CHARLEVOIX, p. 44. FR. B. G. FEIJO Theatro critico universal, tom. ix. p. 138, 139. Lettres edifiantes et curieuses. ^a Fautes chronologiques de la decouverte du nouveau monde, par Pere CHARLEVOIX, p. 44. ^b Lettres edifiantes et curieuses.

" Their skin is generally of an olive-colour ; but some
" were darker skinned than others. They had nothing
" with them that we saw, but a few cocoas."

It appears from these passages, that the gentleness of these *Indians* is not to be relied on ; but that, when they cannot accomplish their designs by fair means, there is an absolute necessity to guard against their attempting to complete them by force. It may be, however, that this regards strangers only ; for it seems to be a principle amongst barbarous nations, taking that word to signify such as have no correspondence with the rest of mankind, to believe, that all sentiments of humanity, tenderness, and justice, belong singly to their own nation, and that such as come among them by chance are not intitled to any other usage than suits with their good pleasure, unless, as the *Spaniards* did who were set ashore, they contract alliances with them, and become one people (15). This relation, however, confirms three great points : that there is such an archipelago as the *New Philippines* ; that the islands, of which it is composed, are very numerous, and thoroughly inhabited ; and that these people have very good boats, and, in their own seas, are very dextrous sailors (16). We are therefore to consider these as *Spanish* witnesses, deposing on their own knowledge, in part at least, as to the truth of what the *Indians* had declared.

(F) The author, mentioned and commended in the text, is the learned *Padre Feijo*, whose judicious writings do honour to *Spain*, and are very justly admired all over *Europe*. His great view is to combat popular errors, and to establish truth at the expence of legendary traditions. A very laudable and useful design, in which tho' other great men have embarked, yet it must be allowed, that none have pushed it either so far, or treated so great a variety of subjects in so exact, so able, and so agreeable a manner as he has done (17). Amongst the number of popular mistakes, he places that of believing the existence of countries upon slight and insufficient evidence ; instances, in the first place, the *Batuecas*, a tribe or nation supposed to be discovered in the mountains of *Castile* ; which story, tho' it had imposed upon authors of distinguished abilities, and those too of different nations, he has very fully and plainly proved to be a fable, equally void of foundation and probability (18). He then mentions the *Atlantis* of *Plato*, *Panchaya*, an island mentioned by several ancient writers ; as to both which, no doubt, there is great uncertainty. He treats the island of *San Beroudon*, or *St. Blaudon*, supposed to lie near the *Canaries*, as a fiction, as very likely it is ; neither is it of any great consequence whether it be or not. He explodes the island of *Freezland* in the northern ocean ; tho' some have supposed that this really exists in

fol. p. 219.

a grave and decent deportment; but are very far from being melancholy; on the contrary, they sing and dance much, and, even in the sentiments of *Europeans*, not ungracefully. They are very affectionate and good-humoured to each other; and we may easily form a judgment of their disposition from a saying that is common amongst them, tho' not heard any-where else: *One man, say they, never kills another.* They sometimes quarrel and fight; but, as soon as there is any blood shed, the dispute is over, and the conquerors erect arches of triumph^o.

As to religion, they have no distinct idea of a Supreme Being, or of a Providence; but they believe that there are good and evil spirits; and that both of them marry, and beget children: concerning whom they have a multitude of idle fables and stories, with which we shall not tire the reader's patience. They have a tolerable notion of a future state, in which they believe that the good are happy, and the wicked miserable. They have priests and priestesses, who pretend to converse with the spirits of the deceased, and pronounce very peremptorily who are, and who are not, happy. When the common people die, their bodies are carried out to sea, and abandoned to the fish; but their nobility are buried with great pomp and ceremony, and have tombs erected to their memories. They consider these as guardian spirits, distinguish them by the name of *TAHAPUTS*, invoke their assistance upon every occasion, and make offerings to them, which they never do to the celestial or infernal spirits. As to their notions about the latter, they do not perplex themselves much; render them no divine honours of any sort; seem not solicitous to please, or afraid of offending them^p. There could not therefore be any great, and much less any insurmountable difficulties in bringing these people to embrace Christianity, by shewing them how little tendency these fictions have to render men wiser or better, and, on the contrary, how well the doctrines of the gospel are adapted to promote both.

THEIR government is well established in a regular aristocracy. There are in every island several families of nobles, and the eldest of each of these is stiled a *TAMOL*, and there is, besides, a chief *TAMOL* in every island, who administers justice, with the advice of the other *Tamols*. These nobles always appear in very decent robes, with long beards, and affect a stately majestic gravity. When they give audience, they sit in their own houses upon a table. Such as approach them bend their bodies, and never look up while they are speaking; and are very careful, in retiring, not to turn their backs on them: but, with all this gravity, and all this respect, there is nothing of tyranny on the one side, or of slavery on the other. Their authority is exerted only in giving good advice, and supported by giving a good example^q. They have but one revenue, and that of a strange kind: all the iron that, by wrecks or any other accidents, comes into the hands of these people, belongs of right to the *Tamol*, to whom it is carried; who makes of it useful tools, and lets them out at a pretty high price; which is what principally enables him to support his dignity. Every *Tamol* is sung to sleep in the evening by the youth of the village, whom he rewards in their turn with some little present. It is, after all, but a painful preheminance; for the *Tamol's* whole study is to maintain, by a correct and irreproachable behaviour, the dignity of his character, which procures him a submission the most arbitrary princes are strangers to, and a veneration and respect scarce mingled with fear; for the *Tamol* never punishes but by reproof; and, if men are incorrigibly wicked, they are banished by the council of *Tamols* to some distant islands^r.

In every village there are two houses destined for the education of youth. In the one the boys are lodged, and in the other the girls. In this point, perhaps, they exceed the most civilized nations; for there every boy is brought up in all the knowledge that the nation possesses, by old men, who have attained to perfection the several things they teach; such as the art of

Forbisher's Streights (19). He treats in like manner the island of *Java Minor*, which we find in some old maps; but he afterwards retracted this, and acknowledges, that it is now called *Bali*; which is the truth (20). He exposes the strange stories that have been told of a country supposed to be in *South America*, and to which the Spaniards had given the name of *el Gran Paititi*; with which Sir Walter Raleigh was amused. He derides the inquiries that have been made after the city of *de los Cesares*, held to be somewhere near the Streights of *Magellan*; and is of opinion, that as little credit is due to the ancient accounts of the country of *Quivira*, in the most distant parts of *North America*; and yet it must be

allowed, that, in this part of the world, we know no more of these countries than when those accounts were given (21). And, lastly, he places the islands of *Palaos* in the same catalogue; tho' he does not absolutely deny their existence, but represents the search after them as a thing of no consequence; to which he adheres, even after he was acquainted with all the evidence that we have produced in the text, of their situation, number, and inhabitants. The reader cannot expect or desire any clearer proof, that discoveries and improvements are points no longer regarded with a favourable eye in *Spain*; which is the reason of our mentioning particularly the contents of his discourses in this note.

cultivating fruits and roots, odoriferous herbs and flowers, of which they are passionately fond. ^a
The method of making domestic utensils, weaving nets, and heading spears, is the succeeding part of their institution; they next instruct them in every kind of fishing; and, when they are big enough, initiate them in boat-building: last of all, they are taught a little astronomy, by shewing them the few stars they know upon a sphere, and directed how to apply this small portion of science to navigation, and the art of steering their vessels. On the other hand, the girls are taught to dress fish, fruits, and roots in different manners; to sow the seed of a certain kind of grass; to dress that in such a manner as to make thread; to spin and weave it into cloth; and to draw out the fibres from the bark of a tree called *balibago*, of which they make mats and sails ^b.

Their diversions, amusements, and exercises well contrived, and properly timed.

THEY have several diversions amongst them, and of these singing and dancing are the chief; ^b
but they have no conception of any such thing as instrumental music. On such occasions, both men and women pique themselves upon being extremely well-dressed: neat and clean they always are, for they wash thrice a day. They wear plumes of feathers, and garlands of flowers, upon their heads: they have large holes in their ears, which they fill with sweet-smelling herbs: on their wrists they wear a kind of bracelets, as also on their ankles and arms. The men also have exercises suited to their sex; they wrestle, throw the lance, fling stones at a mark, toss balls in the air, catching and throwing them up continually ^c. These pastimes are varied according to the seasons, and are all calculated to render them active and agile in the several kinds of labours upon which their subsistence depends. In the month of *February* all their *Tamols* have a meeting in the chief island, and pretend to predict whether the fishing will be good, and whether the ensuing year will be fortunate, or not; which kind of superstition it is likely they have found very conducive, if not absolutely necessary, to support their authority; for all barbarous nations have a wonderful desire to look into futurity, and naturally reverence those who assume to themselves the knowledge of events that are to come, and are easily persuaded to believe, that such things as are artfully foretold shall actually come to pass; and thus ignorance is every-where the mother of superstition ^d.

The different names given to this archipelago, and the reasons of its being so little known.

THIS new archipelago, which, tho' perhaps inferior in value to the *Philippines*, is at least a very valuable addition to the *Marianne Islands*, to which it is almost connected, passes under very different names. At first these isles were styled the *Palaos*, which seems to have been the name given them by the natives: then the islands of *St. Barnabas* and *St. Andrew*, ^d
from circumstances that have been already mentioned: sometimes we find them called the *Caroline Islands*; but their most common denomination is that of the *New Philippines* ^e. We find them, however, in very few maps; our modern geographers scarce mention them, differ as to their situation, and preserve but very few particulars that regard them. This might, perhaps, have justified us in the same neglect; for history seldom takes any great notice of countries that geography has not fully described; but we are so far from thinking this a motive to pass them over hastily, that we thought it incumbent on us to treat of them largely, to draw together all the particulars we could meet with in respect to these islands and their inhabitants, in order to excite the curiosity of the public, and thereby, as far as lies in our power, their further discovery; for as yet, after all we have said, they are but very darkly discovered. ^e

Very little noticed by historians or statesmen, but considered by philosophers.

IT is indeed very singular, that, considering their situation, the number of them, and their lying as it were within several circles one within another, in the very midst of countries possessed by the *Spaniards*, they should remain for two centuries in a manner unknown, or, at least, unnoticed. It is yet more strange, that after the first intelligence of them, and that too by accident, they should remain upwards of fifty years in a manner half discovered. It is certainly very surprising, that, in an age so enlightened as this, an event of this sort should be so little considered or attended to; and that the finding of these islands should be registered only amongst the relations of missionaries, the collections of societies destined to the promotion of science, and be in a manner wholly slighted by the great world, by geographers, historians, and statesmen; from all of whom, from the nature of things, discoveries of this kind claim more immediate regard ^f. This certainly shews, that the noble and heroic spirit which distinguished the fifteenth century, and which was attended with so many illustrious events, and such prodigious advantages to the inhabitants of *Europe*, however ill managed in some respects, and in all, perhaps, but too much misapplied, has been gradually evaporating, and is now on the point of being extinguished; and this from the very principle that first excited and ought ever to keep it alive, a propensity to commerce, which while we endeavour to monopolize, we cease to extend, and, while we quarrel and dispute about what we have, discourage those discoveries that might employ, enrich, and content us all ^f.

B. G. FEIJU Theatrico critico universal, disc. x. sect. 10. Lettres edifiantes.

- a But the most extraordinary circumstance of all is, that not only the benefits that might result from this discovery have been overlooked, but the very circumstances that attended it have been so little known, that the very certainty of there being such islands has been lately disputed by one of the most learned men in *Spain*. It is not above fifteen years ago, that, in a discourse relating to dubious and fabulous countries, too hastily credited upon indistinct relations and ill-founded reports, these islands of *Palaos* were mentioned by this inquisitive and judicious writer, who was then acquainted with only the first accounts of them, as published by father *Andrew Serrano* during his stay at *Madrid*². However, four years afterwards, upon the review of his work, which is justly in high esteem, he very fairly and honestly confessed his mistake, and acknowledged, that the reality of this archipelago had been proved by incontrovertible evidence; and that there was no more reason to doubt the existence of the *New* than the *Old Philippines*³. But even, after all this, he attempts to extenuate and lessen the merit of the discovery, by observing, that tho' it had been furnished, from their situation, that these islands must abound in gold, silver, and spices, yet there appeared no grounds, from their discovery, to adopt those notions as facts; because, from the excessive fondness the natives discovered for iron, it was evident they were unacquainted with other metals (G). This seems to be a very strange deduction by so wise and so penetrating a writer; for the value these people set upon iron most certainly arose from their knowing the use of that metal; and, without having commerce with other nations, it was impossible they should be acquainted with the uses of silver and gold, which arise chiefly from their being common measures, and consequently the great instruments of trade; which, however, does by no means shew, that they have not these

long known, and very hard by admitted to exist, by the more learned Spaniards.

² FR. B. G. FEIJO *Theatro critico universal*, tom. ix. p. 138.

³ Ibid.

(G) There is no circumstance in the history of these people that can excite our curiosity more, or better deserve our consideration, than this strange variety of complexions, which clearly intimates, that these are a mixed people; and therefore it is worth our inquiry, how this should happen; and, in making this inquiry, we may lay it down as a certain rule, that whatever solution will best connect this with the other circumstances of their story, must be that which comes nearest the truth. In the first place, we may lay it down with great probability, that their nobility, out of whom their *Tamols* are taken, are one race of people, and, it may be, the original possessors of these islands. Whence these people came, is not so easily settled, but in all likelihood from the *Philippines*; and possibly they might be *Moors* or *Arabians*, which is the more likely from their language, and their long beards (22). There is nothing incredible or absurd in supposing they either brought with them, or found here, other *Indians* like those in the *Ladrones*. The third nation were negroes from *New Guinea*, to whom they owe their crisp, curling hair; and we need not hesitate in admitting this, when we remember, that these negroes penetrated beyond this archipelago into most of the *Philippines*, and were the sole inhabitants of one at least, if not more, of these islands (23). But the hardest question of all is, how they came by whites amongst them; for such they must have had, to reduce the bulk of the people to a tawny complexion; and this could hardly be accounted for at all, if the *Spanish* writers had not helped us out by the following matters of fact (24). When *Martin Lopez de Legaspi* was sent, in 1565, to settle on the *Philippines*, the pilot of his vessel entered into a conspiracy, with twenty-eight more of the crew, to murder all the rest of the people on board the ship, in order to turn pirates on the coast of *China*; but this plot being happily discovered soon after they left the *Marianas*, these desperate people were set on shore in an island, which, with great appearance of truth, is supposed to have been one of this archipelago; and thus, upon the whole, we see this matter

tolerably well explained. We may likewise observe how soon the manners of a nation may be changed, and all footsteps of their first condition worn out, since, except this circumstance of their colour, and it may be some addition to their skill in manual arts, there is nothing to be traced out among these people that has the least connection with the *Spaniards*, either in point of language, science, or religion. In reference to the first, we may very easily conceive, that, being strangers in these islands, and having probably no inclination to return amongst their countrymen, they were constrained to learn the tongue of the natives, that they might obtain wives and habitations. This once accomplished, they must have accommodated themselves to the same manner of living, which did not admit, much less require, any sort of learning; and, if it had, we may well enough suppose these fellows had no very great stock. Lastly, as to religion, such desperate wretches could not be supposed either to have been well versed in the principles, or much addicted to the practice of it; so that, in a generation or two, their offspring became of course intermixed and blended with these people, and gradually lost all sense of their original: and the very same is supposed to be the case of that race of white *Indians* before-mentioned, who are said to occupy the city of *Los Cesares*, and are thought to be descended from *Spaniards* shipwrecked in the *Streights of Magellan*. These are not, as *Padre Feijo* supposes, the crew of one ship, but of three; so that they were a considerable body of men of different ranks and degrees, and who might be therefore supposed capable of preserving themselves intire and in a body. Now the *Indian* nations reporting, that, in the continent south from *Chili*, there are people of a white complexion, with ruddy cheeks, and in their dispositions resembling the *Europeans*, which people they call *Cesares*; the *Spaniards* persuade themselves, that they must be the offspring of those who were thus left on that side of the streight; in which there is nothing either of improbability or absurdity, any more than of certainty.

metals in their countries, or that they have not spices, concerning which they made no declarations one way or other ^a.

Gold and silver
not at all ne-
cessary to ren-
der colonies
valuable to
their mother-
countries.

THIS rivetted opinion that even the wisest *Spaniards* have, that the importance of colonies can arise only from treasures dug out of the earth, has been the source of so many mistakes, that, without having recourse to that invincible steadiness, which their enemies stile obstinacy, it is impossible to conceive, that so prudent and so penetrating a nation could persist in such a mistake ^b. The mother-country of such colonies is the mistress only of mines and miners; and they are, in all countries, a very poor, despicable people, who work not for themselves, but for those who employ them, and such as supply their wants. It is not indeed true, that a certain proportion of mines, more especially of the baser and more useful metals, may conduce to the welfare of a country, and make its inhabitants rich, which more valuable mines rarely, if ever, do ^c; yet, if the same proposition be stated in other words, in the acceptance of many equivalent to the former, the *Spanish* deduction is perfectly right; for there can be nothing more true than this, that colonies are beneficial in proportion to the gold and silver they produce to their mother-country: but the fallacy lies here; this must not be the work of nature, but of art. Gold and silver are precisely the same thing in possession, however produced; but the gold and silver which enriches a country is not that obtained by digging, but that which is the effect of industry. The former is a kind of volatile gold, which not either law or force can retain; but the latter is so fixed and permanent, as not to be withdrawn but by superior industry ^d. These principles once understood, the reader will not be amazed when we affirm, that these islands may be extremely rich and valuable, tho' we should allow the supposition, and it is no more than a supposition, that there is not so much as a single grain of either of these precious metals in any of them. ^b

This archipe-
lago of inex-
pressible conse-
quence, even
if destitute of
mines.

THESE islands are unquestionably rich and valuable, because they possess almost all the blessings that the indulgence of nature can bestow. They have a soft and serene climate, not exposed to excessive heat, tho' in the midst of the torrid zone, and never visited by a blast of cold; their soil is wonderfully fruitful; and, from the conjunction of these, they produce all the necessaries of life (H). Their situation, again, is so fortunate, that, if they wanted the greater part of these blessings, this alone would compensate all their wants; for they lie at an equal distance from all the rich countries in the world, surrounded by the widest and the mildest of all seas, and capable from thence of the safest, the most commodious, and the most extensive navigation ^e. Are these then countries to be desired? Yet neither are these all their

L'Esprit des loix, liv. xxi. ch. 18. ^d Discourse on navigation and discoveries. Sir WILLIAM MONSON's Naval tracts. Wood's Survey of trade, P. iii. ^e GALVANO's Discoveries, translated by Hackluyt. EDEN's Hist. of travayle. Du Bois Geographic moderne, p. 701.

(H) As we are sincerely persuaded of the great importance of the *New Philippines*, and look upon them, considered in this light, as a kind of literary introduction to a commercial discovery in favour either of *Spain* or some other country, we have treated them accordingly, and stated very fully and fairly all the different evidence that has come to our hands; in which though there are some, it may be very material differences, yet perhaps there may, without much difficulty, be removed, or, if they could not, they do not in the least affect the substance of the relation. We have mentioned two descriptions or maps of these islands, which may seem to contradict each other with respect to their situation. It must be observed, that the first was delineated from the account of the natives, and, laying all circumstances together, seems to us most likely to be true (26). The other, however, is said to be corrected, that is, laid down according to the conception of the *Spaniards*, who would willingly have it believed, that none of these islands were ever visited either by them or any other *European* nation; which very possibly may be beside the truth (27). If it was not, how came these people by any notion of iron, or by the small quantities of that metal which they have amongst them? As to the difference of names, they might easily arise from the relations of natives of different provinces: those who landed in the island of *Samal* came from the south-west part of

the archipelago; those who were driven into *Guam* from the north-east; and it is allowed, that they speak a different dialect of the same language in each of the provinces (28). It must be admitted, that these people have probably given the fairest side of their own character; and yet it does not at all appear, that their behaviour, either in the *Philippine* or *Marianne Islands*, discredited their accounts. It may indeed be said, that the murder of the two missionaries does it effectually; but then we must consider, that these fathers are extremely apt to intermeddle in secular affairs, and, under colour of teaching a new religion, to countenance alterations in government, which, amongst a people utterly unacquainted with the rest of the world, and wedded to their own customs, might easily transport them beyond the bounds of moderation; but, after all allowances made, the great facts, as to the number and nearness of these islands, their abounding in the necessaries of life, their having a multitude of inhabitants, their living under a certain form of government, their having the art of boat-building and navigation in some degree of perfection, and their being an ingenious and docile people, are, by these testimonies, put beyond all manner of doubt; and consequently those material circumstances, from which our deductions are made, stand altogether unimpeached, and ought therefore to be considered as fully proved.

(26) See before in note (D).

(27) See p. 276.

(28) *Lettres edifiantes et curieuses*.

- a advantages ; for mark but the number and the nature of their inhabitants. The latter shews us that the former must be very great ; we know but very little of them, but we know enough to be sure of this, because we know that they are peaceable and prolific. In these eighty-seven islands there cannot well be fewer than an hundred thousand inhabitants : suppose we were to take one half, yet fifty thousand such people, so settled, would be a prodigious acquisition. They might easily be converted to Christianity, if taught them as a system of rational happiness. There would be no difficulty in introducing improvements in their conduct of civil life, which would lead them to the discovery of more wants, but, at the same time, would instruct them how they might be supplied. They have already a great fund of industry, which is the genuine source of wealth ; they have such a turn for mechanic arts as will soon bring them to perfection, and such an inclination to, and such principles of useful science amongst them, as, with a very little help, would render them a civil, polite, commercial nation in countries the best adapted to, and probably as well furnished as any with materials for an enlarged commerce.
- b

For in spite of suppositions, which are very far from being arguments, and still much farther from being facts, these people, for any thing we know, may have gold or silver, or both ; and, which is somewhat stronger than any supposition, some relations actually say that they have them. That they have spice too is more than probable, since almost all the countries to the west of them certainly have spices, tho' the inhabitants, from prudential motives, chuse to conceal them^f (I). But whether they have, or have not, precious metals or rich spices, they may have many other valuable commodities, of which we, and perhaps they, have not the least knowledge ; but which a spirit of commerce would quickly bring to light. In order to excite this, the people are not to be conquered, much less oppressed ; for this would be to hatch chickens by crushing the eggs ; but they are to be instructed and informed, and, after that, protected in the full enjoyment of their trade and freedom. This would make them valuable in the strictest sense ; and we shall shew very succinctly, but to a demonstration, how all this might be so conducted as to become infinitely beneficial to *Spain*, without trespassing, in the least, on the natural rights of a good-natured and active nation.

But no such supposition ought to be admitted, as a fact unproved either by probable arguments, or positive authority.

^f FUNNEL's Voyage round the world, p. 157, 158, 159. DAMPIER's Voyage, vol. i. p. 350. Lettres édifiantes et curieuses.

(I) The scope of these three sections has been to shew, that, how much soever neglected, the *Ladrones* are really very valuable possessions, or at least might be made so from the happiness of their situation, for a variety of purposes, more especially of discoveries. In treating this subject, we presumed it as highly likely, that, notwithstanding there is so little appearance of it in our common maps, yet, in all probability, the *Pacific Ocean* might be full of islands ; and have also hinted more than once at an hypothesis, that, if admitted, would establish this system (29). But, without insisting much upon this, we have gradually proved all that we have advanced from facts, which, in cases of this kind, are incontestable proofs. In the text we have considered them, either in the order of situation or time ; we will now close all our observations by taking them together, and examining how far, in this collective light, they will amount to a proof of our fundamental proposition, that the *Pacific Ocean* is very full of islands. In the first place, then, we have shewn, that discoveries have been made in all directions ; and that there has been no expedition thro' this ocean, of which we have any distinct account, without new islands being discovered. We have shewn, that *Magellan* saw other islands ; and that the number of the *Ladrones*, and their names, have differed anciently from what they are now accounted (30). We have shewn, that *Sir Francis Drake* actually passed through the *New Philippines*. We have shewn, that subsequent *English* commanders made other discoveries ; and, tho' this is a great deal, we could have shewn much more. We have observed, that incidentally, and without seeking them,

a chain of islands has been discovered to the north, almost as high as *Japan* (31). The *New Philippines*, notwithstanding, is the most striking proof of all, since they render it evident, that what we suppose of the whole, is at least true of a part ; nor is this proof at all the less authentic for its being accidental ; for that is a pregnant testimony in favour of another proposition, more than once mentioned, that the *Spaniards* are not so much ignorant of this, as indisposed to acknowledge, and unwilling to have it discovered. This appears from the extraordinary strictness of their sailing orders, which, we have good reason to believe, are not casually defective, but intentionally restricted, in this particular (32). The same thing appears from their charts, but managed with great prudence and address ; for all new islands are inserted as soon as discovered, to prevent the surmise of their wishing to conceal them ; but then islands long before discovered are left out ; so that the modern charts are not at all fuller than those made two centuries ago. Add to this, that no discoveries whatever tempt this nation to proceed any farther, how easily soever that might be done, or with whatever advantageous consequences it might be attended. But, to bar the pretensions of any other nation, and to secure their title to islands not yet known, and which, perhaps, they never will know, they plead an exclusive right, from the first discovery by *Magellan*, of the archipelago of *St. Lazarus*, comprehending, according to their computation, eleven thousand islands (33) ; so that how much soever our doctrine may clash with their politics, there is nothing clearer than that they differ not much from us in their opinion.

Cloves, cinnamon, and nutmegs, if they do not grow in these islands, might be transplanted thither, and would certainly thrive in them.

WE shall shew, in a subsequent chapter, what prodigious pains the *Dutch* take to prevent cloves from growing in those islands, to which they were given by nature, and with what pains, as well as policy, they have secured the monopoly of mace and nutmegs, as well as with what anxiety they prevent cinnamon from being brought into *Europe* by any but themselves^a. We have already shewn in this chapter, that, notwithstanding all this care and concern, there are both cinnamon and cloves in *Mindanao*; and it is very certain, that there is still greater plenty in the small islands of *Meangis*, which either make a part of this archipelago, or are within a few hours sail of it. We further know, that the finest nutmegs in the world lie at no great distance from these islands, and yet where they are out of the power of the *Dutch*^b. What then should hinder the transplanting all these rich spices into some or other of these islands? or what should hinder them from growing, when transplanted out of islands nearly in the same latitude where they grow by nature; more especially when it is remembered, that the very thing we propose to be done, the *Dutch* have actually done already, and with the greatest success^c. For managing such a design, and carrying all the arts of cultivation to the highest perfection, what nation could be wished for more fit, than, without the least thought of an attempt of this nature, these people are described to be? What, with less injury or corruption of their old manners, could supply the wants that a higher degree of civility would introduce, better than this project, if carried into execution?

This would prove highly advantageous to the colonies, and to Old Spain.

THERE is no need of arms, of expence, or much trouble, to do all this; so that, if the sources of immense wealth are not in these islands, they may be fetched from next door: they may be kept too with the same ease that they are brought. In return for the protection afforded them by the *Spaniards*, the natives of this archipelago might be permitted to trade to the *Philippines* and the *Marianne Islands*; and the *Spanish* court might restrain its subjects from all commerce with them. In consequence of these regulations, the people of the *Philippines* might revive their old trade to *China* with spices, and save that balance which they pay at present in silver. Returns might be made to this archipelago for spices in piece-goods and *China* silks. Magazines of *European* commodities might be erected in the *Marianne Islands*, and the spices that purchase them be deposited there also^d. To bring all this to pass, there wants only an active spirit, a tolerable degree of contrivance, and a steady perseverance in those who shall attempt it.

The *European* commerce might be carried on directly from Spain to the *Marianne* islands.

In reference to the *European* commerce, it might, with the greatest profit, and without any considerable difficulty, be carried on directly between the *Marianne Islands* and *Old Spain*^e. The voyage might very well be performed in six, or, at most, in seven months, round *Cape Horn*, without touching any-where; or, till the terrors of this navigation are totally banished, which experience would quickly perform, the vessels thus employed might touch at *Buenos Ayres*, and, after refreshing there, proceed round the cape; and, having delivered their cargo from *Europe* at the *Marianne*s, receive their cargo of spices on board, and bring them into *Europe* much fresher, and in a far better condition, than we now receive them, and yet afford to sell them at a more moderate price to those interested in the commerce by the galleons; which would abate the annual balance against *Spain*, and consequently preserve immense sums of money in that country, which now go out of it: whence it plainly appears, that the *Spanish* subjects in *America* employ their labour in the mines for the benefit of strangers; who, on the other hand, by supplying their wants, acquire a just title to their commodities, gold and silver^f.

Or the trade may be regulated between the *Marianne*s and *Baldivia* in *Chili*, and be sent from *Chili* into Spain.

If it be objected, that so long a run as from *Cadiz* to the *Ladrones*, or from the *Ladrones* to *Cadiz*, tho' performed in the wholsomest climate, and with more certainty, in respect to wind and weather, than almost any navigation, will prove an unsurmountable bar to almost every thing of this kind, even that difficulty may be removed; for the kingdom of *Chili* is exceedingly fertile, abounds with almost every thing that the carrying on this commerce would require, and have always had the obtaining a share of it in their view^g; for which, if we allow them to be the proper judges, they think their country extremely well situated, and apprehend no difficulties at all, as in truth there are none, in the navigation, as it would be performed from *Baldivia* to *Guam*. If therefore the returns were made to the last-mentioned city, and a few ships were annually sent thither from *Spain*, it might answer the purpose very

a well^a, and would certainly have very beneficial consequences, as well in respect to the commerce of the colonies as the mother-country, which must either thrive, or dwindle and decay together; so that there can be nothing more preposterous than the apprehensions that are sometimes formed from the flourishing state of colonies, as if the mother-country was exhausted thereby, which neither is nor can be the case: for if the latter really declines while the former thrives, this can only arise from errors in government at home, which do not affect the administration in the colonies; and therefore, lessening the affluence of the subject, these would only increase, instead of alleviating the distress here: a truth that can never be too well known, or too much considered^b.

But still, even according to this scheme, the navigation round *Cape Horn*, or through the *Streights of Magellan*, is still in the way. However, even that bar might be removed: for, supposing the commerce between *Chili* and the *Ladrones* to be settled in the manner before-mentioned, the *European* commodities and manufactures might be transported from, and the spices carried to, *Buenos Ayres*^c. Without affirming this to be the best or the most eligible method of fixing such a commerce, one may safely and truly say, that it is liable to the fewest exceptions, and might be carried into execution with the smallest alterations; which will be always a point of great consequence in *Spanish* councils. Register ships are sent annually to *Buenos Ayres*, which is one of the most commodious ports in *America*^d: the inhabitants of this city have a regular correspondence cross the continent with the inhabitants of *Chili*; and tho' it must be admitted that it is none of the most convenient, yet even that cannot be swelled into an unfurmountable objection, when it is considered, that the distance is not above a third of that between *Vera Cruz* and *Acapulco*, by which the commerce with the *Philippines* is at present carried on^e.

By this last method a new and great branch of trade will be added to the *Spanish* monarchy, without the least diminution of any that at present subsist, and without the smallest alteration in the manner by which they are carried on, the maintaining of which is another fundamental maxim of *Spanish* policy; for otherwise the galleons had long ago changed their route, and gone to *Buenos Ayres* instead of the *Havannah* and *Vera Cruz*, more unfortunate accidents having happened between those two ports, than in the navigation between *Cadiz* and *Buenos Ayres*; and besides, one fleet would serve then instead of two^f. By this scheme of transporting *European* commodities from *Buenos Ayres* to *Baldivia*, and from thence to the *Ladrones*, the exportation from *Spain* would be greatly increased; her colonies on the *North* and on the *South Seas* would be exceedingly improved; the connection between her dominions strengthened; her navigation increased; and of consequence the number of her subjects, and more especially the number of those usefully employed: all of them objects, which, if there are any that can, may be truly said to demand their utmost attention.

Thus we have finished all that we have to say on this intricate and almost untouched subject; and the intelligent reader will not surely think either his or our pains ill employed in tracing out the many advantages that might be derived from these *New Indies*, better situated, and much pleasanter, than either the *East* or the *West*; and which, with a reasonable proportion of industry and contrivance, might be brought to connect both, and to augment the wealth, the power, and the shipping of *Europe*, in a degree that may be much more easily imagined than described.

C H A P. VI.

History of the English East-India Company.

S E C T. I.

Of the charters, first expeditions, settlements, rise, progress, and establishment, of the English East-India Company; together with a complete view of their colonies, commerce, &c. to the present times.

^a FROM the time that a passage to the *East-Indies* round the *Cape of Good Hope* was discovered by the *Portuguese*, the voyages thither by the *Spaniards*, *Dutch*, *English*, and *French*, have been almost infinite. Each of these nations has made its particular discoveries; and that country now is as well known as many parts of *Europe*. *Introduction to the history of the East-India Company.*

It is, however, with reason, that we have complained of the want of proper materials for compiling a full, just, and accurate history of our expeditions into *Asia*; and the rise and progress of the *English East-India* company. No nation has been less careful than we, of preserving, and of digesting into method, the memorials of such occurrences as are absolutely necessary to our design of tracing this great branch of *English* commerce from its original. Perhaps, greater helps are to be met with from foreign writers, of many important transactions, than from our own. Here little occurs, besides a few rough narratives, or succinct passages in our general historians, that can reflect any light upon our subject, during the earlier period. The great misfortune of foreign authors is, that they write with a visible partiality, prejudice, and passion; which greatly diminishes the weight of their authority. They almost constantly represent the *English* as an imperious, arrogant, and cruel people; fond of power, without knowing how to use it. The *Dutch*, in particular, accuse us of treating the natives with an unrelenting severity, punishing with the utmost rigour the most trivial faults; and rather of governing with a despotic insolence, than treating in the friendly manner of merchants and traders*. *The Dutch writers prejudiced against the English.*

SOME particular instances, we are sensible, may give an appearance of truth to this general asseveration; but we hope to make it appear, from undeniable facts, that our good allies have, in palliation of their own conduct, retorted upon us a character *more*, and perhaps *only* applicable to themselves. As faithful historians, we shall relate true facts from the best authorities; leaving it to the reader's judgment to make what reflexions he may think natural. Comparisons in this instance would be invidious, and necessarily attended with an air of national prejudice, least becoming historians of all men; and many cases in the course of our narrative will occur, in which it would be impossible to refrain from an acrimony destructive of that candour we profess, and believe we have hitherto preserved, without engaging in a long disputed political point; *viz.* whether the *East-India* trade in general, and particularly the method of carrying it on by an exclusive company, is not in itself prejudicial to the community, as well as injurious to the individual. It may not be improper to adduce, previous to our history, the allegations of both parties.

THOSE who favour this trade, and a monopoly, assert the advantages which all nations engaged in this commerce have drawn from it. They instance the *Hebrews*, *Tyrians*, *Ægyptians*, *Greeks*, whose paths have been pursued with equal avidity by the *Venetians*, *Genoese*, *Portuguese*, *Dutch*, *Danes*, and *French*. Thus, by the universal consent and practice of the wisest states, do they prove the importance of this trade, than which scarce another argument is needful. But to wave authority and example; what, say they, can more contribute to the increase of our naval power, the bulwark of our state, than this commerce, in which such a number of ships and seamen are employed? What can better improve the art of navigation, than voyages along so many shores, into so many seas, through so many climates, and round the greatest part of the globe? Besides, what a flux of riches does it bring; and what useful subjects does it constantly employ, both at home and abroad? How many thousands, after amassing large fortunes in *India*, have returned to settle in their native country, and enlarge the common stock of wealth? What part of commerce carried on by the merchants of this island is not in some measure dependant on, or connected with, that to the *East-Indies*? How unjust is it to overlook the great quantities of home manufactures they are

* V. Recueil des voyages de la Compagnie, tom. 3. passim. Vid. Histoire des voyages par l'Abbe Prevost, vol. ii. p. 153.

obliged by the terms of their charter to export; and the prodigious importation of unwrought commodities, by means of this company; yet are these important particulars omitted in every estimate made by the enemies to this traffic! But it is likewise said, that the method of conducting the *East-India* trade, by an exclusive charter, is both injurious to the individual, and hurtful to the community. Does the conduct of other nations countenance this assertion? It seems to be the universal opinion of all states engaged in this traffic, that it can only succeed by a monopoly. The real state and condition of the trade can be known, the necessary regulations and instructions given or executed, by no other means; precautions without which this commerce must inevitably fall to ruin. Experience fully declares the inconveniences which attend the settlements of any trading companies being in possession of the crown. The ministry, aware of this, has not only granted *St. Helena*, but *Bombay*, the dowry of king *Charles* the second with the infant of *Portugal*, to the company, for the public good. Lastly, if two companies only, say they, could not possibly subsist, which we have seen was actually the case, how is it reconcileable to reason, that a multiplicity of traders, whose interests must eternally disagree, should flourish, or indeed produce any thing but repeated losses, and the intire ruin of the trade? For these reasons, they conclude, there is no alternative, but either the traffic carried on to the *East-Indies* must be abandoned, or it must be pursued under the conduct of a company, and the method we now enjoy in common with all other nations ^b.

Arguments
against the
trade in gene-
ral, &c. Mo-
nopoly of it in
particular.

THESE arguments would seem to carry weight, and the appearance of truth and reason; but they are answered by others no less specious. The enemies to this monopoly, and the trade in general, urge, that as it causes a prodigious exportation of silver, the common treasure of commerce, and the sinews of the state, it has therefore a natural tendency to impoverish and exhaust the nation ^c. That the returns from *India* are, for the most part, articles of luxury, of which we have no need; and that it manifestly contributes towards depriving our own poor of employment; thus compelling them to leave their country for bread; than which a greater evil cannot befall a state. They urge, in direct contradiction to the others, that this trade, instead of a nursery, is really a grave for seamen; scarce one-third of the crews returning, or escaping death, from the unwholesomeness of the climate, and length and fatigue of the voyage. Besides, this commerce, say they, differing from other branches of trade, requires no great number of shipping, employing few seamen, and is therefore of little consequence to the maritime power of the state. Even the exportation of *India* goods, they assert to be a pernicious circumstance, since hereby the consumption of our own manufactures in those countries, supplied by *Indian* stuffs, is lessened, nay destroyed ^d. Hence the nation loses the advantages arising from the employment of its own poor, in the improvement of its manufactures, the most solid source of wealth and power. But granting the necessity of the trade, is there no method of continuing it, but by giving away the natural privilege of every free-born *Briton*, to a set of men who fatten on the spoils of their country, and have no other pretences to the singular protection they enjoy, than being serviceable to the views of an ambitious and designing ministry? Cannot those free merchants, who conduct the other parts of this vast machine of commerce in the nation, likewise support the charge, and superintend the management of this one branch, which a few directors conduct at their ease, and with very little notion of trade? Cannot the illustrious body of free merchants fit out seventeen ships, and support the charge of a few factories, with pensions for the few necessary servants, or furnish a stock sufficient for a traffic carried on by some of the poorest states in *Christendom*? Where is the advantage or necessity of buying at the warehouses and sales of one company all the goods of those remote countries, which the free merchants of *Great Britain*, the only exporters of such goods, may have occasion for? ^e

THESE are the arguments of those who pretend, that the trade in general is pernicious; or at least, that the only method of rendering it beneficial is, to make it free, and lay the traffic open (A). We shall not pretend to decide upon the merits of either assertion; though we

^b V. An Address to Parliament, A. 1748. Also Dodley's History of the East Indies, vol. ii. Political Essays. ^c CHILD upon Trade, p. 52. ^d HUME's The Pamphlet and Hist. cited.

(A) Whoever carefully examines the nature of trade in general, will be able to form a judgment how far this commerce is advantageous to the public, and in what particular manner it may the most commodiously be carried on. When our readers have perused our account of the companies trading to *Asia*, established by other *European* states, the emolument and empire derived by the *Hollanders* in particular, from this branch of traffic, they will probably be of the opinion of those who assert the advantages of an *East-India* commerce, and perhaps of those who imagine it can only be con-

ducted under a company and joint stock. As to the allegation, that it is a losing trade, the arguments seem too general, and contradict the policy of the wisest and most thriving nations. It would indeed be surprizing, that the chief *European* potentates should be so insensible to their interest, as zealously to cultivate a traffic pernicious to them; that new states should struggle to obtain a footing in it; and that they should unanimously agree in carrying it on upon joint stock, with such privileges and immunities as shall give them weight, influence, and power, in that part of the world, proportionable to

- a we cannot help remarking, that some arguments, made use of to evince the prejudice of the *India* trade to the nation, will hold good with respect to most branches of trade we are engaged in.

BUT

to the importance of the trade. While other nations trade upon joint-stock corporations, thus endowed, it does not seem advisable in any of the rest to resist the measures pursued by them. A regulated company, without a joint stock, will not, 'tis probable, effectually counterbalance the weight of the former. An equality of force and union, the basis of strength, would seem absolutely necessary in a comparative view; nor perhaps is a balance of power in trade a less useful or ideal maxim, than that long pursued one of a balance of power in politics. The want of union, and its advantages, would be the inevitable consequence of a free and open trade to all the subjects of any state; and this might be illustrated by examples in our own nation.

With regard to the exportation of our bullion; a question proposed by the learned *Camden*, upon the first institution of the *East-India* Company, many of our best political writers have proved, that a free exportation is for the benefit of the kingdom. It is certainly a mistake, to imagine, that money is the cause of the increase or decrease of trade; since it is not money that so much influences trade, as it is trade that discovers money; the medium whereby commerce is conducted, but not the source from whence it arises. No company or private trader exports bullion, but with a view of enlarging his capital, and gaining by it. It was a maxim with *Ferdinand* the First, one of the most political princes of his time, to lend his subjects money, and permit them to export it in trade; by which he raised the commerce of the state to an incredible height. Mr. *Munn*, an *Englishman*, tells us, that himself experienced the duke of *Florence's* liberality, who lent him 40,000 crowns, without interest, all of it exported in specie to *Turkey*. Hence *Leghorn*, a pitiful, poor, and contemptible town, soon became a fair, rich, and flourishing city.

As to an exclusive trade and monopoly, we cannot do better than oblige our readers with the sentiments of Mr. *Posilethwayt*, who seems to have accurately examined the subject. His words are: "Although the government should be at the expence of supporting and maintaining forts, troops, and a fleet in *India*, or lay a duty on all exports and imports *ad valorem*, yet it is greatly to be feared, that such measures would not enable the *British* nation to maintain that weight of influence, dignity, or commerce, that either the *French*, *Dutch*, or *Portuguese*, at present do. Nay, such is the peculiarity of this trade, that a mere military force, capable only of supporting forts and garrisons, might be more liable to destroy, than to cultivate and cement commercial friendships, upon a footing equal to those, who wisely constitute a proper trading interest, at the head of their military, which is absolutely necessary on these occasions.

"A regulated company, duly supported by a *British* government, might certainly be very well devised for the temporary support of a general freedom of trade; but that the nation could permanently preserve so distant a commerce, any thing like what our rivals do, I have never yet seen satisfactorily proved. Till it is, I must, for my own part, always be an advocate for the continuance of the *East-India* company, rather with additional power, privileges, and immunities, than any diminution of those which they at present possess.

"It is frequently said, that our *East-India* company do not trade and exert themselves to the full extent of their charter; but that if private merchants had the unrestrained liberty to drive this trade to the full latitude it would admit of, they would leave no part of the *Indies* untraded to; especially all that are within the limits and jurisdiction of the *British* rights.

"In regard to the company's not prosecuting this commerce to its full extent, as is pretended, it cannot proceed from a deficiency of capital or credit. What reason have we to believe they would be backward in augmenting their gains to the utmost degree in their power? A company, it is said, cannot trade at so small an expence, and therefore cannot offer to trade at so small a profit, as trivial traders can. This is allowed to be true in general: but before this matter comes to be considered, the previous question is, whether we should enjoy any trade at all to this country, if not by virtue of the company's forts, castles, and settlements? The extensive correspondence, and high credit of this company in the *Indies*, will certainly capacitate them to traffic in every corner of that quarter of the world within their rights and privileges, where they can be gainers. To do so, where they must be losers, would shew little regard to the interest of the proprietors. The point, if I am rightly informed, lies here. Such branches of trade, by which the company cannot gain at all, or at least but in a less beneficial manner than in other branches; these are actually carried on by private *British* traders, under the company's licence and authority. Nor is the company scrupulous in granting such licences to persons of reputation. Their profits undoubtedly are less, than if they were admitted by a free trade to export their own goods, and import them to and from *Europe*; that is, the profit to the individual is smaller; but nearly the same to the nation, in proportion to the quantity of goods exported, and hands employed.

"To pursue this point a little farther, in regard to the continuance of this national company; for such, in our opinion, is the distinguishing characteristic of this company in particular. The trade to the *East-Indies* is of such a nature, that it is of the last consequence to the nation, to have from time to time distinct accounts of its state and condition, which could not be so well, or at least so easily received, if it was not managed by a company. On the other hand, the instructions could not with such facility be delivered, conveyed, or executed. What seems to strengthen this opinion is, the conduct of all other nations. Whoever considers how things are to be distributed or conducted in the *Indies*, and what a connection and dependency there is between the commerce of the several countries included within the extent of the *East-India* company's charter, will easily discern, that if the whole trade were in the hands of a disjointed number of separate traders, it would be impossible this commerce should continue prosperous, or even that it should at all subsist. It may in like manner be conceived, that if the forts and settlements were in the crown, and the management of the trade only in the hands of the company, it could not but be attended with numberless inconveniencies; as, indeed, experience shewed in the reign of *Charles* the Second, when *Bombay* and *St. Helena* were granted to the company for the public good. It is plain, from the disorder of the company's affairs, in that reign and the following, that it is highly detrimental to this commerce, and the benefits resulting from thence to the nation, that the company should be immediately under the power of the crown, so as to stand indebted for all encouragement, and to have no other resource in case of grievances, than what they can draw from royal power. This, on the one hand, renders trade precarious; and on the other, interests a great body of people in the support of the prerogative, which might be attended with consequences injurious to the constitution.

"Experience has effectually shewn the mischiefs flowing from the subsistence of two *East-India* companies

The Indies
not unknown
to this nation
in the time of
Alfred the
Great.

How we re-
ceived Indian
goods before a
trade was
opened thither.

BUT not to waste the reader's time upon a subject rather political than historical, we will observe, that next to the *Dutch*, the *English* nation is justly reputed to possess the largest share of the commerce to the *East-Indies*. Some historians allege, that those countries were not unknown to the *Britons* in very antient times. The great *Alfred*, the ornament of the annals of this country, must, to his other virtues, have this glory superadded, of relieving poor christians in the *Indies*. *Sigheimus*, we are told, executed this commission of the king, and distributed his charity; leaving at his death, in the treasury of the church of *Sherburne*, a valuable quantity of spices and jewels; an unquestionable proof of the certainty of his having performed his commission, though we are not told in what manner he carried on this traffic (B) ^f. It cannot here be deduced, indeed, that there was any direct kind of commerce between this island and those remote kingdoms; nor has the assertion the appearance of truth. On the contrary, 'tis probable that our knowledge of the produce of the east was conveyed by the *Venetians*, who, with *Genoa*, *Pisa*, and other free states, had possessed themselves of this rich commerce, from the time that the northern barbarians had overthrown the *Roman* empire, and with it all the traffic of the east, which had changed its chanel from *Alexandria* to *Damascus*, *Aleppo*, and *Trebizond*. From *Venice* this country was supplied with *Indian* commodities, by an annual ship of great burthen; which, as the *Venetians* had it in their power to sell at their own price, cost the nation an infinite deal of treasure. In this condition did the *Indian* commerce continue, till the reign of queen *Elizabeth*, when a *Venetian* carack, of immense value, was cast away on the *Isle of Wight*; the sight of which whetted the ardor of the merchants to attempt a trade by *Turkey*, the only route by which the *East India* commodities were brought to *Europe* in those days ^g. This accident gave birth to the *Levant* trade, and was the foundation of our commerce with the east; which was soon after im-

^f Vit. ALFRED Magni. fol. p. 45. V. A Tract upon Trade, addressed to Lord Halifax, A. 1751. ^g See RAPIN under this reign. DODSLEY's Hist. vol. ii.

“panics at the same time: so great were they, that
“each became sensible, that nothing but an union of
“interests could possibly afford a remedy. Yet we can
“conceive, that laying this trade open, which is what
“hath often been contended for, would be a scheme
“big with still greater evils, because it would be in
“fact a multiplication of companies, all acting upon
“separate interests, perpetually clashing and interfering
“with each other; which would give the powerful
“and united trading interests of other nations oppor-
“tunities to destroy all, and extirpate *Britons* from the
“*Asiatic* commerce. From a just sense of this, we
“may presume it is, that so much is done by parlia-
“ment in favour of this company, and so many new
“powers granted them.” In short, this judicious au-
thor concludes, that the sole objection to the *India* trade
or company lies in this; that it is against the interest of
the western to correspond with the eastern part of the
world. Yet are the arguments made use of to prove
this only plausible, not conclusive. It is said, that the
balance of trade is against us; that we export silver in
exchange for the luxuries of *India*; that since the disco-
very of the passage by the *Cape of Good Hope*, the *East*
has gained from the *West* upwards of 200,000,000 *l.*
sterling; which immense sum they possess, while all
that we have received in lieu is long since perished.
This, say those zealots, who greatly overshoot the
mark, incontestably proves, that the commerce is pre-
judicial.

But admitting the argument, yet does it by no means
affect us. Are we the legislators of *Europe*? and can
we oblige other nations, *French*, *Dutch*, and *Danes*, to
withdraw their commerce? Granting that the trade is
founded upon the caprice, whim, and imaginary ad-
vantages which other nations draw from it; yet still is
it our interest effectually to maintain and support it, as
long as they continue in this humour. While the rest
of the world has a taste for *Indian* commodities, we
must engage our company to take off as large a quan-
tity of home produce and manufactures as possible,
otherwise labour will cease; we shall be underfold at
every market in *Europe*; and *Britain*, instead of the
most formidable maritime power, and greatest commer-
cial nation in the west, will become the most contemp-
tible. Upon the whole, the *India* trade seems to be

one great wheel that sets every other branch of com-
merce and industry in motion. Nor does there seem
any very weighty reason against its being in the hands
of an exclusive company. It is now established upon
a sure basis, greatly beneficial to the nation; however
some, rather sanguine than judicious, persons may
think. In our considerations upon this trade, it should
always be remembered, that from its earliest period,
the shipping, commerce, and naval power of *Europe*,
has been so much increased, that this alone is sufficient
to evince its importance and advantage.

(B) *Alfred*, the glory of whose reign, even the con-
fusion of succeeding times, and the obscurity of that
period of our history, has not buried in oblivion, sent
this favourite ecclesiastic, A. 883. to carry alms to the
distressed christians of *St. Thomas* and *St. Bartholomew*,
in the *Indies* (1). The fact is, indeed, pretty extraor-
dinary; to which we should hardly give our assent, had
it not as clear and distinct evidence to support it, as any
one point of record. *Sigheimus* not only performed the
voyage, as the *Saxon* annals testify, but returned rich,
was made bishop of *Sherburne* in *Dorsetshire*, and left in
the treasury a valuable catalogue of the wealth and cu-
riosity he imported. Yet it must be confessed, that
the most curious inquirers into this subject have been
able to trace no vestiges of the continuance of this
commerce. *Eden* and *Hackluyt* descend to much more
modern times; and first mention the travels of an
Englishman, whose name they omit, through *Tartary*.
But though no footsteps appear of the travels or voyages
of individuals, yet in those days, as appears from the
Venetian historians, there was a direct commerce be-
tween the eastern and western parts of the world (2).
When the *Goths* and *Vandals* over-ran the *Roman* empire,
the commerce through the *Red Sea* by *Alexandria* ceased,
and was afterwards carried on by the way of *Trebizond*,
Damascus, and *Aleppo*, by the free states of *Italy*, *Genoa*,
Venice, and *Pisa*, &c. *Indian* commodities were not
only sold in all the countries bordering on the *Mediterranean*,
but in *Germany*, the *Low Countries*, *England*,
and all over the *Baltick*. Upon this was founded the
commerce of *Bruges*, which was a sort of granary for
the northern states; their commodities being exchanged
by the merchants of *Bruges* to the *Italians*, for the pro-
duce of the *East*.

(1) *Guth.* vol. i. *Rapin*, vol. i. *Smollet*, vol. i. (2) *Sabellia Hist. Venet.* l. ii. d. 1. *Dandolo Hist. di Ven.* l. i.

a proved into a direct traffick, by means of the lights and informations communicated by Sir Francis Drake, after his return from his voyage round the world, A. 1580 (C).

PREVIOUS to this, very extraordinary privileges were granted by the Grand Seigneur for the establishment of a *Turkey* trade, in consequence of a treaty between the queen of *England* and the *Porte*. The *Turkey* merchants were at this time looked upon as the true *East India* traders, by means of their factories at *Alexandria*, *Aleppo*, *Damascus*, and the different ports of *Egypt*, and the *Turkish* dominions. However, the queen, though she had procured her subjects the liberty of trading to *Turkey*, for the produce of the *East*, was sensible that something greater was still wanting to bring this commerce to a flourishing pitch ^b (D). Thorne, a London merchant, who had long resided at *Seville*, and there acquired some knowledge of the *East India* trade, had represented to Henry the 8th, the advantages this kingdom might derive from the *Eastern* commerce; but the scheme he formed was found more specious than solid. Thorne's proposal was to open a passage by the north-west passage to *Tartary*, *China*, or *Cathay*, the difficulties of which have never yet been surmounted. An. 1576, some merchants of *London*, in expectation of reaping the benefit of this discovery, as it would greatly shorten the voyage, fitted out two ships under captain Forbisher; but this gentleman, as all his successors have been, was unsuccessful in three several attempts (1). In short, the hint communicated by Thorne, was, after repeated fruitless trials, rejected as hazardous, if not impracticable. Sir Francis Drake confirmed this, upon his return from his curious circuit; and this gentleman had the additional honour of communicating to the public the most rational intelligence and information yet received, which have given birth to this trade by a direct course ⁱ. An. 1582, Captain

^b LEDIARD'S Naval Hist. reign Q. Eliz.

ⁱ Collect. of voyages from the Oxford library, vol. viii.

(C) Sir William Monson was an eye-witness of the loss of this rich carack, of which he gives a clear, entertaining, and minute account. After describing the accident at large, he adds, "About this time our merchants of *London* began to take into consideration these great and inestimable riches brought into the land by the *Venetians*, &c. They devised how such commodities might come into our hands by a more direct way, than to be served, as we were, at second hand; and therefore resolved to make an overture, by favour of the queen, and her letters, to the *Great Turk*, for an immediate traffick from *England* to *Turkey* and his dominions, and so thence again, with ships of her own subjects, without being beholden to them. These letters were sent by her majesty, and received with great humanity and courtesy by the *Grand Seigneur*, as appears by his letters yet extant. In conclusion, the articles were agreed upon, and a grant of great privileges and immunities to her majesty's subjects, which have since continued, and been peaceably enjoyed (1)." Thus did we open a trade to *India*, first by the *Levant*, some years before it was attempted by a direct passage.

(D) It appears that our trade to the *Levant*, on *English* bottoms, was very considerable in the year 1512. Hackluyt says, that in the years 1511, 1512, &c. till the year 1534, several stout ships from *London*, *Southampton*, and *Bristol*, had a constant trade to *Candia*, *Chios*, *Cyprus*, *Tripoli*, *Baruth* in *Syria*. Thence they imported silks, camblets, rhubarb, malmesies, muscadels, and other wines; sweet oil, cotton, carpets, galls, pepper, cinnamon, and other spices. Their exports consisted in home manufactures, such as fine and coarse kerries, of various colours; white western dozans; cloths called statutes, and others called cardinal whites, calves skins, leather, &c. Our author says, that besides the natural inhabitants of those places, our merchants employed *Jeews*, *Turks*, &c. both in person, and by their shipping, so considerable was the trade; and to evince the fact, and to assert its credit, he says, he has carefully transcribed those particulars from the ledger books of some of the greatest merchants in *London*, viz. Sir William Loche, merchant of *London*; Sir William Bowyer, alderman of *London*; Mr. John Gresham, and other eminent traders (2).

(E) That there was a passage from the *North* to the *South Seas*, which would greatly shorten the voyage to

many parts of *America*, as well as the *East Indies*, was the opinion of John Cabot, and other very experienced seamen, before the time of Forbisher. A variety of reasons have been offered in support of this conjecture, all of them plausible, specious, and perfectly consistent with our knowledge of the terraqueous globe, but baffled and foiled by experience. The first advantage proposed by this discovery was, the reaching *Japan*, the land of *Yedzo*, &c. by a much easier, shorter, and more wholesome route, than either by *Cape Horn*, or the *Cape of Good Hope*. Supplying the northern countries with our produce, as well as opening a commerce with many parts of the *Indies* now unknown to us, would indisputably be an infinite advantage to the nation, and obvious on the bare inspection of a globe, or charts of the northern hemisphere. The immense tract, whether islands or continent, between *California* and *Yedzo*, must, from the nature of its situation, afford valuable commodities, as well as a good mart for our woollen manufactures. 'Tis not without reason then, we have seen so much written on this subject; so many attempts for the discovery set on foot, and such a variety of undertakings, both here and in *Holland*, made to come at a north-west passage.

Without entering upon the arguments advanced for and against the possibility of this attempt's succeeding, we shall observe, that the famous John Cabot preceded Forbisher in this enterprize, which he undertook towards the end of the 15th century; but was prevented from finishing his voyage by a mutiny on board. About fifty years after, Sir Martin Forbisher attempted the passage with two small vessels. He discovered, in the height of 62° on the coast of *Greenland*, a large inlet, to which he gave his own name. He sailed through this streight for sixty leagues, with main land on both sides, and saw some of the inhabitants. In the year 1583, Sir Humphrey Gilbert made the same attempt, and was succeeded by other voyagers after the same plan in 1585; by John Davis, who made three different voyages on this pursuit; by Mr. Henry Hudson, 1610; by James Hall and Baffin, in 1612; by Sir Henry Button, in 1611; and by many other succeeding persons. In short, the passages to the *East Indies*, by the north-east and north-west, were, for a great series of years, assiduously pursued, both by the *English* and *Hollanders*. The attempt is now in a manner abandoned, though the arguments in favour of it still subsist.

(2) See his collect. P. ii. p. 96. See also Led. Nav. Hist. b. i.

*Expedition of
Cavendish
round the
world.*

Stephens went to the *East Indies* by the *Cape of Good Hope*, and sent a full account from *Goa*,^a of what occurred in his voyage; but the route was still precarious, till the famous *Cavendish*, in the year 1587, opened a certain passage into the *East*, in his voyage round the world (F). This gentleman, after consuming a pretty fortune in a life of gallantry and dissoluteness, resolved to recover it by a voyage to the *South Sea*. He sailed with three small ships, equipped at his own expence, arriving on the 25th of *August*, 1586, at *Sierra Leona*. From thence he made the *Cape de Verd Islands*, and entered the *Streights of Magellan* by the 7th of *January*, 1587. Coasting directly north, he made *Conception Island* in *March*. Thence he steered to *Moro Moreno*; thence to *Paita*, and at last to *Puna*, in three degrees S. L. Getting sight soon after of *New Spain*, he came to an anchor in the river *Copalitu*, in 6° N. L. By the third of *January*, 1588, he got sight of *Ladrones*; and, by the 6th of *March*, passed the *Streights of Java*^b Major and Minor. In *May* he came to the *Cape of Good Hope*; and in *June* arrived at *St. Helena*, and from thence arrived at *Plymouth* in *September*^c.

*His voyage and
Sir F. Drake's
instrumental in
the erecting an
India company.*

As this voyage was highly instrumental in forwarding the design of her majesty to open a direct trade to the *East Indies*, we thought the tracing *Cavendish* in a few lines, would not be disagreeable to the reader. In consequence of the lights afforded by *Drake*, *Cavendish*, and others, who had been in the *East Indies*, application was made to the queen by many rich merchants, for a charter, empowering them to undertake this trade. In *December*, 1600, their request was granted, and an *East India Company* erected, under the title of “*The Governor and*

*A charter
granted to the
merchants of
London, to
trade to the
East Indies.*

“*Company of Merchants of London, trading to the East Indies.*” A charter was granted, and they were formed into a body corporate, with a common seal, which they were permitted to alter at pleasure^d. The first governor (*Thomas Smythe*, Esq; alderman of *London*) and twenty-four directors, were nominated in the charter; a power vested in the company to elect a deputy governor; and also to elect for the future a governor, and all other members. The freedom was granted to them and their successors; their sons, when arrived at the age of twenty-one; to their apprentices, factors, and servants, employed by them for the space of fifteen

The terms of it.

years, in the following terms; viz. “*Freely to traffick and use the trade of merchandize by sea, in and by such ways and passages already discovered, or hereafter to be found out or discovered, as they should esteem and take to be fittest, into and from the East Indies, into the countries and ports of Asia and Africa; and into and from all the islands, ports, havens, cities, creeks, rivers, and places of Asia, Africa, and America, or any of them, beyond the Cape of Good Hope, to the Streights of Magellan, where any trade or traffick may be used to and from every of them, in such order, manner, form, liberty, and condition, as they themselves should, from time to time, agree upon.*” They were also empowered to make by-laws; to inflict punishments, either corporal or pecuniary, provided such punishments accorded with the laws of *England*; to export goods free of duty for four years; and afterwards the duty of all exports which should miscarry, to be deducted from future goods when shipped. For the customs of imported goods, they were allowed six months credit for half, and twelve months for the payment of the remainder, with a free exportation for thirteen months. They were also permitted to export to the amount of 30,000 *l.* in foreign coin or bullion, provided that 6000 *l.* were recoined in her majesty's mint. All other her majesty's subjects were, by this charter, excluded, under severe penalties, from this traffick, without the assent and leave of the company. The charter was not to extend to any place in the actual possession of any of her majesty's allies. The company were obliged to return, six months after the completion of a voyage, the same quantity of silver, gold, or foreign coin, as they had exported, the first voyage excepted. This proviso was likewise added, that if, within the space limited by the charter, this monopoly should appear, in any respect, detrimental to the public, it should then, upon two years warning under the privy seal, become null and void. But if experience proved this new corporation was for the weal and benefit of the nation, in this case her majesty passed her royal word not only to renew their charter, but to add such other clauses and graces as should appear most conducive to the interest of the commerce, the undertakers, and the kingdom in general; the true end of all public enterprizes^e (G).

(F) Previous to this voyage by *Cavendish*, we find a journal of *Ralph Fitch*, a merchant of *London*, of a voyage performed A. 1583, to the *East Indies*, by a different route. This gentleman went by the way of *Tripoli* in *Syria* to *Ormuz*, and so to *Goa*. From thence sailing to *Bengal*, *Pegu*, *Siam*, and *Molucca*, visiting the islands of

Ceylon, and the cities of *Cochin* and *Calicut*, he returned to *Ormuz*; and so through *Turkey* to *Tripoli*, where embarking, he arrived in *England*, A. 1591 (3).

(G) The subscriptions or shares in this company were only 50 *l.* originally. The directors having a considerable dividend to make in the year 1676, it was judged

(3) Vid. Col. voy. from the Harleian library, vol. vii.

- a In consequence of this charter, the merchants of *London* began to raise a joint stock for the execution of the design; which became so popular, that, in a short time, 72,000 *l.* were put into the treasurer's hands. A fleet of five stout ships, consisting of the *Dragon*, 600 tons; the *Hector*, 300 tons; the *Ascension*, 200 tons; the *Swan* of 200 tons, and the *Guest*, a flore-ship, of 130 tons; was equipped and manned at the expence of 45,000 *l.*; the remainder of the capital being sent in money and goods as a trading stock. This squadron, manned with 480 stout seamen, under the direction and conduct of captain *James Lancaster* (*), put to sea the 13th of *February* 1601; and, after a sickly voyage, came to anchor in the road of *Achen*, on the 5th of *June* 1602. Here Captain *Lancaster* (†) sent the queen's letter and present by an embassy of seven of his officers and merchants to the king, which was received with great satisfaction and marks of favour and distinction. In short, so happily did this expedition succeed, that a treaty was concluded with the king of *Achen*, and the following privileges granted to the company; viz. Free entry and trade, duty-free, without regard to the goods imported or exported: the power of making wills, and disposing of their estates, when, and to whom, they thought fit: ample security as to all contracts and bargains; in which respect the natives were bound to a punctual observation of the measures of justice and fair dealing: authority to inflict punishments on their own delinquents, without appealing to the civil magistrates of the country: an assurance of steady justice in all cases of injuries received from the natives, upon complaint made: an exemption from arrest upon goods or prizes: and, lastly, liberty of conscience was granted, and the undisturbed exercise of their own religion. Having thus happily settled this important point, Captain *Lancaster* finding the price of pepper high, on account of the barrenness of the preceding year, he dispatched one of his ships to the *Moluccas*, and erected a factory in the island of *Java*. His reception at *Bantam* was no less gracious than it had been at *Achen*; and so successful in every respect was this fleet, that it excited the jealousy of the *Portuguese*, who soon began to do the *English* all the ill offices in their power. After completing his business, *Lancaster* set sail for *England*, and arrived, after a prosperous voyage, in the *Downs*, in *September* 1603, to the great joy and emolument of the company (‡).
- b
- c
- d JAMES I. succeeding in the following year to the crown, his majesty gave this new establishment all the countenance shewn it by his predecessor. This, and the profits of their late adventure, determined the company to make a fresh attempt (H). Sir *Henry Middleton* was appointed

eligible to add to the profits of the stock, instead of withdrawing them. By this the shares were doubled, and became advanced from 50 *l.* to 100 *l.* Thus the original capital of 369,891 *l.* 5s amounted to 739,782 *l.* 10s to which, if the profits of the company to the year 1685, that is, 963,639 *l.* be added, the whole stock will be 1,703,422 *l.*

(*) In the journal of his voyage, we find that Capt. *Lancaster* stopped to take in fresh water at *Comora*, where the king came on board him, and the *English* were civilly treated for some time by the natives. But at length they took an opportunity, when the boat was on shore for water, to fall upon the men, and cut thirty-two of them to pieces in sight of the ship, the Captain being unable to relieve them, having no other boat. From hence he steered his course to *Zinzibar*, a *Portuguese* factory, where he built a new boat, and continued for some days, but without having the smallest connection with the *Portuguese*, who refused to have any commerce with *Englishmen*; and withal informed the natives that they were cannibals, which effectually deterred them from dealing with them (4).

(†) This was the same *Lancaster*, who in 1594 performed a voyage with *Venner* to *Brazil*; the first *Englishman* who undertook a trading voyage to those parts. Here it was, that by his intrepidity and conduct he took the castle and town of *Fernambuc*, got a great booty, and with a slender force resisted all the attempts of the enemy (5).

(‡) In *Ant. Fran. Prevost's Histoire Generale des Voyages*, we find a journal of Capt. *John Lancaster's* voyage to *Zinzibar*, and round *Cape Comorin*, in A. 1591. His fleet consisted of three ships of no great burthen. It is

uncertain, whether this squadron was equipped at the expence of the crown, or at that of a society of merchants; but certain it is, that the discoveries he made were considerable, though the voyage in general ended unfortunately, the admiral having lost his whole fleet, and been saved by a *French* ship. This expedition reflected great light upon the navigation of seas intirely unknown to *English* mariners; *Lancaster* having not only doubled *Cape Comorin*, but coasted along *Malacca* to *Junfaleon*, a kingdom situated between *Malacca* and *Pegu*. It is even imagined, that coasting the *Nicobar* land, he passed through the *Streights of Malacca*, and proceeded to the *Moluccas*; but this is no more than the conjecture of the journalist, unsupported by any other authority (6).

(H) *Purchas* takes notice of an unfortunate voyage, begun in 1596, by Captain *Wood*. Three ships were fitted out at the charge of Sir *Robert Dudley*, previous to the company's charter. They sailed from *England*, and were designed for *China*, having queen *Elizabeth's* letter to that emperor: but not one of the company ever returned to give an account of the fate of the rest. Some intelligence of them was afterwards received, from an intercepted letter of the auditor's of the royal audience at *St. Domingo*, and judge of *Porto Rico*, written to the king of *Spain*, and his council of the *Indies*. It imported, that *Wood* had taken three *Portuguese* ships, subject to his majesty (for the crowns of *Spain* and *Portugal* were at this time united upon one head, and at war with *England*). That soon after a contagious disorder prevailed in the *English* fleet, which swept off the whole crews, except four men, who took to the long-boat, and arrived with some rich effects at an island three leagues from *St.*

arrival in
England.

appointed to conduct this expedition, at the head of three ships, with all necessaries and affort- a
ments. Arriving at *Bantam* in *December*, he delivered his letters and presents to the king;
which being well received, he left two of his ships to take in a cargo of pepper, and sailed with
the third to the *Moluccas*, the natives shewing him all manner of respect and civility, both here
and at *Bantam*; a conduct not observed by the *Dutch*, the old allies of *England*. Already they
began to view with jealousy the success of a nation, whose advantages and talents for trade
were at least equal to their own. They therefore put in practice every base and mean art to
prejudice them with the natives, representing them as cruel, perfidious, and ambitious, of
having intentions very different from those specious ones of commerce they pretended. How-
ever, in defiance of all their calumnies and aspersions, Sir *H. Middleton* found means of making
himself acceptable to the kings of *Bantam*, *Ternate*, and *Tydore* ^a. The *Dutch* and *Portuguese* b
were at this time at war, not indeed in their own names, but as allies to the kings of *Ternate*
and *Tydore*, the former siding with the king of *Ternate*, and the latter taking the part of his
majesty of *Tydore*. The *Dutch* writers accuse *Middleton* of a partiality against the *Hollanders*
on this occasion, though indeed they acknowledge, that it arose from his ignorance of certain
forms with which an entire stranger could not be supposed to be acquainted; therefore, their
own countrymen cannot be acquitted of the mean jealousy and insidious arts laid to their charge,
as their only plea is a trespass arising from ignorance in the *English* admiral ^c. This conduct
of the *Dutch* towards our countrymen in the very infancy of the *Indian* commerce, gave occa-
sion to those disputes which ensued between both nations, and ended in the fatal catastrophe at
Amboyna (1).

It would be unnecessary to pursue *Middleton* in his voyage to the *Moluccas*, and through every
every step of his conduct there, and at *Bantam*; sufficient it is to observe, that two of his ships
having completed their cargoes, set sail for *Europe* before his return. One of these was lost in
her passage; the other he overtook in a distressed condition, at the *Cape of Good Hope*. Re-
turning from thence to *England*, after discovering great proofs of magnanimity in a storm
which happened in the voyage, he arrived in the *Downs*, on the 6th of *May* 1606, with letters
and presents from the kings of *Bantam* and *Tydore* to king *James*, and a rich and valuable cargo,
such as had never been seen from *India* in *English* bottoms ^c.

DURING Sir *Henry Middleton*'s absence, another fleet was sent under *John Davis*, an expert
pilot, to the *Indies*. Before his arrival at *Bantam*, *Middleton* was sailed about three weeks for d
England. Sir *Edward Michelbourn*, who commanded in chief, but in some respects under the
direction of *Davis*, coming into the roads of *Bantam*, was informed by the *English* factors, of
the arts the *Dutch* had used to prejudice them, and the danger which they stood in of being
oppressed by force, if fraud would not prevail. Upon this notice, Sir *Edward* weighed anchor,
and steered directly to the *Dutch* fleet, sending their admiral a message, that, if either direct or
indirect methods were taken to disturb the *English* factories, he would immediately use his
power to avenge them, and sink the *Dutch* fleet. This declaration occasioned the *Dutch* to
keep quiet during the stay of the *English* admiral, which was but short; for he returned with
his fleet to *Portsmouth* in *June* 1606 ^a, soon after the arrival of Sir *H. Middleton*.

Domingo. Three of these were surprized and murdered by the *Spaniards*; the third escaping on a piece of timber to *St. Domingo*. He discovering himself to the governor, revealed the whole affair; upon which, Don *Rodrigo de Fuentes*, who commanded the party that assailed the *Englishmen*, was seized, and the treasure taken from him. During the prosecution against him, Don *Rodrigo* procured the surviving *Englishman*, the only evidence against him, to be poisoned: and thus perished the attempt to open a passage into *India* (7).

(1) The Abbé *Prevost*'s relation is this: *Middleton* sailing along *Tydore*, observed two gallies with white flags rowing towards him, and pursued by seven other gallies. The first two gallies made signals of distress, pulling with all their might, till the one came to his ship, the crew

of which he immediately received on board. In it was the king of *Ternate*, with several of his nobility, and some *Dutchmen*; but the other was boarded by the enemy before she came within reach of the ship's guns, and every soul on board put to the sword, excepting three, who jumped into the sea, and were saved by the *English*. After this, *Middleton* sailed to *Ternate*, where the king and people, in gratitude for the services done them, were not only inclined to traffick, but to enter into the warmest friendship with the *English*. This disposition induced the *Dutch* to insinuate reports, equally to the prejudice of the *English*, and inconsistent with truth; the very fact here related confuting their surmises, that *Middleton* favoured the king of *Tydore*.

S E C T. II.

Containing an account of Keeling's voyage; the conduct of the Dutch, Turks, and Portuguese to him, and other officers of the company, with the success of several different expeditions.

- a** **T**HE former voyages had been so prosperous, that the company, resolving to pursue their good fortune, equipped a fourth fleet, under the conduct of captain *William Keeling*. In this expedition three ships were employed, and about three hundred and ten seamen, besides the servants of the company. Upon his arrival at *Banda*, *Keeling* found he had to combat not only the difficulties which naturally occur in a new established commerce, but likewise to surmount numberless obstructions laid in his way by the *Dutch*. Among other practices of the *Hollanders*, one deserves particular mention (K). The *English* had contracted with the natives of *Pooloway*, for the settling a factory in that island, which was opposed by all the intrigue, chicane, and tricks of the *Dutch*. The *English*, in the mean time, having intelligence, that the *Hollanders* proposed erecting a fort at *Banda*, and knowing the consequences of it to their trade, proposed to some of the chief natives, that a formal delivery of it should be made to them, in the name, and for the use, of the king of *England*, for a valuable consideration; and this before the *Dutch* had entered upon the execution of their project. This proposal was relished in appearance, though, in fact, it was a secret connivance between the *Dutch* and the natives, to deceive the *English*. *Purchas* says¹, that the natives actually signed a surrender in the strongest terms to the *English*; but be that as it will, it is certain they designed nothing less than performing it (L). In fact, both the *English* and *Bandanese* were deceived by the cunning of the *Hollanders*, who treated them both with the utmost contempt and insolence, after their fort was completed, and they could bid them defiance. The resentment of the *Bandanese* soon after confirmed the suspicion of the artful conduct of the *Dutch*; for they put the resident and several of the *Dutch* council to death; having first, with great boldness, drawn them out of the fort. A general massacre would have followed, had not the *English* interposed, and taken the *Dutch* into their protection; though they were requited by unreasonable restraints upon their commerce; and, at last, by a peremptory order to depart before they had fully completed their cargoes. However, in spite of ingratitude, intrigue, and unjust opposition, this voyage proved remarkably successful, especially at the *Moluccas*, notwithstanding all the attempts of the insidious *Hollanders*².

- b** **KEELING** returned to the *Downs* with a rich lading, in *May* 1610; and, what is very extraordinary, without the loss of a man. Among other things, he brought home 3481 bags of pepper. Captain *David Middleton* had been sent by *Keeling* to the *Moluccas*, where he received part of his loading; with which setting sail, he entered the *Streights of Bangaya*, receiving great marks of civility from the king of *Botun*, who came on board his ship. After completing his cargo from some *Java* vessels, he returned to *Bantam*; but the admiral being sailed, he steered his course for *England*, where he arrived after a prosperous and very profitable voyage. Captain *William Hawkins* had been sent out with this fleet in quality of an ambassador, to settle a treaty of friendship and commerce with the *Great Mogul*; which commission he executed with address, prudence, and success³.

- c** **WITH** this special privilege of exporting their goods to the extremities of the *Indies*, the *English East India* company wanted one advantage, which other nations enjoyed for a long time, and what they were daily improving. The *Spaniards* and *Portuguese* had harbours of which they were absolute masters; forts which they had built and secured by garrisons and regular fortifications; whole provinces, of which they had acquired possession, either by trea-

¹ V. 4. See *KEELING'S* voyage. CHAS, *ibid*.

² LED. N. H. 404. HARRIS, Coll. P. P. 79.

³ PUR-

(K) On his arrival at the island of *Nero*, he delivered his majesty's letter and presents to the *Oran Cayas*, or states of the island, which were well received. The same he did at *Lantore*, or *Proper Banda*, and with equal success. Afterwards he agreed with the *Oran Cayas* of *Pooloway* to settle a trade with them, and erect a factory there, receiving of them 225 catces of mace, and 1307 pounds of nutmegs.

(L) Certain it is, that the islands of *Pooloway* and

Poleroon engaged by a written contract with *Keeling*, to deal with the *English* only for all their mace and nutmegs. On this occasion, they declared the *Dutch* should not have a handful; for they had rather it should rot on the ground, than be of any use to those boors. And soon after this it was, that the *Oran Cayas* of *Nero* drew the *Dutch* into an ambuscade, from which they escaped, through the humanity of the *English* (8).

(8) *Purchas*, v. iv.—*Prevost*, t. ii.

chery or the right of war, and over which they exerted an absolute and despotic sway. The *Dutch*, after their example, had begun to fortify themselves in different places, by which means they kept the inhabitants in subjection, and assumed a kind of exclusive property in those places, preventing the natives from carrying on any sort of traffick with strangers^a. Whatever may be said against the justice of such a proceeding, the advantages of it cannot be denied, as it not only secured them against any change in the sentiments of the natives, formed a barrier both against them and interlopers in the trade, but likewise served the purpose of a magazine, to prevent their ships returning empty, and also to embrace the opportunities of plentiful seasons and low markets. Instead of this, the voyages of the *English* company were hitherto necessarily precarious, depending not only on the uncertainty of seasons and markets, which were frequently engrossed or anticipated by others, but also on the will of the *Dutch* and other powers, who, in consequence of their forts, could either deny or admit them into the harbours. Thus were they subservient both to the caprice of other *Europeans* settled in *India*, and of the natives, who frequently had a distaste to *Europeans* of all nations. Their success depended entirely on chance, the civility of the natives and the established *Europeans*, or upon the address and courage of their officers and factors: but daily experience, and the practice of other nations, soon convinced them of the necessity of supporting the simple title of merchants by power. Thus reflection, experience, example, honour, and interest, all coincided to make the company depart from their first principles, and establish a different conduct, however they might have exclaimed against the usurpations of *Spain*, *Portugal*, and the *Dutch*. The late treatment which *Middleton* met with at *Banda*, confirmed them in their resolution to follow the maxims of other states, and oppose force by force: but to succeed effectually in this, the authority and power of a new-formed company was insufficient, and the court was too much engaged otherways, to lend the necessary assistance. The success of their voyages and the money saved to the nation, which foreigners were wont to drain from it by supplying us with their commodities; the great acquisition of wealth and other profits to *England*, by the exportation of her manufactures and produce, and of *Indian* goods and manufactures sold to other *European* states; were, indeed, strong arguments with the king and ministry, to countenance a company that appeared so beneficial to the public. Accordingly their charter was enlarged to what extent they required, but no national force sent out for their assistance. However, they resolved by perseverance to overcome all difficulties, and reap the fruits of so many advances. They now began to build their own ships, which they had formerly purchased of the *Hanse Towns*; a considerable advantage to them, and to the nation in general. Two ships had been sent out in the year 1607, to the coasts of *Arabia* and the *Red Sea*, with indifferent success. In 1608 captain *Middleton* was a second time dispatched, with a single ship, to the *Moluccas*, where the *Dutch* formed a design of seizing his ship; notwithstanding which, he had the address to escape (M), and sailed for *England* with a prodigious rich cargo, having brought home, 'tis said, one hundred and thirty-nine tons of nutmegs, the same quantity of mace, besides pepper, and other valuable commodities^c.

Necessity of
forts and gar-
risons.

A. 1607.

The company
builds its own
ships.

Capt. Middle-
ton's voyage.

The company
builds a ship of
1200 tons.

This success inspired the company to higher attempts: accordingly they built a ship of 1200 tons burthen, their first essay in naval architecture, and the finest and largest ship which had ever been built in *England*, at the same time a proof of the company's wealth, and of their spirit for commerce. A pinnace of 250 tons was likewise built, to accompany her as a tender. This was then esteemed a matter of so much moment and utility to the public, that the king and prince of *Wales*, with a great number of the first nobility, were present at their launching. So great was the magnificence of the company, and the public joy on this occasion, that all the rich utensils used at the entertainment given his majesty on board, were left to be taken away by the by-standers and populace. The greater vessel was named by his majesty *The Trade's Increase*, and the pinnace called *The Pepper Corn*, by the prince of *Wales*^d.

DURING these preparations, two ships, under the conduct of captain *Sbarpey*, were sent to *Achen* in *Sumatra*, from whence they returned with good success, before the other fleet was ready to sail. Now *The Trade's Increase* and *Pepper Corn* were equipped for sea, with two

A. 1610.

^a Recueil des voyages, t. viii.

^c DODSLEY'S Hist. vol. ii.

^d LEDIARD'S N. H. p. 417.

(M) While Captain *Middleton* was at *Banda*, he received advice that the *Dutch* governor of *Nassau Port* had laid a scheme either to burn him by means of a fireship, prepared for that purpose, or, if that failed, to send two ships of a thousand tons each, with some frigates, to sink him. Upon this, he went on shore to expostulate with the governor, and shew him his commission; but was told that the islands of *Lantore* and *Nero*

belonged to the *Dutch*, and that no native should be permitted to trade there. Not chusing to enter upon hostilities with a power greatly superior to him, he sailed to *Poolaway*, and took in his cargo, steering from thence to *Bantam*, where the *Dutch* followed him with two large ships and frigates above-mentioned, with a resolution to sink him, but were prevented by the calms and contrary winds which happened in the voyage (9).

(9) *Prewost*, H. G. des voyages, tom. ii.

- a other ships, under Sir *Henry Middleton*, in the spring of the year. In *Purchas* and *Harris*, *Voyage to Sur* especially in the former, we have a minute and circumstantial detail of his voyage, and particularly of the ill usage the admiral received from the *Turks* at *Mocha*: his imprisonment and escape; the insolence of the *Portuguese* at *Surat*, and the defeat of their fleet by the *English*; the taking of several *Portuguese* and *Indian* ships, and the farther success of the voyage. Not to pass over all these circumstances in silence, at *Mocha*, Sir *Henry*, after delivering his majesty's letters and presents to the *Bashaw* and *Aga*, was received with all possible marks of distinction and friendship; a sun-shine that was soon followed by a tempest of misfortunes. The civilities of the *Turks* were intended to ensnare the admiral, and to allure him and his officers on shore, as well as to entice their ships into their harbours; but disappointed in the latter part of the scheme, they fell upon the admiral, killed eight of his attendants, wounded himself and fourteen men, and, after stripping them, threw them, chained, into a dungeon. They next made an assault upon one of the ships, but were repulsed with great loss. Finding that open force could not reduce the ships into their power, they threatened the admiral with death and the torture, if he did not order them to surrender; but Sir *Henry* preferring the most excruciating tortures and death to an ignominious life, and the loss of honour, bravely defied them, and triumphed over their menaces and cruelty. After six months imprisonment, he found means, with most of his attendants, to make his escape, and arrive at the ships, which had lain in harbour on the *Abyssinian* shore. He had now an opportunity of shewing his resentment, which he accordingly did in a message to the *Aga*; "That if he did not instantly release the remaining prisoners, and render ample satisfaction for the damages he received, he would sink all the ships in the road, and afterwards batter the town about his ears." This menace had its effect; his men and pinnace were set at liberty, and 18,000 rials of eight paid him for his damages.

His escape from the Turks at Mocha.

- From hence he steered his course to *Surat*, where he was informed, that the *Portuguese*, with a fleet of twenty ships, well provided, lay at the bar of *Surat* to intercept him; at least to prevent his carrying on any commerce there. Having no alternative, but either losing his voyage, or fighting his way with a greatly inferior force, he chose the latter, as most honourable; and success crowned his resolution (N). He not only, after a sharp engagement, broke through the enemy, but intirely dispersed them, with the loss of their ships which he took. Notwithstanding this prosperity, he still met with unsurmountable obstructions from the insinuations and influence of the *Jesuits*; and, after a series of noble, but unsuccessful, conduct, was at last compelled to leave *Surat*, without effecting any thing material to his design. Captains *Hawkins*, *Sbarpey*, and the whole factory, were likewise forced to abandon it, without having time allowed them to call in their debts. From *Surat* the fleet steered to *Dabul*, where it had better fortune; and, as an addition to it, Sir *Henry* had an opportunity of being farther

Conduct of the Portuguese at Surat.

Sir Henry's revenge.

* PURCHAS, vol. i. Hist. of his voyage.

(N) Captain *Hamilton* relates a battle, which he says was fought about this time with the *Portuguese*. He does not specify the year; but, from the circumstances, it can be none of those we find mentioned by other authors. We shall venture therefore to insert it upon the Captain's authority, and that of the old *Persee*, from whom he had the account. His words are, "When the *English* first settled a commerce in this country, (*Surat*) they were held in great esteem; but the *Portuguese* pretending a right to that trade solely, disturbed the *English* in theirs, murdering their people, and making prize of all ships and vessels they could overcome. One season the *English* had eight large good ships riding at *Swalley*, which is about ten miles from *Ranier*, where the president and his council then resided; and *Swalley* was the place where all the goods were unloaded from the shipping, and all goods for exportation were then shipped off. The *Portuguese* thinking it a fit time to give a deadly blow to the *English* commerce, came with a fleet of six men of war, ten or twelve half-gallies, and ten small ships, and anchored to the northward of the *English*, in a narrow chanel, not musket-shot wide, and a tide generally of six or seven miles an hour. The *Portuguese* landed near 3600 men, and had seized some carts laden with the company's goods. The *English*, not able to bear the insults they daily received, held a council, wherein it was resolved to land 800 men out of the ships, and attack the *Portuguese*, while they were lulled in secu-

rity of their own strength and numbers; and if they were overpowered, that those left on board the *English* fleet should try if they could cut a *Portuguese* ship's cables that lay near them; and her driving on board of another might, with the force of the tide, put them all a-ground on the shore, or a sand-bank that they lay very near to. Accordingly, by break of day, the *English* were all landed, and every ship's crew led by their own commander. As they had conjectured, so it fell out; the *English* were among the *Portuguese* before they could get in a posture of defence, and put them in confusion. Those on board had done as they were ordered; one being cut loose, soon made all the rest run a-ground, and most of them were lost, especially the great ships. The little *English* army pursued the *Portuguese*, and killed many in their flight; but at a point of sand, about three miles from the ships, the *Portuguese* made a stand, and rallied; but the little victorious army soon made them a second time take to their heels, and so the *English* got an intire victory, with a small loss; for there were not twenty killed on the *English* side, but about 1500 of the *Portuguese*." The Captain informs us, that A. 1690, he was on the field, where he saw heaps of human skulls; a proof there had been a battle on the spot. For the rest he trusted to the authority of the *Persee*, who remembered the action; and to the tradition of the country, which scarce varied a tittle in the circumstances of the fact (1).

His death.

A. C. 1611.
Hippon's
voyage.Capt. Saris's
voyage and
success.

revenged on the *Portuguese*. Here he took two of their ships, richly laden; after which he returned to the *Red Sea*, and procured farther satisfaction for the damages sustained at *Mocha*, by seizing seventeen *Indian* ships, from 1500 to 200 tons burthen, all rich cargoes. As the inhabitants of *Mocha* were deeply concerned in this fleet, it was ransomed for a large sum, after it had been pillaged by the *English* seamen. From *Mocha*, Sir Henry went to *Bantam*, where he died; but the fleet returned to *England*^b.

WHILE Sir Henry was absent, the *Globe*, captain *Hippon*, was sent upon a trading voyage to *Bantam*, &c. in which he met with numberless difficulties from the base conduct of the *Dutch*; one instance of which it may not be amiss to specify. The king of *Narvinga*, who had given the *English* an invitation to establish a factory in his dominions, dying while *Hippon* was there, the governor of the *Dutch* fort took the advantage of the confusion that event occasioned, to put off the payment of a just debt to the *English*, though they were ready to depart. *Hippon* tried all in his power to settle the affair by fair means; but finding this ineffectual, he determined upon force, and to seize either the governor or his son's person. The last he accomplished in the presence of 4000 spectators, who made not the smallest resistance; and the governor was compelled to pay a just debt as a ransom for his son^c.

THIS year three more ships were sent out, under the command of captain *John Saris*; the expence of which equipment amounted to 60,000 pounds; so that, in all, the company had a prodigious venture at sea, in the bottoms of eight ships. *Saris* intended a trading voyage to the *Red Sea*, *Java*, the *Moluccas*, and *Japan*; in the last of which he was, if possible, to establish a commerce, which had not hitherto been attempted by the *English*. *Saris*, after visiting the kings of *Firando* and *Goto*, by whom he was favourably received, went by land to *Suranga*, the emperor's residence. Here he had the honour of an audience of his imperial majesty; and delivering king *James*'s letter and present, was not only graciously received, and kindly treated, but successful in obtaining a grant for the company of certain very important privileges, together with letters and presents from the emperor and king of *Firando* to the king of *England*, and assurances of a constant and warm friendship for his majesty (O). This fleet returned to *England* in September 1614, after having performed a very successful voyage; but *Hippon* did not return till the year 1616; he having spent four years in his voyage, chiefly owing to the intrigues of the *Dutch*, who omitted no opportunity of raising obstacles in his way^d.

BUT besides the obstructions and impediments thrown out by the *Dutch*, to prevent the progress of the *English* company in the *East*, their late prosperity was attended by a new incon-

^b LEB. Nav. Hist. p. 427.^c PURCHAS'S Pilgrim. ubi sup.^d HARRIS'S Collect. vol. i. p. 227.

(O) The following privileges were granted by *Ogosafama*, emperor of *Japan*, to the *East India* company.

- I. We give free licence to the subjects of the king of Great Britain; viz. Sir T. Smythe, governor, &c. for ever, safely to come to any port of our empire of *Japan*, with their ships and merchandizes, without any hindrance to them or their goods; and to reside, buy, sell, and barter, after their own manner, with all nations; to stay here, or go at their pleasure.
- II. We grant them freedom of custom for all such merchandize as either now they have brought, or hereafter shall bring, into our kingdoms, or shall from hence transport to any foreign port. And we do authorize those ships that hereafter shall arrive from *England*, to proceed to present sale of their commodities, without the expence or trouble of sending up to court.
- III. If any of their ships should happen to be in danger of shipwreck, we do straitly enjoin our subjects not only to assist them, but to return such part of the ship and goods as shall be saved to the captain, merchants, or their assignees. And we do decree, that they may build one or more houses for their own use in any part of our empire, and, at their departure, to make sale thereof.
- IV. If any of the *English* merchants, or others, shall depart this life within our dominions, the goods of the deceased shall remain at the disposal of the *British* factors. We ordain likewise, that all delinquents be punished by their own magistrates, and according to their own laws, without appeal to the civil power of the nation, which have no power over their persons or goods.

V. We will that our subjects trading with them for any of their commodities, pay them for the same according to agreement, without delay, or return of the commodity so bought.

VI. For such commodities they now have brought, or shall hereafter bring, fitting for our service, and proper use, we will that no arrest be made thereof, but that the price be settled with the company's factor, according as they sell to others, and immediate payment upon delivery of the goods.

VII. If, in discovery of other countries for trade, and return of their ships, they shall need men or victuals, it is our pleasure that our subjects furnish them for their money, as their occasions shall require.

VIII. And that without other passport, they shall and may set out upon the discovery of *Yedzo*, or any other part in or about our empire.—From our castle in *Suranga*, &c.

A council of merchants and officers being called, it was determined, for the following reasons, to settle a factory in *Firando* in *Japan*; viz. The encouragement which by private intelligence there was reason to expect in the *Moluccas*; the large privileges obtained of the emperor of *Japan*; the certain advice of the *English* factories at *Siam* and *Patane*; the commodities left unsold intended for those parts, and the hoped for profit upon them, from what experience had shewn. Eight *English*, three *Japan Jarabasses*, or interpreters, and two servants, were accordingly constituted, and left with the name of a factory, and with orders to make all possible discoveries of the coasts, ports, manners of the natives, and productions of the countries (1).

(1) Purchas, v. i. p. 379.

- a venience. The *Portuguese* did all that lay in them to hinder their trafficking upon the *Mogul's* coasts, which obliged the company to be at a great expence in equipping the next fleet that put to sea, *an.* 1612. This armament consisted of four stout ships, well manned and mounted, under the command of captain *Thomas Best*, a resolute officer. *Best* arriving at *Surat* in *September*, applied himself diligently to the establishment of a factory, in which he was countenanced by the governor, and all the *Mogul's* officers in the city. But intelligence of his activity and success coming to *Goa*, the *Portuguese* governor fitted out a squadron of four large galleons, and twenty six frigates, having on board 5000 men, with 150 pieces of great ordnance*. The little *English* squadron was at anchor at the bar of *Surat*, when they first discovered a fleet of 240 *Portuguese* merchantmen, steering for *Cambaya*. This alarmed the
- b *English* commodore; however, he soon perceived they had no intention to molest him. As he was comforting himself with this agreeable hope, he received advice of the armament equipped at *Goa* against him, which was in full sail to drive him from the *Mogul's* ports, notwithstanding the emperor's grant for establishing factories at *Surat*, *Cambaya*, *Amadavas*, or where-ever else the *English* thought proper. *Best* was not discouraged; but determined to stand his ground, or perish in defence of his right, and the trust committed to him. He no sooner descried the *Portuguese* admiral, than weighing anchor, he went to meet, and got in the midst of the fleet, before he fired a shot. Here he poured his broadsides and small shot so thick upon the enemy, that they chose not to engage him that day; nor till the admiral had deliberated upon the manner of attacking the *English* *Fury*, as he was called. The two fleets
- c lay that night at anchor, within a small distance of each other; the *Portuguese* admiral holding a council of war, and *Best* animating his men, reminding them, that they were *Englishmen*, who had often triumphed over *Spaniards*; and telling them, that their only safety consisted in an obstinate defence, and resolute spirit; which, with their small force, and great courage, would be able to resist all the attacks of this formidable navy. Next morning, weighing anchor, both fleets engaged with great fury; the enemy relying upon numbers, and the *English* putting all their hopes in their valour. They plied the enemy so warmly, that three of the large galleons were driven upon the sands, where the *Oslander*, one of the *English* vessels, continued pouring her shot upon them so warmly, that not a man could stand upon deck, or at the guns. In the afternoon, the galleons being afloat again, with the tide of flood, the *Portuguese* renewed the action, but with as little success as before; and at last were forced to sheer off with the loss of their honour, and of 1200 men. *Sardar Cbaune*, a great nobleman of the *Mogul's* court, who happened to see the action from shore, was so taken with the bravery of the *English* admiral, that he sent for him, treated him sumptuously, and made him valuable presents. The *Portuguese* fleet, after refitting and recruiting, returned again to *Surat*, with intention to fight the *English* at sea, and make captures of them. This gave great uneasiness to *Sardar Cbaune*, who did all in his power to prevail on *Best* to make his escape by a speedy flight; but *Best's* constant reply was, that numbers would never frighten him out of his duty, which he was determined to pursue, amidst every difficulty and danger. He a second time attacked the *Portuguese*; and in the space of four hours, drove them intirely out of sight, in
- d presence of thousands of the natives, who crowded to the shore to see this extraordinary and unequal engagement. In short, the fame of the *English* soon reached the *Mogul's* court, and raised his astonishment no less than it gained his esteem; for he always imagined, that no nation was equal in skill and valour to the *Portuguese* at sea. The brave captain, after making the best use of his victory for the prosperity of the factory, set sail for *Achen*, and obtained of the king a ratification and renewal of the former treaty with the *English* (P). Thence he went to the island of *Java*, where taking on board a rich cargo, he departed for *Britain*, and arrived in the river in the month of *July* 1614^f.

- f Sir *Thomas Smythe*, then governor of the company, was employed to remonstrate to the king, that it would be not only to the advantage of the company's affairs, but highly to the honour of the nation, if a person of rank and distinction were sent to the court of the *Great Mogul*, vested with the character of ambassador to the emperor, instead of the agent the company retained at the court of that monarch. This, it was thought, would give weight and consequence to their applications, and be more agreeable to the pride and pomp of the *Easterns*. Sir *Thomas Roe* was accordingly sent out in this high quality, and captain *Keeling*, *Sir Tho. Roe sent ambassador to the Great Mogul.*

* LED. Hist. p. 430.

f PURCHAS, v. i. PREVOST's Hist. des Voy. t. ii.

(P) The king of *Achen* earnestly desired of *Best* to commend him to the king of *England*, and tell him, he would be very glad to have a couple of fair women out of his country; for then, said he, if I have a son by one of them, I will make him king of *Priaman*, and of all

that country from whence you procure your pepper. This, said the monarch, will be of infinite advantage to you, as you may then go to your *English* king, without asking my consent about those commodities (1).

(1) See Harr. Coll. p. 137.

or, as some historians affirm, captain *Nicholas Downton*, was ordered to sea, with four fine ships, to convoy him to *India*, where he was safely landed, and afterwards performed his commission with great success. He attended the court for several months, got into a great degree of intimacy with the emperor, had valuable presents made him, and at last procured the end of his embassy; *viz.* some very considerable privileges, grants, and immunities for the *British* company. Sir *Thomas*'s journal affords matter of great entertainment as well as utility; and from his account of the *Mogul* empire (Q), did the *East India* company receive very accurate and distinct lights into the nature of the trade.

Settlements of the India company. THE *East India* company began now to extend her power, and the sovereignty of her mother country, over different parts of *India*. In the year 1616, they had settlements and factories at *Bantam*, *Jacatra*, *Surat*, *Amardavas*, *Agra*, *Azmiro*, *Bramapore*, *Calecut* (R), *Musulipatan*, *Pattapoli*, *Patana*, *Siam*, *Bencarmasse*, *Socodonia*, *Macassar*, *Acben*, *Jambe*, *Tewo*, *Ferando* in *Japan*, *Japar*, *Banda*, &c.^a The island of *Banda* was, by their industry, procured to the crown of *England*; the inhabitants surrendering it by a formal instrument, after their quarrel with the *Dutch*. Notwithstanding this, the *Hollanders* still attempted to reduce those places under their own power, pretending they founded their claim upon a more antient surrender. The *English* soon after procured *Lantore*, by a like solemn instrument of surrender.

A. 1615. Sir T. Shirley sent envoy to Persia, on account of the company. PREVIOUS, however, to this, many successful voyages had been made to various parts of the continent and islands of *Asia* and *Africa*. Among others, in the year 1614, a ship was sent with Sir *Robert Shirley* and Sir *Thomas Powell*, ambassadors from the crown for the *East India* company, to *Persia*. Nothing memorable in the voyage occurred, besides a plot formed by the *Baluches*, a people tributary to the crown of *Persia*, for seizing the persons of the *English* ministers; but their design was defeated, and the commission of the ambassadors executed to its full extent. Next year another fleet, besides that with Sir *Thomas Roe*, consisting of four ships, was dispatched to *Surat*, and other parts of the *East Indies*. In *October* they arrived at *Surat*, and found the natives and *Portuguese* at open war. In *January* the *Portuguese* admiral, with a fleet of six galleons, three men of war, and about sixty frigates, bore down on the *English*, said to be commanded by *Downton*. The *Hope*, a ship of 300 tons burthen, bravely began the fight, by attacking the *Portuguese*, before the other three *English* ships were come up. She fought desperately with four galleons, and was often boarded by the frigates, but as often repulsed the enemy, strewing her decks with the bodies of the slain. At last, as she was ready to sink under numbers, the *English* commodore came up, who soon turned the scale, obliging the *Portuguese* on board the *Hope* to save themselves by leaping over-board into the sea. The viceroy of *Goa*, who was on board the *Portuguese* admiral, perceiving that no force could prevail against an enemy determined not to be conquered, sent a number of fire-ships among them, which the *English* had the address and good fortune to escape. Defeated in every attempt, he retreated with equal dishonour and precipitation, leaving to *Downton* the glory of having triumphed over a fleet of ten times his number and strength (S). The *English*, having finished their commerce, set sail for *Bantam*;

Portuguese defeated by the English, with great loss.

^a PURCHAS, v. i. PREVOST'S Hist. des Voy. t. ii.

^b Collect. Harleian. Voy. t. viii. p. 249.

(Q) Sir *Thomas Roe* went from the *Mogul*'s court to that of *Persia*; when *Shah Abbas*, a prince worthy of a crown, finding the *Portuguese* settled at *Ormuz* extremely troublesome, by the perpetual incursions of their light frigates, entered into a treaty with the *English* ambassador. The king offered any reasonable indulgence to the *English* trading in *Persia*, provided they would assist his land army with a fleet, to expel the *Portuguese* from the gulph of *Persia*. The conditions of this treaty were, that the *Shah* would defray the charges of the expedition; grant the *English* a free trade, without duty or impost, over all the *Persian* dominions; and allow them a moiety of the customs raised upon merchandize in the gulph. On the other hand, the ambassador agreed, not only to drive the *Portuguese* from *Ormuz*, but to keep constantly two ships in the gulph for the protection of the trade. In consequence of this treaty, the company immediately sent out a fleet of five ships, amounting to forty guns each, taken all together. *Shah Abbas* likewise sent an army of 50,000 men, with trankies for transports, to land them on the island of *Ormuz*. The *English* soon destroyed the *Portuguese* fleet; but had one of their ships sunk by the fire from the castle. In the space of two months the *Portuguese*

were forced to capitulate, upon no other terms than liberty to depart without baggage, or any thing else belonging to them. The plunder, which was equally divided between the king's forces and the *English*, was very great. And tradition affirms, that so immense was the quantity of bullion, that it was measured by long-boats. *Shah Abbas* was punctual in the observance of his engagements, which were sacredly kept by his successor, till the year 1680; at which time the *India* company failed in their part of the contract; *viz.* keeping the gulph clear. It ought to be observed, that the *English* had a small settlement on the coast, previous to this, about seven leagues from the mouth of the gulph to the eastward, called *Jasques*; but it was continually harrassed by the *Portuguese* (1).

(R) *Calecut* is the capital of *Samorin*, a country stretching along the sea-coast from *Ticori* to *Chitwa*. The *English* had formerly a settlement there, which was afterwards removed to *Tellicbery*.

(S) *Domingo Francisco*, a *Portuguese* gentleman, afterwards taken in *Savally Road*, gave the following account of this armament; *viz.* that it consisted of galleons of 350 men and 40 guns each; 60 frigates of 30 men, 18 oars each, with swivels and small arms; 9 large

(1) *Hamilton's Hist. of the East Indies*, v. i. p. 102

a *jam*; but were scarce got from the bar, when they descried another *Portuguese* fleet, superior in strength to the former. After offering battle, *Downton* proceeded on his voyage, and arrived safe at the island of *Java*, where this brave officer died¹. Here they found it matter of the utmost difficulty to complete their cargoes of mace, &c. without involving themselves in quarrels with the *Dutch*; who, they had certain advice, had exerted the most despotic tyranny and arbitrary measures over the *English* settlement at *Macassar*. At last, after completing their loadings, they arrived in *England*, A. 1616, after a prosperous voyage.

A. 1616.

We find in *Purchas* a journal of a voyage performed this year to *Surat*, and from thence to *Jasques* in *Perfia*, by captain *Child*. At the former he had an engagement with the *Portuguese* carracks, which lasted three days, and concluded in his favour, he having burnt one of the largest ships of the enemy. *Purchas*, *Harris*, and a number of other collectors of voyages, recite several letters from the *East Indies*, in this and the ensuing year, with particular relations of the injuries sustained by our factories and trade from the *Dutch*. To mention them minutely, would be to write a volume, they were so many and various, 'Tis sufficient that we have it, upon incontestable authority, that no treachery which malice, envy, and jealousy, could suggest, was left unpractised. The great strides the company had made towards procuring a competent share in the spice trade, their insinuating manner with the *Indians*, and their great success, served only to hasten the destruction of their most valuable traffick (T). Repeated accounts arriving in *Europe* of the divisions between the *English* and the *Dutch* settlements, negotiations were set on foot for adjusting these mercantile affairs². For this purpose, king *James* had issued out two several commissions for treaties on this head; the one in 1613, when the conferences were held in *London*; the other in 1615, when this affair was canvassed at the *Hague*; both times to no manner of effect. The *Dutch* even boasted, that their money could determine the *English* court which way they pleased; and said, that every thing there was viewed through the medium of corruption, and a certain price affixed to each of the virtues¹.

Portuguese carrack burnt.

Treaties set on foot between the English and Dutch, which end in nothing.

But before we enter upon the particulars of a treaty, set on foot A. 1619, we shall touch upon two voyages, performed two years immediately preceding. A. 1617 the company fitted out five ships, one of 1000 tons, one of 900, one of 800, one of 400, and another of 150 tons burthen, well armed and manned, being the most complete squadron they had ever equipped, all under the conduct of commodore *Pringle*. After the fleet had reached a certain latitude, it divided, and branched itself into a variety of separate coasting voyages; hardly a

A strong fleet sent out by the English company.

¹ PURCHAS, *ibid.* LEDIARD, *Nav. Hist.* p. 432.
² PREVOST, p. 229. tom. ii.

² Harleian Collection of Voyages, tom. viii.

large ships, mounting from 10 to 28 guns, with their full complement of seamen, besides marines. He likewise related, that of *Portuguese* were slain, on board the *Hope* only, above 300 men, besides 150 drowned by leaping into the sea; that before she was boarded, her great and small arms did incredible mischief in all the galleons and ships that surrounded her; and that the loss of the whole fleet amounted to about 850 slain (1).

(T) Mr. *Thomas Spurway*, factor for the *English* company at *Banda*, in a letter to his constituents, acquaints them, that when he was at *Macassar* with captain *Courtthop*, in November 1616, a large *Dutch* ship came within five leagues of land, and sent her boat with eight men on shore: that the *English* met the *Dutch* at their landing, and told them, their lives were in danger, for that the king and court of *Macassar* were highly enraged against them, on account of some late outrages their countrymen had committed. While they were delivering this intelligence, the natives assembled about them; and the king, with a body of 2000 men, came down to the sea-side, with intention to destroy the *Hollanders*, had not the intreaties of the *English* prevailed and saved them. Next day the *Dutch* captain was imprudent enough to send another boat, with sixteen men armed; which so provoked the king, that he ordered his *curra curras*, or shallops, to board her, which they did, and put every soul to death, hewing them in pieces. The *Dutch* crew, upon their arrival at *Ambonya*, were ungrateful enough to report that the *English* had stirred up the *Macassars* to commit this massacre. *Spurway* farther relates, that on the

24th of *October* the *Oran Cayas*, or states of *Poelouway* and *Paleroon*, came on board *Courtthop*, to treat about a formal surrender of their islands to the *English*, in consideration of their being protected against *Dutch* usurpation, and annually supplied with rice, cloathing, and other necessaries, by the *English*. Captain *Courtthop* demanding, whether they ever had made any contract with the *Hollanders*, or entered upon any articles of a surrender? they all replied, they never had, nor would, upon any terms. with men they esteemed their mortal enemies. In December 1616 articles of cession, or surrender of those islands to the king of *England*, were executed by the *Oran Cayas* of the islands, and delivered into the hands of captain *Courtthop*, Mr. *Thomas Spurway*, and Mr. *Sophon Cusake*, to his majesty's use. They also delivered a nutmeg-tree with fruit upon it, and a live goat, by way of seisin; desiring to have the *English* colours planted on the islands, and thirty-six guns fired, in memory of this contract, cession, and resignation of their right; which were accordingly done.—We find the contract at large in the eighth volume of *Osborn's* collection of voyages; but it would be tedious and unnecessary to insert it, as the above is sufficient to evince the falsity of a fact which the *Dutch* constantly insisted upon. By an instrument of the same nature, the countries of *Wayre* and *Refingen* were formally surrendered and ceded to the king of *England*, A. 1616. And the preceding year captain *Castleton* was at *Banda*, when the *Oran Cayas* of that country gave up their rights, by articles and instruments equally full and valid (2).

Conditions of it.

settlement in the *Indies* that was not visited by some or other of the ships. The chief occurrences there were, as usual, a series of squabbles with the *Dutch*, in which, however, the latter generally paid for their insolence; though after the departure of the ships, they seldom failed of taking their revenge upon the factories. Before the return of this fleet, two ships more were sent out in 1618, to *Surat*, *Acben*, *Bantam*, and other parts of the *East Indies*. The *Dragon*, one of the ships, was set upon by a fleet of six *Dutchmen*, just as she had got out of the harbour of *Tecoo*, and, after an obstinate defence, taken and condemned with her cargo; the men being treated with the utmost barbarity (U) ^a.

These perpetual contentions, and the fruitless issue of the former conferences, rendered a third negotiation absolutely necessary. This treaty was managed by commissioners appointed by the *India* companies of both nations, under the direction of the plenipotentiaries of *Great Britain* and the States General. On the 7th of *July*, this year, an agreement was signed, by which it was stipulated, that all former injuries should be forgotten on both sides; that the companies of either nation might enjoy full and perfect liberty to trade, but without neglecting the respect due to the trading companies of two nations, joined in amity and alliances: that the prices of pepper and other commodities should be adjusted: that the islands of the *Moluccas*, also *Amboyna* and *Banda*, should belong to both nations conjointly, the *English* possessing one-third of the traffick of all those places, and the *Dutch* the remaining two-thirds: that the charge of the fortifications in those islands should be levied by an imposition on the spices of their growth; and that what related to the equipping ships of war, or others, for the protection and defence of their trade and settlements, should be committed to a council of defence, composed of persons in the service of the different companies: that the fortresses, as above, should remain in the hands of those at present in possession of them; and that such forts as had been acquired by the combined force, and at the joint expence, should remain the property of both, and be garrisoned by the troops of both nations, in such manner as the council of defence should think fit to determine: that henceforward, and in all time to come, the intire trade to *India* should remain free, equally to both nations; neither of them pretending to undermine or injure the other, by separate fortifications, or clandestine treaties with the natives: that to corroborate and confirm this contract, both companies should respectively solicit and move their several governments not to erect any separate companies ^b ^c.

^a LEO. Nav. Hist. 427.

(U) When captain *Courtboep* was at *Poleroon*, after its surrender, he descried three large *Dutch* ships coming towards him with bloody flags. Knowing that it would be impossible for him to withstand their superior force, he landed some ordnance, and erected batteries on each side of the road, to protect his ships, and prevent the *Dutch* from entering it. Finding themselves disappointed, they went to sea again, and met with the *Swan*, an *English* ship, which they took. *Courtboep*, in the mean time, built a little fort, where he resolved to maintain himself against all the force the *Dutch* could bring; but he was deserted by a number of his men, who, dreading the fatigues and hardships of a siege, fled to the enemy. Thus his ship being left defenceless, she fell a prey to the *Dutch*, who returned to *Poleroon*, after the capture of the *Swan*. *Courtboep* finding it would be impossible, after the desertion of his men, to stand long out against so superior an enemy, dispatched Mr. *Spurway* with a *Shabander*, and several *Oran Cayas*, to the *English* factory at *Bantam*, to acquaint them with his situation. The *Dutch* gave chase to the little vessel that carried them, and would infallibly have taken her, had not Mr. *Spurway* put into *Bouton*, and been protected by the king, who sent him and his company to the farther part of the island, where he provided a vessel to carry them to *Bantam*. Here they arrived in *June* 1617; but *Courtboep's* first expectation of relief was A. 1618, by an express from Sir *Thomas Dale*, informing him, that he was arrived with a stout fleet at *Bantam*, after defeating the *Dutch* fleet on the coast of *Java*; and that he would speedily come to him to call the *Dutch* to a fresh account. The president and factory of *Bantam* sent letters and stores by the same ship, assuring him of immediate relief. The brave *Courtboep*, however, bravely defended himself another whole year, in daily expectation of reinforce-

ments, or Sir *Thomas Dale's* Squadron. In *January* 1619 he dispatched Mr. *Robert Hayes* to treat with the *Oran Cayas* of *Lantore*, about surrendering their country to the *English*; a proposal to which they unanimously acceded. What a cruel stroke was it to this brave and diligent officer, that, after defending his little fort, upon which depended the whole *Bandanese* trade, for above two years; after procuring the surrender of all those important islands to the crown of *England*; after promises of speedy reinforcements; and after so many gallant but fruitless efforts to drive the enemy from the coasts, at last to receive advice, that the *English* admiral was dead, the other officers upon bad terms with each other, the fleet dispersed upon different voyages, and four of them fallen into the hands of the *Dutch*! But determined, though deserted, never to abandon the trust reposed in him, he went with a vessel to *Macassar*, to procure stores for his fort. In his voyage he was met by a large *Dutch* ship, which he fought for some hours, till he was shot in the breast mortally. Finding that his vessel must strike, he plunged himself into the sea, to avoid falling into the hands of an enemy, whose cruelty he was no stranger to; and thus ended the life of one of the bravest officers, and faithfullest servants, the company ever employed. Mr. *Hayes*, after obtaining an instrument of the cession of *Lantore* to the king of *England*, was returned to the fort, just as advice of the brave *Courtboep's* death arrived. Upon this, he was appointed to the chief command; and soon after, by means of an intercepted *Dutch* letter, came to know that a treaty was concluded between the *Dutch* and *English*. The packet he immediately sent to the *Dutch*, to take away every pretence from them of continuing their hostilities (1). Notwithstanding this, as soon as their power was superior to Mr. *Hayes's*, they proceeded to such acts as we shall relate in the text.

during

- a during the period fixed for this solemn agreement : that if, through death, or any other accident, it should so happen as that no person should remain to take care of the factories of either nation, that then, and in that case, those of the other nation, on the place, should take into their protection, and account for, all the effects so left : and finally, that this treaty should remain in force for twenty consecutive years ; and that all disputes arising during its continuance, which should not be accommodated by the councils of the companies, should be settled and determined by the King of *Great Britain* and the States General of the *United Provinces*. The treaty was ratified by king *James*, in *July 1619* ; in which instrument his majesty promised not to grant another charter to any other persons whatsoever, during the term mentioned in the above agreement ^a.
- b It was now imagined, that all disputes with the *Dutch* were at an end, at least for twenty years ; which was very far from being the case. During this negotiation, hostilities were carrying on at *Jacatra*, where the *Dutch* seized upon, and blew up, an *English* magazine, under pretence of their siding with the *Javanese*, with whom they were then at war. It must be acknowledged, there seems to be truth and justice on their side on this occasion ; for even our own journalists own, that the *English* fired upon the *Dutch* fort, and took every opportunity, under the protection of Sir *Thomas Deal*, who commanded a squadron of eleven sail, of retorting former injuries received from the *Dutch*. Certain it is, our traders have had great reason to be incensed at a people who lost no opportunity of hurting them ; but whether, in the present case, where they acted as indirect auxiliaries to the *Javanese*, they complain with justice, is a question which the most prejudiced person must determine against them, and in favour of the *Dutch*. *War in Java. The Dutch fully blamed*
- c

WHAT they transacted after the treaty was concluded and proclaimed in those parts, is a case of a very different nature, wherein the *Dutch* shewed themselves equally perfidious and inhuman. Their treacherous attempts to reduce those persons whom they had just engaged in the most solemn alliance and obligation to defend, can admit of no palliation or apology. That their general in *India* should, immediately upon the back of a treaty, which assured the *English* of all manner of security, get together a great fleet, under specious pretences, to attack *Lantore*, the undoubted property of the crown of *Great Britain*, and commit the most savage cruelties upon the inhabitants, is an unheard of perfidy. That he should next fire the town, spoil and pillage the *English* warehouses, carry off their stuffs, money, bullion, 23,000 lb. weight of mace, 150,000 tons of nutmegs, making prize of every thing, is an act of so black a complexion, as would disgrace a nation of *Hottentots*. But perhaps the most vile and horrible of all is, that after having thoroughly ransacked, pillaged, and plundered every thing, he should then proceed to the last instances of inhuman barbarity, by seizing, stripping naked, binding with cords, whipping, and loading with irons, the *English* factors. And that, after these wanton marks of a savage cruelty, he should have them hurled headlong from the walls, and conclude the last scene of the shocking tragedy by insolently dragging the miserable remains in chains through the streets. All these are facts, proved upon the most undeniable evidence, not denied, and but very lamely excused by themselves ; yet never punished with that vengeance becoming the character of this nation, and the freedom of this constitution. The factory at *Poleroon* shared the same unhappy fate ; and thus the affairs of the company were suddenly plunged into greater confusion, distress, and misery, than they ever had undergone, and just at a period in which they had all the reason in the world to expect the happiest effects from the late treaty. *Treachery of the Dutch. Cruel massacre of the English at Lantore and Poleroon.*

As it is really inconsistent with our natural disposition to recite at large scenes which equally disgrace and shock humanity, we must beg leave to refer the reader to the original papers, to be found in the 8th volume of a collection of travels, compiled from the manuscripts in lord *Oxford's* possession ^o. There he will find ample satisfaction, and matter enough to satiate the most sanguine and bloody nature, temper, and disposition (W). All that the *Dutch* pretended to allege in vindication of these outrageous proceedings was, that they having a more ancient right to these islands, no subsequent act of the natives, who had before given up all *Dutch defence of their conduct.*

^a DODSLEY'S History of the East Indies, vol. ii.

^o P. 246.

(W) The reader cannot but observe, how flagrantly the treaty was broken by the *Dutch*, as soon as concluded. It was expressly stipulated, in the 23d article, that all places in *India* should remain in the hands of the then possessors ; notwithstanding which, they invaded the islands of *Lantore* and *Poleroon*, which were in possession of the *English* ; treating the natives and *English* factors in the manner we have mentioned above. In another article it was stipulated, that no enterprize was to be undertaken, but by joint consent and joint

forces ; and yet the *Dutch*, against the repeated remonstrances and protests of the *English*, attacked and subdued the *Bandaese*, with *Dutch* ships only. Whence it appears, that their resolution, at the very time they executed the treaty, was, that the *English* should enjoy the benefit of it no longer than till they were in a condition to expel them from the *Indies* ; a conduct that would disgrace the most piratical and uncivilized government.

Answer of the
English.

their privileges, was of force to invalidate it: and further, that the war being carried on ^a against the natives, as principals, those who had thus, contrary to their engagements, assisted them, had no manner of right to complain of the event of a war of their own seeking. But the fallacy of this argument was irrefragably proved by assured evidence, that the natives had never ceded their right to the *Dutch* [†]: that in the former disputes, the *Hollanders* pretended to no more than a promise from the natives, that on certain conditions they were disposed to surrender their rights to them: that upon the quarrel between the *Bandanese* and them, arising from their tricks and double dealing, a cession, by a formal instrument, was actually made to the *English*; besides, all this was farther confirmed by the express terms of the late treaty [‡]. The truth is, the sweets of profit flowing from the spice trade, and their signal successes from the first institution of the company, induced the *Dutch* to extend their power and influence ^b by every possible method, and at all events. They were far from being delicate in their choice, means, and expedients; a scruple seldom found to obstruct projects, where gain is the motive, and remarkably wanting in this penurious and indefatigable people, who make no difference between fraud, force, or persuasion, when the same ends were attained by either of these means. Their attacks upon the *Portuguese* at *Malacca* justify this assertion, as well as their late conduct to their allies the *English*.

Advantages of
the Dutch set-
tlements.

THE strong fortress at *Batavia*, which soon grew the head of that vast empire which they established in *India*, was a kind of protection for all their practices; their power screening them from punishment. This was an advantage which the *English* at that time wanted, and stood greatly in need of. Whether this proceeded from the nature of our government, so much ^c inclined to monarchy, and the less important concerns of a court, ignorant of the advantages of this trade, and requisites to secure it; or whether it was owing to the want of power at that time to afford the merchants the protection they required in so momentous a conjuncture, we shall leave the reader to determine.

S E C T. III.

Of the farther disputes between the English and Dutch companies; of the negotiations, conferences, and treaties, to put an end to them; of the fatal catastrophe at Amboyna, with other particulars.

The remissness
of the English
administra-
tion.

WE will shew, in our account of the *Dutch East India* company, how they date a sort ^d of sovereign power in the *Indies*, from the first foundation of their great settlement at *Batavia*, and to what an astonishing power and influence they in a short time arrived. Certain it is, that from the embarrassments, corruption, and ignorance of king *James's* court, from the differences then subsisting between him and his parliament, from the artful and bold conduct of the *Dutch*, as well as the pusillanimity, avarice, and timidity, of certain leading men in *England*, no satisfaction was obtained by the government, no remonstrances made in behalf of the ruined subjects and wounded commerce, nor indeed any other steps taken which the credit of the administration, justice to the public, and the nation's honour, absolutely required.

A. 1620.
The company
fits out a new
fleet for the
Persian trade.

BUT before we enter upon the particulars of the conduct of our allies the *Dutch*, we shall ^e stop to recite briefly a voyage in which the *English* bravery once more triumphed over *Portuguese* force. In the year 1620 the company built four new ships, from 800 to 300 tons burthen. This fleet set sail in *February*, under the conduct of captain *Shilling*; and fell in with a *Portuguese* squadron, off the east end of *Jasques Road*, where it waited to intercept the *English*, and ruin their *Persian* trade. The *Portuguese* fleet consisted of four galleons of 40 guns and 350 men each, two galliots and ten frigates. These being engaged by *Shilling*, the battle continued for nine hours without intermission, night separating the combatants. Next morning, the enemy finding the *English* a match for them, declined renewing the fight, and had the mortification to see *Shilling* land the company's money and goods (the very prize they fought for), without preparing to molest him. A few days after, receiving a supply of ^f men and ammunition from *Goa*, they ventured a second time to attack the company's fleet; but with less success than before, two of their ships being sunk, the rest greatly damaged, and a number of their men killed and wounded. The *English* sustained hardly any other loss besides that of the brave *Shilling*, their commodore, who was mortally wounded by a musket

The Portu-
guese defeated.

a musket bullet. After this engagement the fleet took two rich *Portuguese* carracks, and then separated upon different voyages ^a.

But to return to the affairs of the company towards *Java*, *Banda*, and *Ambayna*; the remissness and want of vigour in the *English* administration, encouraged the *Dutch*, who had long formed the project of wresting the spice trade wholly out of the hands of the *English* company. They proceeded in the year 1623 to commit, if possible, greater barbarities at *Ambayna*, than two years before they had done at *Lantore* and *Poleroon*; their actions in each being just matter of reproach to human nature. The island of *Ambayna*, which is forty leagues in circuit, is situated near *Scron*, giving name to some other little island in its vicinity. Its chief production is cloves, the principal subject of its traffick; and in order to collect and buy up this commodity, the *English* company had planted in it no less than five several factories, the chief of which was at the city of *Ambayna*. Here the agents of the company resided, and from hence directed the subordinate factories of *Ilitto* and *Larica*, on the same island, and of *Lobo* and *Camballo*, situated on a promontory of the adjacent island of *Scron* ^b. The *Hollanders* had four different forts, well provided with men, stores, and ammunition. The chief strength was at *Ambayna*, where the fortifications were strong and regular, well mounted with a great number of brass ordnance. One side of the fort was defended towards the land by a broad and deep trench, filled by the sea, together with a number of batteries and redoubts at proper distances; the other side was washed by the ocean. It was garrisoned with 200 *Dutch* soldiers, a company of free burghers, and 400 mardykers, who had been taught the use of arms, and were obedient to the *Dutch* governor. The ships which constantly lay in the road, either for traffick or the defence of the fort, added to its security; this being the rendezvous for the trade of *Banda*, as well as that of the rest of *Ambayna* ^c. As hostilities had ceased from the time of the massacre at *Lantore*, the *English* lived in the town, under protection, however, of the citadel, in perfect ease and security, both from the late treaty, and from the antient amity between both nations. The conduct of the *Dutch* at *Lantore* was attributed to the rashness of some of the *English* factors, as well as to the brutal ferocity of the *Dutch* governor; but from hence no deduction was made to the prejudice of the *Hollanders* in general, especially as many of the *Dutch* at *Ambayna* exclaimed with great warmth against that action. In short, every thing contributed to lull the *English* into a security which soon terminated in their ruin.

Near three years were elapsed since the conclusion of that treaty between the two companies, when fresh cause of discord arose. The *English* factors complained of the unreasonable and unnecessary charge which the *Dutch* pretended to have incurred in repairing and maintaining the fortifications and garrison. They alleged, that the *Hollanders* answered their own proportion of the expence in provisions and cloth of *Coremandel*, at three or four times the prime cost; whilst ready specie was insisted upon from the *English*. By such proceedings it was affirmed, the latter were made to pay two-thirds of the charge, which ought to have been equal and common to both. Perpetual disputes resulting from this grievance, the affair was at last carried before the council of defence at *Jacatra*, in the island of *Java*. But the council not being able to bring it to a final determination, to the satisfaction of all parties, the state of the case was remitted to *Europe*, to be laid before the companies, or, in the dernier resort, to be adjudged by the king of *England* and the States General, in terms of agreement for that effect ^d.

DURING the deliberations in *Java* and *Europe*, the breach at *Ambayna* grew still wider; the *English* more loudly complaining of the oppression of the *Dutch*; while they, on the other side, exclaimed against the *English*, for their unwillingness to support the expence of a fortress, of which they equally shared the advantages with them. But though those mutual accusations were warm, no danger was apprehended of an open rupture, nor indeed of any secret practices against each other. The following incident, however, shews the deceitfulness of those appearances of tranquility, which, as it terminated in the final destruction of the *English* settlements in those parts, in the breach of that amity between both nations which had long subsisted, and has ever since been matter of animosity between the *English* and *Dutch*, we shall recite more at large than we have done any preceding transaction.

A SOLDIER of the *Dutch* troops, by nation a *Japanese*, came one night to a sentinel, posted on the wall of the citadel, and amidst other discourse with him, happened to ask some questions concerning the strength of the fortifications, the number of cannon, and of the garrison; questions extremely natural for a stranger, who had no farther intention than the bare gratification of his curiosity. This fellow had been occasionally, amongst others, introduced into the citadel, to relieve the garrison in the day, the *Japanese* troops not being permitted to remain in the fort at night, as not being confided in equally with the *Dutch*. An officer, who

*A recital of
the horrid mis-
fortune of the
English at
Amboyna.*

had seen the centinel in conversation with the *Japanese*, interrogated him concerning the sub-
ject of their discourse; and being informed, he laid the whole before the governor, who had
the *Japanese* seized, upon a suspicion of a treasonable design against the citadel. Being put
to the torture, he was compelled, by the insupportable torments he underwent, to acknow-
lege himself, and some others of his countrymen, guilty of the crime laid to his charge;
upon which, the supposed accomplices were seized, and put to the same trial, together with a
Portuguese, who superintended the *Dutch* slaves. This examination lasted four days, during
which, the *English* went as usual to the citadel. As they were not conscious of guilt, they
apprehended no danger, though they saw the prisoners, and heard the cause of their torture.
They were in fact strangers to the *Japanese* and *Portuguese*, who were then under punishment.
At this time *Abel Price*, formerly a surgeon to the *English* factory, was prisoner in the cita-
del, for having threatened, in a drunken frolic, to set fire to the house of a *Dutchman* against
whom he had some pique. *Price* being dragged from the dungeon where he lay, saw the
Japanese groaning under the agonies of the torture he recently underwent, and was peremp-
torily told, that the *English* were accused, by those two wretches, of being confederates in
the conspiracy; and that unless he confessed the guilt, he should sustain equal, if not more
exquisite tortures than those he had before his eyes. Such menaces, suddenly followed by
their execution to the utmost rigour, soon overcame the constancy and conscience of the
miserable wretch; who, in hopes of being relieved from the rack, answered every question
in the manner the judges required*. Immediately upon this confession, captain *Towersson*,
and the rest of the *English*, were sent for; who having no notice of what passed concerning
Price, or suspicion of what was intended, immediately obeyed the summons, all excepting
two, who remained in the factory upon some business. As soon as they arrived, they were
informed of the charge against them, and closely confined in irons. *Towersson*, with one
more, was kept prisoner in the citadel; and the rest were put in irons on board the ships in
the harbour. These proceedings were followed by seizing those who remained in the factory,
together with the goods, money, chests, boxes, books, writings, and other things. On the
same day, the *English* at *Hitto* and *Larica*, and a few days after the factories of *Lobo* and
Camballo, were treated in the same manner, the company's servants being brought in irons
to *Amboyna*.

*All the Eng-
lish seized and
put to the tor-
ture.*

THEY were all no sooner in custody, than the governor and fiscal proceeded to their exa-
mination; when *John Beaumont* and *Timothy Johnson* were first called upon. Those wretches
were brought from the ships to the citadel, and immediately separated; *Johnson* being brought
to the rack, while *Beaumont* was placed in an adjoining apartment, from whence he could hear
the screams and dismal groans of his companion, at every application of the torture. When
he had fully experienced the torments they could inflict, *Price* was brought in to confront
him: but *Johnson* persisted in denying every thing laid to his charge; upon which *Price* was
ordered out, and he applied again to the rack. For above an hour he obstinately continued
to assert his own innocence and ignorance of the whole affair, in defiance of all the anguish
of the torture; when at last, drenched over with water, he was most cruelly scorched and
burnt all over his body; and in this condition thrown into a corner, where a guard was set
over him†. Well might the lines of *Virgil* be repeated, *Auri sacra fames quid non mortalia
peſſora cogis!* Nothing could exceed the inhumanity, cruelty, and barbarity, of the judges,
but the constancy of some of the accused. *Emanuel Thomson* succeeded *Johnson*; and his
punishment was equal in degree, but not in duration, to the former; he being tortured for
no more than half an hour, and then flung aside to make room for *Beaumont*, who had all
this time been within hearing of his piteous shrieks. While they were equipping *Beaumont*
for the torture, he began denying, with horrid imprecations and oaths, the whole charge:
upon which he was for this time dismissed, the governor pretending to be moved with com-
passion at his extreme old age. Next day nine more brought from the ships; when *Edward
Collins*, denying with deep execrations the whole allegation, was tied hand and foot to the
rack, a cloth bound round his neck, whilst two men, with earthen jars of a prodigious capa-
city, stood ready to pour the water into it. The sight of this torture made him pray for a
respite, and promise an intire confession; but no sooner was the cruel apparatus removed,
than he again asserted his innocence with redoubled vehemence. The fiscal enraged at his
perseverance, ordered the torture to be again applied, on which he repeated his request and
promise; but, said he, as I know the torments you can inflict, I am ready to confess what-
ever you are pleased to desire, if you will first oblige me, by telling me what I am to say.
Then pausing for some time, he proceeded to relate, that some months before, himself, to-
gether with some others of the prisoners, had conspired to surprize the citadel with the assist-

*Method of
questioning by
the torture.*

* Collected Voy. from W. HADLEY's Lit. tom. viii. p. 227.
vol. ii.

† DODSLEY's Hist. of the East Indies,

a ance of the *Japanese*. He was interrupted by the fiscal, who asked if *Towerfon* was not a confederate in the plot; to which he answered no. The fiscal then told him he lied, and insisted upon his acknowledging that this *Towerfon* had called all the *English* together, and told them, that the abuses and intolerance of the *Dutch* had obliged them to think of that plot, which wanted nothing to render it successful, besides their consent and secrecy. A *Dutchman* who was present interrogated him, whether they had not sworn secrecy on the Bible? This *Collins* denied with vehement oaths, declaring that he was utterly ignorant of any such matter: but upon their ordering him to be tucked up, he recanted, and spoke as they prompted. He was then asked, whether the rest of the *English* factories were not consenting to this plot? whether the *English* president at *Jacatra*, or *Welden*, their agent in *Banda*, were not
b privy to the conspiracy? to all which interrogatories he answered in the negative. Being still interrogated by what means the *Japanese* were to have executed their purpose? and he-
fitating, unable to give an answer, the fiscal helped him out, by asking, whether two of the
Japanese were not to have gone to each point of the citadel, and to the door of the governor's house, ready to murder him, when he should come out to enquire into the cause of the tumult, which was to have been raised without? A by-stander, irritated by this method of proceeding, called out to the fiscal, that he should cease to tell the criminal what he was to say, and let him speak for himself. Upon which, that equitable judge dropped the question in hand, by enquiring, what reward the *Japanese* were to have for their service? *Collins* answered, a thousand rials: but unable to say any thing concerning the time of executing
c the plot, or any other particular that could give it an air of credibility, he was dismissed².

The scandalous conduct of the Dutch fiscal.

THE person next questioned by this hellish apparatus was *Colson*; who was so terrified with the sight of the rack, and the torments inflicted upon his companions, that he answered in the way he thought would be most agreeable to his judges; though, after coming out, he fell down upon his knees, asking forgiveness of Heaven for the untruths he had alleged, and deeply protesting his innocence and intire ignorance of the suspected conspiracy³. *John Clark*, who succeeded *Colson*, was not so easily terrified and brought to submission; this man for two full hours withstanding the most excruciating tortures applied by fire and water, to compel him, through agony of pain, to confess what he was ignorant of. To give the reader
d a faint idea of *Dutch* barbarity, we will briefly relate the method in which his judges proceeded in the examination of this miserable man. His arms were fastened at as great a distance as they could extend them upon a large door, by means of iron staples drove into the extremities of it. His legs being bound and stretched out in the same manner, a cloth was bound round his face and neck, so close as to contain the water poured into it. Then did the executioners pour jars filled with water into the cloth, which rising above his nostrils and mouth, obliged the unhappy sufferer to draw it in, with every attempt to breathe, in large quantities, till, by repeated draughts, he was so glutted, that (what is shocking to imagine) his bowels seemed to burst out at his mouth and nostrils, his body to be swelled to twice its dimensions, his cheeks inflated like bladders, while his eye-balls were ready to start from their
e orbs. Thus was this miserable creature handled, and then taken down to prepare him for a second trial, by making him disgorge what had cost him so many nauseous and painful draughts. After he had sustained his second trial with equally astonishing constancy, the fiscal and his tormentors cried out, that this must be an enchanted person, a witch, or devil, to support such insufferable torments. Imagining the incantation might reside in his hair, he ordered it to be cut off, and a third exertion of inhumanity was made. He was hoisted up as before, when those more than savage wretches caused burning torches to be held to the soles of his feet, till they were extinguished by the fat that dropped from him. Then fresh lights were applied; but this repetition failing also, they began to extend their diabolical barbarity to the other parts of his body, by scorching the palms of his hands, his arm-pits, and
f elbows. Exhausted at length, and overcome by torture, he seemed willing to yield; but not being able to frame a relation, in such manner as to make it at all probable, his judges were reduced to the necessity of leading him, by questions so devised as to render it impossible for him to mistake their meaning⁴. However, with all their cruelty and cunning, all they could draw from him consisted in bare negatives and affirmatives, he just assenting with a *yes* or *no*, to whatever they signified to be agreeable to them. Thus treated, he was carried out by four blacks, and thrown into a horrid dungeon, where he lay without the assistance of a surgeon to dress his sores, till his flesh putrifying, he was filled with maggots, in a manner most loathsome and barbarous. Thus ended the christian work of *Sunday*, it being dark before his examination was finished. The prisoners brought from *Kitto*, who had all this

The English tortured by fire and water.

² In Collect. cited, *ibid*.

³ SALMON, *ibid*.

⁴ DODSLEY, vol. ii.

time waited their own turn of suffering, were remanded to prison, and thrown, loaded with a irons, into the same dungeon with *Clark* and his fellow-sufferers ^a.

NEXT morning, *William Griggs*, *John Fardo*, and some *Japanese*, were brought to the place of torture. The *Japanese* were constrained by numberless acts of barbarity to accule the two *Englishmen*; and *Griggs*, to avoid the same torments, acknowledged their allegations. The same conduct was observed with regard to the other *Japanese* and *Fardo*, though this last continued obstinate in his denial of the charge, till he had suffered the torture by water. Upon their confession, they were remitted back to prison, and *Beaumont* was brought a second time to the torture. *Griggs* was produced to confront and charge him with having been present when the conspiracy was formed; an allegation, which he denied with deep execrations and tremendous oaths, till plied with repeated draughts of water, he was compelled to submit. Yet ^b the moment he was brought down from the rack, he not only declared in the most positive terms, that all he had confessed was false, but also impossible, as he made appear from a variety of circumstances. However, the terror of a repetition of the torture made him sign his confession; which done, an iron bolt, of intolerable weight, and two shackles, were rivetted to his legs, and he remanded to the loathsome dungeon from whence he had come ^c.

The remarkable conduct of *Sharrock*, one of the English prisoners.

THE next person brought to judgment, was Mr. *George Sharrock*, some time an assistant at *Hitto*. This unfortunate gentleman was no sooner brought to the place of torture, than he sent up a prayer to God, that in order to shun the grievous torments his countrymen had sustained, he would enable him to frame such probable falsehoods against his own conviction, and the innocence of his companions, as might serve at once to persuade his judges, and deliver ^c him from the torture. When he was brought to the rack, where the tormentors stood ready with pitchers of water and lighted tapers, the governor and fiscal proceeded to examine him. But *Sharrock's* conscience overcoming his fear, he fell down upon his knees, protesting before God and man his innocence, with an earnestness that would have staggered persons who were not proof against conviction, conscience, and the feelings of humanity. He was therefore questioned by the torture, and told, that if his confession was not ample and complete, he should first be tormented with all the power of fire and water, and then dragged by the heels to end his life on the gallows. Still, however, persevering in his innocence, the fiscal ordered the horrid operation to be performed; upon which he requested a moment's respite, alleging in his vindication, that he was at *Hitto* on new-year's day (the day on which the pretended conspiracy was ^d supposed to have been planned); from which time to the present, he offered to prove, by witnesses of good credit and faith, both *Dutch* and *English*, he had never been at *Amboyna*. But, upon a renewal of their menaces, he told them, that he had often heard *Clark* say, that he would be revenged on the *Dutch*, for the insufferable wrongs they had done the *English*; for the execution of which, *Clark* said, he had proposed an excellent plot to captain *Towerjon*. All this while, the governor and fiscal expressed their satisfaction in his plausible tale, by significant gestures and joy in their countenances. *Sharrock* added, that *Clark* said he had intreated permission of *Towerjon* to go to *Macassar*, to consult with the *Spaniards* proper measures for seizing upon the lesser factories in the islands of *Seron* and *Amboyna*, when no ships were there. Being asked what answer *Towerjon* gave to *Clark's* proposal? he replied, that *Towerjon* was to ^e the highest degree incensed against him for harbouring such a villainy, and never afterwards could endure the sight of *Clark*. The fiscal, displeased with this latter part of his confession, told him, in an enraged tone, that he lied, and threatened him afresh with the torture ^f. *Sharrock* then once more begged a respite, and began a tale quite different from the former; viz. that upon a certain day *Clark* told him of a conspiracy to seize the citadel, and asked him to be of the plot. To which he replied, by enquiring if captain *Towerjon* was privy to it; to which *Clark* answering in the affirmative, he, *Sharrock*, consented to do as others did. Thus he proceeded varying in other particulars from the confession they wanted him to make; so that, despairing to gain their ends with him, he was remanded back to his dungeon, whence he was brought the day following, and compelled by menaces to sign his confession, though he told the fiscal to his face, that what he signed, to avoid torture, was absolutely false, and without the least foundation. The fiscal reproaching him with lying, he broke out into bitter invectives, accusing him of shedding innocent blood; which, said he, you must answer to your God at the day of judgment ^a.

JUST in the same manner they proceeded with the other prisoners, forcing them, by unsufferable barbarities, to a confession; and when the extremity of torture deprived them of their senses, leading them to the confession they would extort. Yet what is remarkable, and sets their innocence beyond all suspicion, is, the conduct of the judges on this occasion, the manner of their examination, but, above all, their disavowal of all they confessed on the rack, before it

^a DODS. Hist. of the East Indies, vol. ii. Harl. Collect. Voyag. vol. viii. p. 246. Hist. vol. i. fol. p. 136.

^b DODS. ibid.

^c SALMON'S Mod. Vid. vol. ii. of the Harl. Collect. of Voyages, p. 222.

a was applied, at the time it was applied, and after it was removed, which is corroborated by their final renunciation, the moment before they were put to death, of their signed confessions. Their solemn protestations and appeals to the tremendous tribunal of the Almighty at this awful period, could not possibly leave a doubt in the mind of the most partial *Dutchman*; yet did they, contrary to evidence, to conscience, and the dictates of reason, feeling, and humanity, persevere in their damnable and detestable barbarity.

On the 25th of *February* all the prisoners, *English*, *Portuguese*, and *Japanese*, were solemnly A. D. 1622. condemned to death, some only excepted, who incontestably proved their being at *Hitto*, at the time of the pretended conspiracy. The day following they were brought into the great hall, to be prepared by the *Dutch* ministers for the awful transition; Mr. *Tower*son and *Thompson* being b excepted in the number. Here the unhappy *English* accused the *Japanese* of having brought to misery and death men they had hardly ever seen, or ever conversed with, which the others excused, by shewing the wounds received by the torture; adding, that flesh and blood could not withstand a trial, which would even change the nature of stones, and make inanimate things feel. *Collins* and *Beaumont* were respited and pardoned; the first having drawn lots with four others; and the latter owing his life to the intreaties of two *Dutch* merchants. The c remaining ten, with one *Portuguese* and eleven *Japanese*, were led next day to condign punishment, all of them protesting their innocence with their last breath*. Thus fell the *English* factors victims to the avarice, jealousy, resentment, and barbarity of the *Dutch* company, with circumstances of cruelty which leave an indelible stain on the reputation of that people, and will ever be just matter of reproach, disgrace, and infamy to human nature, as well as of eternal resentment and animosity in the *English* nation (X). *The English executed.*

The day following was spent, by order of the governor, in public rejoicings, and thanksgiv- Rejoicings of ings for so signal an escape and deliverance from a pretended conspiracy, and for the iniquitous the Dutch. extirpation of their rival traders. On the succeeding day, *Beaumont*, *Sbarrock*, *Collins*, and *Webber*, were brought before the governor, who informed *Sbarrock*, that he was to go to *Jacatra*, and rely upon the general's mercy; and the rest, that they were pardoned by his own grace and compassion. He then entertained them with wine, and other instances of a false and treacherous regard^p, verifying, by his conduct, the truth of the poet's remark, that

d *A man may smile and smile, and be a villain.*

Business being thus ended at *Amboyna*, the governor and fiscal proceeded for *Banda*, The Dutch where, after the severest scrutiny into the conduct of Mr. *Welden*, the *English* agent, nothing governor and was found that could in the least justify a suspicion, or answer their purpose. They therefore fiscal proceed returned, happily disappointed of their cruel intention of repeating the late horrid tragedy. *Welden*, perceiving the disorder of the company's officers at *Amboyna*, hired a vessel, and directly sailed thither. Having arrived, he sent for the company's servants, remanded by the *Dutch* governor to the upper factories, and minutely examining them, and comparing their report with the dying declarations of those who were executed, he could not doubt of its being e a premeditated scheme of the governor's to ruin the *English* trade there. Finding it neither

* Ibid. etiam. DODGE. Hist. East Ind. tom. ii.

^p Ibid.

(X) The following declaration of *William Griggs*, and some others, was wrote in his table-book, which he delivered to *Powel*, and the others who were pardoned, and by them transmitted to Mr. *Welden*. "We, whose names are here specified, *John Beaumont*, *William Griggs*, *Abel Price*, &c. lying prisoners in the ship *Rotterdam*, being apprehended for a conspiracy to blow up the citadel of *Amboyna*, and condemned to death for the same, after we were constrained, by the force of cruel tortures, to speak and confess what we knew not, and were innocent of, the which we take upon our deaths and salvation; and that we now die guiltless of the charge, as we hope to receive mercy. This we desire that our employers may know, and resent, the injuries we have received; and that you too (meaning Mr. *Welden*) may be on your guard, for they intended to bring you too in guilty. Written in the dock, *March* 5th, 1662."

The difference of the old and new style makes the variation in the dates.

Samuel Colson wrote on the margin of a common prayer book the following solemn declaration:

"*March* 5th. Understand that I *Samuel Colson*, late factor of *Hitto*, was apprehended for suspicion of conspiracy, and for any thing I know must die for it. Wherefore having no better means to make my innocence known, have wrote this in this book, hoping some good *Englishman* will see it. I do here, upon my salvation, as I hope by his death and passion to have redemption for my sins, declare that I am clear of all such conspiracy; neither do I know any *Englishman* guilty thereof, nor other creature in the world. As this is true, God bless me.

Samuel Colson."

On the opposite page he writes, "In another leaf you shall understand more, which I have written in this book." Here follows a relation of the abominable tortures he and his companions underwent, a retraction of every syllable spoke in the confession, extorted from him by means the most inhuman; a solemn avowal of his innocence, and a hearty desire that these his last sentiments may be transmitted to *England*, in defence of his character (1).

consistent with the honour or interest of the company, or safety of the factors, longer to reside there, he withdrew the poor remnant of *English*, and embarked them along with him for *Jacatra*. As for the company's effects, which had been seized, we do not find that he ever could prevail upon the *Dutch* governor to restore them; a circumstance which, without farther proof, would condemn the *Dutch*, and leave no doubt of their intentions, in the mind of any unprejudiced or impartial judge. The fatal news no sooner reached the *English* at *Jacatra*, than the president and council, moved with horror at the barbarity of the proceedings of the governor and fiscal at *Amboyna*, sent to demand of the *Dutch* general, by what authority the governor and fiscal carried their savage usage to such an extremity against the *English*, and whether he approved of their conduct? The general's answer was, that the governor of *Amboyna* acted in consequence of a power vested in him by the Lords the *States General*; by virtue of which he was supreme in all cases, civil and military, within the jurisdiction of his government. Further, that his proceedings against the *English* traitors were not only just, but indispensibly necessary; as might be seen by the copy of their confession, which he, the general, transmitted to the *English* president and council.

Thus it appears, that the massacre at *Amboyna* was not the wanton act of the governor and fiscal; though their natural dispositions might add to the cruelty of the circumstances; but the cool, deliberate, and concerted measure of the *Dutch* company, afterwards countenanced and supported by the *States General*, by a thousand arts and subterfuges, by false glosses, and spurious copies of extorted confessions. The first *true declaration*, as it is called, of the conspiracy, transmitted to *Europe* June 1624, by the *Hare* pinnace, is a notorious and base forgery, wherein the confessions of the unhappy *English* are interpolated, mangled, and castrated, in such a manner, as to set the governor's conduct in the best view; but unhappily, as murder will ever discover itself by some unforeseen circumstances, this copy of their confession differs widely, in the most important particulars, from that sent to *Jacatra*, and from the original, which was, by order transmitted the following year * (Y).

Without entering upon the particulars of what has been advanced by both parties, we shall beg leave to recapitulate in our text a few circumstances, which render the innocence of those unfortunate persons in the highest degree credible, and the conduct of the *Dutch*, as well as their motives, not only suspicious, but even beyond contradiction base, insidious, and barbarous (Z). And, in the first place, does not their conduct at *Peleroon* and *Bantam* suffi-

• *Collect. of Voy. Har. lib. ii.*

(Y) In the collection of voyages compiled from the manuscripts in the *Harleian* library, the reader will find a full account of this shocking catastrophe. There he may see the lame defences of the *Dutch* company and of the *States General*, their artful evasions and specious glosses of a fact detestable beyond the power of casuistry to palliate. There likewise he may peruse at large the remonstrances of the *English* company to the ministry, and theirs in consequence to the *States*. Vid. tom. viii.

(Z) Notwithstanding we have, in the preceding pages, given the reader a summary of some of the most important articles of the treaty subsisting between *Great Britain* and *Holland*, it may, possibly, not be disagreeable to him to see it here at large; as it will help him to a clearer view of the situation of the commerce of both nations, at the time when this fatal stroke to the trade of the *English* company was given, and naturally account for the security in which the factors lived at *Amboyna*, notwithstanding some differences with the *Dutch*. The following is a confirmation of the treaty between the *English* and *Dutch East India* companies, under the direction of the representatives of each nation.

This instrument sets forth, that a treaty had been concluded at *London*, in the then year of our Lord 1619, between several commissioners, members of his majesty's privy council thereto appointed, and others, members of the *English East India* company, on the one part, and the commissioners of the High and Mighty Lords the *States General*, our good friends and allies (being of the body of the said lords and states), and others, members of the *Dutch East India* company, of the other part.—

“Whereas for several years past there have been differences and misunderstandings between the *English* and *Dutch East India* companies, to accommodate which, conferences have been held between commissioners of the said respective companies, as well at *London*, an. 1613,

as at the *Hague*, an. 1615, without coming to any conclusion: his majesty and the said lords of the states, desiring that their subjects might live in friendship and a good correspondence, and being solicitous to remove all obstructions to a perfect accommodation, have found it expedient and necessary to resume the said affair again in a third conference, by commissioners of the said companies, assisted by such persons of his majesty's privy council, and of the body of the *States General*, as his majesty and the states shall appoint; viz.—Here the members of the privy council and of the *States General*, appointed to assist at this treaty, are specified—Whom his majesty and the said lords the *States* have, to that purpose, authorized with powers and commissions, to the end that, by their interposition and joint direction, the conclusion of an affair of so much importance may be facilitated, to the mutual satisfaction of both parties, and according to the orders, and in the presence, of the abovesaid lords, the commissioners of both the said companies shall begin and manage their conferences; viz. on the part of the *English East India* company, Sir *Thomas Smith*, Knt. &c. &c. and on the part of the *Dutch East India* company Sir *Henry Bass*, Knt. burgomaster of *Amsterdam*, &c. &c. who, by virtue of their powers, after much communication and long debates, have, by the interposition, counsel, and direction of the abovesaid lords, finally concluded and agreed upon the following articles; viz.

I. It was agreed, That there should be a perpetual amnesty of old offences and injuries before that time committed in the *East Indies*, either by the subjects of his majesty, or by the subjects of the said lords the *States*; and accordingly all prisoners on either part shall be set at liberty, and all ships, goods, or merchandizes, taken before the publication of this treaty in the *East Indies*, should be reciprocally restored.

II. The

a ciently declare their views, and evince that they were determined to stick at no means to enjoy the whole property of the spice islands? What could induce the *English* at *Amboyna*, if they were

II. The officers, agents, and servants, as well on the part of the one company as the other, shall entertain a friendly correspondence, and afford each other mutual aid, whenever they meet, as becomes neighbours and friends engaged in so strict an alliance. And if either party shall find the other in distress at sea, they shall afford them all friendly assistance, to the utmost of their power, and faithfully deliver any letters or accounts that shall be sent by them.

III. The trade and commerce of the *East Indies* shall be free, as well for the *English* company as for that of the *United Provinces*; and each of the said companies shall be at liberty to raise and employ such capital stock and funds as they respectively shall think fit.

IV. And, for the general good and advantage of trade, they shall mutually endeavour to regulate and lessen the excessive duties and impositions lately exacted in the *Indies*, and leave off the practice of giving gratuities and presents over and above.

V. They shall, by common consent, agree to fix a reasonable price in the *Indies* on all merchandizes; and at public or private sales, made either in *England* or *Holland*, of *India* goods, they shall agree upon a stated price for a certain time, during which it shall not be lawful for either party to sell under that rate.

VI. And, for avoiding all manner of jealousies and differences for the future, the agents or factors on both sides shall consult and agree together upon a moderate price for purchasing pepper at *Bentam*, and other places in *Java Major* (nevertheless, there shall remain a freedom of commerce in other parts of the *Indies*, and also in *Java Major*, as to other merchandizes, agreeable to the third article); and, to this end, skilful agents or factors shall be appointed to buy pepper, which, when bought, shall be divided and shared equally.

VII. The *English* company shall enjoy a free trade at *Pelicate*, and bear half the charge of maintaining the fort and garrison there, to commence from the time of publishing this treaty in those parts.

VIII. In the isles of the *Moluccas*, *Banda*, and *Amboyna*, the trade shall be so regulated by common consent, that the *English* company shall enjoy a third part of the trade, as well for the importing and selling of goods in those islands, as of the fruits and merchandizes of those islands, which shall be exported from thence; and the *Dutch* company shall enjoy the other two thirds.

IX. And as to buying and sharing the said merchandizes, the principal factors of the two nations shall buy them at the current price, and divide them by lot, to each their respective share: and, for that end, it shall be lawful for either party to have access to, and abide in, the forts and magazines of the other.

X. And considering that a trade so remote and important cannot be secured but by a considerable force, this shall be done by furnishing out and maintaining twenty ships of war; viz. ten by each company; the said number to be increased or lessened by common consent, as occasion shall require: and every one of the said ships shall be of the burthen of six or eight hundred tons, and carry 150 men, with 30 pieces of cannon, which will carry bullets from eight to eighteen pounds weight, with ammunition, and all other necessaries suitable thereto.

XI. And the council of defence shall order what number of frigates, gallies, and other small vessels shall be further necessary for the said defence.

XII. The forts and garrisons in the islands of the *Moluccas*, *Banda*, and *Amboyna*, shall be maintained out of the duties and impositions to be levied on the fruits and merchandizes exported from the said islands; which duties and impositions shall be assessed by order of the council of defence, and received by the

Mod. Hist. Vol. IV.

agents of both parties, and by them be transmitted from time to time, as it shall be necessary, to the treasurers of both companies, for the payment of the soldiers.

XIII. For the better ordering and establishing the said defence, a council of defence shall be erected, consisting of eight persons of the principal officers there, and an equal number to be elected out of each company, and they to have the precedency by turns.

XIV. This council shall order all things which concern the common defence by sea, and distribute the ships of war to such stations as they shall judge most convenient.

XV. They shall also regulate the duties and impositions which shall be necessary for maintaining the said forts and garrisons; and shall have power to call the collectors of the said duties to account.

XVI. The ships of war shall continue in the stations appointed them, and pursue the orders of the council of defence, and not be employed in importing merchandizes into those kingdoms or provinces.

XVII. Provided, That the ships of war may be sometimes employed in transporting merchandizes from place to place in the *Indies*, for the service of the respective companies, if the council approve it, and it be not prejudicial to the defence.

XVIII. And, in case of necessity, the said council are empowered to employ such numbers of merchant ships as they shall judge proper in the said defence.

XIX. The losses and damages that shall happen in any engagement for the common defence, or in going to, or returning from, the said defence, shall be borne equally, and defrayed at the common charge: and the gain and prizes which shall be made shall redound to the common profit.

XX. The same rule shall be observed as to merchant ships employed on the like occasions; and, during such service, the soldiers and provisions for the seamen shall be made at the common charge of both companies: and, in consideration of the interruption their commerce may sustain by such service, they shall receive such recompence as shall be adjudged them by the council of defence.

XXI. But if any ship of war, being in its own road, or port, or in going or returning thither, shall receive any damage by tempest or other misfortune, such loss shall not fall on the community, but be borne by the company such ship shall belong to.

XXII. And, for avoiding all disputes which may arise concerning the value of ships lost or damaged, the council of defence shall make an estimate of all ships of war and others, before they shall be employed in the common service.

XXIII. The forts as well on the one part as the other, shall remain in the hands of those who possess them at present.

XXIV. And whereas a question has been moved, concerning the building certain new forts, which the *English* company have judged necessary for the security of their men and goods; it is agreed, That the said question shall remain undecided for the term of two or three years; to the end that, having duly weighed and considered how many forts, of what nature, and in what places, the same will hereafter be necessary, the said question may be resumed and determined in such manner as may tend to the mutual satisfaction of both parties.

XXV. As to such forts as shall be taken in the *Moluccas*, or any other parts of *India*, by the interest and joint forces of both companies, they shall be equally possessed, garrisoned, and maintained by each company, who shall have there equal numbers; or they shall be divided equally between the two companies, according to the direction of the said council of defence.

Recapitulation
of facts.

Innocence of
the English.

The situation
of the English
factory at the
time of the

were conscious of guilt, not to escape the punishment they saw inflicted upon their pretended confederates the *Japanese*, for four days before they were called in question? They could not rely on the fidelity and constancy of those wretches against the excruciating torments of the rack. Nor could they imagine, when the end of the torture was to extort a false confession, that the *Dutch* governor would pay no regard to the evidence against them, especially after the late quarrels with him. It might also be asked, in what manner, or with what prospect of success, a fortress, strong by nature, and garrisoned by a body of two or three hundred foot soldiers, besides an equal number of free burghers, always ready and undoubted friends upon every danger, could be reduced by twelve or fourteen *English*, and an equal number of *Japanese*, without one military person among them? Or, if they had the good fortune to succeed in their scheme of seizing upon the citadel, in spite of the endeavours of a vigilant, crafty, suspicious governor, and regular troops, with what prospect could they hope to maintain their conquest? *Tower*, *Colson*, and some others of the *English*, appear to have been men of understanding, who could not possibly adopt such a plan, if it had been proposed to them by some of the more warm but unthinking servants of the company. Only two evidences appeared against *Tower* in particular; one of which alleged, that such a proposal had been made to him, but that he rejected it with indignation. The other declared, previously and subsequent to the torture, that what he was going and had confessed, was in consequence of the cruel torments inflicted upon him, from which he would readily free himself at any rate. Admitting, therefore, the authority of the governor to take cognizance of the offence, and that some were criminal, upon what pretext or evidence was *Tower*, the principal *Englishman* in the island, executed? But the feigned conspiracy is rendered still more improbable, when it is considered, that all the materials in possession of the *English* for so hazardous and difficult an attempt, were three old swords, two useless musquets, and half a pound of powder, with some small shot*. It is urged, the intention might be to blow up and

* The cited Collect. of Voyages, *ibid.* Also HARRIS'S Collect. and DODSLEY'S Hist. *ibid.*

XXVI. They shall jointly endeavour to open and establish a free trade in *China*, and other places in the *Indies*, by such ways and means as the common council shall judge expedient.

XXVII. The said companies shall not prevent or exclude each other from trading, either by force or any separate contracts which they shall make in the *Indies*, but the trade shall be free and open as well for the one as the other, in every place, as well within the forts and towns either party shall be possessed of, as elsewhere.

XXVIII. And it is agreed, That, without the consent of both companies, no other persons, not being of their respective bodies, shall partake of the benefit of the present treaty. And if any subject of either nation, not being of the same body, shall undertake any thing in prejudice of the said companies, they shall jointly and severally oppose the same, and maintain their respective privileges. And his said majesty and the said lords and states shall be addressed not to authorize any other companies to intermeddle in the traffick or navigation of the *Indies*, while the present agreement shall remain in force.

XXIX. If in any part of the *Indies* the one or the other company shall have a factory, trade, or effects, and it shall happen, by the death of the factors, or some other misfortune, that the goods or estates of either remain without any person legally intitled to administer to them, the surviving factors and officers of the other company shall take the said goods and estate into their possession, and honestly keep them for the owners, to whom they shall restore them in convenient time.

XXX. This treaty shall be in force twenty years; and if, during that time, there shall happen any disputes which cannot be terminated by the said council abroad, nor on this side by the said two companies, such differences shall be referred to the king of *Great Britain*, and the said lords of the States General, who will graciously be pleased to determine such differences to the satisfaction of both parties.—All which articles shall be faithfully and inviolably observed by both parties, according to the true intent and meaning of this treaty. And the above-mentioned lords do en-

gage that, as well his said majesty of *Great Britain*, as the said lords of the States, and both the said companies, shall approve, confirm, and ratify the said treaty, and reciprocally deliver instruments of ratification in due form.

Done at London, the 7th July,
1619, O. S.

Signed—By the above-said lords, and
the commissioners of the respective
companies."

Then follows the ratification:

"We have perused and fully understood this present treaty, have approved, confirmed, and ratified, and do approve, confirm, and ratify the same by these presents; promising to observe, and cause it to be observed, in all points, so far as it shall concern us, or the said company of *English* merchants, without suffering it to be infringed directly or indirectly, in any manner whatever. And we do acquiesce in the contents of the 28th article: and engage that, during such time as this treaty shall be in force, we will not erect any other company than that which is already erected, which shall intermeddle in the trade or navigation of the *East Indies*. In witness we have signed these presents, and caused them to be sealed with our great seal.

Done at Westminster, the 16th of July,
1619, and of our reign the seven-
teenth.

JACQUES, Rex.
per Carew.

Per ipsum regem propria manu signatum."

We have given our reader this treaty at full length, to shew how little the *Dutch* regarded the most solemn leagues, alliances, and treaties, where a point of interest was concerned. The reader will, without our help, be able to draw many inferences from this treaty, and what we have related of the conduct of those excellent allies, not much to the credit of either nation.

destroy,

- a destroy, not to seize, the citadel ; a fact acknowledged by the extorted confession of one of the criminals. But was half a pound of powder sufficient for the execution of this desperate attempt? Supposing the plan to succeed, did the *English* propose to bury themselves in the ruins? or did they resolve to defend themselves against the garrisons of three other forts in the island, and all the crews of several *Dutch* ships lying in the road? It cannot be imagined but a man of *Tower*'s understanding would have considered this circumstance. But, to pass over a thousand absurdities in the defence the *Dutch* have made, is there no credit due to the testimony of men as unanimous in their denials as they were dissonant in their confession? a confession extorted by the most excruciating tortures, drawn from them by the cunning and cruelty of their judges, as well as the utmost power of torture by the elements of fire and water. Is there, it may be asked, no credit to be given to a firm, steady, and uniform denial of a confession thus extorted, inconsistent with itself, at a time, too, the most solemn and awful, upon the brink of eternity, all the powers of their consciences awake, all temporal considerations vanished, and nothing before their eyes but death, judgment, and the account they were to render before the tremendous tribunal? Surely! the unfeeling and callous hearts, even of the governor and fiscal, whatever their avarice, their fears, or their inhumanity might formerly suggest, could not but admit such an evidence!

Credit due to the testimony of dying men.

- On the other hand, the *Dutch* had many motives to tempt them to a piece of cruelty from which they apprehended no consequences which their power, their cunning, and their wealth could not obviate. Their unbounded avarice; their eager desire to possess the whole trade of the *Moluccas*, *Banda*, and *Ambeyna*; their constant jealousy of the progress the *English* made in the *East India* trade, together with many other circumstances, induce us to believe, that a nation, the very basis and foundation of whose power, and the first and vital principle of their constitution, is the quest of money, would not be scrupulous or delicate in an affair which so cheaply procured to them so great an advantage*. The phlegmatic, cold, and determined disposition of the people of that country, renders actions perfectly consistent with their character, which would be hardly credible of other nations. Perhaps the lenity, indolence, corruption, and timidity of our court at that time, might be a collateral inducement with them to venture upon an expedient equally important to their interest, and shameful to this nation. The king, whose weakness could be exceeded by nothing but his conceit, could, at any time, be diverted from the pursuit of glory and national interest, by a theological disputation, where he was admitted to the princely honour of sitting as arbiter; while his ministry, as covetous as indigent, would sacrifice the good of the state, the honour of the kingdom, and their own reputation, to the sordid purposes of gratifying an insatiable lust of money, fraught with arguments equally solid and weighty, not only to a *Dutchman* but to a *Hottentot*. But besides the unanimous denial of all the prisoners, *English* and *Japanese*, at their last moments, not one paper, letter, or token, was found by the *Dutch*, to countenance their suspicions, after they had seized, ransacked, and plundered, all the chests, boxes, and cabinets of the factors. From these, and an infinite number of other presumptions, the *English* company, the nation, and indeed all *Europe*, naturally concluded the plot to be on the side of the *Dutch*; and, indeed, if the above circumstances were insufficient to prove it, their seizing upon all the *English* factories in the spice islands soon after, falls little short of a demonstration of their intentions.

Arguments why the Dutch conduct is suspicious.

Character of the nation.

Character of king James and his ministers.

Conclusion.

- In this manner, and by these methods, were the *English* company driven out of the spice islands; which the *Dutch* engrossing to themselves, have remained sole possessors of to this day. The death of king *James* soon after, put an end to any prospects there might be to remedy this disaster. The early embarrassments and disturbances which were transmitted with the crown to his successor, disabled that prince from paying all the regard to the commercial interest which his good sense suggested, or to humanity and justice, the debt his heart acknowledged, and his revenge dictated. That he attended to it, cannot be doubted, since it is evident he granted letters of request, which were presented to the States General, for obtaining suitable satisfaction to the *English East India* company, for their injuries and losses by the governor of *Ambeyna*†. This measure had not the desired effect; nor did the king pursue it, in hopes of finding a favourable opportunity of being revenged by giving some signal blow to the *Dutch* maritime force, and for ever putting it out of their power to interrupt the *English* commerce, or to execute their favourite scheme of dividing the *Spanish Netherlands* with *France*; a scheme by which they hoped, in confederacy with that court, to dispute the *English* title to the sovereignty of the narrow seas‡.

Reasons why the company received no recompence or satisfaction for the injuries and losses they sustained.

We are told by *Salmon*, an historian of no great credit, and but of weak judgment, that what alone prevented king *James* from procuring satisfaction, was the misunderstanding with his

Charles the first's remonstrances to the States General.

The rump parliament resolves to call them to account.

Decline of the English East India trade.

English and Dutch engage the Portuguese as a common enemy, in the gulph of Persia. Victory doubtful.

parliament, in consequence of his profuse bounty to the *Scots*⁷. It is certain that this contributed; but we have before assigned the most powerful causes. Some time after, the *Dutch* understanding that the *English* treasury was very low, and that the parliament would not supply the king till their grievances were redressed, to distress him still more, they refused to pay the garrisons in the cautionary towns, according to a treaty with queen *Elizabeth*. This occasioned grievous complaints from the troops, and had nearly produced a mutiny in the garrisons. Hence the king was in danger of losing these towns without any consideration, as well as a sum of money the *Dutch* were indebted to the crown by way of loan. These circumstances the republic craftily improved to their own advantage, by making tender of about one-tenth of the value, at a time when they knew the king would accept money upon any terms. In this manner did they acquire an independency of *England*; the consequences of which to our maritime power, our commerce, and more particularly to the redress of the late loss the *India* company had sustained, were neither sufficiently reflected upon at that time, nor retrieved ever since⁸.

BUT the cruelty and usurpations of the *Dutch* were not passed over entirely unobserved by our princes. *James* the first, insensible of national honour as he was, is said to have bestowed several hearty execrations upon them; but his spirit would seem to have evaporated there. *Charles* the first, finding remonstrances, letters of request, and memorials, ineffectual, was on the point of increasing his shipping, and calling the *Dutch* to an account; but that unhappy prince was first prevented by heats about ship-money, and afterwards by the civil war which ensued⁹. As the nation and government were reduced to the utmost confusion, nothing farther could be expected under this reign, during which the *Dutch* company was left in the quiet possession of this valuable branch of commerce. After the king's death, the rump parliament demanded satisfaction, and the *Dutch* were sensible it was not to be trifled with; insomuch that they promised speedy justice. The short duration of the parliamentary authority prevented the effects, and *Cromwell*, for some secret purposes, was stopped in his career of compelling them to a full compensation and an ample redress. *Charles* the second entered into two wars with *Holland*, for this among other reasons; and nothing but the national apprehension of the growing power of the house of *Bourbon*, has prevented their being long ago forced to make restitution of *Banda*, and other valuable islands¹⁰.

FROM the time of the massacre at *Amboyna*, the *English East India* trade wore another face from what it had done, and began to decline apace; the severities of the *Dutch* terrifying the company from engaging in disputes they were unable to maintain, and their servants refusing to settle in colonies where their property and lives were in continual danger. But before we proceed farther in the affairs of the company in the islands, it may be proper to mention some circumstances wherein the *Dutch* and they acted as allies in the gulph of *Persia*, at *Ormuz*, and at *Surat*. In *January*, an. 1625, four *English* ships, under the command of captain *Weildel*, lying in the road of *Gombroon*, with an equal number of *Dutch* vessels, were attacked by a strong *Portuguese* squadron. Such was the situation of affairs at that time, that while the *Dutch* and *English* were embroiled and at perpetual war in the *Moluccas*, the *Portuguese* were using their utmost endeavours to dispossess both of their trade on the continent, both in *Persia* and the *Mogul's* country. Here the *English* and *Dutch* acted as faithful allies against a common enemy; there as open enemies, yet under the mask of friends, and while a treaty subsisted between the nations. In this engagement both the *English* and *Dutch* admirals eminently distinguished themselves against a greatly superior force of the enemy. The battle continued for four successive days, without terminating in a victory on either side, though the *English* company sustained a considerable loss in having one of their finest ships burnt; but with this satisfaction, that the loss of the enemy was superior, and their settlements at *Surat* and other places in the gulphs of *Cambaya*, *Ormuz*, &c. left unmolested¹¹. Several other engagements happened, in which the *Portuguese* generally had the advantage of a superior fleet, but no other. As these were not attended with any decisive or important consequences to the company, we shall omit them, leaving the reader to the perusal of *Harris's* collection of voyages, wherein he will find a full account of them (A).

(A) The dispossessing the *Portuguese* of this settlement was, indeed, a point of the utmost consequence to the company, and would have been attended with great advantages, had not the civil war which ensued intirely put a stop to the *Indian* commerce. It may be worth the reader's while to peruse a short account of the settle-

ment at *Gombroon* by the *Portuguese*, and of the manner in which the *English* enlarged their privileges. *Shah Abbas* having rendered himself master of the provinces bordering upon the *Persian* gulph, in the 10th century, passed over into this island, and built the city of *Ormuz*. It was conquered by the *Portuguese* in 1508, in the time of

- a** WHILE the *English* were attacked on all hands, either by force or fraud, by open enmity or treacherous professions of friendship, the company's affairs began to have a very untoward aspect, and to be in a situation little better than ruinous. In order to remedy this growing evil, *Charles* thought proper to accept the proposals of certain merchants of *London*, to send a squadron into the *Indies*, to revive the commerce, but without prejudice to the rights or interest of the company. Although this was an infringement of the company's charter, yet it was not only opposed, but even forwarded by them; they well knowing their own inability to support themselves alone against the power of the *Dutch*; and that upon the success of this squadron depended their future prospects of advantage. A commission therefore was issued to certain persons therein specified, to send a determined number of ships to the *East*; in consequence of which, six large ships were fitted out^a. We are not informed in what particular year this expedition was undertaken; but from circumstances it seems to appear to be that so strongly patronized by prince *Rupert*, when a settlement in *Madagascar* was intended. Sir *William Courton*, one of the great promoters of this scheme, advanced, on his own part, a prodigious sum, amounting to one hundred and twenty thousand pounds, towards the equipment of the fleet and purchase of the cargo. Their success in the *Indies* was answerable to the greatness of the preparations, and the most sanguine expectations; but the *Dutch*, who dreaded above all things the revival of the *English* commerce directly with the *Indians*, wanting to engross the first purchase to themselves, fell upon them in their return with a success almost ruinous to the enterprize. In this action, two of the largest *English* ships, with their whole crews and cargoes, were sunk; the latter amounting to one hundred and fifty thousand pounds^c.
- b** This disaster, however, did not dispirit the adventurers. The richness of the cargoes excited their appetite for gain in a greater proportion, than the fear of danger, and hazard of losses, pallied it. Accordingly seven ships were sent out the following year by the same proprietors, and with just the same fate as the former. They were every-where well received in *India*; disposed of their cargoes, and laid out their money to the utmost satisfaction: but returning with merchandize of immense value, they were a second time attacked and defeated by the *Dutch*. This misfortune was entirely attributed to the necessity they were under of

of *Saffadin*, a prince tributary to the monarch of *Persia*. *Albuquerque* coasting along *Arabia*, had intelligence that the city of *Ormuz* was in disgrace with the Shah, by reason of some misdemeanors of the viceroy, or governor, and came before the city with his fleet. Here he defeated the *Persian* squadron and forces; then attacked the city with such fury, that the viceroy was forced to capitulate on ignominious terms. He acknowledged the king of *Portugal* his sovereign, paid a tribute to the *Portuguese*, and permitted *Albuquerque* to build and garrison a citadel, which had the entire command of the city.

The *Moors* oppressed by the *Portuguese*, made several attempts to rid themselves of those tyrannical superiors; but the vigilance of the *Portuguese* not only frustrated all their endeavours, but likewise engrossed the whole commerce of these parts. It was accounted a favour that they permitted *Saffadin* to live within some miles of the city, of which formerly he was sovereign. Shah *Abbas*, having received some provocation from the insolence of these new masters, particularly by their having given protection to an *Italian*, one *Gabrieli*, who fled out of *Persia*, engaged the *English* to join him in reducing the city, and expelling the *Portuguese*. This great prince, equally celebrated for his valour and justice, as he had no fleet at sea, was forced long to submit to the insults of the light *Portuguese* galleys upon his coasts. This they had practised before his reign, and continued during the first years of his government. At last tired out with the complaints of his subjects, robbed, spoiled, and plundered by those imperious conquerors, he sought his remedy first in encouraging the *English* to settle a factory at a place called *Jasques*. Sir *Thomas Moore* being then ambassador at the court of *Persia*, the Shah communicated his intentions to this minister, of driving the *Portuguese* out of the gulph. It was at length concerted, that the *English* should assist his majesty with a fleet, upon certain immunities granted to the company;

upon his majesty's sending a sufficient land force, and on his defraying the whole expence of the enterprize. Accordingly the Shah sent an army of 40,000 men, with *frankies*, or transports, to convey them to the island; at the same time the *English* fleet, consisting of five ships, amounting collectively to 40 guns each, well manned, invested the town by sea, after defeating the *Portuguese* frigates. The brisk fire from the citadel sunk one of the *English* ships, whose guns were landed, to erect a battery to annoy the castle. This was done with such spirit, both from the batteries and shipping, that in less than two months the *Portuguese* capitulated to leave *Ormuz*, with all the fortifications intire, carrying nothing besides their liberty away with them. The plunder, which was immense, was equally divided among the *English* and *Persians*: and the former were recompensed, not only with an exemption of all duties, but likewise with a moiety of all the customs received in the gulph. Captain *Hamilton* informs us, the treasure was so great which they had taken in *Ormuz*, that tradition affirms it was measured by long-boats full: that one boat being pretty deep, an officer still throwing in more, put the boatswain of the ship, at that time in the boat, into a passion, who swore, that for every handful more they put into her, he would throw two into the sea; for he could not tell what would satisfy them, if a long-boat full of money would not. This story, though not literally to be depended on, yet shews the greatness of the treasure taken here. In this manner did the *English* acquire a firm establishment in the gulph. The articles with the Shah were punctually observed till the year 1680, when the *English* company failed, on their part, of keeping the gulph clear of insults, according to contract. The *Persians*, perceiving the company's forces too small to repel the injuries of the *Arabs*, their neighbours, took away half the customs, and allowed the *English* 1100 Tomans, about 3300 *l.* per cent. (1).

separating, and making different voyages to the different parts of *India*. One ship running on shore, on the island *Mauritius*, became a prey to the *Dutch*, and was a real loss to the owners of ten thousand pounds, notwithstanding all the pretended humanity of the *Hollanders*, and their proffers of friendship and assistance. Another was met by two ships of war belonging to the *Dutch* company, who openly attacked, took, and made prize of her, with a cargo amounting to seventy-five thousand pounds, after they had killed the captain and half the crew in the engagement. The remainder were carried to *Batavia*, where, together with the *English* ensign, they were dragged in triumph through the streets of the city, and exposed to the brutal insults of the populace, and the jests of the mob^a. By these outrages, most of the proprietors were utterly ruined, and the rest deterred from prosecuting a scheme from which nothing but misfortunes ensued. Thus failed the attempt of those public-spirited citizens, to restore the commerce of *England* to the *East-Indies*; an attempt as glorious in the design, as unfortunate in the issue. King *Charles*, notwithstanding the difficulties he had to struggle with, and the variety of the embarrassments which frustrated his laudable intentions, did not neglect the care of the company's affairs. Repeated remonstrances, letters of request and menace, were used, all of which terminated in procuring the trifling equivalent, and restitution of eighty-five thousand florins; a sum by no means proportioned to the hundredth part of the immediate loss and its consequences^b.

Now did the *Dutch* triumph unrivalled in the east; while the *English* company were compelled, not only to abandon their just rights, but the traffick in general for several successive years; the civil distractions banishing all care of so distant concerns. The sequel of this unhappy reign we must pass over in intire silence; no monuments of the company's transactions appearing for a series of years, if they really did subsist as a company, during that period. Such were the melancholy effects of the confusion at home on foreign trade, at a critical juncture too, when it might have been carried to so high a degree, and made a source of perpetual wealth and glory to the nation. It is indeed a dismal and sad scene, the prospect of which was never clearly exhibited to the view of an *English* reader; and to trace it now thro' its labyrinth of unfortunate effects, would be to write a tragedy rather than a history. The immense wealth, and maritime strength, acquired by the *Hollanders*, induced them to endeavour still to aggrandize themselves, by the total depression of our naval power. They were led to this design by an opinion, that the parliament, which stood upon a precarious and narrow basis, would hardly venture upon a war abroad, at a time when they were breathing after the fatigues and oppression of civil broils. In this the *Dutch* found themselves deceived; for however unjustly the parliament had acquired the might it possessed, it must be allowed they here exerted it for the national honour. War between the two commonwealths was declared; and the *Dutch* suffered the due punishment of their insolence, and had reason afforded them of repenting their being the aggressors. After repeated losses at sea, they were compelled to ask peace, which was granted to them, and signed at *Westminster*, on the 5th of *April*, A. 1654. By this treaty, they rendered *Cromwel* that satisfaction which they had denied both *James* and *Charles* I. This new revolution, which consigned the government of the kingdom into the hands of a tyrant, promoted to that high rank by the intrigues and interest of *Holland*, operated nothing in favour of the *Dutch* on this occasion. *Cromwel*, it must be admitted, discharged his duty in this particular, with the true dignity of a monarch. Forgetting his personal obligations to that nation, where the honour and interest of *England* were concerned, the protector insisted upon giving the law and his own terms. In the 27th article of the treaty it was stipulated, "That the Lords the States General of the *United Provinces* shall take care that justice be done upon those who were partakers or accomplices in the massacre of the *English* at *Amboyna*, as the republic of *England* is pleased to term that fact, provided any of them be living"^c. By this treaty, there was settled a commission which sat at *Goldsmiths-Hall*, whose determination was to be decisive and final of all complaints laid before them, respecting either of the companies. The *English* gave in an estimate of damages, amounting, besides the loss of their settlements, to 2,695,999 *l.* 19 *s.* sterling; which sum was specified in fifteen different articles, clearly proved and stated. On the other hand, the *Dutch* commissioners ballanced this demand by a charge, which, however, was neither specified nor proved, amounting to 850,000 *l.* After weighing the evidence in support of either claim, the following conclusion, called a Regulation, was agreed upon, and signed the 30th of *August* 1654. Here, after reciting all the above demands at large, they proceed thus; "all which complaints, demands, and charges, exhibited to us the said commissioners, by the deputy of both the *English* and *Dutch* companies, expressly chosen to this purpose, have been laid before us, with a great number of documents, instruments, and proofs exhibited, as well for forming

^a DODSLEY'S Hist. vol. ii.

^c Parliament. Hist. sub An. 1654. Etiam HARRIS,

- a and corroborating their own demands, as for destroying and refuting those of the opposite party; and at length the arbitration of all those conferences is submitted to us the aforesaid commissioners, by the said deputies of both companies. Whereupon, we the aforesaid *John Exton, William Turner, William Thompson, Thomas Kendal, Adrian Van Almonde, Christian Van Rodenburgh, Lewis Howens, and James Oyffal*, after having seen, read, examined, and accurately considered all the documents, instruments, and proofs exhibited to us on both sides, together with all other things which seemed necessary to us for the discovery of the truth; and being desirous to reconcile and to establish a perpetual agreement between both the companies aforesaid, by virtue of the power and authority to us given by the most High the Lord Protector of *England, Scotland, and Ireland*, and the High and Mighty Lords the States
- b General of the *United Netherlands*, have decided, defined, and determined, and by this our present award, do decide, define, and determine as follows:—

- “ We make void, extinguish, obliterate, and altogether wipe out, and commit to oblivion (so as never to be revived at any time, and upon any pretence, by any person whatsoever) all complaints, pretextures, and controversies mentioned here at large above, and all others whatsoever, which the *English* company trading to the *East Indies* doth or may form against the *Dutch* company, without excepting any, of whatsoever kind, nature, or condition they may be. And particularly we appoint and ordain, that the said *English* company shall not for the future sue or demand any thing of the said *Dutch* company in *Persia*, or elsewhere, under the denomination of the customs at *Ormuz*, or *Gombroon*; so that the *Dutch* shall never be
- c molested or disturbed by the *English* for this cause, under any pretext. Provided, nevertheless, that this does not prejudice any action or plaint, which the *English* company may enter against the king of *Persia*, or any other person whatsoever, the *Dutch* excepted. In like manner we make void, extinguish, obliterate, and wholly blot out, and commit to oblivion, so as never to be revived at any time, and on any pretence, by any person whatsoever, all complaints, pretensions, and controversies mentioned above more at large, and all others whatsoever they may be, which the aforesaid *Dutch East India* company doth or may form against the said *English* company trading to the *East Indies*, except none, of whatsoever kind, nature, or condition they may be. Moreover, we appoint and decree, that the said *Dutch* shall yield and restore the island of *Poleroon* to the said *English* company, in the same state and condition as it
- d now is; provided nevertheless, that it shall be lawful for the said *Dutch* company to take away, and remove out of the said island, all military furniture, merchandize, household stuff, and all moveables, if they happen to have any in the island.”

“ AND in the last place, we declare and ordain, that the said *Dutch* company shall pay the said *English* company 85,000 *l.* sterling; to be paid here at *London*, one moiety before the last day of *January* next ensuing, according to the *English* style, and the other before the last day of *March* following, according to the same style; and all controversies between the said companies being by this means composed, decided, and determined, to the end that a stop may also be put to the quarrels of private persons.”

- “ We have seen, perused, and examined, all the complaints, and demands exhibited to us
- e in due time, in the name of some private *Englishmen*, who complain of having received injury and damage at *Amboyna*, in the year 1623; and on the other hand, we have heard and considered the matters which have been alleged and exhibited by the above-mentioned deputies of the *Dutch* company, in their own defence; and we the commissioners aforesaid, considering that no one person besides these underwritten, to us, on this account, entered any actions or demands before us within the due time, after which, it is not lawful to enter any more; and being therefore desirous that no relicks of complaint should remain, and that all cause of wrangling may be removed, after having duly considered and weighed all things, do, by virtue of the full power and authority given us by the most High Protector, and the High and Mighty States of the *United Netherlands*, appoint and ordain, that all complaint, action,
- f and demand of the *English* whomsoever, whether public or private, on the score of any damage or injury which they pretend to have suffered at *Amboyna*, in the year 1622 the *English* style, and 1623 the N. S. may be made void, terminated and committed to oblivion; and that no person whomsoever he be, shall enter any action on that account, or disturb, molest, or vex the *Dutch* company on that account, or any *Dutchman* on that pretext. And on the other hand, we also decree and ordain, that the said *Dutch* company shall pay here at *London*, before the first day of *January* next ensuing, 700 *l.* sterling, to *William Towerfon*, nephew and administrator of *Gabriel Towerfon*, late of *Amboyna*, deceased. To *William Colson*, brother of *Samuel Colson*, &c. administrator in like manner of his effects, 450 *l.* To *James Bayles*, administrator of the effects of *John Powell*, 350 *l.* To *Anthony Ellingham*, administrator of the effects of *William Grigg*, 200 *l.* To the administrators of the effects of *John Wallerel*, 200 *l.* To *Jane Webber*, administratrix of the effects of *George Sharrock*, 150 *l.* To *John* and *Elizabeth Collins*, children and heirs of *Edward Collins*, 465 *l.* To the administrators
- g

nistrators of *John Beaumont*, 300 *l.* To *Jane Webber*, widow and administratrix of *William Webber*, 200 *l.* To *James Baslie*, administrator of the effects of *Ephraim Ramsey*, 350 *l.* To the executors of the will of *Babrofee*, 50 *l.* And to the administrator of the effects of *Emanuel Thompson*, 200 *l.* all which sums added together, make the sum of 3615 *l.* sterling, to be paid here at *London*, before *January* next ensuing. And on this condition, we insist that their actions or suits be altogether set aside and cancelled, so as never to be revived hereafter by any person whatsoever¹.

Concessions
made by the
Dutch com-
missioners.

As this award, judgment, or determination, was strictly executed as soon as made, it ought to be considered as decisive against the *Dutch*. By these trifling and inconsiderable concessions and satisfactions to the representatives of the unfortunate *English* murdered at *Amboyna*, they tacitly acknowledge the guilt of their proceedings; unless it be said, this acknowledgment was extorted by a high hand with the same exaction they used over the sufferers. This treaty set the affairs of the company again on foot; it gave life and spirit to commerce, and encouraged individuals to that independence and freedom of action and sentiment, which they perceived was asserted by the public. So much did the *East India* affairs recover themselves, that there was actually a subscription entered into, under the protection of *Cromwel*, of 800,000 *l.* sterling².

A. 1661.
Charter grant-
ed by Charles
the 2^d. with
additional
privileges.

In this train were affairs when *Charles II.* was restored, by the address and intrigues of *Monk*; and the constitution reinstated in its antient form. It was one of the earliest acts of *Charles's* government, to give that countenance and protection to the company, which was necessary to revive and establish its commerce. He granted them a new charter, dated *April 3, 1661*; and leave to export bullion, to the amount of 150,000 *l.* every voyage, provided that foreign goods to that amount were re-exported. He confirmed their exclusive right, and permitted them to license private merchants to trade from one port to another in *India*, by the name of country traders. An authority, civil and military, was vested in the company, with power given them of making war or peace with the infidels in the *Indies*: But should this charter prove detrimental to the nation, the provisional clause was still reserved, of its being in that case void and of no effect, after three years notice given.

Bombay, the
dowry of the
infanta of
Portugal,
queen of
England.
Squadron sent
thither.

No sooner had his majesty set on foot a treaty with *Portugal*, for his marriage with the infanta, than it was determined to embrace this opportunity of procuring the cession of some convenient port and mart for the *India* company, as part of the infanta's portion. Thus the important island of *Bombay* came into the hands of the *English*, where it has ever since continued, and proved one of the most advantageous settlements in the *Indies*. The soil, it must be acknowledged, is but barren, and the climate unhealthy; yet its situation renders the place important, and the ensuing success of the company demonstrates it to be one of the greatest acquisitions they ever made. After the king's marriage, a squadron, conducted by the lord *Marleburgh*, was sent to receive the possession and investiture of the island from the hands of the viceroy, who had received his *Portuguese* majesty's commands to that effect. His lordship set sail with a fleet of five men of war, having Sir *Abraham Shipman*, appointed governor, on board, and arrived at *Bombay* in *September 1633*, after a prosperous voyage. The viceroy was disposed to comply with his majesty's instructions; but the strong opposition of the clergy, who refused to cede the island to hereticks, terrified the viceroy into their measures, and determined him to keep to his new acquired dignity³. It is probable, that ambition as well as religion might have some influence upon the viceroy; certain it is, that his obstinate refusal to surrender the island, obliged the lord *Marleburgh* with the fleet to retire to *Swally Road* for refreshments. The governor of *Surat*, under whose jurisdiction *Bombay* was, threatened the *English* factory at *Surat*, unless the *English* troops reembarked, who were too formidable neighbours for him to endure without apprehensions. After laying in store of the necessary provisions, his lordship, in *January 1664*, set sail with two ships for *England*, leaving the rest of the squadron under Sir *Abraham Shipman*, to spend the remainder of the western monsoons in some of the nearest ports. During this time, he buried above 200 of his men on a desolate island, *Anjadiva*, where he wintered and stayed from *April* to *October*. The monsoons being over, the fleet put to sea, and sailed for *Bombay*. On his arrival, Sir *Abraham* threatened the viceroy and clergy, who opposed his pretensions, with the vengeance of the kings of *England* and *Portugal*, if they longer continued obstinate, or denied obedience to their majesties instructions and contracts. Some of those who had not forgot *Cromwel's* exploits, who reflected on the miseries the *Portuguese* and *Spanish* fleet endured from the *English* republicans, advised the church to abate of her zeal. At length, their religion giving way to the suggestions of fear, they consented to a treaty, by which the inhabitants were to be continued in the free exercise of their faith, and possession of their estates under the crown of

a *England*°. Sir *Abraham* dying, Mr. *Cook*, next in commission, signed the treaty, and in quality of governor, took possession of the island, in the name of the king his master. Here he immediately set about building a fortress; but a capital mistake he made in concluding the treaty, by not including the appendages to *Bombay*, extending to *Verfisa* on *Salet*, has been a bone of contention ever since. The fort was laid out in a regular manner; an old square house fitted up for himself as governor; but Mr. *Hamilton* observes, that both Mr. *Cook*, and some of his successors, never once thought of a church.

Thus the trade of *Bombay* flourished exceedingly; but the revenues of the place not being equal to the expence of keeping it, and other political and commercial reasons superadded, obliged the crown to make it over in fee-tail to the company; in which manner they continued to hold it to this present time°. After the fort was traced, and the foundation laid, Sir *George Lucas* arrived from *England* with two ships; but affairs being accommodated before he came, he continued here no longer than *January* 1666, when he returned to *England*, leaving the government as he found it, in the hands of Mr. *Cook* and the council, under the presidency of the settlement at *Surat*. Mr. *Cook* shewed his ignorance of architecture, in building the fort upon the ground it now stands, which is to a high degree inconvenient. As an engineer too, he has failed; the fort being commanded by a hill, called *Dangeree*, at about 800 paces distance. The consequences of this unfortunate choice were apparent in the year 1689, when the *Mogul* invested the city with an army. He is the more blameable, as common sense, with the greatest ignorance of architecture and engineering, might have pointed out a much more commodious situation, at the distance of 500 paces southward (B). Several other little forts and fences were likewise built in commodious places for the security of the island against invasions°.

In the mean time, the *Dutch* had for a considerable time pursued the long-concerted scheme of engrossing the entire *India* trade. The former reign had afforded them an opportunity of executing in a great measure that design; the interregnum began to revive commerce, and now that the court struck into the plan advantageous to traffick, the *English* company once more began to make some figure in *India*. This the *Dutch* resolved to put a stop to, by a method no less effectual than an immediate attack upon the *English*; this was, to wage unintermitting war with the natives, till they compelled them to expel all foreigners, besides themselves, out of the country (C).

The war no sooner broke out, than their resentment was immediately levelled against the *English*, in which, by their superior strength, they generally succeeded in that part of the world; but peace between *England* and *Holland* ensuing, they again began with the natives, supporting the prince of *Java* against his father, till, from a principle of self preservation, the *Javaneze* necessarily excluded our company. The loss of the *English* settlement at *Bantam* greatly affected the affairs of the company; they determined, therefore, at all events, to at-

° HAMILTON, vol. i. p. 85.

(B) As for the magnitude, figure, and materials of the fort, says captain *Hamilton*, there is nothing considerably faulty. It is a regular tetragon, whose outward polygon is about 500 paces, built of an excellent hard stone. It can mount an hundred pieces of cannon; and these particulars are all that can be alleged in its favour. It has not a single spring of fresh water; which very circumstance must, in case of a siege, render all its fortifications of little or no value; since a little patience must make the enemies masters of it at discretion (1).

(C) We find in the first volume of the painful and elaborate *Ralph*, a catalogue of the damages for which the *English* demanded satisfaction, A. 1663. The following contain the articles exhibited by the *East India* company.

I. The ship *May Flower*, W. *Curtis* commander, was debarred by *Balshaazer*, the *Dutch* commodore, A. 1658, from trading at *Achen*, notwithstanding leave obtained of the queen; 3878 pounds of pepper were seized by the said *Dutchman*, and *Curtis* compelled to depart empty.

II. The ship *Dragon*, N. *Baddiford* commander, was prohibited A. 1588, from trading at *Bantam*, by the governor of *Batavia*; and after a long delay, obliged to sail away without a lading. Hence she was necessitated to remain in the *Indies* till her provisions were consumed, and then to return at an unreasonable time of the year, by which she was lost. Of this

nothing was known at *London*, upon the 10th of *January* 1588-9.

III. The ship *Advice*, R. *Mayne* commander, was in the same manner constrained to depart empty from *Bantam*, in 1558. Of this nothing was known at *London*, in 1659.

IV. The ship *Marygold*, J. *Cornis* commander, was used in the same manner, with this difference, that she was fired at by the *Dutch* ships in the harbour of *Bantam*.

V. In *August* 1659, *Peter de Goyer*, principal of the *Dutch* factory at *Jambee*, in *Sumatra*, assisted by 40 *Dutchmen*, and 150 slaves armed, entered the *English* factory in the said place, in a hostile manner, plundering it, to the great damage of the company.

VI. The *Merchant's Delight*, J. *Bell*, commander, was hindered from trading or entering the port of *Bantam*, by some *Dutch* ships, A. 1659.

VII. The *Merchant of Constantinople*, R. *Brown* commander, A. 1659, sailing betwixt *Vingola* and *Goa*, on the coast of *India*, was attacked by a *Dutch* fleet, and plundered of 1978 grenades, 59 iron guns, and 3 brass mortars.

VIII. Money disbursed for provisions, stores, &c. for the *Dutch*, A. 1651.

These were the articles exhibited by the company, which, with those of the *West India* merchants, &c. were the scaffold on which was built the future war (2).

(2) *Ralph*, vol. i. p. 100.

tempt the recovery of a place so important to their trade. Great and extraordinary preparations were set on foot for this purpose; and a fleet consisting of twenty-three ships, many of them carrying sixty and seventy guns, was equipped, with every thing ready to sail, A. 1685. A body of 8000 land forces was put on board; a force which no reasonable man doubted would reinstate the settlement, and humble the insolence of the *Hollanders*^p. In another manner did the corrupted court determine things. Profusion begat avarice; and this insatiable passion blinded the administration to every view of honour, and silenced the clamorous dictates of honesty, conscience, and national spirit. An embargo for nine months was laid upon this armament, under various pretexts; but with a view to extort large sums of money from the company. At last the time elapsing, the *Dutch* ambassador put an entire stop to the expedition, by a bribe to certain great personages, of 100,000 *l.*; an action that has indelibly stained with infamy the mercenary reign of that weak and profligate prince. Thus was the interest and honour of the kingdom, and the rights of a company established by law, and cherished by all the predecessors of this monarch, bartered for the mean gratification of an inconsiderable sum of money. *Charles*, it must be owned, understood, and would have encouraged commerce, had his irregular passions, and loose desires, left him an opportunity of paying any attention to the welfare of his people. His inclinations were evinced by the additional privileges he granted the company the year after his restoration. The company found in his brother *James* the II. a still more powerful protector and warm patron. *Charles* had granted them a new charter in the 28th year of his reign, and extended it in the 35th; but his successor not only extended the immunities of the company, but in a manner shared his sovereignty with them^q. He impowered them to build fortresses, to levy troops, to determine causes under the form of courts martial, to coin money, &c. and this with intention to enable them to dispute this commerce with the *Hollanders*, and to secure the encroachments resulting from the traffick to his kingdoms. Under so many advantages, and the patronage of a prince, who both knew and loved trade, it is not to be doubted, but the company flourished, grew powerful, and extended their dealings and authority with which the sovereign had invested them. 'Tis true, they did exert their power, by making their countrymen feel its full weight, without communicating any part of the benefit.

The corruption of the English court frustrates the design.

James the II. encourages the company.

The company borrow money in India.

The shameful acts of the governor of the company.

Sir Jos. Child and his brother abuse the power entrusted to them.

tempt the recovery of a place so important to their trade. Great and extraordinary preparations were set on foot for this purpose; and a fleet consisting of twenty-three ships, many of them carrying sixty and seventy guns, was equipped, with every thing ready to sail, A. 1685. A body of 8000 land forces was put on board; a force which no reasonable man doubted would reinstate the settlement, and humble the insolence of the *Hollanders*^p. In another manner did the corrupted court determine things. Profusion begat avarice; and this insatiable passion blinded the administration to every view of honour, and silenced the clamorous dictates of honesty, conscience, and national spirit. An embargo for nine months was laid upon this armament, under various pretexts; but with a view to extort large sums of money from the company. At last the time elapsing, the *Dutch* ambassador put an entire stop to the expedition, by a bribe to certain great personages, of 100,000 *l.*; an action that has indelibly stained with infamy the mercenary reign of that weak and profligate prince. Thus was the interest and honour of the kingdom, and the rights of a company established by law, and cherished by all the predecessors of this monarch, bartered for the mean gratification of an inconsiderable sum of money. *Charles*, it must be owned, understood, and would have encouraged commerce, had his irregular passions, and loose desires, left him an opportunity of paying any attention to the welfare of his people. His inclinations were evinced by the additional privileges he granted the company the year after his restoration. The company found in his brother *James* the II. a still more powerful protector and warm patron. *Charles* had granted them a new charter in the 28th year of his reign, and extended it in the 35th; but his successor not only extended the immunities of the company, but in a manner shared his sovereignty with them^q. He impowered them to build fortresses, to levy troops, to determine causes under the form of courts martial, to coin money, &c. and this with intention to enable them to dispute this commerce with the *Hollanders*, and to secure the encroachments resulting from the traffick to his kingdoms. Under so many advantages, and the patronage of a prince, who both knew and loved trade, it is not to be doubted, but the company flourished, grew powerful, and extended their dealings and authority with which the sovereign had invested them. 'Tis true, they did exert their power, by making their countrymen feel its full weight, without communicating any part of the benefit.

HAVING been at the expence of such an armament as we have mentioned, they were obliged to employ them abroad; but their capital being insufficient for purchasing a cargo, orders were issued to their governors and factors, to borrow what sums they could on the company's credit in *India*. Still several of the ships remained unloaded; these, therefore, were employed in freights in the country. Thus far the policy of the company was justifiable and honest; what follows was treacherous, base, and unworthy the subjects of a christian and civilized state. Captain *Hamilton*, who seems a plain honest man of sense, acquaints us, that he saw a letter from the governors of the company in *England*, to the factors abroad, intimating, that as soon as they had pushed their credit to the utmost extent, they would then contrive means of quarrelling with the creditors, and of putting a stop to their trade^r. A short method of payment; which shews, that no ingratitude or villainy is too black for the human heart, possessed with avarice, to perpetrate (D). By many writers this whole transaction is charged upon the intrigues, pride, and ambition of Sir *Josiah Child*, and his brother Mr. *John Child*, then honoured with knighthood, and made governor of *Bombay*. The arbitrary administration

^q DODSLEY'S History of

(D) Mr. *Hamilton* says (1), that the government of *Bombay* was conducted in a partial, confused, and impolitic manner, till the year 1674; when the good sense and moderation of the president *Aungier* reformed many abuses, which had crept in under former governors. This gentleman, leaving *Surat* to the management of deputies, came to *Bombay*, to put the island in a state of liberty, by unveiling the face of justice, which till then lay hid in the breast of a single person, who distributed her favours by the governor's direction. Mr. *Aungier* erected a formal court, where all causes were brought and debated; a method of justice that continued till Sir *John Child* came to the chair. Mr. *Aungier* was the first who started the proposal of inclosing the town from *Dangerree* to *Mendham's Point*, which, however, was not effected during his administration. It was, indeed, reserved to increase the honour acquired by Mr. *Boon*, a succeeding governor, who seems, with great reason, to be a favourite with our honest author, captain *Hamilton*. This fortification was a very ne-

cessary defence against the insults of the troublesome and beggarly neighbours on the continent, as was apparent in the war with *Connagee Angree*. The year preceding Mr. *Aungier's* arrival, the *Dutch* sent a squadron and body of troops to make an attempt on *Bombay*. On their landing, the reception they met with was so unexpectedly warm and vigorous, that they were glad to abandon the enterprize, with the loss of 300 men. The governors of *Bombay* proved in general tolerably good; at least by comparison with the gentleman who succeeded to the chair in 1682. We are told, that a kind of confederacy between Sir *John Child* in *India*, and his brother, who was at the head of the company's affairs in *England*, was set on foot to rob, spoil, and oppress the *English*, as well as natives, under their jurisdiction. To relate all that is well attested of them, would be to write a libel, and not a history; we shall therefore suppress it, and wish that the whole transaction could be buried in eternal oblivion.

(1) Vol. i. p. 189.

- a of this gentleman was equally oppressive to the *Indian* merchants, as to the *English* traders and troops. The pay of the latter was reduced 30 *per cent.* which entirely alienated them from the governor, and prepared their minds to embrace any opportunity to bring about a revolution in the affairs of the island. The occasion soon offered; Mr. *Ward*, the governor's brother-in-law, by him appointed depury, was detected in a secret correspondence with the *Swajee*, inviting him to land. This prevented not the *Swajee's* making an effort. He sent a fleet of eighty small vessels, to attempt a landing on the back bay; but they were so hotly received, that they sheered off with loss. *Ward* was then confronted with his intercepted letters, the government taken out of his hands, and he, with the rest faction, sent to Sir *John Child* at *Surat*, which at that time was the head settlement and residence of the governor. The islanders taking upon themselves the administration, chose major *Kegwin*, an officer of experience, to superintend military affairs; and captain *Thorburne* was put at the head of the civil government.

- In this manner did affairs stand, till the arrival of the *Phoenix* frigate, A. 1685. She had been dispatched from *England*, in consequence of remonstrances received there from Sir *John Child*, to demand restitution of the island, and to have it again put under the company's authority. The king's orders, and pardon to all who should yield obedience, were no sooner declared, than all the inhabitants submitted; but for their own security, drew up certain articles to be signed by general *Child* (he now bore that rank), and *Tyrrel*, captain of the frigate. Among the rest they stipulated, that any one desirous of returning into *England*, should have liberty to do so, and a passage in some of the company's ships. *Kegwin* accordingly came over; but *Thorburne*, on account of his family and small fortune, remained behind, to experience farther proofs of the general's inhuman cruelty. A villainous and dark scene of iniquity here presents itself, which, in honour to human nature, we must suppress. Indeed the general was no sooner reinstated, than he exerted every act of a wanton, insolent, and ambitious tyranny. Besides oppressing *Thorburne*, by acts the most insidious and base, two other gentlemen in particular, whose integrity was a check upon his measures, felt the lash of his unjust resentment. These were Messrs. *Pit* and *Bourcbier*, both of the council, and both of dispositions very opposite to that of the petty bashaw. They had ever preferred their honesty and honour to his favour; constantly opposing his pernicious schemes, they at length sunk under the weight of his authority. What particularly made Sir *John's* vengeance to break out with all its violence, was the firm opposition made by those gentlemen to a diabolical inquisition erected by him, under the presidency of a refugee *Greek*. Their attachment to liberty, and his cruel persecution, obliged them to seek shelter in the *Mogul's* dominions, where, for some time, they traded with success. *Pit* was at last taken by pirates, and his ransom, by means of the humane governor, raised so high, that he died in slavery. He next, in arrogant and imperious terms, demanded *Bourcbier*, his wife, children, and effects, to be delivered up to him by the *Mogul* governor of *Surat*. This, with the remonstrance to the *Mogul* governor of pretended grievances, laid the foundation of the war that ensued with the *Great Mogul*. It may be easily perceived how hard this *English* robber must have strained to make his charge plausible; a charge founded upon fraud, ambition, and tyranny, the whole intention of which was to clear accounts with the *Indian* merchants, his creditors; to raise his own power, and to give full scope to his private resentment and pique to Mr. *Bourcbier* (E).

THESE

* DODSLEY, vol. ii. HAMILTON, ibid.

* DODSLEY, vol. ii.

* HAMILTON, vol. i. ibid.

(E) The reader may not be displeased to see a copy of this charge, exhibited in thirty-five articles. We believe it is no-where to be found, but in Mr. *Hamilton's* history of the *East Indies*. A. 1687.

I. Last year a ship of *Molab Abdal Gassoar's* coming from *Juddab*, in her return met with two *Danish* pirates, who made a prize of her. The news coming to *Surat*, the said *Gassoar*, by persuasion of *Mechir Razim*, and other merchants, made his complaint to *Salabat Cann*, then governor, and other officers of *Surat*, saying the *English* belonging to *Surat* had taken his ship; at the same time sending his attorney to court, to complain to the king, who ordered the governor, &c. to inquire into it, and do justice accordingly. In this affair, by bribery, I was represented in such a light, to the king, his subjects, the *French*, *Dutch*, and other nations, that I am in a manner disgracefully prohibited from trading in these parts.

II. In consequence of *Gassoar's* complaints, I was unable to clear my money out of the custom-house, or ship my goods to *Europe*, which were seized and stopped. Hence was I obliged to abandon the port and trade, and retire to *Bombay*. I have by me 30 or 40 lack of rupees, in money and goods, the truth of which you may have certified, by sending a fit person to examine into it. Consider my loss, in keeping my money out of trade, and goods from market. I desire your answer.

III. *Molab Abdal Gassoar's* disgracing me by false reports has hurt my credit, making people afraid to trust me. I have now 12 ships loaded with merchandize to *Surat*, there to relade for *Europe*, which are now compelled to winter here, in consequence of his calumniation. This detention is a prejudice to his majesty's customs, to the company, my masters, for which I must be answerable.

IV.

This and other
pretences the

THESE pretences were made the foundation of a war with the *Mogul*; *Cbild*, whether from the violence of his own disposition, or whether by collusion with his constituents, or both, seized

- IV. Mr. *Pit* (1) and Mr. *Bourchier* being indebted to the company for several sums of money, I should have called them to account; but absconding themselves, they sought protection with the governor, *Cortaleb Caun*. As for *Pit*, he is dead, and gone to the devil [*strange language*]. Mr. *Bourchier* still remains at *Surat*. I demand him, his wife, children, family, and all *Englisbmen* belonging to him, with their effects.
- V. Formerly all goods brought from the *Malabar* coast, *Macba*, and other parts, intended for *Europe*, were licensed to be brought on shore at *Swally*, to cleanse and re-ship, without custom, duty, or impost; but the governor *Cortaleb Caun*, during his administration, exacted customs. My demand is, that reparation be made, and the practice abolished.
- VI. Of late years we bring more money than formerly, which has greatly enriched the port, of which the governor acquainted the king; and his majesty was pleased to exact no more than 2 *per cent*. Since then, the governor of *Surat* prevailed with his majesty to raise this tax 3½ *per cent*. both for money and goods, to the great prejudice of our trade. My desire is, that the customs may be reduced to their former state, and the overplus repaid. These exactions made the governor greatly over-rate our goods, to our great damage.
- VII. Formerly we never paid custom for apparel or provisions: of late *Cortaleb Caun* exacts duty for both. My demand is, that we be reimbursed for both, and no more troubled on that account.
- VIII. If our goods coming out of the country are robbed, stole, or designedly damaged, his majesty's order is, that his officers make good the damage. A few years since, our goods coming from *Amanadabaul* and *Durringum*, were robbed in the way to *Surat*. We have petitioned the governor for satisfaction, but never obtained any. My desire is, that the king order satisfaction to be made for the very considerable loss we have sustained.
- IX. Many of the natives are indebted to us, of whom we can procure nothing, having made repeated remonstrances to the governors where they reside, to no effect. Our desire is, that all governors and their officers may be assisting to us, in the recovery of our debts.
- X. We bring more treasure than any other nation into the country, which is carried to the custom-house. Cleared from thence, it is sent to be coined in the mint. But, from private interest, the officers delay the coinage, to the great impediment of business; the want of cash preventing getting our investments, and loading our ships in the proper seasons of the year. Our request is, that henceforward no delay be permitted in the mint; but that our treasure be separately coined, for the greater dispatch.
- XI. At the arrival of our ships, unloading them, we carry our goods to the custom-house, where they are often damaged, broken, and stolen. Our request is, that we may have a warehouse apart and distinct from the *Dutch*; that as soon as we have either sold or sent our goods to the factory, the custom-house officer take account of the king's duties, clearing them without further molestation.
- XII. Formerly we used to clear the duties once a year: of late the officers of the revenue send daily, weekly, and monthly, to our broker; and to prevent his being affronted, he is forced to see the officers, to the great prejudice of our trade. Our request is, that the customs be put upon the antient footing.
- XIII. When *Gessadean Caun* was governor of *Surat*, by order of the king the city was walled, at which time we had a garden, surrounded by thirty-four shops, at *Bramport Gate*; the garden, shops, stables, summer-house, &c. amounting to 25,000 rupees. When the wall approached our garden, it, with all the above conveniencies, was destroyed. We petitioned the governor for satisfaction, which he promised out of the king's treasury, but never performed. We demand payment of the above charges.
- XIV. Formerly, when our goods came to *Surat*, we paid no more than due custom, and shipped them for *Europe* or elsewhere, without further trouble: of late the officers of those places, where our goods come, demand the receipts of the governor and officers of *Surat*, and often detain our goods. By these proceedings our ships sometimes return empty, and frequently are forced to winter in the country, to the prejudice of the king's customs, and of our affairs. Our request is, that we be restored to the former liberty in this traffick.
- XV. Formerly the officers used to examine one or two bales, permitting the rest of the goods to be shipped and cleared, without farther molestation, if they found these according to invoice. Of late the custom-house officers ransack all our goods, putting us to the expence of re-packing, and also damaging our goods. Our desire is, that they may be stopped, and shipped according to invoice, without further trouble.
- XVI. Of late years the *Merbas* will not clear our sloops and boats, coming from *Swally* to the custom-house, for the space of three or four days. Our request is, that they be cleared with the usual dispatch.
- XVII. Sometimes merchants buy our goods, then break and plead poverty. Our desire is, that we may be redressed out of the king's customs, that we may no longer be sufferers by his subjects.
- XVIII. When we send our brokers to the governor, officers, &c. no admittance is permitted them, till the servants are feed. We desire this grievance may be redressed.
- XIX. Formerly we used, without molestation, to send to our stables the horses come from *Persia*, *Laffora*, &c. Of late years they are carried to the governor's, his seal put about their necks, and we deprived the use of them. We demand redress.
- XX. The governor, officers, &c. send to us for broad-cloth, sword-blades, &c. which in civility we cannot deny them. When payment is asked, our servants are beaten, affronted, and mal-treated. Our desire is, that nothing be sent for till payment is made.
- XXI. Goods provided at *Agra*, *Amanadabaul*, &c. coming to *Boraach*, the governor obliges us to pay custom for, at 18 *per* mile, which is contrary to the king's order. Of this we desire redress, by being on the foot of *Moors* and *Banyans*.
- XXII. Our request is, that all goods paying custom may be brought to *Surat*, kept there, and shipped in due season, without molestation.
- XXIII. Our request is, that the governors of provinces or towns afford no protection to our servants, who have left us without leave, and clearing their accounts; but that we may proceed against them as we may see convenient and proper.
- XXIV. On our first arrival in this country, the king granted us a piece of ground for a *Bander* to repair our ships and vessels. This the governor has, to our great prejudice, converted into a garden. Our request is, that we may have restitution, or a spot equivalent, near the sea.
- XXV. Formerly we paid 2½ rupees *per* bale of indigo, without unpacking: of late the officers charge at pleasure, besides rummaging and spoiling the goods. Our request is, that we be restored to our former privilege.

(1) This gentleman is sometimes called *Petit*, and sometimes *Pit*, by Captain Hamilton. In *Marini's* voyages, *Dodgson's* history of the East Indies, &c. we always find him mentioned by the name of *Pit*.

- a seized on all the ships of the *Mogul's* subjects, where ever they were found. The *Surat* merchants in particular, who carried on an immense traffick by sea to *Mocha*, *Perfia* and *Bassora*, westward; to *Bengal*, *Achen*, *Molucca*, and *Siam*, eastward, obtained passes from the *English* general, notwithstanding which they were violently seized, without regard paid to the protection he had afforded and engaged. Nor did he once trouble himself by sending to the king, or using the form of declaring war, as practised among all civilized states. No! his intention was to reap the fruits of a piracy before a proper force could be sent against him. Thus was the company involved in a quarrel, which cost them above 400,000 pounds, besides the ruin of their credit with the *Mogul* and his subjects; a piece of false policy, the effects of which they have not recovered to this day. By what measures of common sense could the general abroad, and his brother Sir *Jos.* at home, think to rob, plunder, and spoil the *Mogul's* subjects in one part of his dominions, and yet enjoy a free undisturbed traffick in other parts? They could not expect that the king would be an idle spectator of the misfortunes of his people, and arrogance of the *English*. During this period it is, that foreigners, and even the *Dutch* themselves, have reason to complain of the haughty insolence with which a company of merchants insulted a great and powerful monarch. The first exploit of this strange policy was performed by captain *Andrews*. This gentleman, in a ship called *Charles the Second*, sailing to *Mocha*, set up the *English* flag on the *English* factory, and seized upon two *English* country trading ships, commanded by the captains *Bear* and *Wren*. This last refusing to surrender his ship, was put to death in his own cabin. The governor and merchants of *Mocha* disliking those violent proceedings, were proposing to compel *Andrews* to deliver back the ships, of which he receiving notice, withdrew on board with great precipitation, leaving the colours flying on the factory. He soon after left *Mocha*, carrying his two prizes with him. The company suffered for those captures, they being forced to make ample restitution to the owners. Mr. *Clive*, supercargo of the *Straights Merchant*, one of the seizures, got bills, payable at *Grand Cairo*, for his stock, 60 bales of coffee excepted, which he carried into *England*, where it sold well: in proportion to this were the company obliged to indemnify the owners for the rest of the cargo, the whole amounting to 32,000 pounds. The *Bristol's* cargo was in like manner made good to the proprietors, as was that of the *Jobanna*, amounting to 60,000 pounds. The *Little Betty*, a ship taken by the *Phoenix* in her way to *India*, and sold at *Bombay* for 600 pounds, cost the company 12,000 pounds in *England*. The owner of this vessel, one *Hastwell*, a city quaker, arrested captain *Tyrral* on

general makes the foundation of a war with the Mogul.

The absurd conduct of Sir Jos. and general Child.

The company are forced to make satisfaction for the violence committed by General Child.

W HARRIS, vol. ii. HAMILTON, vol. i.

XXVI. The governors, &c. take iron, guns, lead, &c. for the king's use. Perhaps they are turned out; and when the successor is asked for payment, we are told, the king wanted not our goods. Our desire is, that prompt payment be made.

XXVII. As to the island of *Bombay* it produces no corn. The *Mogul's* fleet often winters there, which raises the price of provisions. We are in want of supplies from *Surat*, and other the *Mogul's* ports, which are refused us, unless we pay $\frac{1}{4}$ per cent. Our request is, to be exempted from this tax.

XXVIII. A ship worth 25,000 rupees came out of *England*, contrary to the privileges of our company. By our king's order we seized ship and cargo in *Surat*, but had her forced from us by the governor of the city, who delivered her to Mr. *Bourchier*. Our demand is, that the said ship and cargo be delivered; that *Bourchier* give a faithful account; and that the governor take care nothing be squandered by him.

XXIX. Contrary to the king's grant, who exacts but one duty for goods, the officers have, of late years, forced us to pay double customs, besides perquisites, to the great prejudice of trade. We desire that things may be restored to their original footing.

XXX. We formerly rented a piece of ground for stables, which *Meer Nassam* purchasing, deprived us of, after we had been at considerable expence in building. Our desire is, we may be indemnified.

XXXI. Some years since we left an anchor at the mouth of the river, which was taken up by *Mirza Nassam*. We have demanded it, offering to pay his charges, but never could obtain it. Our desire is, that his son make restitution on these terms.

XXXII. On their arrival, our ships send their boats up with stores. These are stopped for a day at the custom-house, to the impediment of business. Our request is, that they may be allowed to pass, without interruption.

XXXIII. As to *Bengal*, we hear several ships have been taken and burnt there. As we are no-ways concerned in that transaction, our request is, that his majesty issue out orders that no one question or make demands upon us on that account.

XXXIV. The *Sedes*, with the king's fleet, wintered some years ago at *Bombay*, in which time some of his people murdered two *Englishmen*, which determined our men to revenge their deaths, but they were persuaded to lay aside their design, by the strongest assurances that all possible satisfaction should be made. The governor, indeed, upon our complaint, imprisoned the murderers, but released them in three days. Our request is, that they may be delivered up to punishment.

XXXV. If we happen to stay on parties, of pleasure till the city gates are shut, the porter denies us admittance, without he is paid. Our desire is, that orders be given by the governor, that we be no more affronted by those people (1).

Such was the bill of grievances exhibited by general *Child*, upon which he founded a war, without ever sending his complaint to court. The judicious reader will observe, how trifling, how frivolous, and absurd, the greater number of the articles are; others how unjust; and the whole dictated with an air of insolent authority, equally ridiculous and imprudent. No other alterations are made, but such as were necessary in the language, to render it intelligible.

(1) *Hamilton's History of the East Indies*, v. i.

Change; who offered *James* the second for bail, which the plaintiff, it is said, refused, but accepted of a private gentleman, *Sir Joseph Henne*.^a

The General
seizes all the
Mogul's ship-
ping.

THE *Charles, Cesar, Royal James and Mary*, seized upon fourteen sail of the *Surat* trade, and brought them into *Bombay*, A. 1688, no war having yet broke out with the *Mogul*, only with the inhabitants of *Surat*, whom the general thought to humble. These captain *Hamilton* saw at *Bombay*, who likewise affirms, that *Child* sailed with the *Royal James and Mary*, in the month of *October*, attended by four other ships of force, in order to force the governor and inhabitants into a compliance with his arbitrary demands, in which, however, he was disappointed. Failing in his design, he left *Surat* in *January*, 1689, highly incensed at his disappointment, carrying all the *English* ships, except the *Adventure*, with him. This ship had been forced by the *Phoenix* over the bar, where she lay till her bottom was eat up by worms, and the ship rendered useless, the cargo remaining for years in Mr. *Bourcbier's* possession. On his return to *Bombay*, *Child* seized upon a fleet, laden with corn for the *Mogul's* army, though he was opposed by the council in general. One captain *Hide*, in particular, gave his opinion of the imprudence of this measure with great freedom, for which he was treated with scurrilous language by this haughty general. In short, neither the danger of incensing the *Mogul*, or bringing destruction upon *Bombay*, and ruin to the company's affairs, could prevent this vain-glorious and rash man from pursuing a series of ill-judged unadvised measures. His pride, insolence, avarice, and self-sufficiency, rendered him an object of contempt and hatred; prevented his council from giving him the necessary advice, and, in short, brought on the almost fatal catastrophe which ensued to the company, from a war with so potent a prince, opposed by so ignorant a general.^b

He still conti-
nues his arbi-
trary proceed-
ings.

Sedee Ya-
coup, the
Mogul's gene-
ral, demands
redress.

SEDEE YACOU, the *Mogul's* general, receiving advice of this transaction, sent to *Sir John Child* in terms of the highest respect, to request restitution of the fleet, assuring him that he had never hitherto interfered in his disputes with the inhabitants of *Surat*; that he was still determined to pursue the same conduct, unless his refusal of so just a demand should compel him to alter his measures. To this *Sir John Child* returned an answer full of insolence, and ordered the captures to be unloaded at *Bombay*. *Sedee Yacoup* sent another message, more peremptory than the former, threatening, that if the fleet was not discharged by the 11th of *February*, he would certainly demand it with an army at *Bombay* on the 14th. This demand being returned likewise with arrogance, the *Mogul* general performed his promise with great punctuality, landing with 20,000 men at *Somree*, a place four miles distance from the main fort.^c In silence and boasting are seldom combined with true courage. *Child's* security had not only prevented his taking the proper precautions against such an attempt; but his fears now deprived him of the necessary presence of mind. Hitherto he had trusted to the reputation and power of the company, which was now higher than it had ever been in the *Indies*; this screen taken away, he sunk into his natural pusillanimity and meanness. There was, indeed, a sufficient number of small boats to have opposed and defeated the enemy's landing; but the confusion which attended so unexpected a danger, rendered them useless. They were neglected, while the general's attention was employed on things of little consequence, or on his own fears. *Sedee Yacoup* surprized the redoubt that stood at the place where he landed, the garrison abandoning it after having fired a cannon as an alarm. At one in the morning three guns were fired from the castle to give general notice of the approach of the enemy, which threw the inhabitants of the fortress into so much consternation, that the women, both white and black, ran with their children in their arms, half-naked, to the castle, where, being denied admittance, they remained till daylight. The fortress of *Magazan*, though defended by fourteen pieces of cannon, as well as an almost inaccessible situation, was abandoned on the enemy's approach, without the garrison having hardly exchanged a shot. The cowardly retreat of the commanding officer was so precipitate, that he left every thing behind a prey to the *Moors*. Ten chests of treasure, each containing a thousand pounds, and four chests of new arms, among other things, were taken by the enemy, although the sailors offered to carry them off safe. How these came to be deposited in *Magazan* could never be cleared up; nor were the officers reasons for making a present of them to the enemy more apparent. But perhaps the most wonderful circumstance of the whole was, that this officer was never called to give an account of his conduct. Mortars, bombs, ammunition, and provisions, fell likewise into the hands of *Sedee*. Profiting by the misconduct of the *English*, that chief sent a party to plunder the peasants of *Mabim*, and to see the fort, which he judged might, like the others, be evacuated; nor was he mistaken, the garrison having embarked in boats for *Bombay*, before they had sight of his detachment. Establishing his head quarters at *Magazan*, and planting his flag on the ramparts, he sent out parties to harass and insult the *English* general, who was stung with the consequences of his own imprudence. Accordingly Captain *Pear* was ordered with a body of fifty men to dis-

- a lodge the enemy from the hills of *Magazan*; *Monroe* an experienced officer, being appointed his lieutenant. This small detachment marched in good order within shot of the enemy, who were drawn up behind a rising ground, which covered them from the fire of the *English*. Here the *Moors* determined to wait, which *Monroe* observing, advised Captain *Pean* to separate the detachment into platoons, as the most effectual means to break the *Indian* infantry. The Captain haughtily rejecting this seasonable counsel, told the lieutenant, that when he was appointed commander, he was to do what he thought proper; but as that trust was now committed to himself, he would act according to his own judgment. He then ordered his men to extend their ranks, making them as thin as possible, and to discharge a general fire upon the enemy as soon as they saw them open upon the plain. Such a conduct, he said, would strike terror
- b into them. *Monroe* warmly opposed this disposition, reminding the captain of the danger he must be in, if the enemy should advance whilst his men were reloading. But *Pean* adhering tenaciously to his first opinion, ordered his men to fire as directed; the consequence of which was what had been foreseen by *Monroe*. The enemy, being lighter armed than the *English*, perfectly well practised in close fight, with sword and target, and ten times their number, laying hold of the important moment, rushed upon *Pean* with all their force, and soon bore him down with their weight. So rapid and bold a movement struck the captain with a panic, which carried him, with incredible swiftness, to a *Portuguese* church, where one hundred men lay to sustain him if required. *Monroe* still stood his ground with a part of the wing which he commanded, his whole force not exceeding fourteen men. After an obstinate dispute, which
- c demonstrated that, had his advice been pursued, victory would have declared for the *English*, he, with all his brave fellows, were cut in pieces. *Pean*, who was the general's minion, returned to him, and met with a hearty welcome, instead of the halter which he deserved* (F). *Sedee Yacoup* was now master of the whole island, the castle, with about half a mile of ground to the southward of it, excepted. To reduce the garrison, he planted a battery on *Dangeree Hill*, which commands the castle, from which he greatly annoyed the besieged. Then he put four great guns into the custom-house, called the *India House*, raised a battery at *Moody's* house, within 200 paces of the fort, which made it dangerous stirring without the gate of the castle, till a sconce, in form of a crescent, was thrown up. General *Child*, on his part, took all the measures he then could for his defence. Every man, without distinction, was pressed
- d into the service, and three thousand *Savajees* were taken as auxiliaries into pay. This rendered provisions scarce; to remedy which, a fleet of small ships was sent to cruise on the *Mogul's* coasts, which had a good effect, this squadron returning after considerable success. In particular our author, Captain *Hamilton*, from whom this relation is deduced, was pressed, and appointed to the command of a frigate of nine tons burthen, twenty fighting men, and sixteen rowers; with which small force he brought nine prizes into *Bombay*, most of them loaded with provisions and cloathing for the enemy. One piece of oppression he complains of, as greatly prejudicial to the service; viz. that the cruisers were admitted into no share of the captures; nay, that the very pay they had saved was wrested from them for the use of the company, under pretence of its being part of the prize. Thus they became negligent in their duty, and
- e never looked out for the enemy's ships, but when necessity and pinching hunger rendered it absolutely necessary.

The injudicious conduct of Captain Pean.

He is cut off with the whole detachment.

The garrison of Bombay straitened for provisions.

They are relieved by the success of their cruisers.

The general sends ambassadors.

In this train were affairs, when General *Child*, finding his success on shore not correspondent to his insolent hopes, and that the enemy were increased to 40,000 men, began to think of terminating the affair by submissive terms. With this view two persons, in the character of *English* ambassadors, were dispatched to the *Mogul's* court. Mr. *George Welden*, *Abraham*

* HAMILTON'S Hist. of the East Indies, vol. i. c. 17. DODSL. vol. ii. HARRIS, vol. ii. B. i. c. 2.

(F) Mr. *Hamilton* acquaints us, that when *Child* left *Sarat*, several persons, some of them the company's servants, were sent to prison, where they were laid in irons. Mr. *Bourchier*, and those protected by his phirmaund, were alone exempted from that severity. Those wretches were made to pass through the streets with irons round their necks, as a mark of infamy. Sir *J. Weyburn* had been sent from *England*, an. 1686, with a commission from the king to execute the office of Judge-Admiral: and another commission from the company was also given him by their governor, which he was made to believe was signed by the king, to condemn and put to death thirteen of the inhabitants of *St. Helena*, where one *Johnson*, the second, had been killed in a tumult, caused by the oppression of the governor of the island. *Weyburn*, on his way to *India*, put in at *St. Helena*, where the thirteen proscribed were put to death,

without form or process; a proceeding which cost the company dear afterwards, and might cost *Weyburn* a violent death, had not a natural one prevented it. 'Tis thought that the many illegal proceedings of general *Child*, and personal affronts he put on *Weyburn*, so strongly affected him, as to cause his death, which happened at *Bombay*, about two months before the *Indian* invasion. *Weyburn*, notwithstanding the affair at *St. Helena*, which ought not to be attributed to him, died much regretted by every person of probity who knew him. In short, the conduct of the managers of the company's affairs at home seemed intirely of a piece with that of their governor abroad. As Captain *Hamilton* is the only relater of the transactions of this period, the reader must receive them *cum grano salis*. The captain seems to be an honest but warm man, strong in his affections and prejudices. Vol. i. p. 224.

*The Mogul
recalls his ar-
my from Bom-
bay, and*

Naava, a Jew, assisted by *Meer Mezamie*, a merchant of *Surat*, of some interest at court, and a friend to the company, constituted this embassy. They arrived in fifteen days at *Jebanabat*, where the court then resided. At first their reception was cold, but, by force of bribes and presents to the officers, they were admitted to an audience of *Aurengzeb*. Their attitude, when brought into the presence of this monarch, was very mortifying, their hands being tied before, and they constrained to prostrate themselves on the ground, who, after a severe reprimand, demanded their business. To this they answered by a confession of their fault, and an humble request that his majesty would pardon them. They then petitioned that their phirmaund, so justly forfeited, might, by his clemency, be renewed, and that the *Mogul's* forces might be withdrawn from *Bombay*. *Aurengzeb* told them, that to have their submission accepted, and the injuries sustained by his subjects pardoned, one thing was absolutely necessary, which was General *Child's* withdrawing from *India* within nine months, never to return: that then their phirmaund should be renewed, and the army recalled, as soon as security was given for full satisfaction and indemnification of the losses sustained by his people.

THE death of General *Child*, which happened in *January* following, much facilitated a reconciliation with *Aurengzeb*, and promoted the company's affairs; yet it was kept secret, till it was known what his majesty's intentions were, in respect to him. *Meer Mezamie* died likewise in *March*, it was supposed by poison, on account of his attachment to the *English*. At the time that *Mezamie* was given over by his physicians, the *English* ambassadors went to demand of him an account of 50,000 rupees he had received for secret services. His answer was, "That he was sorry he had ever meddled in their affairs; he had served them at the expence of his life, yet were they dissatisfied. As to the use to which the money was appropriated, that was a secret he was not at liberty to divulge."

DURING this situation of affairs, the *Dutch* failed not to endeavour profiting by the misconduct and misfortunes of the *English* company. *Baroon*, their ambassador at *Aurengzeb's* court, hearing of the revolution in *Great Britain*, thought to impose on the ignorance of the *Indian* monarch. He seized the opportunity of his first audience, to magnify the power and influence of the *Dutch*, and vilify that of the *English*, with which the *Mogul* seeming pleased, ordered him to proceed. *Baroon* then told him, that *Great Britain* was, in comparison to *Holland*, a poor, weak, and contemptible nation, fickle, unsteady, and ever embroiled in divisions and civil discord. That the *Dutch* were forced to send the *English* a king to govern them; and that if they were excluded by his majesty from trading with his subjects, the States General would carry it on with more advantage to *India*, fill his coffers with treasure, and make his people happy, while the *English* would be at a loss to procure daily bread. The *Mogul* gravely replied, that if the States possessed that superiority he alleged, it would be an easy matter for them to drive the *English* out of *India*, and engross the whole commerce to themselves, which, he desired, he would acquaint his masters he expected from them. *Baroon*, upon this, excused himself, pretending that he could do nothing in the affair without instructions from *Holland*. Then the prince reprimanded him, and discovered his sense of the falshood the ambassador had advanced: "You very well know," says *Aurengzeb*, "that about seventeen years ago, the king of *France* over-run most of your country in a few days, and would have become master of the whole, had he not been repulsed by the *English*, and not the *Dutch* forces." He further told him, "That if *England* did not hold the balance of power, either the Emperor or *France* would conquer *Holland* in one campaign." *Baroon* was confounded, as well at his own detection, as at his trivial knowledge of the *Mogul*; made no answer, but returned dissatisfied that his effrontery could not procure the indulgence to the *Dutch* company which he had been sent to solicit. The *English* ambassadors had no sooner obtained pardon, than they began to perceive the features of the courtiers soften in their favour. They were indulged with the liberty of taking the diversions of the country, while the phirmaund was preparing, which, according to the custom of the *Easterns*, was a work of time. Orders were sent to the *Sedes* to forbear hostilities; the same orders were given to the garrison, so that frequent visits passed among the officers on both sides (G). The phirmaund being ready, and the necessary security given, *Sedes Yacoub* left *Bombay* on the 8th of *June* 1690, after a stay of near four months, all which time the castle was closely blocked up on the land side. The pestilence, which his army left behind, more prejudiced the company's affairs than either the loss of men they had sustained,

^c HAMILTON, vol. i. chap. 17.

(G) In the course of this war about 60 *Europeans*, of various nations, deserted from the *English* fort to the enemy, and received their pay. Upon an act of oblivion's being published, they all returned, excusing their conduct, on account of the tyrannical usage of some *Irish* officers in the company's service (1).

(1) *Hamilton*, vol. i.

- a or the last malicious act of *Sadee* in setting on fire and destroying *Mazazan* ^(H). Although ^{grants a} the *Mogul* was not ignorant of the injuries his subjects had received from the *English*, yet was ^{peace.} he unwilling to use severity. That wise monarch thought it more advisable to wink at enormities which could not be remedied, than to persecute the authors with a rigour that might deprive his dominions of a beneficial commerce. When the ambassadors had their audience of *The Mogul's* leave, he gently told them of their errors, prudently admonishing them to a different conduct ^{speech to the} for the future, and, with the majesty of a prince, commanded them to receive his favours ^{company's am-} and graces with that respect and deference which was due to the friendship of so great a monarch. He concluded with advising them to make law the measure of justice, to use moderation in all their actions, and justice in their dealings; after which he dismissed them, filled with the ^{bassadors.}
- b highest notions of his wisdom, magnanimity, and virtue ^a.

GENERAL *Child* was succeeded in the government of *Bombay* by Mr. *Vaux*. Mr. *Harris*, Mr. *Vaux* who had been prisoner in *Surat*, ought to have been the successor in course of seniority, but it was unusual to admit into this office any one who had been confined for capital crimes by the *Mogul*, till a particular amnesty was granted. And this was a kind of necessary compli- ^{succeeds} ment and respect paid to that monarch. Mr. *Vaux* was obliged to go to *Surat* to receive the ^{Child in the} phirmaund and the *Mogul's Serpaw*, or present, usual on these occasions. This donation consisted of a fine horse richly caparisoned, which must never be sold on any account whatsoever, a complete suit of cloaths of *Atlasses*, or *Zeerbastas*, a kind of sattin with wrought flowers of gold or silver; a fine turban, embroidered shoes, and a dagger of value, stuck into a fine ^{government} ^{of Bombay.} ^c fash. Equipped in this attire, the general, or governor, is presented with the phirmaund by the *Mogul's* messenger, the governor of the city or province enlarging, at the same time, upon the honour done him by the most powerful potentate under heaven; and admonishing him that his conduct may render him deserving of such a distinction. Mr. *Vaux* having received the phirmaund in a gilt box, put it upon his head, returning by the interpreter his acknowledgments of the honour and particular obligation he was under to the great monarch; after which he was conducted by the *Mogul's* governor from the garden where this ceremony was performed, into the city, amidst the acclamations of an infinite concourse of people, who welcomed his accession to that high rank with shouts of joy, as he passed to the *English* factory. After remaining about a week at *Surat*, Mr. *Vaux* sent to acquaint the *Mogul* governor ^d of the necessity he was under of returning to his charge at *Bombay*. In answer, he was told, ^{He is detained} that as no other person could be intrusted by the *Mogul* to see the contract performed, it was ^{at Surat by a} hoped he would not think of leaving the city, lest the king should repent of the favours ^{gentle re-} conferred upon the company, whose commission he bore. Thus was Mr. *Vaux* detained a ^{straint.} hostage for the security of the performance of the articles entered into by his masters ⁱ.

Mr. *Harris* then, as was usual, demanded the government of *Bombay* to be ceded to him, ^{Mr. Harris} as senior, which *Vaux*, to avoid altercation, granted. *Harris* soon after made *Annesley*, a ^{is governor of} man of no character, his confidant and director; so that, in short, the subtle *Annesley* held ^{Bombay.} the reins of government, and had art and address enough to embroil, during the administration of *Harris*, the company's affairs, as well as those of private traders, procuring himself to ^e be afterwards made president, or rather tyrant of *Bombay* ^(I). Nor was the conduct of Sir *Josiah*

^a HARRIS, vol. ii. b. i. c. 2. DODSL. Hist. of the East Indies, vol. ii. HAMILTON, ibid. ^b HARRIS'S Collect. vol. ii. b. i. c. 2. ⁱ HAMILTON, vol. i. ^k HAMILTON, vol. i. DODSL. vol. i.

(H) That the reader may have a specimen of the *Mogul* emperor's character, we shall present him with the following phirmaund, as we find it in Captain *Hamilton*, translated by the company's interpreters.

"The occasion of your writing to me was your being
"in fault of all these troubles; that you have repented
"of what you have done; that you made several complaints against former governors, all which I have
"here from several of my *Umbras*, and the several abuses received from them and their officers, all which
"you should have acquainted me with, before you proceeded so violently. Having acknowledged your error, and asked pardon, I not only grant your request, pardoning what is past, but granting you a phirmaund, according to your desire; and have ordered
"Affit Cann to forward it to the governor of *Surat*,
"with such particulars as he will acquaint you with.
"At the arrival of my phirmaund, receive it with great respect, acknowledging the glory you have got by the same, that you may trade as formerly, at your pleasure, and as accustomary: that you deliver the merchants, who have complained of you, their ships, with
MOD. HIST. VOL. IV.

"their effects: that, for the future, you do not commit the like error, in doing as you have done: and
"that you proceed according to my will and pleasure, and be not forgetful of the same. If you receive any
"affronts from my governors or their officers, or any of my subjects, be not negligent in acquainting me
"of the same. I have ordered *Affit Cann* to write accordingly.
"What you write concerning our former governors protesting Mr. *Bourchier*, that you have several demands on him, that you cannot call him to account, desiring that he may be delivered to you; my order is, that you prove your demands according to law, that justice may be done accordingly."

Dated the 31st year of *Aurangzeb's* reign.

(I) Captain *Hamilton* mentions the following instance, which will sufficiently point out the character of this new governor. The *Mogul's* subjects have a number of large ships, which trade all over *India*. Their owners having

Sir John
Gayer made
commander in
chief in India.

His mal-ad-
ministration.

Josiah Child (K), who was president of the company's affairs in *England*, less culpable, as the reader will perceive by the instance we have quoted in our notes. At last the mal-administration of *Harris*, and his prime minister *Annesley*, produced so many complaints, that the company was forced to supersede them, sending Sir *John Gayer* to take upon him the management of affairs in *Harris's* room. *Gayer* arrived, A. 1694, and was invested with the title of General of *India*. He continued *Annesley* in the company's service, though he deprived him of all power of doing mischief, and in the end dismissed him, A. 1700. The new governor was a man far from vicious principles, of good nature, and on the whole an agreeable character; yet did he commit actions greatly prejudicial to his reputation. Several instances of this we have given by Captain *Hamilton*; it will be sufficient to our readers that we point out one or two, which indicate the necessity there was for a thorough reformation in the affairs of the company. A young lady, daughter to Mr. *Ward*, whose relations were dead, married a young gentleman she loved, in a clandestine manner, not permitted by the laws of *Bombay*. As she had some fortune, the governor, who was desirous of uniting her to his own family, dissolved her marriage with Mr. *Loyd*, and struck up a match between his own son and the lady. Another piece of conduct he is blamed for: The captain of a *China* ship, his friend, had behaved with so much insolence and tyranny to the crew, that they all to a man deserted him. *Gayer* ordered them all by force on board, and obliged them to proceed on their voyage. The consequence was, the crew mutinied, murdered the captain, and then went a pirating, infesting the *Streight of Malacca*, where they took and plundered every ship they were able to overcome. The *Dorrell*, Captain *Hide*, fell in with her, when a sharp action ensued, in which the *Dorrell* lost sixteen men, was disabled in her rigging, and damaged in her hull, but, by the address of the captain, narrowly escaped being taken. Sir *John Gayer* is likewise reflected upon for permitting himself and his lady to be made prisoners in *Swally* road, by order of the governor of *Surat*. As he might easily have escaped, it was esteemed a piece of low cunning to reside in this place, where he could employ his money to more advantage than at *Bombay*¹.

He is succeeded
by Sir Nicho-
las Waite,
whose conduct
is equally
blameable.

Bombay
ruined by the
oppression of
its governors.

NOR was the conduct of Sir *Nicholas Waite*, who succeeded in the government of *Bombay*, less unwarrantable. The looseness of his morals, his barefaced perversion of justice, together with his prevarication, and little arts, incensed to such a degree the inhabitants and soldiers of the island, that they seized and sent him prisoner to *England*. His sway, which was short, was, nevertheless, very prejudicial both to the company and to private traders. From the time that the president had been obliged to reside at *Surat*, *Bombay* was under the direction of a deputy, appointed by the governor. The war and late pestilence had made great havock among the *Europeans* on the island, insomuch, that out of eight hundred *English*, there remained not above sixty. Thus, from a populous and pleasant place, *Bombay* was reduced to a solitary and dismal desert. Still the spirit of injustice remained, which neither war nor pestilence could subdue. Those who survived were denied the liberty of returning to their native

¹ HAMILTON, vol. i.

having a high opinion of the *English* skill in navigation, procure pilots and masters from the company, to whom they pay very considerable wages, with the privilege of trading to a certain extent in certain commodities, free of duty. These wages Mr. *Annesley* undertook to reduce to one half, appropriating to his own use the other moiety, in quality of his office. Awed by fear, or compelled by necessity, some complied; whilst others, despising his menaces, refused to accede to his measures, which they deemed insolent and unjust. He persecuted these with all the virulence of malice, and weight of authority; bribing likewise the *Mogul's* officers to harass and tease them. Many were ruined by his oppression, whilst others bid defiance to his resentment with impunity. Those who suffered, and those who were out of his power, laboured to render him odious to the *Indians*. Thus, between both, the company's credit was sunk in that country, and their affairs prejudiced by the numbers who were forced, by the governor's avarice, to look out for other professions.

(K) Captain *Hamilton*, in giving a short relation of the rise of Mr. *Vaux*, who, it seems, was patronized by Sir *Josiah Child*, has the following remarkable passage: "Sir *Josiah* continued his esteem for Mr. *Vaux*, pro- curing him many profitable places; among the rest,

" that of judge in civil affairs. After he was installed
" in that office, Sir *Josiah* wrote to him, full of ad-
" monition and remembrance, wherein, after ma-
" ny postulates, he told him, that now, having the
" power of condemning the company's enemies, or
" such as should be deemed so, particularly those who
" should dare to question the company's power over
" all the *British* subjects in *India*; and that he expected
" his orders, from time to time, should be obeyed and
" observed as statute laws. Mr. *Vaux* returned a letter
" of grateful acknowledgments, promising that, as he
" had put him in that post of honour and profit, he
" would endeavour to acquit himself with all possible
" integrity and justice, telling him, that the laws of his
" country should be the rule of his conduct. In his an-
" swer to this letter Sir *Josiah* seemed to be extremely
" angry; he told Mr. *Vaux* roundly, that he expected
" his will and orders should be his rule, and not the
" laws of *England*, which were a heap of nonsense,
" compiled by a number of ignorant country gentle-
" men, who hardly knew how to govern their own fa-
" milies, much less the regulating companies, and a so-
" reign commerce." Captain *Hamilton* informs us,
that he copied those letters, *an.* 1696, at the time that
Vaux and he were prisoners at *Surat* (1).

(1) *Hamilton's History of the East Indies*, vol. i. p. 235.

country,

a country, and likewise of pursuing their fortunes in *India* by private trade. They were detained in the company's service, under the lash of authority, insolence, and oppression, without a glimmering of hope^a.

To avoid confusion, and disturbing the reader's attention, we have pursued the affairs of *Bombay* at the expence of a slight trespass on chronology. We shall now return to the year 1691, when the domestic transactions of the company afford materials for our history. As the political affairs of this commerce are wholly abstracted from foreign occurrences, we believe the reader will not be displeased that we have treated them separately. The contrary would have broke the chain of narration, thrown the reader into perplexity, and wholly destroyed the pleasure arising from an uniform and complete view.

^a HARRIS, *ibid.* DODSL. *ibid.*

S E C T. IV.

Containing the domestic occurrences of the company; designs set on foot to destroy the monopoly; the disputes of the company with interlopers; and the steps previous to the establishment of a new company.

b **A** B O U T this time a design which had been long in agitation of subverting the old *East India* company, by erecting a new one in its stead, began first to appear. This project took its origin from all the several motives which most powerfully actuate the human mind. In 1680, and the several following years, till the unhappy war at *Bombay*, the price of *India* stock was 360 *l. per cent.* and their dividend proportionable; a circumstance that struck all *Europe* with admiration, and our rivals in trade with envy and malignity. It inflamed the avarice of individuals in the nation; prompted many to invade the exclusive rights of the company, in order to share the profits; and at last divided the whole court and mercantile interest into opposite factions. Each saw the value of the prize, and each contended with equal ardour, the one to keep, the other to obtain, possession of it. The foundation of this struggle had been laid towards the end of *Charles* the second's reign; it had been kept up by the partisans of each, either by the press, or by secret intrigues and corrupt applications^a.

A. 1691.
A design on foot, by some private merchants, to annul the company's charter.

c THE complaints against the company were deduced from the year 1682, when Sir *Josiah Child*, after having arrived at the presidency of affairs, got those very persons excluded the direction who had raised him. They had, indeed, opposed some of his measures, which they apprehended would be fatal and destructive. In the course of the complaints, it is alleged, that Sir *Josiah's* ambition and corruption were so great, that no difficulties could withstand him; by force of intrigue, money, and notorious falsehoods, he prevailed in procuring some of the most experienced merchants, of the greatest credit and weight, to be turned out of the direction. His presents were so substantial, that the court fell in with his measures, by which, we are told, he could command equally at *St. James's* and *Westminster Hall*, whatever he desired. The embargo that was laid upon the great armament set on foot for the recovery of *Bantam*, the war with the *Mogul*, the mal-administration of the island of *Bombay*, the ruin of our most beneficial settlements in *India*, particularly that at *Bengal*, then the richest province in the world, were all charged upon Sir *Josiah Child*. It was proved, that our trade in *Bengal*, which, in the space of twenty-three years, had advanced from 8000 *l.* to 300,000. *per ann.* was now reduced almost to its former nothingness, by his misconduct. It was yet further objected by the enemies of the company, that by their shameful neglect they had lost the island of *Puleroon*, which, though of inestimable value, was defended only by twelve men, the garrison of a wooden fort, set up for shew, and of no use in defence. That they had accepted for their right to the moiety of the customs of *Gembroon*, a trifling equivalent of about 3000 *l. per annum.* That by annexing votes to shares instead of persons, at the rate of a vote for every 500 *l.* stock, they had enabled one man (*Child*), to usurp an authority over all the rest, to the great prejudice of the trade. On these narrow principles, the stock ought to govern the stock; and he who had the most money, ought of consequence to have the greatest power. That for the last three years it could be demonstrated, that the joint-stock had been wronged about 100,000 *l.* by means of private contracts, and unheard of deductions, not without the most iniquitous frauds in both. That the trade had been leased out not only to *Englishmen*, but to foreigners, invited to assist in freighting the company's ships, to the detriment of the company; and discredit of the nation. That in consequence of a capital error

Complaints exhibited against the company.

^a HARRIS, vol. ii. c. 2. b 2.

in taking but one half of the sum at first subscribed, they found themselves distressed by a narrow stock; and that, to remedy it, instead of calling in the remaining subscription, they had borrowed 2,000,000*l.* at interest, which had thrown the commerce into a deep and almost incurable consumption. That the stock had been received by unjust and unreasonable dividends, made without regard to the real progress of the trade; but solely directed by ambition and avarice. That from *February* 1677 to *January* 1682, they drew out 741,647*l.* and in two months after doubled their stock, which, together, made 1,109,673*l.* and all this from a capital of 369,891*l.* which was the principal paid in by the adventurers, while they were besides at the charge of 300,000*l.* for interest and gratuities at court^b.

Hence, and from such proceedings, the stock fell into so low, weak, and languishing a condition, "That instead of preserving the purity of their virgin credit by a continuance of punctual payments, they made it a prostitute jilt, by a paper fixed on the treasury door, declaring a stop to payments till a certain time specified." This the enemies of the company alleged, was, for the scandal and presumption of it, without precedent, and clearly demonstrated that the directors had been so busy in making dividends, that the obligation of payments was forgot (L). But the general charge brought against the company was their having seized and condemned the ships of private traders, who had their licence, and this both contrary to express contract, and without sufficient authority so to act. To which was added, their having put to death by the martial law, in contempt of the known constitution of the kingdom, several of his majesty's subjects at *St. Helena*^c.

The company's
answer to the
charge.

Arguments
against inter-
lopers.

To this heavy indictment the company answered, in their defence, 1. in general, That they neither exceeded their power, nor abused it. That in no one instance did they violate the rights of nations, or prejudice the honour of their country. That the cry and murmurings against them were raised by those very *interlopers*, who had occasioned the war in *India*. They then descended to particulars, urging that the rights they held, and the power they exercised, were not only derived from the crown, with the sanction of parliament, but absolutely necessary to conducting the commerce, and carrying it on upon a footing with other nations, and particularly for guarding against the encroachments of the avaricious dispositions of the *Indian* governors. That among the powers with which they were invested, was that of holding courts-martial, and inflicting military punishments. That it did not become them to discuss the question, how far the crown was impowered to grant them their privileges? Yet, that as a proof of this power in the crown, their charter had once been judicially confirmed in *Westminster Hall*. That for many years it was not requisite to exert that power; nor was it put in force till necessity urged it; till the *interlopers* broke in upon their trade, embroiled them with the natives, and even bred discord among themselves. That it was first in the year 1680, when the whole nation was in confusion, and *England* was threatened with a civil war, they began to take advantage of the then situation of affairs. That on notice of their illicit

^b RALPH'S Hist. Eng. vol. ii. sub an. 1691.

^c See before, p. 323 (F).

(L) Mr. *White*, in his sensible account of the *India* trade, calls this the key of that mysterious war with (1) the *Mogul*. Things arriving at such a crisis, it was high time to look about for an expedient. This offered itself readily, by seizing on the rich fleets belonging to *Surat*, especially those trading to *Arabia* and *Persia*. Previous to the intended quarrel with the *Indians*, we have seen the company's factors borrow the sum of 300,000*l.* of them, which they were to clear off by a war. In short, besides the sums borrowed, this iniquitous scheme produced about a million sterling, by the seizing of ships in an hostile manner, as was proved by oath in his majesty's court of exchequer. About 300,000*l.* sterling were brought into *England*, according to the confession of several of the factors and prime agents employed by the company. Thus, after violating the most sacred rights of nations, after involving themselves in a dangerous, expensive, and unjust war, and after bringing disgrace and contempt upon the honour of the kingdom, what was the important result of all these deep-laid projects? Why, these that follow:

1. A charge to the company of about 400,000*l.* in sundry articles, as advance on the rate of their tonnage; for supernumerary seamen; transporting old soldiers from *England*, with their pay; for great numbers raised in *India*; for large quantities of ammunition and stores, and garrisons in *Fort St. George* and *Bombay*, toge-

ther with those heavy articles of dead freight and demurrage.

2. It interrupted the course of commerce for four or five years, by which the company cannot (supposing they had a sufficient stock to trade) be computed to have lost less than 800,000*l.* and the crown about a third of that sum.

3. It destroyed several thousands of the best *English* seamen, by being sent out at unreasonable times, and by long detention in those countries.

4. It occasioned the loss of five capital ships, besides others, which by their long stay, loss of freight, and other circumstances, had proved a dead charge, and useless by worms, before they came to be employed.

5. And above all, those invaluable jewels public credit and national honour, became bankrupt. From the most respected, esteemed, and favoured nation, the *English* in *India* became the most odious, detestable, and contemptible. Insolence, pride, avarice, and ambition, were the means used to destroy the estimation in which the *English* were held; while corruption, adulation, and cringing, were made the infamous tools of regaining what had been lost, by means no less infamous. All their misconduct became articles of real grievance to the nation, which were corroborated by the secret practices of the enemies of the company, who, besides public spirit, had private views to serve.

(1) *White's Account of the India trade*, p. 57.

- a practices, the company applied to the crown for such further privileges as might obviate the inconveniency. That such powers were accordingly granted. That even in the affair of *St. Helena*, which had undergone the censure of the house of commons, they were justified by an express commission from king *James* the second, and also by his orders for the fact. That such was the temper of the court at that period, that their presuming to question the validity of such a commission and order, or even insinuating the expediency of having them ratified by parliament, would be forfeiting the protection for the indignation of the court, and exposing themselves to all the rigours of a *quo warranto*. That in such circumstances they could only use the power given them, or submit their trust to be infringed, ruined, and destroyed, by the foreign and domestic enemies of the company. Which alternative was
- b the most eligible, common sense is enough to determine. They had foretold, in their petition to king *James* the second, that all their settlements would be filled with confusion and anarchy, from the pretensions of those *intruders*, who, to procure themselves credit, propagated a report, that they were a *new company*, erected by the king, in consequence of the *old company's* having entered into the rebellion against him. That such of the company's servants as had reason to apprehend the consequences of their unjust dealings, joined those *interlopers*. That the *English* interest being thus divided, the *Indian* governors seized the occasion to oppress them, to sink their credit, to embarrass their dealings, and to lessen their profits. That the *Dutch, French, Danes, and Portuguese*, took their several advantages of this anarchy. That under such a variety of pressures it could not be wondered that their returns
- c were less considerable than formerly, and the management more difficult. Yet that the company was so far from being bankrupt, that they were in a condition easily to satisfy all demands, and to carry on their trade with as large a stock, and with the same advantages, as ever. That, in truth, the clamour was not raised on account of their supposed poverty; it was their wealth and prosperity had excited envy. That as to their postponing payment, they had followed the example of the chamber of *London*, and even the exchequer itself. The war with the *Mogul*, the company affirmed, was so far from being unprovoked, perfidious, and piratical, that it was just, necessary, and unavoidable; and that, upon the whole, they had done nothing designedly to forfeit the protection of the government, the good opinion of the people, or the powers and privileges granted them by their charters, since whatever national advantages were
- d to be drawn from trade, might be as well obtained on the present model, as on any other whatever^d (M).

HERE, as in all similar cases, where interest excites opposition, each discredited, or pretended to discredit, the allegation of the other. Pamphlets were poured out in such numbers on the public, that this subject would seem to have engrossed the whole employment of the press. The by-standers were delighted with the sport, the public inflamed the contest, and, next to the war, placed it among the great topics of the day. One advantage the company had, they were united, attached, and unanimous; their enemies were consistent in nothing but their animosity, which was vented in a variety of clashing projects. Some were for laying the trade open (N); others were for continuing it under the sanction of the parliament, and transferring

^d Vide Apologie for the East India Company, p. 18. RALPH, *ibid*.

(M) Here the company specified a number of other particulars, the consequences of the footing the several traders, or *interlopers*, as they called them, had got in *India*. The revolt of their servants under *Kegwin* at *Bombay* was charged upon them. The like consequences happened at *St. Helena*, say they, upon the report and suggestions of the *interlopers*. Here almost the whole island rose in actual rebellion, attempting to force the company's fort by arms. In *Bengal*, likewise, where the company's chief trade was, the *Nabob* and his officers took the advantage of the confusion in their affairs, to break all their former compacts, and deprive the *English* of all those valuable privileges, which they had long enjoyed by stipulation. They drew great sums of money from both parties, by violence, injustice, and open hostilities, which they never ventured to attempt, while the *English* were united under the prudent conduct of a company. The *interlopers* agreed to any conditions for the liberty of trading, to the great prejudice of the company, who were also obliged to accept of the most disadvantageous terms (1).

(N) The arguments they urged were the following:

1. A company would be a monopoly, which has always been a grievance, in the eye of the law; since, in this case, there would be but one purchaser of all the *English* manufactures sent to *India*, and but one seller of the commodities imported from thence.

2. Hence such purchasers will buy cheap and sell dear, both which are detrimental to the public. On the contrary, the more buyers of *English* commodities, and sellers of foreign, there are, the first will be sold the dearer, and the latter the cheaper; the advantage of which to the nation is obvious.

3. If the trade was laid open it would increase; the industry of individuals would discover more markets, as the advantage would be their own. The case is different with a monopoly, where a small trade is equally lucrative with a great one.

4. It is contrary to justice, and an infringement of the rights of an *Englishman*, to be excluded from the trade of any part of the nation: for why should not *Bristol*,

ferring the direction to themselves and their friends. Those who aspired to power and im-
portance, as well as wealth, gave into the latter, while the former scheme was supported and
eagerly pursued by those whose small stocks they were desirous of extending in reasonable
adventures. These, however, after some feeble attempts, were overpowered, a majority con-
curring in the former opinion. In short, it seemed to be the general sense, that a trade to
India, properly conducted, would prove highly beneficial to the nation; that it could not be
successfully managed but by a joint stock, and under joint adventurers, trading in a body.
That these were incompatible with *interloping*; that therefore no company could subsist unless
private *interlopers* were excluded, and that they could no otherwise be excluded than by
investing a company with sufficient powers to vindicate their own rights, to defend themselves
against such encroachments, and to conduct their commerce by such fixed laws, as should
secure it against the avarice or craft of nabobs, governors, and the counter-practices of their
foreign rivals. In this manner did the public reason; arguments equally strong for these in
pursuit and those in possession, both joining issue in the inference. But then the enemies of
the company alleged, that they were not legally invested with the powers which they exercised;
that consequently by executing an undue and unlawful authority, they had forfeited all
their other rights, and were, in equity, actually disqualified for any such trust for the
future*.

In this train stood affairs when they came before the convention parliament. The subject
appeared truly national to the unprejudiced; and worthy the attention of those who had formed
designs. A committee was appointed to take cognizance of the dispute, and it proceeded so
far as to demand a perfect state of the company's accounts, an estimate of their stock, goods,
cash, debts, with a view of their domestic and foreign correspondence. With this the com-
pany complied, and voluntarily offered to submit their books and latest advices from *India*
to the inspection of the chairman, or such two or three of the committee, as the house would
please to nominate. Their reason for this limitation was, that a copy of that estimate, which
they had submitted to the house, had been sent to *Holland*, for the *Dutch* to make what advan-
tages of it they could, to the prejudice of the company, as was apparent by a transcript remit-
ted from *Amsterdam* to some *Jews* residing in *London*, to compare it with the account deli-
vered in by the company to the chairman. But notwithstanding the eager desire of the con-
vention parliament to prejudice the company, such was their address, such were the friends
they made by money and interest, that they baffled all designs upon them till the third ses-
sion. Their vigour, indeed, was so great and unexpected, that their adversaries thought fit
to wait a more favourable occasion to renew the attack†.

HERE stood the dispute for some time, till the adverse party found themselves strengthened
with the assistance and countenance of several nobility and gentlemen of rank, distinction, and
weight. Upon this they renewed their operations with redoubled vigour; and, to render
their motions more regular and certain, they erected themselves into a kind of com-
pany, by entering into certain engagements (O). After this they presented a petition to the
house of commons, representing the danger to which the *India* trade was exposed by the mis-
conduct, abuses, and unlawful practices of the present directors; praying, that a new com-
pany,

* DODSLEY'S Hist. East Ind. vol. ii. b. iii.

† RALPH, vol. ii. sub. an. 1692.

Exeter, Plymouth, Hull, Yarmouth, &c. equally enjoy
the privilege with the port of *London*, of going to the
East Indies.

5. The *Dutch* trade with a joint stock; but they
permit their subjects to import from *England*, or any
other parts, except *India*, all sorts of *India* goods.
Whereas by the act of navigation, no *East India* goods
can be imported into this kingdom, but by the com-
pany, directly from thence. Thus the company have it
in their power to fix what price they think proper to
their imported commodities, without any remedy for
the buyer. Hence it follows, that the *English* are in a
worse situation, and more hardly circumstanced, than
the *Dutch* (1).

(O) "Whereas the trade to *East India* is of very great
importance to this nation, and yet, through the many
abuses and illegal practices of the managers of the
present joint stock, both at home and abroad, it is
likely to be lost, if some speedy remedy be not used,
by application to their majesties and the parliament,
to procure a regular and lawful establishment of the
same; which cannot be completed without a new

and national stock, clear of all incumbrances. And
whereas divers eminent traders and merchants, in and
about the city of *London*, are accordingly endeavour-
ing to procure such an establishment for the benefit
and advantage of all who shall or will be concerned
in the said trade; the subscribers being willing to
promote so good a work, &c. do hereby severally
promise and oblige ourselves, so soon as such an estab-
lishment shall be made, to pay the several sums of mo-
ney by us subscribed towards raising the said stock,
at such time and place as a committee, chosen by the
major part of the subscribers, shall direct and appoint.
And we do hereby make it our request to those per-
sons who have engaged themselves by a certain writ-
ting of the 8th instant, to endeavour the procuring such
establishment, and to pursue their endeavours to com-
plete the same. And we do hereby promise to pay
them, out of the joint stock, all such sums of money
as shall be thought necessary by them to be laid out in
obtaining the said establishment, according to the true
intent of this preamble." This was the contract en-
tered upon.

(1) Vid. Somers's Coll. vol. xxx. p. 98.

a pany, on a new joint stock, might be erected, with such powers, privileges, limitations, and restrictions, as the wisdom of parliament might see fit, and conduce to the public good. This petition, which was presented on the 28th of *October*, was attended with a counter-petition from the company. Both were submitted to a committee of the whole house. And, that nothing might be wanting to a thorough intelligence of the point in question, the several articles of grievance were ordered to be fully stated, and the company's distinct answer to each particular delivered; upon which the 28th of *November* was appointed for a hearing of both sides².

DURING the intermediate time, an account of the company's stock, cash, debts, &c. as given in by their governor Sir *Joseph Herne*, was under examination. Certain petitions from b the clothiers, praying a free exportation of woollen manufactures; and of the linen-draper, complaining of the company's not supplying them with calicoes, were received and read. At last, after a tedious discussion, and warm debates, the house came to the following resolutions; viz. That a sum not less 1,500,000*l.* and not exceeding 2,000,000, was a fund necessary to carry on the *East India* trade in a joint stock. 2. That no person should have any share in the above stock, exceeding 5000*l.* either in his own or any other name in trust for him. 3d. That each person having the above share should have a vote; and that no person should have more than one vote. 4th. That the company trading to the *East Indies*, should be obliged annually to export goods, being the growth and manufacture of this nation, to the amount of 200,000*l.* 5th. That no private contracts should be made; but all goods be sold c at public sales by inch of candle, saltpetre for the use of the crown excepted. 6th. That the company be obliged to sell yearly to the king saltpetre refined, 500 tons, at the rate of 30*l.* per ton. 7th. That no lot exceeding 500*l.* should be put up at one time, at any of the company's sales. 8th. That no person, whose share did not amount to 2000*l.* should be appointed governor or deputy governor; and that a share of one thousand pounds, and no less, could intitle a person to a seat in the committee of the company. 9th. That the election of governor, deputy governor, and committee for the company to trade to the *East Indies*, be made every year. 10th. That all dividends be made in money. 11th. That no dividend be made without a sufficient fund to clear debts, and carry on trade. 12th. That the stock be valued every five years by the accomptant of the company, upon oath, to be inspected by all d concerned. 13th. That for the future no ships be permitted to go to the *East Indies*, except such as should be of a company, or be established by act of parliament. 14th. That no by-laws should be binding to the company, but such as should be approved by a general court of adventurers, and were not repugnant to the laws of the land. 15th. That the joint stock of a company to trade to the *East Indies* be for twenty-one years, and no longer³.

HITHERTO the house seemed to regard the trade only, without entering into the interest of either contending party. The day following they further resolved, that all persons now having shares exceeding 5000*l.* be obliged to sell out the excess, whether in their own names, or in trust, and this too at *par*. That the members of the committee of the *East India* company give security, to be approved of by the house, that their present stock and estate, all debts e and incumbrances cleared, amount to 759,000*l.* And lastly, That after security given, an humble address be presented to his majesty, to incorporate by charter the present *East India* company, according to the regulations agreed upon by the house, that the same might pass into an act.

By this resolution, the house gave the company their choice; who accordingly proceeded as if they thought the offer deserved acceptance. Things bore a promising aspect for them, when Sir *Thomas Cooke*, and two of the committee delivered in their proposals concerning the security required, which were rejected. However, they still shewed a ready compliance, and according to order, undertook to produce the persons of their bondsmen, and specify the sums they would severally undertake for⁴. Thus every obstruction was, in appearance, sur- f mounted; and a committee was appointed to prepare and bring in a bill to establish an *East India* company, according to the resolutions of the house. The bill was prepared, and brought in on the 16th of *January*, but not read till the 22d. This proved to the company A. 1692. that some new objection was started; some impediment thrown in their way, which they must remove by other measures. As a farther proof, new petitions were received against them; their answers deemed unsatisfactory; and the whole game, by the following resolution, was played into the hands of the court; viz. That an humble address be presented to his majesty, to dissolve the present *East India* company, according to the powers reserved in their charter, and to erect another *East India* company, for the better preserving the *East India* trade to this kingdom, in such manner as his majesty in his wisdom shall think fit. The resolution was g prented, to which his majesty made answer, "That it was a matter of high importance to " the national commerce; that he would consider of it; and that in a short time he would

The company give in a state of their affairs to the house of commons.
